The history of 19th century Europe has been characterized as age of liberalism and nationalism. At the opening of the century the fall of Napoleon tolled the death knell of the liberal-thinking, democracy-seeking ideals that had arisen by then. The Congress of Vienna that met in 1815 to decide the future of post-Napoleonic Europe was dominated by the Austrian Prime Minister Metternich and culminated in a return to the harshly restrictive conservatism of the absolutist era. This policy, seated in Vienna and backed by the might of the Austrian Army, had the effect of repressing individual freedom and subjugating it to the interests of strong central monarchs. The struggle against this trend and the assertion once more of the basic human liberties implicit in self-government took place in every European country for most of the balance of the 19th century. This struggle was certainly the case in Hungary. The key year in this struggle of the Hungarian people was 1848. In this year the freedom seeking nationalists, led by such men as Louis Kossuth, were fully prepared to stage a revolution to gain their ends. Happily such a revolution with all its usual bloodshed and terror proved unnecessary. For the tidings of the successful French revolutionary effort came from Paris and the demands of the dedicated Hungarian liberty-lovers were acceded to in a bloodless manner.

And so on this March 15, over a century later, I take great pleasure in saluting the Hungarian people on the 112th anniversary of the freedom day of the Hungarian nation. And I close, Mr. Speaker, with the heartfelt wish and fervent prayer that before another March 15 passes, we here, and indeed the whole world, may witness and rejoice in a rebirth of that eternal freedom that the Hungarian people have always sought.

A Tribute to Purim

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. TOLL. The triumph of righteousness over outrage, and decency over wickedness, has been the goal of mankind, from the beginning, as witness the everlasting popularity of the David and Goliath story and the destruction of the walls of Jericho. Indeed, no news so delights the general public as that describing the comeuppance of some villain, for in this we all can sense the influence of eternal justice.

Such an event in history is annually celebrated by the Jewish people at this

season of the year, to honor the deliverance of their ancestors from destruction at the hands of despotism. The occasion is called Purim, the Festival of Lots, and, in the manner of all holidays, is now principally a time for festivity. But its history is awe-inspiring and worthy of review on this occasion.

In ancient days it was the manner of kings to select their wives on a basis of beauty, and so it came about that Ahasuerus, ruler of the Medes and Persians, took to wife one Esther, a Jewish maiden and daughter of Mordacai, an humble servant at the royal gate. Fearing the effects of prejudice, Mordacai forbade his daughter to reveal who her people were or her family, and proceeded to maintain his humble station, unhonored and unsung. Yet, in this capacity, he was soon to uncover a plot against the king's life, and relaying the news through Esther, prevented its execution.

Soon after this there arose in the court of King Ahasuerus an arrogant nobleman named Haman, who issued an order that all the king's servants should bow before him. Enraged by the refusal of Mordacai the Jew to meet this preposterous requirement, Haman vindictively conceived the destruction of all the Jews in the kingdom—a policy to be inaugurated through the hanging of Mordacai upon a gallows 75 feet high, especially constructed for the purpose. But here Queen Esther intervened, advising the king both as to her true identity, and Mordacai's efforts in his behalf, and accusing Haman of plotting the extermination of her people. Enraged, Ahasuerus ordered Haman's arrest and hanged him on his own gallows. The king then appointed Mordacai as one of his advisers and canceled Haman's program of mass extermination.

The Jews of Media and Persia were thereby gladdened in spirit, and in every city throughout the land they celebrated in joy of their deliverance.

On the 14th and 15th days of the month of Adar they rested and devoted their efforts to feasting and rejoicing. And so the holiday has come down through the ages as a Jewish custom. Since Haman had cast pur, that is to say, lots, to destroy them, the Jews designated the holiday as Purim, the Festival of Lots, and so it is known to this day.

Few holidays so specifically represent opposition to the tyrant; a policy as essential to the happiness of the world today as in the world of ancient times. In truth, its celebration stands as testimony by the Jewish people that their influence will ever serve the cause of freedom and justice, so long as mankind remains upon the earth.

Marylander President of National Audubon Society

EXTENSION OF REMARKS OF

HON. RICHARD E. LANKFORD
OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following article from the New Yorker, January 16, 1960, about the new president of the National Audubon Society, Mr. Carl W. Buchheister, a native of Prince Georges County, Md.:

NEW PRESIDENT

If you want your boy to grow up to be president of the National Audubon Society, take him on country walks when he is very young and point out not only the beauties but the interesting things of nature. That is the message we received from Mr. Carl W. Buchheister, the society's new president with whom we recently lunched at the Peachtree Restaurant, on Madison Avenue, almost within binocular range of the Audubon headquarters, which are in the old Harrison Williams house, at 1130 Fifth Avenue. "My father, who was in the tobacco-export business in Maryland, had the old-fashioned idea of taking his children—there were six of us—on a walk every Sunday morning," he told us. "He had a kind of cultural interest in nature, and it rubbed off on me. We lived in Prince Georges County, in beautiful rural surroundings, and at 11 or 12 I began to explore on my own. I was excited about birds, snakes, and animals, and I was a passionate reader of Ernest Thompson Seton and other natural-history writers. My mother saw to it that I got all the books of that sort I wanted. During my teens, this interest was in abeyance—as it often is at that age. First, I wanted to be a doctor, but when I was 14 I developed a heart murmur, and the family physician said that I shouldn't go in for anything as strenuous as medicine. So I decided to become a teacher of the classics—I was doing well in Latin and Greek—and went to Johns Hopkins."

Mr. Buchheister, a tall, impressive man who is a year younger than the century, finished a martini and shook his head. "The biological laboratories at Hopkins beckoned me—I smelled the formaldehyde—but I went dutifully on to prepare myself in Latin and Greek," he said. He took his A.B. in 1923, and then, after 2 years in the graduate school, being newly married and anxious to earn a living, he began to teach Latin—first at the Park School, in Baltimore, and then, in 1926, at the Lawrence School in Hewlett, Long Island, where after 9 years the Audubon call came to him. "Lawrence is a day school in the country, and my interest in nature led me to take the kids on bird walks," he said. "They'd get up at 5 in the morning, in spite of their parents' protests, and we'd comb the countryside looking for birds and birds' nests before settling down to Caesar. A nature club grew from this, and it branched out from birds to all forms of nature; it became the school's most active and successful extracurricular activity, and it attracted the attention of the Audubon Society. In 1935, John H. Baker, the society's executive director—he later became its president—invited me to direct a camp for teachers that it planned to open the next year on Hog Island, Maine. I had been running a summer camp for boys in New Hampshire, and I gave it up for the Audubon one, which I directed until 1958. We now have three others—in Connecticut, Wisconsin, and California—all modeled on it."

In 1936, Mr. Buchheister also gave up schoolteaching, to become executive secretary of the Massachusetts Audubon Society; after he had spent 3 years there, Mr. Baker asked him to come to New York as his assistant director. "The Massachusetts society antedates the national society, and we had a lovely old Bulfinch house in Hingham, but I decided I would rather be a small frog in a big puddle than a big frog in a small puddle," he said. "I named Bartram Cadbury to succeed me as director of the Maine camp in 1958, when the society's trustees, looking ahead, selected me to take over the presidency on Mr. Baker's retirement, which occurred a few weeks ago. We have had 5,000 people at that camp since it started. Any-

one over 18 may attend, and about 70 percent of the campers have been teachers. Our camps are educational, not recreational. They are not bird camps, although we do have a marvelous gull-nesting island off the Maine coast. The Audubon is a conservation organization, concerned with soil, water, plants, and wildlife. We have 31,000 members and 300 affiliates and branches, and we patrol 2 million acres of land and water."

Mr. B. has three married daughters, two of them married to men they met at Hog Island. "One of my sons-in-law, who was something of a sportsman at the time he was courting my daughter, was tried in a Federal court around then for shooting more than his limit of ducks in South Carolina," he told us. "Judge, that isn't the worst of it, my son-in-law said, 'I'm engaged to the daughter of an officer of the Audubon Society.' The judge fined him, and my wife made him join the society. She's a daughter of the late Strickland Gillilan, an old chautauqua circuit speaker and writer. He wrote 'Finnigun.' You know, the bit of light verse containing the line 'Off agin, on agin, gone agin—Finnigun.' I met my wife when we were both taking a night course in archeology at Hopkins. She was 17 then. Now we have 11 grandchildren."

Philippine Sugar Quota May Be Increased Under the Provisions of the Philippine Trade Agreement Revision Act of 1955

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. LEVERING. Mr. Speaker, there appears to be a widespread misconception to the effect that since the Philippine Trade Agreement Revision Act of 1955 specifies a fixed quota for Philippine sugar imports to the United States, nothing can be done by Congress to revise this figure upward. This is not true. The Trade Revision Act, article II, paragraph I, specifically provides that the establishment of a limitation on the amounts of Philippine sugar which may be entered or withdrawn from warehouses in the United States for consumption shall not prejudice any increases which the Congress of the United States may from time to time allocate to the Philippines.

On this subject a leading editorial in the Manila Bulletin of March 11, 1960, is relevant and persuasive.

Under leave to extend my remarks in the RECORD, Mr. Speaker, I respectfully include this editorial as follows:

[From the Manila Bulletin, Mar. 11, 1960]

OUR SUGAR QUOTA

The U.S. Congress appears sympathetic to an increase of the Philippine sugar quota beyond the 980,000 tons annually to which we have been limited for many years. This is mere peanuts beside the 3½ million tons Cuba has been furnishing under the same sugar legislation, now up for extension.

The Philippines has friends who have been speaking for us. Former Speaker JOSEPH W. MARTIN went to bat this week with facts and figures supporting an urgent plea for a bigger Philippine share. Yesterday Representative ROBERT W. LEVERING put a statement into the RECORD noting that Cuba, which enjoys the largest quota in the pre-

mium-priced U.S. sugar market, has just made a deal to supply Russia with a million tons. The time is ripe, he said, for the Philippines to share in the rather large consumption increase which has given all foreign suppliers but the Philippines a nice break.

Last month Representative JOHN W. MCCORMACK inserted in the CONGRESSIONAL RECORD a long statement laced with figures showing the disadvantage to the Philippines of having its quota fixed by law at 980,000 short tons. In the year 1958 there were no less than 10 additional allotments of sugar consumption increases prorated among foreign and domestic suppliers, in none of which the Philippines shared.

In that year Cuba went from just over 3 million tons to 3,437,000. Domestic beet and cane producers were boosted several hundred thousand tons. Hawaii, Puerto Rico, and the Virgin Islands all shared. Manila allocations remained the same.

"Many methods of helping the Philippines have been and will continue to be suggested and considered," said MCCORMACK. "I am addressing myself to one form of help which will cost American taxpayers nothing and which indeed may be considered the fulfillment of a moral obligation." He went into the background of the fixed-quota position of the Philippines as regards U.S. sugar imports.

Many have thought that because the sugar quota is fixed in the Philippine trade agreement as revised by the Laurel-Langley document, nothing can be done about it. This is not true. There is a provision in the agreement taking care of that. It states that the establishment of quota limitations on sugar "shall be without prejudice to any increases which the U.S. Congress might allocate to the Philippines in the future."

Riding the Rails

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. DADDARIO. Mr. Speaker, I have received from the Secretary of Commerce, as all of us have, a copy of the new Cabinet report on transportation problems. I have looked through it, and I intend to give it close study, because I have been extremely interested in this subject.

I have not determined, however, from my initial study, what emphasis the report places on the quality of service provided by the railroads. This is something the passenger notices very much. In evidence, I offer a column from the Hartford Courant, written by an able reporter, Jack Zaiman, regarding the service he recently encountered.

Many have argued that the public relations of railroads has been especially bad. But this goes beyond public relations. It is service, pure and simple, which has hampered the hopes of the roads to acquire more business. In the drive to secure more profitable freight service, the quality of passenger service has continued to go down. I commend this article to the attention of all our readers:

RIDING THE RAILS

(By Jack Zaiman)

Through a set of unforeseen circumstances recently, I traveled to and from Florida by railroad, a total distance of perhaps 3,000 miles. Total travel time was close to 70 hours, coming and going. It was coach travel, since it seemed to me that prices for a pullman berth or a sleeperette, if that's the proper name, were far too much for vacation travel.

With all this time on my hands, I had an excellent opportunity to observe the operation of a number of railroads, especially as they affected the passenger. I am sorry to report that I came away with an extremely unfavorable impression of most of the operation, so distasteful that I'm beginning to wonder if these railroads really appreciated their passengers.

I am firmly in favor of private enterprise, so long as private enterprise does the job. But I have traveled railroads in Great Britain, in France, and in Italy, where the railroads are operated by the government, and found service there much better than my family and I received on our recent railroad adventures. My sympathies are now completely with the people who have to ride the railroads daily to and from work. From my short experience with rail travel, I can understand now what they are beefing about when they scream about railroad service.

I got the idea, from my exposure to rail travel, that the railroads would just as soon get rid of their passenger service. Not a single thing is put forward for the comfort and welfare of the passengers, beyond the basic supplying of the railroad coach. Indeed, I seemed to find an impression that the railroads may be trying to make it tough for the passenger. I found not a single person who was happy with his rail travel or who complimented the railroad. Everyone I talked with complained, some bitterly.

Not a single train I was on either started or came in on time. On a supposedly 26-hour run from New York to Miami, the train was nearly 6 hours late, and there was no weather problem involved. On our return, the train was about 2 hours late coming into New York. The New Haven, from New York to Hartford, was nearly 3 hours late in arriving.

I found railroad employees, in some cases, discourteous and abrupt. Passengers hungered for food at times. There was no explanation for delays, which sometimes extended unbearably. There were bad delays in Pennsylvania Station in New York, coming and going. The waiting room of this station is as cold as the outdoors; anyone not feeling well or exhausted from travel just sits and shivers. I found discourtesy from information personnel in Penn Station.

I found an incredible situation in getting on the New Haven at Penn Station. The train apparently was so long that the coaches were attached to the part of the train that did not rest near the platform. Hundreds of exhausted persons, carrying tons of baggage, were directed aboard a pullman car, and then led through about five other pullmans, with their narrow corridors, to where the coaches were.

Luckily, I had sent my heavier luggage through the railroad baggage facilities from Florida to Hartford. When I went to pick up the bags a day after my return home, I found one of them open, and tied together with string. So far as I know nothing was taken, but the zipper was broken and the contents of the bag exposed.

But the thing that shook me most was the apparent attitude of the railroad authorities that the passenger has to shift for himself. I have frequently been impressed with the excellent public relations attitude of the airlines toward the passenger. There is an effort at friendliness here, both before

and during the ride. The airlines give you a feeling that they are trying to give you service, an approach I did not find, except in isolated instances, on the railroads.

I can stand inconvenience and delay, which is a major part of transportation. But I do object to what almost seems to be a hostile attitude by a public utility toward its customers. I have no knowledge of the intricacies of railroad bookkeeping and financing, but it seems to me incredible that a long-distance train has to change engines every time it passes over the tracks of another line, even for a 2-hour run.

It seems to me to be small potatoes to charge a passenger 35 cents for a small pillow to rest his head on. It is outrageous public relations to go into restrooms on the coaches and find no paper towels to wipe your hands, messy floor conditions, and piles of rubbish. The Mrs., who likes to smoke, complained she couldn't even find an ashtray in the women's restrooms.

What a field is here for a public-relations job by the railroads. They complain bitterly about the loss of passengers. Why, they are simply driving them away with the policy I observed. I've heard people say they would rather drive to Florida than take the train, and driving is a 3- or 4-day operation.

What is needed, it seems, is a change of attitude. Somebody should be on the train to make the passenger feel he is wanted. It could be a hostess, as they have on the airlines. A free pillow would make a passenger happier. A bit of information here and there, perhaps some music in the railroad coach, some complimentary hot coffee, a kind word or two, a clean restroom—all these little things and others would help to bring the railroads into better repute. It may cost a trifle more, but the roads would get it back in more traffic.

The railroads desperately need a selling job.

New Disarmament Conference

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the New York Times, of March 16, 1960, entitled "New Disarmament Conference":

[From the New York Times, Mar. 16, 1960]

NEW DISARMAMENT CONFERENCE

The new disarmament conference at Geneva has begun with expressions of good will, including a pledge of cooperation from Premier Khrushchev. But the opening speeches show that despite a dozen years of talk the basic differences between East and West remain.

In point of fact, the new conference can deal with only one aspect of a problem whose roots lie deep in unresolved political conflicts. The age that produced the ultimate weapon has also polarized these conflicts between two camps, for which reason disarmament must go hand in hand with political solutions.

Because of this double aspect of the problem, the basic decisions in both disarmament and the political field will have to go to the summit meeting. But just as the foreign ministers' conference prepared the political ground for that meeting, so the

disarmament conference, at least in its first phase, can prepare the ground in its field. And despite all the difficulties involved there is at least one ray of hope. For both sides, including the Soviets, appear to have come to the conclusion that as long as a balance of power—or a "balance of terror"—exists, war is no longer a feasible means of national policy, and that therefore such a balance might well be reduced, to less dangerous, less costly levels until other means are found to keep the peace.

But even assuming agreement on this basic premise, the rival plans submitted by East and West clearly reveal their divergent purposes. Both plans envisage an ultimate total disarmament. But the Western plan approaches this goal through a realistic and flexible program of progressive and balanced armament reduction, with special emphasis on the disarmament of the atom and outer space, and with each step put under effective control by a new International Disarmament Organization (IDO), associated with the United Nations, that would ultimately also control an international police force enforcing international law against any aggressor. This program is so sweeping and cuts so deeply into vital national interests that it rightly proposes a careful study of the problems involved.

The Soviets, on the other hand, not only reject this approach but also present anew Premier Khrushchev's utopian program for total disarmament within 4 years, with effective controls only at the end of it. The renewed Soviet complaints that the West continues to put control ahead of disarmament shows that the Soviets still seek to maneuver the West into a paper agreement—self-enforcing in the West but a scrap of paper behind the Iron Curtain.

Chicago Truck Drivers, Chauffeurs and Helpers Union of Chicago and Vicinity—Independent

EXTENSION OF REMARKS OF

HON. DANIEL D. ROSTENKOWSKI
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1960

Mr. ROSTENKOWSKI. Mr. Speaker, pursuant to my remarks which appear in the RECORD on Tuesday, March 15, I ask that the second part of the financial statement of the Chicago Truck Drivers, Chauffeurs and Helpers Union of Chicago and Vicinity—covering the pension fund—be published herewith.

The article referred to follows:

CHICAGO TRUCK DRIVERS, CHAUFFEURS AND HELPERS UNION OF CHICAGO AND VICINITY—INDEPENDENT

To Our Members, Employees, and the Public:
Pursuant to our past practices and in conformity with the provisions of the Labor-Management Relations Act of 1947, and the Labor-Management Reporting and Disclosure Act of 1959, we present herewith financial statements for the year ended December 31, 1959. These statements have been certified after audit by Peter M. Shannon & Co., certified public accountants. Copies of the full text of these audit reports, including subsidiary schedules, are available upon request by letter or telephone.

ED FENNER.

PENSION FUND

The pension fund is operated under rules and regulations adopted by its trustees. The purpose of the fund is to provide retirement benefits for union members.

Balance sheet, Dec. 31, 1959

Current assets:	
Continental Illinois National Bank & Trust Co.	\$42,512.47
Petty cash	25.00
Total	42,537.47
Investments:	
Stocks	918,363.49
Bonds:	
U.S. Government bonds	192,131.90
Industrial bonds	1,097,561.68
Public utility bonds	652,095.99
Foreign bonds	95,951.75
Total	2,037,741.32
Temporary Investment—U.S. Treasury bills	99,183.05
Total	3,055,287.86
Receivables:	
Interest—Bonds	26,359.72
Dividends	2,193.13
Total	28,552.85
Grand total	3,126,378.18
Liabilities:	
Reserve for possible liability to members making voluntary contributions	139,775.35
Net worth:	
Surplus available for future pension payments to qualified members	2,986,602.83
Grand total	3,126,378.18

Statement of cash receipts and disbursements for the year ended Dec. 31, 1959

Cash receipts:	
Contributions:	
Received from employers	\$693,119.68
Received from members to maintain eligibility	15,814.56
Received from members for voluntary participation	29,939.90
Total	738,874.14
Security transactions:	
Proceeds—Sales of securities	228,860.71
Interest received	71,089.21
Dividends received	30,076.12
Total	330,026.04
Grand total	1,068,900.18
Cash disbursements:	
Benefits:	
Pension payments	125,375.00
Security transactions:	
Purchase of securities	916,036.12
Purchase—Accrued interest bonds	180.56
Total	916,216.68
Refunds:	
Issued to members withdrawing from voluntary participation	7,782.75
Administrative:	
Salaries of office personnel	26,603.00
Trust fund contributions for employees	971.88
Payroll taxes	939.39
Office supplies	2,578.11

Statement of cash receipts and disbursements for the year ended Dec. 31, 1959—Continued

Cash disbursements—Continued	
Administrative—Continued	
Utilities (rent, electricity, telephone, and telegraph)	\$4,280.23
Postage, printing, and stationery	3,719.15
Insurance	1,131.65
Miscellaneous	28.32
Auditing	10,000.00
Publication of financial statements	3,858.07
Actuarial services	3,165.00
Trustee fee—public member	7,500.00
Trust agency fees	7,682.11
Total	72,436.91
Grand total	1,121,811.34

Cash disbursements in excess of cash receipts 52,911.16

Respectfully submitted,
WALTER MULLADY,
Rogers Cartage Co. Employer Trustee,
ED FENNER,
Union Trustee.
HAROLD C. HAVIGHURST,
Northwestern University Law School
Public Trustee.
WILLIAM B. CRAWFORD,
Alternate Union Member and General Counsel.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

A Program for Senior Citizens

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. HUMPHREY. Mr. President, with all the talk about prosperity, with all the self-congratulations going on about the state of the economy, I hope that we shall none of us forget that for literally millions of Americans, prosperity is only a phrase in a newspaper headline. For farm families in general, for the families who live in areas of chronic unemployment, and for the elderly who are trying to get along in their years of retirement on small incomes, there is no real prosperity.

Recently, Mr. President, I set forth my thoughts on what we must do in the Federal Government to see to it that this last group—our senior citizens—can spend their years in dignity and comfort. I did so in a radio address to my Minnesota constituents during the week of March 7 this year, and I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A PROGRAM FOR SENIOR CITIZENS

(By Senator HUBERT H. HUMPHREY,
Democrat, of Minnesota)

We often hear the word "crisis" thrown about these days. It is a word which is used all too often to describe problems of all types.

Today I want to talk with you about a problem which is truly critical. It is a problem which cannot wait for more talk and more study. It is the crisis faced by our Nation's senior citizens.

Let me first give you an idea of the immensity and growth of this crisis. In the year 1900 there were only 3 million Americans over the age of 65. Today there are nearly 16 million. In 10 years there will be more than 20 million.

But these are just figures. They do not tell the pathetic story of the needs of our senior citizens in terms which all of us can understand.

They do not tell the story of the elderly widow whose income is so low her day begins and ends with a sense of hunger.

They do not tell the story of the elderly man who needs, but cannot afford, hospital or nursing-home care for illness or disease.

They do not tell the story of the elderly couple who live each day in fear of losing the roof over their heads.

We hear noble talk about "the golden years." But more and more people are finding that these are years of despair and anxiety. This is a disgrace for a nation with our wealth and luxury.

I'm not just talking about a few isolated cases. Millions of Americans, through no fault of their own, are existing without ade-

quate incomes, health care, or housing, and without a recognized role in the community.

The Department of Health, Education, and Welfare tells us that it costs at least \$2,800 a year for a couple to live by themselves in modest fashion.

But the average retired couple on social security receives only about \$1,440 a year.

And 60 percent of the individuals retired on social security have less than \$1,000 a year in money income.

Even more desperate is the crisis facing the 1,300,000 aging widows who now receive an annual social security benefit of \$56 a month.

I ask you: Is this what our mothers and fathers deserve? Do these fine citizens deserve a shabby rented room and a diet of bread and soup in their final years?

There are selfish and narrow-thinking persons who say the problem is not theirs. They say: "It's every individual for himself." They say every individual has total responsibility to plan for retirement.

I agree that we should all plan on an individual basis to provide for our future needs. But the best plans and preparations of all men can be crushed by forces beyond their control. Disease, economic fluctuations, and just plain bad luck can make a mockery of even the wisest investments and preparations.

What we need is a new dedication to end the crisis facing our senior citizens. What we need is a government with heart and understanding. And what we need right now is action on a program to allow our senior citizens to live with dignity, security, and a sense of usefulness.

Let me specify six steps which are vital to such a program:

1. Increase social security benefits to keep pace with living costs.
2. Increase from \$1,200 to \$1,800 the amount which individuals may earn without losing social security benefits.
3. Extend the social security system to cover costs of hospital and nursing-home care for senior citizens.
4. Establish minimum Federal standards which States must meet for old-age-assistance programs.
5. Provide effective Federal assistance for specialized housing programs for the aged.
6. Allow a tax-credit incentive to encourage hiring of older workers.

I have sponsored legislation for these purposes in the Senate and will continue to fight hard for favorable action. This is no sudden effort on my part. I have never forgotten—and I will never forget—the crisis facing our senior citizens. We must let them know they are not alone.

Who Leads in Space Race?

EXTENSION OF REMARKS

OF

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. CURTIN. Mr. Speaker, the recent accomplishments of our scientists, as evidenced in the flight of Pioneer V,

indicate that the United States is still very much in the space race. In this connection, under unanimous consent I include in the Appendix of the RECORD a very good editorial on this subject which appeared in the March 14, 1960, issue of the Evening Chronicle, a newspaper of Allentown, Pa.:

Because Russia got there fastest with the biggest, there has been a tendency to underestimate U.S. space accomplishments.

The latest news in this field definitely calls for a reevaluation of the entire picture. It projects the United States farther out into space than any nation ever has gone before.

The flight of the Pioneer V toward an orbit around the Sun between the paths of Earth and Venus has been highly successful and gratifying. The news represents more than a major scientific breakthrough. It also is a stimulant to the confidence of American people who have been treated to a heavy dose of propaganda in the light of Russian achievements in the space race.

Actually, the claims of Soviet superiority always have been open to question. We heard only of Russian successes, nothing of Russian failures. Meanwhile, our own efforts have been conducted under fishbowl conditions, with every dud shot heard around the world.

While the hardware lofted into space by the Russians has generally been larger than our own, we have had more artificial satellites in orbit and most of what we sent way out there accumulated and relayed to earth scientific data that is vital to preparations for our first venture in that direction in manned equipment.

Furthermore, there is strong scientific reason to question authenticity of published pictures purporting to be photographs of the dark side of the moon taken by a Soviet satellite and sent back to earth. If, as many experts believe, these pictures are fakes, there must be reason to suspect exaggeration of some other Russian claims in the missile and satellite field.

Our failures notwithstanding, our successes—especially Pioneer V—prove rather conclusively that the space race will not be conceded to the Soviet Union by default.

Who Is Responsible for TV's "Ugly America"?

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. BUSH. Mr. President, I ask unanimous consent that an article entitled "Who Is Responsible for TV's 'Ugly America'?" written by Clare Boothe Luce, be printed in the Appendix of the RECORD, following my remarks.

I am informed by the Government Printing Office the article would make approximately 2 1/4 pages, at a cost of \$182.25. Therefore, under the rule, I ask

unanimous consent that it be printed, the cost notwithstanding.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

WHO IS RESPONSIBLE FOR TV'S "UGLY AMERICA"?

(By Clare Boothe Luce)

Last winter, with the heat of public exposure upon it, the television industry dropped the fraudulent quiz shows. The thud was heard around the world. Congressional inquiry revealed that the collusion and corruption involved in the quiz shows had been long suspected, even perhaps known, not only to the industry itself, but also to the Federal Communications Commission—the Government's own agency for overseeing the industry. Public indignation exploded, in the press, on the platform, in the pulpit, and in the Halls of Congress. Whereupon, public opinion demanded that both Government and the industry render an account—a long-overdue account—of their three decades of trusteeship of the Nation's airwaves. The public insisted on knowing the answer to a number of questions: Who was to be held accountable for such malpractices as kickbacks, payola, shills, plugging for advertisers' products during the programs, and phony ad claims in the commercials? But, above all, the public wanted to know who—in Government or in the industry—could be held accountable for the image of the "ugly America" that appeared on the screen itself.

The main inquisitors comprised a highly articulate section of the country, among whom were many of America's most respected expounders of the public philosophy. The press and its greatest political pundits, like Walter Lippmann; the top TV critics, like Harriet van Horne and John Crosby; important religious and educational leaders, psychiatrists, doctors, sociological-research and civic-minded groups, even a number of businessmen of high caliber appointed themselves the quiz masters. In the name of Mr. and Mrs. America and their children. Whatever their line of approach to the question, significantly they all agreed on three things:

First. That while TV presented many programs ranging from harmless to excellent, the overall image of America that emerged from the majority of TV programs was at best shoddy, stupid, and materialistic and at worst, brutal, sadistic, and criminal.

Second. That this image, if projected for another decade, was bound to debase the American character and invite the contempt or fear of other nations, thus weakening America's democracy.

Third. That the responsibility for changing this ugly America image must be clearly fixed somewhere—either in Government or in the industry.

Thus the dropping of the quiz programs set the stage for the greatest of all television quiz programs.

But this time, the men of the industry themselves were in the isolation box. They are still there, where—unlike Charles van Doren—they are honestly sweating. Already they have given a good many answers to the questions concerning malpractices within the industry. And between their own promises of self-regulation and self-reform, and the probable passage of some Federal legislation that will help them keep their promises, there is some reason to believe that corruption in the industry will soon be brought under reasonable control.

But the big question, the 64-million-dollar question—"Who in the industry, what segment of the industry, is responsible for and therefore accountable for what appears on the screen?"—remains unanswered, except as the industry (this time, like Charles van Doren) gives the same old rigged

answer: "The public is responsible. We are just giving the public what it wants . . . which is democracy. Isn't it?" (Oddly enough, this was Charles van Doren's main and only defense for what he had done.)

Nevertheless, this question of accountability is one that every thoughtful and patriotic American must insist be pursued to the end. For until it is answered, no American can have any certainty that the TV screens of the Nation will not continue to be used, in large part, to debase the moral and intellectual fiber of the country.

We must remember that the present orgy of mea culpa breast beating and tua culpa finger pointing, which both the FCC and the industry are indulging in, to the accompaniment of loud and vague promises to try to do better programming in the future, are no guarantee to the millions of American TV family viewers that they will be any better even a year from now. As one Madison Avenue advertising agent put it to a client who was experiencing qualms about showing an especially brutal "whodunit" series he had just bought: "This is just the present climate. It will soon blow over. Things will get back to normal in 6 months."

If the men in the isolation booth today cannot, or will not, answer the question of accountability and where it should be fixed, what can you and I as American citizens do about it?

The first thing we can do, as the ultimate quizzers, the public, is ask the right questions and know, ourselves, the right answers. In other words, we must try to understand the structure of the television industry in order to know whether there is, today, any answer to the \$94 million question.

The first and most important question to ask the men in the isolation booth is: Who owns the television air waves? There is only one answer to that one: The air waves of the Nation belong to the American people. They are the property not of a majority (even a large majority); they are the property of all the citizens. They belong to you and me and our families—and to all American families. Let us never lose sight of that basic fact, if for no other reason than that it is the very one currently being lost sight of by most people.

In 1927, the people, by an act of Congress, granted the use of the air waves to private enterprise. The act set up the Federal Radio Commission, which has since been superseded by the Federal Communications Commission. This is a body of seven men, appointed by the President.

What is the responsibility of the Government, through the FCC, for television? The FCC (which is the public's trustee of its television property, the air waves) has the right to issue licenses to TV stations, allocate frequency bands, and oversee the industry. It also has the right—and, indeed, the duty—to refuse to renew the license of any station which, in its opinion, fails to live up to the basic requirement of the Communications Act, which is to "act in the public interest, convenience, and necessity."

Since the FCC first started parceling out licenses in 1934, it has never revoked or refused to renew a single license because a station failed to fulfill these requirements.

Oddly enough, the first important TV figure in the isolation booth in the great American quiz was the Chairman of the FCC, Mr. John Doerfer. He stepped into it when he faced a U.S. News & World Report quizzer (Oct. 26, 1959, issue). In that interview, Mr. Doerfer made it abundantly clear that the FCC has no control of any kind at all over the content of programming, and that any effort on his part to exercise such control, even by an act of informal persuasion, would—in his view—constitute a failure to comply with the provisions of the section of the act which is a direct proscription against censorship or interference with

free speech. Furthermore, in his view, as action is not required—is indeed forbidden by law—the FCC is not even morally responsible for analyzing or studying the content of the programs shown on the Nation's screens. As the public's trustee for television, Mr. Doerfer seemed to feel that an abysmal ignorance of program content, even of its overall quality, was what the public expected of him. As the interview showed, he did not disappoint this imagined expectation.

While Mr. Doerfer had little or no idea of the general quality of TV programs, we can evaluate the quality of the Chairman's mind—and his general intellectual fitness to oversee the vast television industry—by the following exchange between himself and the U.S. News & World Report interviewer:

"Question. Do you have any record of the overall programming which will show what percentage [of the programs] was spent on crime?"

"Answer. No."

"Question. Then how can you judge the overall program content, if you have no records?"

"Answer. First of all, how could you possibly categorize programs into whether or not they involved crime? . . . Many people don't like and disapprove of the shootings and the murders that go on in the Who-dunits. . . . But, when Hamlet comes on, where there are about six murders and one suicide, for some reason or other that becomes high dramatic art. Now, I agree there certainly is a difference between the quality of the two, but how can I write a definition or a standard which I can give to a clerk who can apply some sort of sanction against the one and not against the other?"

The fact that the Government has no legal control over programming of the Nation's screens, and therefore no responsibility for it, is plainly a great relief to Mr. Doerfer. And so long as the FCC is chaired by a man who is not able to state (or even find an educated ghost writer to help him state) the difference between the lowest form of sadistic trash and the highest form of tragic poetic art, it may also be viewed as a relief to the public.

The FCC Chairman was even unable to state where today the responsibility for better programming does lie. In the same interview, he suggested that perhaps it was with the advertiser, or sponsor, who generally determined what appears on the networks. But "the public will gravitate to those stations showing programs that it wants, and it's all based on the sponsor . . . all based on advertising revenues." On the other hand, the Chairman thought, perhaps the "broadcaster should have full control of all program production. Then he will be more responsive to his responsibilities."

On the other hand (once more), Mr. Doerfer did not think that those responsibilities should be fixed on the broadcaster by legislation "until we know precisely where we are going; until we know definitely what evils there are." But, according to the wonderfully ambidextrous Chairman, "I don't think there's much wrong with TV. It's an infant industry, and it's going through growing pains."

The conclusion the citizen must reach is that today Government has no responsibility for what appears over your airwaves on your machine, doesn't believe it can or should be fixed inside the industry, and doesn't believe that fixing it is important or necessary, since, Mr. Doerfer says, TV is giving people what they want.

Plainly, the question of the Government's moral responsibility for maintaining a decent overall standard of programming is a long way from being thrashed out. Only one thing is clear: The present Chairman of the FCC is one of the most unlikely characters in Government to aid the industry or the Con-

gress in any enlightened or intelligent debate on the subject.

We must, therefore, in our search to fix responsibility for the moral, aesthetic, religious, educational, ethical, and artistic content of TV, pursue our own examination of the industry.

What are the networks? The big names are, as every TV-viewer knows, National Broadcasting Co. (210 stations), Columbia Broadcasting Co. (210 stations), and American Broadcasting Co. (217 stations). For the most part, the networks are essentially gigantic bundles of telephone wires, which the broadcasting companies lease from another gigantic network, the American Telephone and Telegraph Co. The big TV networks produce few programs themselves. NBC produces only a handful of shows and news summaries a week. CBS produces about 30 percent of the programs it carries on its wires. ABC produces almost none.

The networks, or broadcasting companies, are largely middlemen who re-lease their leased wires, along with their facilities and stations, to the advertisers who sponsor the vast bulk of the programs carried on our air waves. (Where the advertiser, in turn, gets his packages, we shall see presently.)

The point can be made—has, in fact, been frequently made by the president of one of the big networks, Mr. Kintner of NBC—that the networks have no more moral responsibility for what is carried every day over their leased wires onto the screens than the A.T. & T. has for the conversations that go on all over America, around the clock, over its wires.

A review of the public statements and speeches made by numerous network officials and executives during the past decade shows that the majority of them take the same view on responsibility for the content of programs they do not themselves produce as the FCC takes—they have none. Moreover, to interfere in the programming field would involve not only censorship, but with their present facilities, financial hardship. Monitoring, analyzing, reviewing, editing, or censoring the Nation's programs would involve hundreds upon hundreds of scripts and films. Such an effort, personnel-wise, would be tremendously costly and might indeed alter the very character of their business, which is largely the business (the highly profitable billion-dollar business) of leasing the wires granted to them gratis by the American people. (A network may charge an advertiser as much as \$100,000 an hour for a prime evening time.) And, in truth, in the absence of any law fixing responsibility on the networks for program reviewing, this view is reasonable. Such responsibility as the networks now show for good programming is altogether voluntary.

In defense of the big broadcasting companies (especially of CBS), the fact must be noted, and should be noted for the public promise and hope that lies in it, that the quality of many of the shows the big networks do produce—compared with the many banalities, vulgarities, brutalities, and even obscenities that characterize the programs they do not produce—are generally good. Many of them are among TV's best. Nevertheless, the networks do not accept, and do not wish to accept, any fixed responsibility for the overall quality of TV. Moreover, they point out, the bulk of the "ugly America" programs are handed to them, sight unseen, by the sponsors. If responsibility, or blame, for the creation of this image is to be fixed, it should go where it belongs—on the sponsor.

What is the sponsor's role in TV? Let us follow this finger of scorn as it seems to point to the sponsor—that famous (though rapidly becoming infamous) "kingpin of the industry." The networks are stating no more than the facts when they say that the advertiser presents over 75 percent of the programs that come into America's homes.

There can be no question but that the advertiser has something to say about the quality, the character, the moral, artistic, or educational worth of the program he seeks to sandwich between his ads. And it is indeed a notable and happy fact that the greater the prestige and esteem in which the advertiser's company is held by the general public, the better the caliber of the show he sponsors is likely to be. Great companies—for example, Ford Motors (Startime) and Standard Oil (The Play of the Week)—cannot afford to besmirch their own "public image" by sponsoring shows that affront racial or religious groups, outrage ordinary mothers and fathers, or arouse antagonism among organized pressure groups, such as the Parent-Teacher Association.

There are also some less affluent or less prestigious sponsors who conscientiously exercise a sense of responsibility toward the character of the public entertainment presented by their companies.

But again, the sponsor's assumption of responsibility, where it exists, is purely voluntary. No public law, beyond those relating to the dissemination of certain obscenities, indecencies, and so on, which prevail for newspaper, book, and magazine publishers, requires him to maintain—no less raise—the moral or artistic level of the program he shows.

Moreover—and this is an important point—the sponsor and his company, like the networks, receive their programs sight unseen. The sponsor buys them from his advertising agent. If his agency provides him with a "lemon" or a "turkey," which fails to hold his advertising audience, or if the program (however popular) creates a false image of his company in public circles where his company (for ultimate reasons of profits) needs to be thought well of, the sponsor shows where he thinks the responsibility lies: He fires his advertising agent.

What is the responsibility of the advertising agency? When television came on the scene, radio was already booming, and the pattern of the program paid for by the advertiser was already fixed. The agency is the real power in TV, as it was in radio. The agency, working on a commission basis, supplies the advertiser with the program. His responsibility for the program might be demonstrated if he produced it. But he does not. The agency, like the broadcaster, is largely a middleman.

He buys his TV "package" for his client (the sponsor) from a packager. He is guided in his purchase by only one criterion: How many people will tune in on the program?

For the more people who watch the program, the more will see his sponsor's ad, the greater (presumably) will be the sponsor's profits, and, consequently, the more secure the agency's future commissions from the client. Like the networks and the sponsor, very often the advertising agency does not see—until it appears on the screen—the entire program it buys. An agency, for example, may purchase a series of 39 episodes on the basis of a pilot film. Can the agency be held morally responsible if, after the acceptance of the pilot film, the subsequent 38 episodes run downhill, begin to feature increasingly base, vulgar, or brutal material, start to flood the livingroom floors of the Nation with gore, break the decibel record for shrieks and groans? Plainly, he says, if responsibility for the quality of the program lies anywhere, it lies with the program's creator, the packager.

What is the responsibility of the packager? Perhaps 85 percent of the nationally telecast evening shows are from packagers (Screen Gems, Four Star Films, Revue Productions, Desilu among the foremost). Just as the sponsor can have something to say about the program, so can the agency. But in the end, after he has shopped for his pilot film and

the overall theme of the series, he has to trust to the skill, talent, and taste of the producer. The producer, or packager, provides the studio, stars, scripts, ideas, talent, and films; he makes the programs.

But the packager, like networks, like sponsors, like agencies, heatedly denies responsibility. He is not in business to maintain—no less elevate—public taste, and there is no law requiring him to do so. Like the A. T. & T., like the networks, like the sponsors, like the advertising agencies, like the talent agencies, he is in business to make as much money as possible.

He cannot make money unless the package he makes and sells will, in the end, get an audience and hold it for the sponsor. Personally, the packager might prefer to produce fine classical dramas, ballets, documentaries, and original scripts of a high order. But what happens to his revenue if these fine programs can't find a sponsor or don't click with the masses?

We have already seen that Mr. Doerfer, chairman of the FCC, felt that the government has no responsibility for maintaining or elevating the over-all quality of TV shows and that, all the way down the line, the networks, sponsors, agencies, and packagers agree they have no such responsibility, either, except on a voluntary basis. There is also common agreement among them on one other question: Such responsibility as they have to the public, whose air waves they use (and grow rich on), is simply this—to give the public what it wants.

Now we come to an all-important question: How do the networks and the sponsor, advertising agency, and packager know what the public wants? They check it with the ratings.

What are the ratings? The rating services are firms whose job it is to determine how many people at any given hour in any given area are watching any given show coming to them over their own wave lengths. Nielsen and Trendex (to name a couple) have various ways of sampling the numbers of people tuned in on any given program.

Let us take an example: A rating service finds that, on the 7 to 8 p.m. hour, "Joe Gutter, Private Eye" or "Dead Gulch Yarns" is being "watched" by 80 percent of the viewers, while "Studio Super" (a highly exciting and original effort in live drama) and a symphony orchestra, on at the same hour, are drawing only 20 percent of that night's TV audience. This "fact" is reported to every interested sector of the industry. The agent who sold the symphony hour or "Studio Super" to its sponsors scrapes, as best he can, the egg off his face—and the "eggheads" who watched those programs out of his hair. He promises his sponsor it will never happen again. The next time, he asks for—and gets from the packager—a program featuring their common denominator, brutality, blood, and bullets. The sponsor then has the double satisfaction of giving the public what it wants and getting a far larger audience for his commercial.

And so we end—or almost end—our quiz program. No one, unless it is the American public, seems to be responsible for TV's image of "ugly America."

Can we accept this answer? You and I cannot. And in order to see why we cannot, we must now return to our original and basic fact: The air waves belong to all the people.

Do they cease to belong to the 20 percent who want to see "Studio Super" or the symphony orchestra simply because 80 percent prefer "Joe Gutter, Private Eye"? To agree to this proposition is to agree that only a majority of the people have any rights over the wavelengths. Such an admission is to deny the assumption of American democracy. It is to say that a minority must relinquish its property rights over the wavelengths any time the sponsors (for reasons

of profits) choose to usurp them. In other words, the present situation in television is that the sponsor's right to make the largest possible profits is given precedence over the rights of a minority of our citizens. That is to say, certain programs, which the ratings themselves show there is an audience for, are canceled in favor of programs, and imitations of programs, that get a majority rating.

The great question that has not yet been debated by the Congress of the United States is the question of the minority's right, based on the ratings themselves, to get what they want over the wavelengths.

A system that permits advertisers and the networks to throw off the air programs the ratings prove several million people enjoy, simply because there are more profits to be made by showing worse programs to more people, is the suppression of freedom of speech for a minority. It is also the worst and least defensible form of censorship—dollar censorship.

We now come to the practical question of what you, as a private citizen who wants better television, can do to get it. You can do the following things:

First. Write your Senator or Congressman, and demand that the Government take cognizance of the minority's rights in the airwaves and their preferences for getting good programs over them—as expressed by the ratings themselves. Insist, in your letter, that the Congress firmly take one of two courses: fix responsibility on the networks for balanced programs based on the ratings; or, if this cannot be done by the networks, insist that the Government itself provide a channel for decent, intelligent entertainment that reflects minority interest.

If the networks and advertisers cannot raise a standard of entertainment to which the intelligent and thoughtful can repair, then it is Government's duty to do so.

Second. Contact your priest, pastor, PTA, or any civic group in whose integrity you have faith, and ask them to write your Senator.

Third. Telephone your local station whenever a program offends your sense of decency or morals, and raise a row with whoever answers the phone. Telephone to praise a program that pleases you. Your local station is very sensitive to such calls.

Fourth. Organize, with other families in your blocks, "tune-out strikes" against offensive programs, and also notify the local station you have done so, informing it, at the same time, that you do not intend to buy the products advertised on these offensive hours.

Above all: Remind yourself and your neighbors that you—and not the networks or the advertisers—are the ones who own the wavelengths, and that the profits they are making out of your property do not justify the image of the ugly America they are projecting. It is your right and duty to protest it. It is the Government's duty to change it, so long as the industry itself, in all its sectors, refuses to accept any fixed responsibility for changing it.

Forces of World Revolution Seen in Sitdown Protest in South

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fol-

lowing editorial from the News and Courier, Charleston, S.C., March 15, 1960:

FORCES OF WORLD REVOLUTION SEEN IN SITDOWN PROTESTS IN SOUTH

Sitdown demonstrations that threaten the public peace may be symptoms of a worldwide conspiracy against law and order. They are more than stunts by idealistic students. The sitdowns are planned by agitators with ample experience in troublemaking. Consider the unrest fomented in Nashville, Tenn. Sitdowns in that city, led by the Reverend James Morris Lawson, Jr., admittedly were planned for more than a year. They were an invitation to race riot.

The Nashville Banner said that "imported techniques of local harassment" were used to create disorder. "In that inflammatory role, and out Kaspering Kasper as the ramrod of strife directed from the outside, is the Reverend James Lawson. His capacity for mischief shows in the crisis he has brought on race relations not only in this city, but at other points in the South which he has visited in that mission of incitement."

The Banner was referring to Lawson's participation in the Montgomery bus boycott. But that was only one chapter in this agitator's career. He spent 3 years, from 1953 to 1956, in India. Asked if he was trained in Indian methods of passive resistance to force social change, he refused to answer directly. What is clear is that he and others like him are roving agents of social revolution. The law means nothing to them, except when it promotes their cause.

Lawson's attitude was revealed in his remark that "the law has been a gimmick to manipulate the Negro." Even after he was arrested, he continued to advise his followers to violate the law.

Good Americans should be disturbed at the use of colleges and universities as bases of operation for agitators inciting riots. Vanderbilt University was right in expelling Lawson for his leadership of sitdown activities. But radical sympathizers used the university's name in organizing a "Lawson Defense Fund." At Princeton University last Sunday, the university chapel was made available to the Reverend Martin Luther King, Jr., a leading social revolutionist, who used the pulpit to attack the South.

The basing of agitators on the campus and the activities of radical university groups, many of them masked as religious movements like Lawson's Fellowship of Christian Reconciliation, reminds us of political techniques in Cuba and other Latin lands. In those countries, universities often serve as bases for so-called students, who usually are mature revolutionists aiming at overthrow of a government by subversion.

One of our readers, who has intimate knowledge of events in Castro's Communist-ridden Cuba, urges us to consider the relationship between the sitdown demonstrations and the leftist revolution in that country. He says that radical student groups at Havana University are greatly interested in the sitdown demonstrators. It is well to remember that the leftist revolution in Cuba also is a color revolution. Dark-skinned Cubans rallied to Castro's cause, and are enjoying property seized from middle and upper class whites in Cuba. One wonders if the U.S. Government sought to determine whether any ties exist between the radicals leading the sitdowns and radical student groups across the Florida Straits.

Because revolution is a worldwide activity, directed from Moscow, the possibility that sitdowns are inspired by subversives cannot be overlooked. The success of the Communist world revolution has been built on enlisting "liberal" dupes who mistakenly believe they are advancing human rights. This kind of Communist manipulation of forces of conscience may be taking place in our country today.

Address of Mr. Charles E. Ingersoll

EXTENSION OF REMARKS

OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Charles E. Ingersoll, chairman of the board, Kansas, Oklahoma & Gulf Railway Co., Midland Valley Railroad Co., Oklahoma City—ADA—Atoka Railway Co., before the Arkansas Basin Development Association, on March 11, 1960.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have kinsmen on the program this afternoon, both of whom are in the transportation industry—myself in the railroad business, my esteemed cousin, Capt. A. C. Ingersoll is president of the Federal Barge Lines. You also, no doubt, are aware of the traditional animosity between the railroad industry and the barge industry. Add to these items that an aim of the ABDA is to provide barge transportation in our railroads' territories and you would be entitled to feel you are to witness a family scrap.

If such is your anticipation you will be disappointed, as there will be no family blood spilled.

Our railroads are in favor of the Arkansas program and especially that facet of the program that will provide a 9-foot channel on the Arkansas and Verdigris Rivers, a channel suitable for barge transportation from the confluence of the Arkansas and Mississippi Rivers to Catoosa, Okla.—for all practical purposes, to this great city of Tulsa.

It will be my endeavor this afternoon to explain to you the way in which our management arrived at such an heretical position that in effect says that the presence of waterborne transportation in the area served by the railroads we manage will lead to increased prosperity for these railroads.

But, first and briefly, the area we serve should be delineated. Specifically, the Midland Valley serves the rich coal fields of western Arkansas and eastern Oklahoma, after a job into Fort Smith the road runs northwesterly across Oklahoma through Pabana, Muskogee, Tulsa, Pawhuska and Arkansas City to Wichita. The K.O. & G. runs on a north-south axis from Baxter Springs, Kans., through Miami, Muskogee, Henryetta and Durant, all in Oklahoma, to Denison, Tex. The O.C.A.A. runs from Tupelo, a point on the K.O. & G. south of Henryetta, northwesterly through Ada and Shawnee to Oklahoma City. Our general offices are in Muskogee where the Midland Valley and K.O. & G. intersect. Parenthetically, we are the only railroads serving the great State of Oklahoma whose general offices are in Oklahoma.

With your knowledge of the country through which these roads run, you can appreciate that, due to availability of natural resources, water and labor, presence of recreational facilities and proximity to markets, the area generally referred to as northeast Oklahoma holds the most promise for us. Northeastern Oklahoma is, of course, traversed by the Arkansas and Verdigris Rivers.

Having said this area holds the most promise for us, the question then becomes "Promise of what?" The answer is what all American businessmen are constantly striving for—"more business." For freight hauling railroads, such as ours, this desire for more

business can be realized by the industrialization of the area served.

Now, on this matter of industrialization—you have many excellent efforts continuously in being to lure new industry into Oklahoma and particularly into northeastern Oklahoma. These efforts are excellent and due to the many assets northeast Oklahoma has, should be very fruitful. But, until a basic disadvantage inherent to the area is eliminated, the effort may be likened to a prize fighter entering the ring with one arm tied behind his back. The odds are quite against his chance of KO'ing his two-armed opponent.

Before discussing this basic disadvantage, how it came about and its cure, let me give an example of it in operation.

My files indicate that some 3 years ago and as a result of the effort Oklahoma is making toward industrialization, it was learned that a major heavy industry was considering the location of a plant in either the Southeast or the Southwest. An industrial team of men from Oklahoma went to work on this report and were able to have Muskogee included among the 13 areas the company selected for intensive study. As a result of the study of significant cost factors for this company, Muskogee was rated most favorable of the 13 in the cost of electricity, gas, labor, water, and land, but the transportation cost of raw material in and finished products out for this company at Muskogee were so high as to eliminate Muskogee from further consideration. The company engineer in charge of this study had this to say in a letter:

"If the proposed barging facilities of the Arkansas River were now a reality, our finding might be different, but the existing spread between rail and waterborne freight is so great that these other factors in your favor are more than neutralized."

The great handicap northeastern Oklahoma carries in its fight to industrialization then is high transportation costs.

Now, I am not an expert rate man and it would seem to me that if our area is to be industrialized, common sense dictates that rail rates should be reduced. As I say, I am no rate expert and I cannot give you the argument as to why the rail carriers will not voluntarily, by majority vote or independent action, reduce rail rates to stimulate volume business, but the fact is that it has not happened in the area under discussion.

In other nearby areas of the country rail rates have come down. To find a clue as to what compelled these rail rates down, let's look at the situation in the Southwest. Again I am no rate expert, but I think you would find rail rates to and from points on the gulf coast are relatively low; moving inland and I am thinking mainly of a north-south axis, the natural traffic flow due to existing plant and market locations, moving inland, the rates rise for a while but, as Missouri River points are approached, the rates start dropping, reaching the lowest levels at points right on the river.

If this rate pattern is graphed, there would be a steady rise in the graph from the gulf to a plateau midway between the gulf and the Missouri River with the chart then descending to a low on that river. Interpreting the graph geographically leads to the not-surprising conclusion that the plateau of high rate level represents the situation here in Oklahoma.

Further and final analysis of our graph raises the question—Is there a common factor at both ends of the chart where rail rates are the lowest and what, if any, relation does this common factor have to these low levels?

There is, of course, a common factor and it is waterborne transportation. To the south, at the gulf ports, both intercoastal and

barge carriers provide service and on the Missouri River, to the north, water carriage is by barge only.

As to the cause and effect between the presence of water transportation and low rail rates, there is a real and undisputed relationship. The accumulation of each item of cost in providing transportation results in a sum of costs considerably favoring barge operation over the railroads. Parenthetically, in these items of cost to the barge operators, we feel there are certain inequalities that unduly penalize the rails in favor of the barges, but that is another subject.

The fact is that the barge operator can provide service at less cost than can the rail. This being so, he can make a profit on a rate charged to the shipping public lower than the average rail rate. The rails, on the other hand, do not want to lose business to the barges and thus, to protect themselves, must establish rates to and from water points lower than their average rates and in competition with barge rates—all things considered.

The casual relationship is then established and these lower rail rates at water point are known, in technical parlance, as "water-compelled rates."

If northeastern Oklahoma is to eliminate the bar to industrialization in the form of high transportation costs to industry, it appears then in theory that water-compelled rates must prevail in the area. Navigation on the Arkansas would provide the vehicle to achieving these types of rates.

But let us examine the experience in other areas of the country in order to see if our theoretical industrialization really does occur on the waterways.

In the past decade, the Ohio Valley alone has seen expansion of industry at a rate of \$1.3 billion annually, or a total expended of \$13 billion.

Since World War II, there has been a steady increase in industrial expansion in the Mississippi Basin and there seems to be no end in sight. In 1958 there was a total of 488 waterside industrial plants either built or expanded, a figure which was exceeded only in 1956 when the total was 565. The 1958 figure is very impressive when it is remembered that this was a year of recession with plant expansion at a depressed rate during much of the year.

During the first quarter of 1959, the American Waterways Operators were able to report construction or expansion had been started at 77 industrial sites on navigable waterways and the final figures for 1959, when available, will certainly be impressive.

You people in the Arkansas basin area do not need statistics on the growth to the south of you on the lower Mississippi and the gulf coast of Louisiana and Texas. Most of you have probably seen it with your own eyes and felt its impact on your day-to-day lives.

And so it goes. It is impossible to categorically state that the new plants would not have been built and the expansions to existing plants would not have taken place if there had been no water transportation available, but the fact cannot be ignored that availability of water transportation was a factor in determining the choice of location for the new plant or expansion of the old.

The next aspect of the problem our management had to study was: granted waterways lead to industrialization, but does it follow that industrialization in connection with waterways create profitable business for railroads that are nearby?

It is, of course, axiomatic that water-compelled rates will lead to a diminution of the revenue to be earned on each car handled by railroads in the area of such rates. Then if the carloads handled remain constant, the local railroads will be in a bad way. But you will recall my telling you of the plant

Muskogee did not get—the rates on the in and out bound material that plant would have used are presently quite high, which sounds fine. The fact is, however, that we would be better off handling business for that plant at low rates than we are now since high rates in the tariffs do not move a pound of freight. In effect then, we feel the railroads in the area of water-compelled rates will lose in per-car earnings but this loss will be, in our considered opinion, more than offset by increased volume generated in the area by the new industry attracted by water-compelled rates.

Let us look then to see what support we can give to the proposition that these new industries will produce a vast volume of business for nearby railroads.

As a generality, it is safe to say that any industry creates business for all forms of transportation. But it is possible to be more specific and understood why the types of industry which seek water transportation will produce transportation demands on other types of carriers.

The prime requisite for utilizing the efficiencies of barge shipment is consolidation of a massive volume of freight at one point. Barge lines have minimum tenders of 500 to 1,000 tons. In other words, for a shipper to obtain the cheapest rate possible by barge, he must ship in very large volume. This requirement of such large minimums restricts barge service to limited range of products—mostly industrial raw materials and fuels. These raw materials are processed and the fuel consumed at the water-served plantsite, resulting in a finished or semifinished product not eligible for large shipment or not likely to be shipped by barge from the plant because of service requirements. Thus, the output of the plant will move by plane, truck, or rail. Any service offers ultra-high-speed movement with emphasis on value of the cargo and limitation on size of package. These criteria are not generally found in the end product of a plant which consumes huge volumes of raw material and fuel.

The trucking industry offers service for small units requiring individual treatment and great flexibility in handling. High speed, door to door delivery and frequent schedules are its sales points. There is no doubt that the type of plant under discussion will avail itself to some extent of this type of transportation service.

But it seems fairly obvious that a plant consuming huge amounts of raw materials and the energy will produce the type of product which the rails are most aptly suited to handle. Railroad transport offers relative low cost fairly rapid movement of goods to thousands of different points throughout the Nation. The efficiencies of trail haul stem from the economics of mass transportation—low rates on minimum carloads of 12 to 15 tons or more—minimums in excess of either planes or trucks and tailored to suit the output of the industrial plant located on the waterway.

Not to be overlooked, is the fact that industrialization means increased employment for the community and concomitant increased business activity requiring increased transportation services. The rails will get their share of this increased transportation.

The discussion of whether industrialization in connection with waterways is helpful to nearby railroads has, up to this point, been theoretical. Let's move from theory and look at some actual experience. Taking the eight major railroads of the Ohio and Mississippi Valleys (B. & O., C. & O., N. & W., L. & N., in the Ohio Valley and G.M. & O., I. C., M. P. and St. L. S. F. in the Mississippi Valley), the ton miles of revenue freight they moved in 1957 were 23 percent higher than in 1946 while that of all class I railroads in the United States were up only 4 percent.

Moreover, the dollar freight revenues of the Ohio Valley railroads were up by 76 percent, of the Mississippi Valley railroads, by 73 percent, and of the eight Valley railroads combined, by 75 percent, while the national average increased only 54 percent.

The cause and effect are too apparent here that these major lines paralleling the rivers have benefited therefrom to be mere coincidence and we are driven to the conclusion that industrialization in connection with waterways is good for railroads nearby.

So far, as I have exposed our thinking to you, we have dealt with industrialization in general. Briefly, let us look at a specific industry. In western Arkansas and eastern Oklahoma are large deposits of high quality caking coal. This coal is currently being mined in moderate volume and is being shipped, by rail, mainly to steel mills in Colorado, Utah, and California. Because of the existing rate structure, the present market for this coal to the east of the fields is limited. The laid-down price of this coal at the western mills is quite high. The advent of navigation on the Arkansas would open new markets, particularly on the lower reaches of the Mississippi to the Oklahoma and Arkansas coal producers. These new markets would not produce a pound of freight for the railroads of the territory. But to the extent that these new markets enabled the mine producer to achieve greater efficiency and lower costs through volume production, those same railroads would receive the benefit of a continuous market for this coal to the West, which is uncertain at this time due to the relatively low volume presently produced in the area.

There are other specifics which could be analyzed. Oklahoma is an agricultural State to which superphosphate fertilizer is shipped, but the volume consumed is influenced by its price laid down in Oklahoma. Move the raw materials, phosphate rock and sulphur, into the area, by cheap barge transport, combine the products into the finished fertilizer and, as a result of lower costs, its price will drop and larger amounts will be consumed. Such a product will move relatively short distances by rail, witness the movement of cement by rail in Oklahoma today, and the rails will benefit from the increased volume.

Further examples of specific industries and products could be cited, but to do so would be redundant and I think it is time we rested our case.

Our decision as railroad managers to support the Arkansas program was indeed heretical. Traditional postures must bow to the inevitable and, as we studied the situation, as I hope I have expressed to you, the lesson of the past few decades is simply that the presence of water navigation leads to industrial development and expansion in the given territory and that this industrial activity is more beneficial than harmful to the railroads serving that territory.

There is no doubt that the railroad industry was right in fighting the development of modern waterways 30-odd years ago, when the idea was new. Public policy has clearly overruled the railroads' position and through congressional appropriations a waterways system of thousands of miles is an existing fact. With that has come industrialization along the waterways. We whose investments are in landlocked areas cannot put our heads in the sand and ignore the problem which water transportation creates for us as we bid for our share of the Nation's industrial expansion. In our geographical situation, we must conclude that we can't eliminate the Nation's waterways and if we can't beat 'em, we better join 'em.

Before I sit down I feel it is incumbent upon me to comment on the pamphlet recently issued by the Association of American Railroads, of which our roads are dues-paying members. This pamphlet urges Congress to

deauthorize the project and "particularly its navigation features until such time change in economic conditions suggest the need for a restudy."

Basically, the three professors who prepared the AAR study take exception to findings of the Corps of Engineers as to the projected tonnage of barge traffic on the Arkansas River, based on the corps' 1954 re-evaluation of its original study of the matter. The Corps of Engineers' projection is 13,221,171 tons annually over the period of amortization. The professors claim this is overly optimistic by 11,284,247 tons. That discrepancy is quite a charge to level at the Engineers who, after all, have had some experience in this business of projecting tonnage figures.

But let's look at the record and see if the corps may justly be accused of being overly optimistic in its traffic forecasts. The upper Mississippi Waterway project was authorized in 1936 with a traffic forecast of 9 million tons; by 1950 this figure was exceeded by more than 2 million tons. The gulf inter-coastal project was authorized in 1945 with 7 million tons of traffic projected; the 1950 actual performance was 18,971 tons. The Illinois Waterways was authorized in 1933 and within 17 years the projected tonnage had more than doubled.

Further examples could be cited proving that Corps of Engineers project tonnage estimates are conservative, but I think the point is clearly made. Equally clear is the fact that when these early projections were made, they were subject to the same type of criticism now embodied in the AAR attack on the Arkansas program. With respect to this present attack—one can only say of it the fact that time has proved the Corps of Engineers right and the earlier critics wrong does not seem to have exerted any deterrent effect on later critics.

Thank you.

Budge Raps Foreign Aid

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. WESTLAND. Mr. Speaker, under leave to extend my remarks, I wish to honor my colleague, HAMER H. BUDGE, by inserting in the RECORD the following editorial which appeared in the November 8, 1959, edition of the Times-News, published at Twin Falls, Idaho.

Mr. Speaker, it is indeed difficult to find words to adequately express the diligence, effectiveness, and complete political honesty of my good friend from Idaho.

It is my opinion that the Times-News editorial comes as close as possible to doing just that, and I wish to add my voice to that of the writer of the editorial in praise of Mr. BUDGE for his dedicated service to his State and our Nation.

The editorial follows:

BUDGE RAPS FOREIGN AID

It should be gratifying to the people of Idaho that we have a Representative in Washington like Congressman HAMER BUDGE.

From a purely partisan standpoint, of course, there are those who would not support him politically, but he serves as an outstanding example, nevertheless, of the type

of representation this country needs in the Nation's Capital.

Some of our readers may feel the Times-News goes too far in its repeated praise of Congressman BUDGE. But this newspaper regards it as highly important that he be given continued recognition and encouragement for his record in Washington.

This country would be far better off if we had a majority of such men in Congress—level-headed thinkers with the courage of their convictions, men who put the welfare of their State and country above everything else.

Congressman BUDGE has demonstrated his solidarity many times in pursuing a course that would not appear politically expedient. It's to his credit that the people of his district have recognized his ability and sincerity by continuing to have him represent them in Washington.

That was demonstrated during the last election when the AFL-CIO political action committee poured money into the Idaho campaign in an all-out effort to defeat him.

He will face such a test again and it will remain for the people of his district to decide whether he should continue to be rewarded for his courageous thinking.

Only a few days ago Jimmy Hoffa, chief of the powerful Teamsters Union, served notice that he will organize a political action group aimed at defeating all Congressmen who voted for the Landrum-Griffin labor bill.

Congressman BUDGE would be well toward the top of any such list of Hoffa's intended victims, because there is no doubt in anyone's mind where Representative BUDGE stands when it comes to sizing up the racketeers in labor.

While visiting in Twin Falls this past week, Congressman BUDGE elaborated on his thinking as regards foreign aid—another issue on which he has taken a firm stand.

Speaking at the annual Twin Falls County Farm Bureau banquet, he charged that the "anti-American demonstrations in Panama prove the U.S. foreign aid program has been a dismal failure in nonmilitary areas."

With good logic, he called for immediate restriction of the foreign aid program to military aid, and then only to those countries who can and will serve as military allies.

In this connection, the Congressman was referring particularly to the recent troubles in Panama.

"If it were not for the American dollars that have been poured into the Republic of Panama during the last half century," he emphasized, "Panama would be nothing but a jungle and the people would be living off uncultivated banana trees."

"But in spite of our continuous support of Panama over that long period of time, we have less friends than if we had not attempted to support the people in the grand manner to which they have been accustomed."

He called to the Farm Bureau members' particular attention that Americans, through foreign aid, have lost their export market for most of their produce from farms and factories.

"The only export market on which we are thriving," said BUDGE, "is the export of American dollars to other countries so they can compete with our own products."

This thinking on foreign aid is nothing new with Congressman BUDGE. He has called our attention time and time again to examples of ridiculous spending at the American taxpayers' expense—examples of extravagance that insult our intelligence.

What many Idahoans might not understand about Congressman BUDGE is his mild-manneredness. It's outstandingly to his credit that he's not a publicity seeker, nor is he campaigning for reelection every day he is in office. But let no one mistake all that for ineffectiveness.

In Washington, Congressman Budge is influential and highly respected. That he serves on some of the most important congressional committees is recognition of his ability.

Whether we all realize it or not, he is among the stalwarts of a courageous and dedicated minority that is holding out firmly against those destructive influences which would lead this country into socialism.

That's why the Times-News continues to sing its praises of Congressman Budge. May we suggest that all who share this thinking join in giving him a full measure of support.

Let's never let him wonder for a moment whether he is out of tune with public thinking in his own district.

Aid to India

EXTENSION OF REMARKS

OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. KUCHEL. Mr. President, a most intriguing and excellent plan for assistance by this country to the people of India has been fashioned by a distinguished agricultural leader of my State, Mr. Jonathan Garst. Mr. Garst, over the last several months and years, has fashioned a careful plan for the construction in India of great nitrogen plants which could produce fertilizer to enrich the soil of India and to raise agricultural produce and which, in his view, would bring nearer the elimination of the poverty which all too often strikes the teeming millions of people who inhabit that free country.

Mr. Garst spent some time in Washington several days ago, and, together with our able colleague, the senior Senator from Kentucky [Mr. COOPER], formerly our distinguished American Ambassador to India, I accompanied Mr. Garst to a meeting at the State Department in which he outlined his plan to Under Secretary of State Dillon. Mr. Dillon was considerably impressed, and the plan will receive official study.

What is involved in the plan is the topic of an interesting article by Mr. Marquis Childs which was published in the Washington Post of yesterday, entitled "Is Fertilizer a Key to India's Future?" which I ask unanimous consent to have printed in full in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS FERTILIZER KEY TO INDIA'S FUTURE?

(By Marquis Childs)

For 3½ years America's surplus grain has fed 10 million hungry people in India and under an expansion of the surplus food program this may go to 20 million. What disturbs many policymakers and others who are all for this program is that, as India struggles vainly to keep ahead of her swiftly expanding population, she may come to rely permanently on these surpluses.

That is one reason an idea being generated here has stirred so much interest. It is for a big-scale program of fertilizer plants for India that could expand food production beyond the needs of the foreseeable future.

That, at any rate, is the claim of the author of the plan, Jonathan Garst, an agricultural specialist from Berkeley, Calif., and a member of the remarkable Iowa family that has done so much pioneering in the revolution in agriculture. It is this revolution in machinery and chemical fertilizers that has increased production anywhere from 30 to 50 percent in a short span of time. One brother is Roswell Garst of Coon Rapids, Iowa, who last September showed Premier Khrushchev what a combination of hybrid seed, machines and fertilizer could do.

In brief, what Garst proposes is that India build one 100,000-ton nitrogen-urea plant per month for 36 months to produce a total of 3.6 million tons of nitrogen a year. Because these plants would be standardized throughout, Garst believes the whole job could be done for about \$600 million. In India's upcoming third 5-year plan it is proposed to spend \$622 million for fertilizer plants but this would mean less than a million tons of nitrogen capacity.

The plan would be financed on an international basis, with the United States putting up about one-fourth of the total. This last could come to less than the cost of handling and shipping the grain surpluses under the current program.

Senator JOHN SHERMAN COOPER of Kentucky, who has taken a lively and constructive interest in India and the underdeveloped countries since he was Ambassador to New Delhi, immediately saw the potentialities in the Garst plan. With Senator THOMAS KUCHEL of California, he took Garst down for a conference with Under Secretary of State Douglas Dillon. Dillon, too, is said to have seen the dramatic possibilities of ending the threat of hunger that hangs over India's 400 million people.

But bureaucracies move slowly and ponderously. India must first ask for a mission that would later make a formal recommendation for such a program. Working out the international financing would in itself be no small undertaking.

What makes the plan so appealing is the effect it would have in dramatizing the technological progress of the West. Its propaganda value in all of Asia would be almost as great as the practical value of making India virtually self-sufficient in food.

The agricultural surpluses that have piled up in a huge multi-billion-dollar mountain in this country are an advertisement of the American revolution in agriculture, albeit an embarrassing advertisement. Under Public Law 480 the mountain has been somewhat chipped away, with surplus foods sent to various countries and sold for local currencies which have also accumulated with some embarrassing consequences.

India has paid the equivalent of \$676.7 million in rupees for shipments of grain up to last September. But the net cost to the U.S. Government has been \$946 million because of the difference between support prices here and the world price.

Farm State Members of Congress might oppose any program to use American aid to create self-sufficiency in agriculture. But, on the other hand there is a general realization that somehow the fantastic accumulation must be brought under control, since it depresses the agricultural economy and is a constant drain on the Treasury.

You merely have to ask a question that has occurred to more and more officials here to see why there should be keen interest in plans to reduce the need for sending American surplus food abroad. What if in the next 3 or 4 years a way can be found to bring production in this country in balance with demand? Would we then abruptly stop shipments to countries such as India and risk widespread famine? To build up anything like a permanent dependence on a lifeline from the United States is to risk just such an eventuality.

St. Catherine's High School Plays in the Knights of Columbus Invitational National Basketball Tournament at Georgetown University, Washington, D.C.

EXTENSION OF REMARKS

OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FLYNN. Mr. Speaker, St. Catherine's High School of Racine, Wis., a former girls' academy became a coeducational Catholic high school in 1924. It serves the city of Racine, Wis., and has an enrollment of approximately 1,350 boys and girls. Its enrollment continues to increase and is limited only by the physical capacity of the school to accept more students. The school is under the management of the Sisters of St. Dominic, who maintain a convent at Racine. The president of the school is Rt. Rev. Mnsgr. S. B. Witkowiak who has done an admirable job in inaugurating a program designed to secure the greatest effort from every individual student. His plan is being studied carefully.

The school has always had an excellent record scholastically. Its athletic teams have enjoyed recognition for their ability and for winning many championships on both a city, district, and State level. The athletic director for the school is Rev. Anthony Zukaitis and the basketball team has been coached for the last several years by John McGuire. His talents and fame, as a coach in Wisconsin, are legend. He has the ability to get the most from a boy and has a record of wins that would do credit to the most famous coach of our day. His teams have won the last two Wisconsin State Catholic basketball championships and, for the second time, have been invited to play in the Knights of Columbus Invitational National Basketball Tournament at Georgetown University. Last year, St. Catherine's won the consolation championship.

The students of St. Catherine's High School staged a fundraising drive and raised the money necessary to send their team to Washington. Over 100 students will accompany the team by train and there will be, at least, that many adults coming to Washington from Racine for the basketball tournament this weekend.

The 1959-60 team averaged 61 points per game. Their opponents averaged 34 points per game. They have long been known by the nickname of Angels. Their colors are black and white. The players on this year's team are: James Hesse, Joseph Gamell, Charles Wood, Tom Schilke, Jim Poulson, Bob Letsch, Rocky Calvelli, Todd Pettit, Tom Cramer, David Koenings, Tom Donovan, Donald Hartig, Roger DeMark, Edward Evenson, Brian Verhagen. The managers of the team are: Robert Olley, David Dudor, and Jef Miller.

The players who will participate in the national tournament play are: Joseph

Gamell, Charles Wood, Tom Schilke, Jim Poulson, Bob Letsch, James Hesse, Rocke Calvelli, Todd Pettit, David Koenings, Tom Cramer and Donald Hartig.

The tallest man on the team is Tom Schilke; he is 6 feet 8 inches tall. The high-point man for the year has been the so-called eagle-eyed Chuck Wood. Three of his teammates were picked on the all-city team for Racine, Wis., to wit: Tom Schilke, Chuck Wood and Jim Poulson. Jim Poulson and Chuck Wood were picked for the all-Catholic conference team for the State of Wisconsin.

The team will arrive in Washington, D.C., at Union Station on Thursday March 17, at 8:40 a.m. and will stay at the Roger Smith Hotel while in Washington.

It is with great pride that I am able to report the arrival of St. Catherine's High School basketball team to Washington, D.C. St. Catherine's is the alma mater of both my wife and myself and it is indeed a true and real pleasure to see this group of splendid young men, whom I have watched play on several occasions, come to Washington with the enthusiastic backing of their schoolmates and the adult population of the entire city of Racine. The spirit of teamplay has permeated their actions during the entire year and I predict that they will leave Washington Sunday evening as the winners of the tournament and with the 1960 trophy tucked away in their luggage.

I believe that St. Catherine's High School should be congratulated for its consistent ability to develop such fine athletic teams and for its dedication to the development of manhood in those participating in its athletic programs.

Panorama Editor Focuses on Texas Labor; University of Texas Paper Details Antilabor Climate in Texas

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. YARBOROUGH. Mr. President, in my State, as in many other States, the newspapers generally characterize organized workingmen as a massively powerful group that utterly controls the political destinies of the people. Nothing is further from the truth, so far as Texas is concerned. Labor has been paralyzed by a flood of crippling laws and a uniformly hostile press, and is so weak politically that it has been made a political whipping boy.

An extremely interesting and informative editorial on this subject recently was written by Mary Beth Coniglio, one of the editors of the Daily Texan—the nationally known and respected student newspaper at the University of Texas. This type of accurate reporting will bring new credit to the Daily Texan.

Miss Coniglio has done a particularly outstanding journalistic job on this subject. I ask unanimous consent to have printed in the Appendix of the RECORD her article from the Sunday, March 6, 1960, issue of the Daily Texan, entitled "Texas Labor: Still Feared."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS LABOR STILL FEARED

"The workmen desire to get as much as possible, the masters to give as little as possible. The former are disposed to combine in order to raise, the latter in order to lower the wages of labor."—Adam Smith

It's no different in Texas. Texas workmen have had a hard time getting as much as possible, or even as much as is necessary. And it's simply because legislators have been opposed to letting a big organized labor force develop here.

They have been successful. It hasn't developed here. There is no big organized labor. Only 400,000 workers out of a total Texas labor force of 3,530,000 belong to unions.

MINIMUM WAGE KILLED

Not only has the Texas legislature been unfriendly to organized labor, it has been reluctant to give any benefits to the labor force as a whole. As recently as May 1959, attempts to require a 50 cent minimum wage bill for Texas workers were blocked in the Texas House of Representatives. Texas has no industrial safety law for all Texas places of work, and ranks 49th among the 50 States in per capita expenditures for the restoration of hurt workers to usefulness.

And according to J. J. Brown, head of the vocational rehabilitation section of the Texas Education Agency, "We are rehabilitating 2,000 a year now—we ought to be rehabilitating 10,000."

With the opposition of the State legislature, militant antiunion newspapers of the State, and the abiding Texas fear of anything un-Texan in origin, labor unions have been much slower in developing here than in other parts of the Nation.

LABEL IN DISREPUTE

The union tag or label evokes a bad taste in the mouths of many Texas citizens who still consider organized labor alien, perhaps even seditious, in spite of the fact that unions have been part of the American scene for more than 90 years.

In fact, Texas did not even become particularly conscious of organized labor until the heavy industrialization caused by World War II began to take effect. In general this consciousness took the form of antagonism toward unions—Texas has done just about everything but outlaw them.

As early as 1943, the legislature began passing major pieces of legislation regulating the activities of labor unions, their officers, agents, and organizers. One of the first of these, the Manford Act, prohibited an alien or one convicted of a felony from serving as a labor union officer or organizer; it prohibited unions from making financial contributions to a political party or individual candidate for public office; and it required unions to file an annual report with the secretary of State showing the name and address of any State, National, or international organizations with which they are affiliated, a statement concerning property owned by the union, and a copy of the union constitution. Collection of fees, assessments, etc., by a labor union as a prerequisite for work is unlawful; and an itemized account of all receipts and expenditures must be kept by unions and made available to any union member at any time, as a result of this act.

The bulk of antiunion legislation came in the 1947 session of the legislature when nine

labor laws were passed as part of nationwide reaction against unions after a series of labor strikes in 1946.

ANTI-PICKET LAWS

An anti-closed-shop law (the so-called right-to-work law) passed during that session. Under this law, employees cannot be denied employment because of membership or nonmembership in a labor union. The closed shop is prohibited, and violations by employers or labor unions are considered conspiracies in restraint of trade, thus violations of the State's antitrust laws. Fines up to \$1,500 a day can be inflicted against any person or group violating the act.

Legislators also passed an anticheckoff law which prohibits contracts permitting checkoffs, or deduction, of an employee's wages to pay union dues or assessments except upon the individual employee's written consent.

Placing more than two pickets within 50 feet of the entrance of the picketed business or within 50 feet of another picket is a violation of antismass picketing law. Picketing which does not violate the provisions of this statute may be considered peaceful, although peaceful picketing may still be prohibited by the Secondary Boycott Act, the utility antipicketing law, or the Union Antitrust Act.

PUBLIC EMPLOYEES

The public employees loyalty law prohibits a labor union from being recognized as the collective bargaining agent for public employees. Public employees may not engage in strikes against the State or any of its political subdivisions. Although a union cardholder may work for the State, the activities of his union are severely limited under this law.

Picketing the plant, premises, or property of a water, gas, or electric utility if intended to interrupt utility service or its maintenance is a violation of the utility antipicketing law.

Under the equal responsibility law, if a union should call a strike before the termination of its contract and the company suffers a loss, the union would then be liable for the full amount of the loss if the courts found that the union had breached its contract.

RIGHT TO WORK

These laws have held union activities in check for years, but the sharpest thorns in organized labor's lean flesh are the 1955 Parkhouse-Spiman Acts which restate what has come to be regarded as a Texas public policy—the right to work regardless of membership or nonmembership in a union.

These acts also declared striking or picketing in order to cause an employer to bargain with a labor union which does not represent a majority in the place of business a violation of the right-to-work policy.

And this legislation has had the desired effect on curtailing union activity in certain areas of the State. Marcus Loftis, president of the State association of electrical workers, said that the right to work "has had a tremendous effect on the contracting business. In Austin from 25 to 30 percent more construction is nonunion than right after the war, and this holds true roughly for the rest of the State except for two or three unionized areas."

It is difficult to say how many members right-to-work has cost Texas unions, but Jerry Holleman, president of the Texas AFL-CIO, said that "We have not been able to do anything in Texas, largely because of right of work, with retail trades, office employees, hotel and restaurant workers—that category. Potentially, in Texas, there are half a million in this category in intrastate trade."

NONUNIONIST BENEFITS

Under the right-to-work statutes which are law in 17 other States now, nonunion

employees can profit from any pay raises and improvements in working conditions the union wins, without paying union dues.

In trying to cripple union activity, Texas, along with many of the less industrialized States, has failed to distinguish between the closed and the union shop, and has prohibited agreements that make union membership a condition for holding a job. But this is the law in Texas, and Don Ellinger, AFL-CIO director of political education for Texas and five other States, characterized it as "the right-to-work—for less."

And Holleman says, "I do not believe any man becomes a better or more virtuous person by becoming 'organized.' He simply becomes more effective."

CHEAP FORCE

Since World War II Texas has made a concentrated effort to bring industry, and the fruit of industry—prosperity—to its borders. And the policy to attract industry, friends of organized labor say, seems to be with a cheap and unorganized labor force. But few of the great industrial States of the country are antiunion, and Texas hopes to become a great industrial State.

It would appear that if Texas is to become the industrial giant it desires to be, an adequate mass purchasing power among its people has to be established. And this will be hard to accomplish as long as the one effective voice of the total labor force—unions—are viewed with fear and alarm.

Federal Aid

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. SHORT. Mr. Speaker, there is a continuing tendency among many people to look in the direction of Washington for funds whether or not the problem in question should be met entirely as the responsibility of the individual States. The current agitation for Federal aid to education is an example of this tendency. I am therefore pleased to include with my remarks an excellent editorial on Federal aid which appeared in the March 12, 1960, issue of the Minot (N. Dak.) Daily News. The editorial follows:

ABOUT FEDERAL AID

When the paid representative of an organization pleads a cause to which his group is dedicated, the public in general is not expecting an objective presentation.

Instead it is assumed the statement will point out the affirmative side, leaving the people to conclude that there is another side to be told by someone else.

Paul Dalager, executive secretary of the North Dakota Education Association does just that kind of a job in a statement published this week in the News.

When comparisons are made in salaries of one group of citizens it might be well to broaden out and blanket a few more.

Statistics, whether compiled by Government bureaus or the education association, mean nothing in themselves unless they are studied and analyzed by unbiased researchers who dig into the background for explanations.

Mr. Dalager points to the fact North Dakota is eighth from the bottom of States in salaries paid teachers. That sounds pretty bad, but it might be fair to state that there

are other factors in education besides salaries.

Now about comparisons.

Attorneys in New York City, Washington, and other similar points charge from two to five times legal fees collected in North Dakota.

Plumbers and electricians receive from two to three times the scale paid in Minot. We could go on and on.

Here are factors that throw averages out of balance and make them useless.

Looking at the financial condition of the State of North Dakota we reach the conclusion that this State is well able to meet every problem involved in education.

Of course the easy way is to rush to Washington and seek to get back a fraction of the money that goes through the hands of our national spendthrifts.

The only possible justification is that every other State and community is doing just that. Those with the largest shovels and sharpest political "pull" are the ones that come out on top.

There is ample evidence of vicious waste in every project operated by the Federal Government, all unneeded in our school system.

One thing should be made crystal clear. No one tricked Mr. Dalager or anyone else into the professions they are making their lifework.

Medical Care and the Aged

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. HUMPHREY. Mr. President, the Minnesota Union Advocate of March 10, 1960, contained an excellent column on the needs and opportunities for providing medical care for our aged citizens who find such care a crushing financial burden.

The column presents evidence in support of Congressman FORAND's measure and my similar proposal as advanced by several private groups—the American Hospital Association, the Arthritis and Rheumatism Foundation, the Philadelphia Health and Welfare Council, and the Jewish Family and Children's Service of Detroit, as well as the Senate Subcommittee on the Aged and Aging under the chairmanship of my distinguished colleague, the senior Senator from Michigan.

Mr. President, I ask unanimous consent that the column be printed in the Appendix of the Record.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

WASHINGTON WINDOW—MEDICAL CARE AND THE AGED

If any early relief from the crushing burden of medical expenses is in the cards for our aged citizens this year—a presidential election year—1960 provides the best hope.

A number of bills have been introduced in both the House and Senate, but expectation is that primary attention will be centered on a measure introduced in the House by Representative ALME J. FORAND, Democrat, of Rhode Island.

The Forand bill is an insurance plan to help retired people pay their hospital and surgical bills through our social security system. It will pay for surgery performed in

a hospital by the patient's own surgeon, hospital care in a semiprivate room up to 60 days, and convalescence in a nursing home.

The measure provides that the program financed by an increase in social security taxes for both workers and employers. Each will pay an additional one-fourth of 1 percent. No one will pay more than 25 cents a week.

The growing support for some type of legislation along the lines of the Forand bill has become increasingly evident. It received an additional shot in the arm recently in the report of the Senate Subcommittee on the Aged and Aging under Senator PAT McNAMARA, Democrat, of Michigan, which recommended medical care for retirees.

The subcommittee held extensive hearings on the problem and gathered some 300 replies from experts and organizations. The committee concluded that retired older people face three major obstacles to adequate medical care:

An increase in medical needs for the aged; The aged, the committee concluded, are far more likely to have chronic illnesses which require more visits to the doctors or home calls by physicians. There is greater need for professional nursing care in the home. Older people spend at least twice as many days per capita in general hospitals as do persons of all ages.

Increased needs compounded by rising cost of medical care: Living costs from the 1947-49 period have risen about 25 percent while the cost of medical care has risen about 50 percent; hospital costs alone about 100 percent.

A nationwide study by McGraw-Hill in 1956 showed that our elderly citizens pay approximately 50 percent more in medical care than do persons of all ages.

Inability to finance medical care: The majority of the aged—about 60 percent—are not covered by hospital insurance. Those with the most serious illnesses are the least likely to be covered.

Older persons usually find that they are considered poor risks by insurance companies and are either denied protection or have to pay enormously high premium rates. Also, private insurance companies drop many of them when they consider the risks too great.

A survey by the Health Information Foundation that 47 percent of the aged had only one type of asset (such as a home or piece of real estate, life insurance, savings, stocks or bonds, or the help of relatives) or no such assets at all to pay a medical bill of \$500 or more.

The subcommittee, in its majority report, declared: "Most groups recommend that the principle of prepaid health insurance with Government assistance—and not socialized medicine which means a system of Government-owned facilities and Government-employed personnel—is a sensible, practical answer to the problem."

As might be expected, despite such evidence of need, the American Medical Association remains unmoved in its opposition to such a prepaid health insurance program. But forward-looking medical and social service organizations are taking more reasonable views. Here are a few representatives quotes:

"We are convinced by all evidence we have seen that the problem of health care and its financing is one of the most serious facing the nonindigent aged, and one of the greatest threats to their economic security." American Hospital Association.

"Sickness in the aged is being covered to some extent by health insurance, but health insurance does not solve the problem completely. Any real chronic cannot be adequately taken care of by present-day health insurance agencies."—Arthritis and Rheumatism Foundation.

"A No. 1 priority should be adequate provision for medical care, especially for those who are living on social security alone. * * * Existing agencies are, therefore, providing only a partial answer to the main problem."—Health and Welfare Council, Philadelphia.

"One of the most serious sources of anxiety which we see in our aged clients, as well as their adult children, is that of anticipated incapacity and inability to meet the future costs of medical care."—Jewish Family and Children's Service, Detroit.

This live issue cannot be ignored much longer.

The Status of Puerto Rico

EXTENSION OF REMARKS

OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FERNÓS-ISERN. Mr. Speaker, the uniqueness of the present relationships of the Commonwealth of Puerto Rico with the United States gives rise at times to misunderstandings, as illustrated by a letter which I include at the end of these remarks, together with a letter in reply, both recently published in the New York Times.

In this connection, it may be enlightening to recall certain aspects of the historical development of the Federal system of the United States. In the growth of the United States from the Thirteen Original States to the present 50, new States were formed in areas which were ceded to the United States by the original States, and admitted into the Union. Although the formation of those States and their admission have been simultaneous, the formation of a State by the people of a territory is a political act separate and distinct from the act of admission by Congress. In fact, the ordinance of 1784 of the Continental Congress, drafted and reported by a committee presided over by Thomas Jefferson, provided for the formation of the State to precede its later admission.

The ordinance of 1784 provided that—

The settlers of the territory * * * either on their own petition or on the order of Congress receive authority from them with appointment of time and place for the free males of full age to meet together for the purpose of establishing a temporary government to adopt the constitution and laws of any one of these States.

That such temporary government shall only continue in force in any State until it shall have acquired 20,000 free inhabitants when, given the proof thereof to Congress, they shall receive from them authority with appointment of time and place to call a convention of representatives to establish a permanent constitution and government for themselves; provided that both the temporary and permanent governments be established on these principles as their basis: (1) That they shall ever remain a part of the United States; (2) that in their persons, property, and territory they shall be subject to the Government of the United States in Congress assembled and to the Articles of Confederation, in all those cases in which the original States shall be so subject.

That whensoever any of the said States shall have of free inhabitants as many as

shall then be in any one of the least numerous of the Thirteen Original States, such State shall be admitted by its delegates into the Congress of the United States on an equal footing with the said original States. * * * Until such admission by their delegates into Congress, any of the said States, after the establishment of their temporary government, shall have authority to keep a sitting member in Congress with the right of debating but not of voting.

That all the preceding articles shall be formed into a charter of compact; shall be duly executed by the President of the United States in Congress assembled under his hand and the seal of the United States; shall be promulgated and shall stand as fundamental conditions between the Thirteen Original States and these newly described, unalterable but by joint consent of the United States, in Congress assembled, and of the particular State within which such alteration is proposed to be made.

The similarity between the provisions and the philosophy of the 1784 ordinance and Public Law 600 of the 81st Congress, under which the Commonwealth of Puerto Rico was created, is striking.

As provided in the ordinance of 1784 for States to be formed in the western territory, the people of Puerto Rico received, under Public Law 600, 81st Congress, authority from the Congress to adopt a constitution and to form their own government. They did so and they organized the Commonwealth of Puerto Rico. As provided under the ordinance of 1784 for the States formed under it, Public Law 600 (sec. 9 of the Puerto Rican Federal Relations Act) provides that the laws of the United States, with some exceptions, have the same force and effect in Puerto Rico as in the United States. The ordinance provided that States to be formed in the western territory would have, until admitted, a nonvoting Delegate in Congress; the Puerto Rican Federal Relations Act provides that Puerto Rico be represented in the United States by a Resident Commissioner who has been accorded the privileges of a nonvoting Member of the House of Representatives. The ordinance provided that the articles thereof be formed into a charter of compact; Public Law 600 was enacted "in the nature of a compact," to become effective upon its acceptance by the people of Puerto Rico.

The conclusion is inescapable that, under the terms of Public Law 600, 81st Congress, the Commonwealth of Puerto Rico occupies a position parallel to that envisioned for such States as might have been formed under the ordinance of 1784, except for the absence of an explicit or implied promise or commitment for admission. Puerto Rico was not an incorporated territory.

It was not until the ordinance of 1784 was repealed, with the adoption of the 1787 Ordinance of the Northwest, that the territorial form of government was originated.

That the thinking of the men of 1950 may have so closely paralleled the thinking of the men of the glorious founding years, is clear proof that time may pass, circumstances may change, but the fundamental principles upon which this Nation was founded are never obsolete and never change; they are always current and, indeed, eternal.

The letters follow:

[From the New York Times, Nov. 10, 1959]

LETTERS TO THE TIMES—PUERTO RICO'S STATUS—ISLAND DECLARED AN AUTONOMOUS TERRITORY, NOT A COMMONWEALTH

(The writer of the following letter is Bishop of the Roman Catholic Diocese of Ponce.)

TO THE EDITOR OF THE NEW YORK TIMES:

Your lead editorial of February 28 on the status of Puerto Rico is misleading and far from the reality.

Puerto Rico was a possession of the United States from the signing of the Treaty of Paris to 1952 and during most of that time was governed by an act of Congress known as the Organic Act.

About 1948 Congress consented to a modification of the Organic Act of 1917, permitting it to be modified by a constitution drawn up and voted upon by the people of Puerto Rico. However, a necessary condition for the acceptance of the new constitution by Congress was the retention of the "Federal relationship" established by the old Organic Act of 1917. This is clear from the CONGRESSIONAL RECORD for June 30, 1950, wherein Congressman JAVITS expressed his opposition to the bill for the reason that it did not give Puerto Rico the opportunity to vote for independence or statehood, but only the opportunity to vote for a new constitution within the structure of the old Organic Act.

It was this new constitution (which modified but did not abolish the Organic Act and therefore did not abolish or change the territorial status of Puerto Rico) which was approved by Congress in 1952.

GOVERNOR'S STATEMENT

In 1953 Mason Sears, an official of the U.S. Government, declared before the United Nations Commission for Nonautonomous Territories that the United States would no longer report to this Commission in regard to Puerto Rico, which by law 600 of 1952 had ceased to be a nonautonomous territory. Presuming that a change from nonautonomous to autonomous was the same as a change from a territorial status to one of independence, Governor Muñoz-Marín began to proclaim publicly that the law 600 of 1952 had somehow given independence to Puerto Rico, which then, in its turn and by the same law, freely united itself to the United States in a bond of "permanent association."

This is not what the law 600 did. It maintained the organic act as the basic law for Puerto Rico and by the organic act Puerto Rico is and remains a possession of the United States. In fact one of the necessary conditions for acceptance of the new constitution of Puerto Rico by the Congress was the retention of the Federal relations established by the Organic Act of 1917.

The result of the confusion being spread by Governor Muñoz-Marín is that the New York Times and even the President of the United States are speaking as though Puerto Rico has been given its independence and is now independent but voluntarily associated with the United States. It is for the sake of continuing this thinking that Governor Muñoz-Marín is now requesting the Congress of the United States (Fernós-Murray bill) to change the terminology of law 600 of 1952 so that the words "Federal relations" will no longer appear and that they be substituted by the words "articles of permanent association."

CONGRESSIONAL ACTION

This may continue the confusion. But it will not change the reality, which is that only Congress can give independence to Puerto Rico. There is no evidence that that has been the intention of Congress, and the recent congressional investigation regarding the Fernós-Murray bill made that quite clear.

When the Times states that "Puerto Rico does not belong to the United States" and

"Puerto Ricans themselves have chosen the commonwealth status and are equally free to choose independence or ask for statehood," and when Governor Muñoz-Marín states, "We are happy to say that Puerto Rico is a proud, free, self-governing commonwealth, joined to the United States by her own choice"—these are all statements which do not square with the legal realities, and which usurp the powers of Congress over territories or possessions of the United States.

Puerto Rico up to 1952 had been a non-autonomous territory or possession of the United States. In 1952 Congress made it an autonomous territory.

If we are ashamed to have colonies, and we should be, then let us get rid of them in a legal way and in a way in which there will be no room for doubt by anyone. The people of our colonies should be given a fair opportunity to choose between independence or statehood. If independence is not wanted and statehood is not practical at the time, there is still the possibility of legislation by Congress that will make our territories that do not want independence a definite and integral part of the United States with the assurance of statehood if the conditions warrant it.

But let this be done by act of Congress after consulting with those concerned.

The present condition in Puerto Rico is that Governor Muñoz-Marín is, by his own will, imposing upon the people of Puerto Rico and on the Congress of the United States, an independence which was never granted and a voluntary association which is absurd unless independence has been granted.

JAMES MC MANUS.

PONCE, P.R., February 24, 1960.

[From the New York Times, Mar. 14, 1960]
LETTER TO THE TIMES—PUERTO RICO'S STATUS—BOTH FEDERAL AND COMMONWEALTH GOVERNMENTS SAID TO EXIST

(The writer of the following letter is Resident Commissioner, Commonwealth of Puerto Rico.)

TO THE EDITOR OF THE NEW YORK TIMES:

The letter published on March 10 and signed by the Bishop of Ponce, P.R., interprets Public Law 600, 81st Congress (in accordance with which the Commonwealth of Puerto Rico was created), as a mere grant by the Congress of its consent to a modification of the Organic Act of Puerto Rico. With all due respect to Bishop McManus' point of view, I must disagree as to the interpretation of the facts involved.

Public Law 600, entitled "an act to provide for the organization of a constitutional government by the people of Puerto Rico" states: "That fully recognizing the principle of government by consent, this act is now adopted in the nature of a compact so that the people of Puerto Rico may organize a government pursuant to a constitution of their own adoption."

It also states: "This act shall be submitted to the qualified voters of Puerto Rico for acceptance or rejection through an island-wide referendum to be held in accordance with the laws of Puerto Rico. Upon the approval of this act by a majority of the voters participating in such referendum, the legislature of Puerto Rico is authorized to call a constitutional convention to draft a constitution for the said island of Puerto Rico. . . ."

"Upon adoption of the constitution by the people of Puerto Rico, the President of the United States is authorized to transmit such constitution to the Congress of the United States if he finds that such constitu-

tion conforms with the applicable provisions of this act and of the Constitution of the United States.

"Upon approval by the Congress, the constitution shall become effective in accordance with its terms."

OTHER PROVISIONS

Certainly this goes far beyond mere consent to a modification of an organic act. Moreover, sections 4 and 5 of Public Law 600 provided that when the constitution of Puerto Rico became effective all but 21 of the 58 sections of the Organic Act would be repealed. The continued sections were to be cited thereafter as the Puerto Rican Federal Relations Act.

The Senate Committee on Interior and Insular Affairs, reporting on what is now Public Law 447, to approve the Constitution of Puerto Rico (enacted July 3, 1952), stated: "The provisions of the present Organic Act which will remain in force and effect as the Puerto Rican Federal Relations Act, however, relate to matters affecting not the internal affairs of Puerto Rico but the relationship of Puerto Rico to the United States Applicable provisions of the U.S. Constitution and the Federal Relations Act will have the same effect as the Constitution of the United States has with respect to State constitution or State laws."

Furthermore, the Constitution of Puerto Rico provides: "Article I, section 1: The Commonwealth of Puerto Rico is hereby constituted. Its political power emanates from the people and shall be exercised in accordance with their will within the terms of the compact agreed upon between the people of Puerto Rico and the United States of America."

"Section 2. The Government of the Commonwealth of Puerto Rico shall be republican in form and its legislative, judicial, and executive branches as established by this constitution shall be equally subordinate to the sovereignty of the people of Puerto Rico."

POWERS OF PEOPLE

Territorial status has always been interpreted to mean the status of an area which is subject to the plenary authority of Congress. Whatever political authority is exercised by the people of the area is delegated to them by Congress. The political powers now exercised by the people of Puerto Rico emanate from themselves. Therefore, since the proclamation of the Commonwealth, two governments operate and coexist in Puerto Rico similarly as in the States of the Union—namely, the Federal and the Commonwealth Governments, each within its respective sphere. To hold that the status of Puerto Rico continues to be territorial is to ignore the true meaning of territorial status and give the term a new meaning.

Neither Governor Muñoz Marín nor anyone who has had any significant part in the advent of the Commonwealth of Puerto Rico has ever claimed that commonwealth is independence, for it is not separation but rather it is freedom in association.

It is unfortunate that because commonwealth status, as created for Puerto Rico, has no precedent in the United States political system, it is not always properly comprehended. For this reason the recognition given to the Commonwealth by the President in his recent address in San Juan was not only enlightening but extremely valuable, while editorials such as yours of February 23 are most helpful and commendable.

A. FERNÁNDEZ-ÍÑIG.

WASHINGTON, March 10, 1960.

Milwaukee Has Earned Worldwide Acclaim as Nation's Best Governed City

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. WILEY. Mr. President, as our country progresses, we find a growing trend toward urbanization.

One hundred years ago, 85 percent of our population lived in the country. Now, nearly 70 percent of us live in urban areas and only 30 percent in rural communities.

With this great farm-to-city migration has come a wide variety of serious, complex problems.

To find needed solutions, we need constructive, creative efforts to provide adequate public services, housing, transportation and other programs, as well as to establish coordinated planning upon which to promote business, industrial and residential patterns of progress for the future.

Currently, *Torch*, published by the outstanding Milwaukee Advertising Club, is publishing a series of articles on Milwaukee, Wis.—one of the finest cities in the country and the world.

The February issue contains a particularly informative article by Gerald P. Caffrey entitled "Your Milwaukee—It Has Earned Worldwide Acclaim as Nation's Best Governed City."

Among the highlights of the article, Mr. Caffrey points out the following factors:

Over the years Milwaukee has achieved a significant reputation as one of the best governed cities in the Nation.

Anyone who has lived in Milwaukee more than a year takes honesty so much for granted that he forgets that in other cities conditions can sometimes be very different.

Milwaukee tax bills are not low, but the services rendered for those taxes are of superior quality that can bear comparison to those of any city in the country.

Milwaukee is one of the only three major cities having a triple-A credit rating. This means that when Milwaukee needs money for capital improvements she gets it at the lowest interest rates the market will allow.

Reflective of the kind of constructive programs that are helping to promote progress in our great cities, I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

YOUR MILWAUKEE—IT HAS EARNED WORLDWIDE ACCLAIM AS NATION'S BEST GOVERNED CITY

(By Gerald P. Caffrey)

What makes Milwaukee great?

Its people, of course. Its great manufacturing firms which employ those people and which owe their existence to the organizing brains and the working skills of those people are another source of Milwaukee's greatness. Then there are the independent

craftsmen, the artists, the writers, the professional people, all of whose combined lives and efforts here in the southeast part of Wisconsin add to the vitality of the Milwaukee area.

But, in sharper focus, what makes Milwaukee really great as a city?

Here, we must again give first credit to the people, since in a democratic society, however imperfect it be, it is the people's attitudes and expressed wishes that determine the kind of government the city will have.

That's a real compliment to you and you and you. For over the years Milwaukee has achieved a significant reputation as one of the best governed cities in the Nation.

Why?

The answer lies in a combination of factors, but these can best be appraised by dividing the question in two. Any city has two aspects in its government, the political or administrative, and the service aspect.

Does Milwaukee provide good services and is the city government honest? Is there integrity or skullduggery in city hall?

Anyone who has lived here more than a year knows the answer, and anyone who has lived here much longer takes honesty so much for granted that he forgets that in other cities conditions can sometimes be very different.

Not long ago a businessman from the west coast was driving down a Milwaukee street and became involved in an accident. In the process his car knocked down and damaged a parking meter. Since he was going to be in the city only a short time, and since city property had been damaged, the police took him to the city attorney's office to arrange for payment.

The assistant city attorney who handled the matter requested the usual deposit for this type of damage, \$60, and explained to the visitor that when the meter was repaired the city would deduct the cost of repair and return to balance to him.

Having been through this sort of thing before in other places, the man mentally kissed the \$60 goodbye and left. His work kept him in Milwaukee for several days, so that before he left town he received a phone call.

It was a clerk in the city attorney's office telling him the meter repair had amounted to only \$7 and he could pick up his \$53 at the office.

Flabbergasted, he called on the same assistant city attorney, congratulated him, and told him what an unexpected pleasure it was to do business with such an honest city. To show his appreciation he urged a \$10 bill on the attorney—told him to "take your wife or secretary out to dinner." When the city official would have none of it, he asked if he couldn't donate it to charity. "Suit yourself," the attorney replied, "but don't give it to me."

The visitor again thanked him and soon left marveling at this latter-day paragon of municipal integrity. Everything he'd heard about Milwaukee was true. There's no payola here.

Yet somehow our Western friend didn't quite believe it. In fact, he wasn't completely sold until he got home to California. In his mailbox was a city of Milwaukee check made out to the same assistant city attorney and endorsed over to the westerner. It was the return of a \$10 bill he had slipped under a book on the attorney's desk when the official wasn't looking.

THEY ALSO SERVE

So much for integrity. What about city services? After all, that is what a city government is for. Were it not for the great variety of services required by people living in an urban area there'd be little need for that legal entity called a city. A 1958 report on Milwaukee listed 1,350 functions or

services which are performed for the general public.

Because of the drama inherent in their work everybody knows about our police and fire departments. The fame of these well-run city divisions goes before each like a siren. Related to these and also well known is Milwaukee's great reputation in the field of safety. Birthplace of the National Safety Council, Milwaukee has won safety prizes with monotonous regularity. It's the sort of monotony that our city thrives on, for again she was in either first or second place in traffic safety all during the first 10 months of 1959.

PUBLIC WORKS

Less spectacular, but important especially to the taxpayer, is the city's performance in other fields—public works for example. Milwaukee tax bills are not low, but the services rendered for those taxes are of a superior quality that can bear comparison to those of any city in the country. Milwaukee is the only large city that still sends its workers into basements to bring out rubbish. It is the hope of some city officials that this special service can eventually be discontinued except for hardship cases, as the cost of such complete rubbish removal is not economical. It is a luxury that Milwaukeeans have become used to but one that they might well do without in an era when fewer and fewer homes are accumulating heavy baskets of ashes, that require the strong arms of city laborers to remove. Almost equal in nuisance value from the city worker's point of view is the concrete ash vault. Most large cities prohibit them, but Milwaukee permits them to remain even in this post-ash era because many householders consider them convenient.

In public works construction whether you are thinking of public buildings, bridges, or streets and sewers, sound engineering is at the base. The city maintains a large, well organized engineering staff, around some 150 graduate engineers. Even for new areas the city does most of the engineering work, whereas in many cities this is done by the subdividers. By having the city do the engineering, higher and more consistent standards of work and materials are maintained. Only for very large projects, such as some bridges and larger buildings, does the city have the engineering let out on bids to consulting firms. This goes too far water feeder mains and paving and sewer overloads.

MIDWINTER NIGHTMARE

While we're on the subject of public works services, what about snowplowing in Milwaukee? One hears a lot of complaining about it. Is it justified?

Aside from the general tendency of most of us who drive cars to be impatient with any delay, and somehow to be experts on all phases of traffic management, there is little reason for criticizing Milwaukee's street clearing program during snow emergencies.

A few facts should be kept in mind. Milwaukee is a northern city. It's in the snow belt. Snowstorms can do a Pearl Harbor sneak attack (like the one just before Christmas) when every weather forecaster, including the private service to which the city subscribes, predicts only rain. Timing is all important, for unless streets can be plowed when cars are not on them they can't be cleared.

Milwaukee has 1,200 miles of streets. It plows all of them when a snowfall exceeds 3 inches. Canadian cities do not touch side streets unless the fall exceeds 6 inches. Small towns clear business streets only, and very few cities of any size can afford general removal of snow, as distinct from plowing.

A businessman sometimes asks that "all that blankety blank white stuff" be removed from in front of his store. He should

realize that it can't be done by the city unless it is also removed from in front of every other business place. As a taxpayer he should remember that snowplowing is costly enough—from \$30 to \$50 per mile. Snow removal can cost from \$1,800 to \$2,500 per mile. Does he want the city's new IBM machines to include that when they make up the tax rolls?

Bad snowstorms are tough, whenever they strike, but Milwaukee's public works officials think it's better to roll with the punches. Milwaukee traffic has moved well during the last 5 or 6 winters thanks to the increasing use of ice control. Many drivers think the city streets are clear of snow and ice just because it melted, due to warm weather. They seem to think that, even though the temperature might be in the twenties for many days. But the street sanitation department knows better. It knows that without the tons of salt, sand and chemicals it spreads on the streets, we would have the ice ridges and ruts that were a regular thing on our streets in the winters of a decade ago.

Today's greatly increased traffic demands movement. Milwaukee's traffic engineering department applies its best brains to giving Milwaukee's cars a higher average speed than in many other cities, and it does that with maximum safety, as records will prove. In bad weather, therefore, this movement is kept up as close as possible to the average speed, only by a well planned and consistent ice-control program.

TEAMWORK

In the various battles against Old Man Winter, not only the men of the street sanitation department, but workers in forestry, street maintenance, and garbage collection are mobilized for the fight. Where does this army of men get its equipment?

Besides 170 police and 130 fire department vehicles, the city owns 1,900 pieces of mobile equipment. These, from small pumps to 15-ton cranes, are all under the control of the bureau of municipal equipment. By centralizing ownership and maintenance (as Milwaukee has done since 1924) many advantages are realized. For example, insurance and depreciation, both of which are continuing factors, can be put to best use by keeping trucks working as much of the time as possible. This could not be done if trucks belonged to a particular bureau since then they would only be used when the special tasks of that bureau required it.

Figures also show that the accident ratio per miles traveled is lower on equipment driven by bureau drivers than it is on city passenger cars and pickup trucks, which are driven by other employees.

After 8,000 miles of use the bureau gives each car a thorough checkup and makes small repairs before they get to be big ones. Various price advantages are realized from quantity buying of parts and from fleet discounts on tires. Equipment is kept moving by the use of four radio-controlled repair trucks.

All work is done on a businesslike basis between the bureau and the departments using the equipment. The bureau maintains three repair shops and seven service stations. Heavy maintenance of squad cars, regular repair of all other equipment, and biweekly washing of cars and trucks, is done by some 140 bureau personnel, for an annual billing of \$4.5 million in 1958 and \$4.75 million in 1959.

PROTECTIVE SERIES

In addition to the excellent work of the police and fire departments, assurance of safety is given to Milwaukee citizens by other city departments. We live in safe houses, see plays in safe theaters, and attend other public events in safety because of the careful work of our building inspection department. One occasionally hears complaints

about Milwaukee's antedated building code. These usually come from some impatient purveyor of new building materials who can't wait to sell them to eager builders who are making the most of the current housebuilding boom. While this may be sincere and admirable from a strictly business point of view, government must, of necessity, move more slowly. Her responsibility for the safety of her citizens must be (and is, in Milwaukee) taken very seriously. A person who dies because of the failure of a structural element is dead for a long time. City officials, from inspectors to lawmakers try to keep that fact in mind. Although it is not always easy to do so under pressure from persons who do not feel the same responsibility.

Another example of the city's protection, developed in spite of efforts to the contrary, is the fluoridation of Milwaukee's drinking water. Only those who attended the many public hearings on this subject, know how hysterically the aldermen and the health commissioner were scolded and threatened if they would dare to put this "rat poison" in the water. It was easy to see why the council hesitated, and who knows how many growing children were deprived of better teeth because of the delay. But as soon as the verdict was clear—that fluoridation was a benefit, not a danger—the council acted. A recent survey of the results in the 6 years of fluoridation show a very noticeable reduction in tooth decay with evidence that eventual results will be as much or more than originally promised. The survey also showed that the cost of this protection is only 5.5 cents per person per year compared to costs of 8 to 15 cents in most communities, according to the State board of health.

PROTECTING YOUR POCKETBOOK

An article in Life magazine last November highlighted a New York City conspiracy between dishonest butchers and city inspectors. This "high-weight robber," as Life called it, was traced right to the door of the City Sealer of Weights and Measures. Some inspectors were shaking down butchers for as much as \$60 a month.

Could this happen in Milwaukee? The answer is "Yes," provided there is widespread dishonesty on both sides, that is, among the merchants and the inspectors. But there isn't. Also, citizens are quick to report any possible cheating to the City Sealer, who encourages this reporting. He advises citizens in doubt to reweigh packages at home, and he tells us that some people even pour milk from cartons into glass bottles to compare measure.

Both merchants and the public are protected. The former are saved from unfair competition and the latter from being cheated, even inadvertently. For just one example, city inspectors reweigh every year more than 20,000 prepacked items in supermarkets to assure correct weight. This has an extra advantage. Contents are fresher, because the merchants dare not pack too far in advance, lest the packages shrink before the inspector arrives.

SOUND MONEY POLICIES

One frequently hears of Milwaukee's financial stability, her fine credit rating and her generally good reputation in the municipal bond market. Since 1950, when Milwaukee again embarked on a borrowing program, city finance officers have had frequent opportunities to learn in what high esteem Milwaukee's credit is held. Today, with \$120 million in debt outstanding, Milwaukee is one of only three major cities having a triple-A credit rating. But practically speaking, what does this mean to us taxpayers? It means that when Milwaukee needs money for capital improvements she gets it at the lowest interest rates the market will allow. A study of

what's happened in the last few years shows that Milwaukee has obtained interest rates 0.53 percent below the average for large cities. This represents a saving of \$636,000 a year at present rates. If we would limit our comparison only to 20 cities having a double-A credit rating, Milwaukee's superiority diminishes to only a 0.39-percent lower interest. That means we are saving only \$468,000 a year, thanks to sound government and sound financing.

WHO DOES THE WORK?

Just as the city in general is only as good as its people, so the local government is only as good as its officials and employees. The good people see to it that the right officials are elected, but what about the thousands of city employees who provide all the service we have described?

For 65 years or more, Milwaukee has depended on the principle of civil service to get the best employees it can. The city service commission and the fire and police commission have both used an approach to this problem that over the years has provided honest, competent, well-trained workers to give Milwaukee its fine reputation in so many fields.

None of this just happens. For example, with the current emphasis on construction, our city service commission goes to great efforts to hire good civil engineers. In the past year it has recruited some 25 or more by doing just as big industry does—visiting colleges to get the best, at a cost to the city of about \$100 per hired engineer.

The commission also conducts nationwide examinations where necessary, particularly for high echelon positions, as it did recently for museum director, city forester, assistant purchasing agent, and the like. In such cases, thousands of preliminary announcements are mailed out to selective lists, such as professional organization member lists, or lists of attendants at certain conventions. In this way, the cream of prospective employees are apprised of vacancies on the staff of the best governed big city in America. They apply; they are hired, and help to keep Milwaukee's great reputation.

No, sir. It doesn't just happen.

Shorter Presidential Campaigns

EXTENSION OF REMARKS

OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. MONAGAN. Mr. Speaker, in still further support of my bill for shorter presidential campaigns (H.R. 9584), under unanimous consent, I append herewith a thoughtful editorial on this subject which appeared in the Mason City (Iowa) Globe-Gazette, on March 8, 1960:

LONG CAMPAIGNS NO LONGER NEEDED

Just why a presidential campaign should stretch out 4 or 5 months after the nominations are achieved is something difficult of explanation. One year this was reduced by a month or so and the innovation seemed to be highly popular with the public.

Reversion to extended campaigns after a taste of the abbreviated format apparently was dictated by politicians although some vigorous voices are being raised against the decision in political circles. Representative JOHN S. MONAGAN, of Connecticut, has urged a 60-day limit in these words:

"It is becoming more and more obvious that this 4-month period serves no useful purpose. It brings the candidates to phys-

ical prostration. It causes the unnecessary expenditure of large sums of money, and it carries the voting public to a condition of apathy.

"I honestly believe that the time has come to reduce the campaigning period of our national elections. . . . A shorter campaign in this country would prevent wear and tear on the candidates, save millions of dollars and preserve the voter's interest in the candidates and the election."

Constantly improving transportation and communication provide candidates with the means to get themselves and their views before the public more quickly and on a much broader basis than in the past.

Dr. George I. Sanchez, Good Neighbor at Home—A Leader for Understanding at Home and Abroad

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. YARBOROUGH. Mr. President, Dr. George I. Sanchez, University of Texas professor of Latin American education, has resigned as chairman of the history and philosophy of education department, but will continue full-time teaching duties.

Dr. Sanchez' decision to remain at the University of Texas is good news for us, for the University of Texas, for the country, and for all Latin Americans on both sides of the Rio Grande del Norte. Dr. Sanchez has been a beacon light of progress in the growth of friendship and understanding and mutual advancement of Americans of both Anglo and Latin descent in both his native New Mexico and his adopted Texas home.

More than that, he has been an active and dynamic force for good government and progress in the entire State of Texas. Boldly he placed his shoulder to the wheel for integrity and honesty in the State government when millions who wanted the same objectives were too timid to help. He is a genuine leader in the best sense of our democratic way of life.

I ask unanimous consent to have printed in the Appendix of the Record an article from the American Statesman of Sunday, March 13, 1960, entitled "Colleagues To Honor Educator."

There being no objection, the article was ordered to be printed in the Record, as follows:

COLLEAGUES TO HONOR EDUCATOR

Dr. George I. Sanchez, University of Texas professor of Latin American education, will be honored by his colleagues and friends at a reception here Sunday afternoon.

The reception will be held in the home of Dr. William E. Drake, 5806 Trailridge Circle. Dr. Drake succeeded Dr. Sanchez as chairman of the history and philosophy of education department. Dr. Sanchez was chairman from 1951 until he resigned last fall. He continues full-time teaching duties.

A large portrait of Dr. Sanchez will be presented at the reception and will be hung in the departmental office in Sutton Hall, along-

side portraits of previous chairman, Dr. Fredrick Eby and the late Dr. Charles F. Arrowood.

Dr. Sanchez began his career as a rural schoolteacher, principal and supervisor in Bernalillo County, N. Mex. He served with the New Mexico State Department of Education as information and statistics division director. He was New Mexico State Educational Association president, 1934-35, and Julius Rosenwald Fund research associate, 1935-37.

He joined the University of Texas faculty in 1940 as professor and consultant in Latin American education.

Dr. Sanchez has directed several studies of Spanish-speaking people and has conducted research in Latin American countries, notably Mexico and Venezuela. In Venezuela in 1937-38 he was adviser to the National Ministry of Education and director of the National Institute of Pedagogy.

He has been consultant to various U.S. Government agencies, including the Bureau of Indian Affairs, Interior Department, and Office of Civilian Defense.

Dr. Sanchez is the author of "The People, a Study of the Navajos," "Forgotten People," and "Mexico—A Revolution by Education." He also has contributed chapters and sections to more than 20 other books, including "Comparative Education," a widely used college and university textbook. His articles have appeared in scholarly journals in the United States and abroad.

He delivered the principal lecture of an education seminar at a Festival of the Americas, held last August in Chicago in connection with the Pan American games. He will teach next summer at the University of Alaska. He will soon undertake a national study of bilingualism.

Dr. Sanchez was born in New Mexico and is a graduate of the University of New Mexico. His master's degree is from the University of Texas, and his doctoral degree from the University of California.

"Bill Langer—As I Knew Him," by Usher L. Burdick

EXTENSION OF REMARKS OF HON. QUENTIN BURDICK OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. BURDICK. Mr. Speaker, the matter which I include in these remarks constitutes not only a eulogy and a biography, but a piece of American history. William Langer, Usher L. Burdick, William Lemke, Lynn J. Frazier, and A. C. Townley were actors on the North Dakota political stage during a very colorful period and their influence was felt far beyond the borders of North Dakota. All of these men have now departed this earthly existence except my father, Usher L. Burdick, who is remembered by my colleagues as an able and effective legislator with a warm and infectious sense of humor.

Senator Langer and my father followed the same liberal course, and both found themselves voting more often with the Democrats than with the Republicans. I know of no one more qualified than Usher L. Burdick to recount the events of the period and to portray the life of "Bill" Langer.

Upon my graduation from law school in 1932, I became associated with Senator Langer through the Nonpartisan League, and this association continued for almost a quarter of a century. During that time we shared the same political platform many times and spent many hours together traveling the roads of North Dakota. From my personal association with "Bill" Langer and from my participation in the Nonpartisan League I, too, recall many of the events recounted by my father, and I share his same regard for the late Senator. I am, therefore, happy to include the following comments of my father, Usher L. Burdick, entitled "Bill Langer—As I Knew Him."

William Langer was born in Everest Township, N. Dak., September 30, 1886, the son of Frank J. and Mary Langer. He received his high school education at Casselton and his university course at Columbia University in New York. He graduated from Columbia as valedictorian in 1910, and immediately started his professional career as a lawyer at Mandan, Morton County, N. Dak.

On his way home from Columbia, he stopped to visit William Lemke of Fargo who was at that time looking after the interests of himself and associates in a ranching venture in Mexico. Several friends of William Lemke's had organized a large cattle ranch in Mexico and it was here that Langer came to visit Lemke. The proposition looked good to Langer and, through the arguments put up by Lemke, Langer invested in capital stock of this land company. Here was the beginning of a feud between the two that lasted until death.

It is not generally known why Langer and Lemke were such uncompromising enemies but, since they have both now crossed the Great Divide, and because both were my close friends always and under all circumstances, I presume it will not be out of place to relate the story.

A few days after Langer had invested in this ranch, he rode around the domain examining the cattle herd of some 800 head and the clearing of brush on the lands they intended for an orchard. He learned that the revolution then going on in Mexico was headed directly for this ranch and, knowing that Lemke was in good standing with the Mexican Government, Langer had visions that they would be taken prisoner and their property confiscated. He notified Lemke of his discovery and pleaded with him to accompany him back to the United States instantly. Mrs. Lemke was at the ranch at that time, and Langer concluded that all three would be saved if they got out of there at once and before the revolutionary forces arrived.

Lemke didn't propose to abdicate so suddenly, and remarked to Langer, "I will stop all the bullets that come this way." Langer had put all of his cash into stock and had no funds with which to finance himself back to the United States. Lemke handed back to Langer \$1,000 of his money, and Langer lost no time in starting out. He started walking toward the border, but about the time he was completely tired out, two Mexicans in an open Ford car, who had deserted the revolution, caught up with him. Langer asked them to let him ride with them, which they consented to, and the three drove on. The facts were that these two men in the Ford were fleeing themselves, but Langer was not informed of this or where they were headed, nor did he care as long as they were going in the direction of the United States.

The Mexican Government forces soon caught up with this Ford car and all three were captured and securely lodged in jail

at the nearest town. A court martial convened immediately and all three were condemned to be shot the next morning at sunrise. Langer bewailed his fate and always thought that if Lemke had immediately started out with him at the time Langer first notified him, all would have escaped.

Before concluding what happened to Langer, we will see how Lemke and his wife were progressing. The revolutionary forces struck the ranch just as Langer had predicted. The house was shot up, but Lemke and his wife defended it with all the means they had. The cattle and all personal property were confiscated. Finally the attack on the house ceased and the forces moved on. Lemke and his wife made their way back to the border without mishap.

We left Langer in jail and about to be executed. Langer got in touch with Washington and, after two or three postponements of the execution were obtained, Langer was freed but his two companions were shot. The U.S. Government obtained Langer's free and unmolested passage to the border.

As time went on, Langer claimed his near execution was due to Lemke's long delay in getting away from the Revolution, and Lemke claimed Langer had deserted him and his wife in their perilous situation. Nothing I could do, and I was friendly to both men, could patch up this deep-seated feud. This was the beginning of their life's resentment, and all through their political careers this ill feeling persisted. Both were loyal public servants with great ability. Not only that, but they had the same philosophy of bending their efforts to help the underdog. Both Langer and Lemke went ahead in their careers, both becoming outstanding public servants, both having the confidence of the people, and both were unbeatable in elections.

Langer had a hectic career from the very beginning. His first office was that of State's attorney of Morton County, where he determined to clean out the bootleggers and booze vendors. This was something new for the once Wild West. In his successful campaign against the liquor elements, he built up a mass of friends and some enemies, but the people generally applauded an honest crime prosecutor.

His next office was that of Attorney General, being elected by the Nonpartisan League faction of the Republican Party. While acting in this capacity, he discovered that some of the leaders of the Nonpartisan League were carrying on illegal practices in banking and other financial deals. Langer stuck to his guns to enforce the law. He broke with the A. C. Townley control of the league and became a candidate for Governor on the ticket opposing the Townley supporters. He lost the election but the campaign he made convinced the people that he was right.

There was no job too big for Langer. He started right in to reorganize the old Nonpartisan League, became a candidate for Governor and was elected. The opposition was so wrought up over his election that they started in on a desperate program of propaganda against him. Before his term ended, the Supreme Court of North Dakota rendered a decision that ousted him from office. The Federal Government arrested him for interfering with the WPA program, charging that he had caused to be solicited from workers on WPA for contributions to support the Nonpartisan League newspaper, which Langer had established. Through the unjust conduct of the trial by the judge, who was Langer's enemy, Langer was found guilty by the jury, and the judge sentenced him to Federal prison.

Having now brought about the verdict of guilty, the supreme court in a court action decided that under the State constitution and laws the Governor was ineligible to hold the office. The legal phrase pertaining

to the Governor recites that upon conviction of a crime the occupant becomes ineligible. The supreme court was confused, for there is never a conviction until the defendant has had his final day in court. Langer had appealed his Federal case at the time he was removed from office and actually he had never been found guilty since his appeal was pending. He won his case in the U.S. Circuit Court and was, therefore, never found guilty. But the supreme court had put him out of office. Langer, therefore, became the Nonpartisan League candidate for Governor and was elected again with a "hoop."

His next try was for the U.S. Senate. Here it might be well to say that Langer didn't want the nomination; he insisted that I be nominated. The convention thought otherwise and Langer became the candidate and was elected. In the meantime he had been arrested for various crimes, but that didn't stick. So when he presented himself for a seat in the Senate, his enemies were right on hand to oppose his seating, although all legal charges against Langer had been aired but the people overwhelmingly had elected him Senator, having before them all the charges and complaints offered by the opposition. Langer was seated and became a Member of the U.S. Senate; his next election was much easier and he went back to the Senate for a second time.

In the meantime, the nonpartisan league faction of the Republican Party, and the ROC faction (leader of the opposition to the league), decided to join forces. But no sooner had this marriage taken place when the convention endorsing candidates decided to turn on Langer and defeat him. It refused to nominate him. This fired up the old league members again and they discovered that their marriage with the ROC was not what it was thought to be.

Langer, therefore, entered his name on the Republican primary ballot, and carried every county of the 53 counties in North Dakota. No one before had ever won such a victory. This was his last political victory, however. His charming wife died in August 1959 and, while Langer could respond from political reverses, he could not respond from the death of his wife, and before the year closed, he joined her in death.

His record still lives, and in it the people can find that in him they had an able Senator, a loyal friend of the poor, and one who stood up to be counted in the Senate, although he might be the only one to stand. He probably will never be replaced in the hearts of the people, but they will do their best to send someone to the U.S. Senate who does not forget the record of their beloved Senator Langer.

Langer was a prodigious worker. No request from people back home, whether they were Nonpartisan League or not, was ignored by Langer. He attended to more details than any man I ever knew. He rushed to the side of people in trouble, and these people would stand up and fight anyone who made disparaging remarks about him. I drove with him one time, and we were 100 miles from our scheduled destination. It was dark, as we had just left a meeting. All at once Langer remembered that some rancher living down in the Badlands had wanted to see him, so we drove 80 miles out of our way to see this man. Langer had done a favor for this man, and he merely wanted to thank Langer. While this man was a staunch Republican, he jumped the traces and fought for Langer. Thousands had been helped by Langer, and those he helped paid him back with their support, no matter what party or faction they were affiliated with.

Langer was arrested or sued, he said, 32 times, and won every case. He took great delight in putting away his enemies, but after the complaint had been settled, Langer

made no reprisals. He always said to me, "I don't blame this man for bringing this suit or signing that complaint; somebody is behind it, and this man is being used."

As the years rolled on, Langer became politically stronger. His last election to the U.S. Senate wasn't an election; it was a complete rout. His death was a stunning blow to the thousands in North Dakota, and the principles for which he fought will live on even with generations not yet born. He once said, "Burdick, those prosecutions and unfounded charges I can take in stride, but when at school the students say, there is Langer's daughter, he has been sentenced, that is hard to take."

Mrs. Langer was a delightful woman and a real fighter, being a descendant of the patriots of '76. She stood like the Rock of Gibraltar in all these trying experiences. Their daughters, too, were fighters and held their chins up in adversity. They can be proud of their parents, who were united in marriage, in life, and now in death.

Merle Peters: Outstanding Individual Farmer

EXTENSION OF REMARKS OF

HON. ANDREW F. SCHOEPPPEL OF KANSAS

Thursday, March 17, 1960

IN THE SENATE OF THE UNITED STATES

Mr. SCHOEPPPEL. Mr. President, Mr. Merle Peters of Geuda Springs, Kans., recently was awarded a plaque by Henry Ford II in recognition of his outstanding achievement as an individual farmer. He was one of 12 recipients so honored at a banquet in Dearborn, Mich., attended by about 200 farmers.

On March 20, Mr. Peters will leave on a 4-week trip to the Far East as a guest of the Ford Motor Co.

I ask unanimous consent to have printed in the RECORD an article about Mr. Peters which appeared in the 1960 Ford Almanac under the main heading "High Dollar Wheat Award."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG WHEAT YIELDS MEAN HIGH PROFITS

Merle Peters is a Kansas wheatgrower who fertilizes, conserves moisture, uses the best varieties, and treats his seed. His reward is a good yield that returns almost \$1 per bushel profit, figuring \$1.82 supports.

Cost of growing wheat on this farm near Geuda Springs, Kans., is 46 cents per bushel for fertilizer, seed, seed treatment, labor, fuel, and depreciation. That's on a 40-bushel yield, and last year Peters averaged 41 bushels on 260 acres of wheat.

When you figure a land charge of \$15 per acre, the cost jumps 37 cents to a total of 84 cents.

These figures show why it takes big yields to make high profit on wheat. Using a \$15 land charge, Peters' costs are \$33.40 per acre. At 40 bushels, the cost is 84 cents per bushel; 30 bushels costs \$1.11; and 20 bushels costs \$1.67—close to the break-even point.

Peters plants the Triumph variety. He has a test plot where he grows the 10 varieties that Kansas State recommends. Triumph is the one that does best in the Arkansas City area.

On ground that has been cropped continuously, Peters uses from 70 to 100 pounds of 16-48-0 applied at seeding time. If there's

plenty of moisture in the spring, he top-dresses with additional fertilizer. Wheat following sweet clover or a legume gets 100 pounds of 45 percent phosphate.

Peters never burns straw. He follows the combine with disc or one-way. Then as soon as volunteer sprouts, he uses a mold-board plow. He continues to work the ground after each rain with a springtooth.

Peters thinks crop rotation would be most helpful in boosting yields for the average wheat grower. He also feels that plowing under all straw and working the ground after each rain to control moisture and kill weeds are important too.

Peters has 1,100 acres, half in grass and half cultivated. He has a beef herd and feeds out steers and 150 hogs. Last year he was voted the outstanding young farmer of the area by the Arkansas City Chamber of Commerce.

High dollar wheat award

	Yield	Cost per bushel	Profit per bushel
	Bushels		
Peters' record	41	\$0.84	\$0.98
Almanac goal	40	1.00	.82

James L. Kilgallen, Famous Newspaper Reporter, Honored Today

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Wilkes-Barre Sunday Independent of March 13, 1960:

FRIENDLY SONS WILL PAY HONOR TO OUTSTANDING NEWSPAPERMAN

James L. Kilgallen, one of the top reporters in the United States and an employee of United Press International, will be honored at the annual dinner of the Friendly Sons of St. Patrick of Greater Pittston on Thursday. It has been a custom over the years for the local organization to honor a native of the area at the annual dinner to be held this year in the Mayfair Supper Club, Yatesville.

Mr. Kilgallen started reporting the news at the age of 17 and has been writing for over 50 years. A reporter for the International News Service for 35 years, he ran the gamut of news jobs—reporter, copy reader, makeup man, managing editor, editor-in-chief. He once owned his own daily newspaper.

RUNYON TRIBUTE

Damon Runyon once said of Kilgallen: "No man alive has greater determination or pertinacity in the pursuit of news, no man is faster getting it, and no man is even half as speedy getting it out." Kilgallen has covered everything and everybody from Al Capone to the Pope. During World War II he was a war correspondent with both the Navy in the Pacific and the Army in north Africa, Italy, France, and the final drive into Germany.

Typical of his experiences, Kilgallen was in the death chamber that night in Trenton, N.J., when Bruno Richard Hauptmann was executed. He saw Ruth Snyder die in the Sing Sing death chamber.

He was at the ringside in Chicago when Jack Dempsey dropped Gene Tunney for the now-famous "long count." He was in the press box when Grover Cleveland struck out Tony Lazzeri with the bases loaded during the 1926 world series.

KNOW THE GREATS

The great names he has interviewed include the late President Franklin D. Roosevelt, John L. Lewis, John D. Rockefeller, and Henry Ford.

He covered the Hindenburg disaster; the Michigan sit-down strikes; the extradition of the late Samuel Insull, the former multimillionaire Chicago utilities king; and many famous trials. He has covered important meetings at the United Nations and atom bomb tests in the Pacific. In 1948 he won the George R. Holmes Memorial Award for his coverage of the indictment of Alger Hiss by the New York Federal grand jury.

Born in Pittston, Kilgallen is a graduate of the old Chicago school of newspapering, and was with the Chicago Tribune, the Associated Press, and Indianapolis Times. He is married and has two daughters, the elder of whom is Mrs. Richard Kollmar, better known as Dorothy Kilgallen, Broadway columnist and television panelist.

World Understanding Week

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. WILEY. Mr. President, as the miracles of science and technology bring the nations and peoples of the world closer together, we recognize that there is a great need for more understanding and cooperation if there is to be an ultimate peace.

Over the years, Congress has endorsed and supported a variety of programs for mutual cooperation on military, economic, cultural, educational, and other levels, to establish a better framework within which to resolve world problems and to meet the challenges of the future.

Recognizing the tremendous burden that already is placed upon the shoulders of Uncle Sam, however, I am always deeply gratified by voluntarily sponsored efforts of individuals and organizations to engage in such broadscope programs that serve our national interest.

During March 20-26, 1960, the Rotary International, a splendid service organization, is undertaking a constructive effort to promote "World Understanding Week," through its international organizations, at home and abroad.

This splendid endeavor represents an attempt to "bridge the gap" of understanding between ourselves and the people of other nations—to promote greater friendship and to increase understanding of international problems. Particularly, they stress the human side of "getting to know our neighbors" in a world shrunken by science and technology.

Reflecting the kind of practical action needed to promote greater human understanding, I ask unanimous consent to have a 15-step practical program, en-

dorsed in past efforts by the Rotary, designed to make World Understanding Week a success, printed in the Appendix of the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

FIFTEEN WAYS YOU CAN HELP MAKE THE WEEK A SUCCESS

1. Join some of your fellow members in a panel discussion of a major world issue.
2. Put your personal acquaintanceships on a round-the-world basis by writing to clubs in different countries.
3. Exchange books and magazines with clubs in other countries.
4. Arrange a window display of publications received from other countries. Also, discuss the publications at fireside and club meetings.
5. Inform local clergymen, newspaper editors, and radio and television stations about the week. Tell them how your Rotary Club intends to observe it.
6. Is your community near a college? If it is, arrange to entertain a group of students from overseas.
7. Build a club program—a panel discussion, quiz, or a talk—around an International Service article taken from a recent issue of this magazine.
8. Get plans underway for an international youth exchange for this coming summer, or for the next school year.
9. Promote the week in local schools by sponsoring an essay contest on world understanding.
10. Do you have some new citizens in your town? Invite them to a club meeting; perhaps they might participate in a panel discussion on an international subject.
11. If your club is near a national border, meet with a club on the other side.
12. Publish a special issue of your club bulletin, theming it to world understanding and good will.
13. Highlight the week with a community-wide gathering to hear a speaker from another country, possibly a consular official.

Are the Postal and Federal Employees Entitled to a Pay Raise? William Doherty Explains This Fully in His Analysis of Postal Employees and Federal Employees Pay Legislation

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. MORRISON. Mr. Speaker, hearings were begun by the House Post Office and Civil Service Committee on Legislation to make a proper adjustment in the salaries of postal and other Federal employees. The first witness was the president of the National Association of Letter Carriers, Mr. William C. Doherty. He was accompanied by his able staff, Mr. Jerome Keating, vice president, Mr.

Peter J. Cahill, secretary-treasurer, and Mr. Reuben B. Kremers, assistant secretary-treasurer.

Mr. Doherty's remarks were directed primarily toward the provisions of H.R. 9883, a bill which I introduced and in which I have been joined by 65 Members of the House.

In view of the widespread interest in this legislation, both in the House and on the part of postal and Federal employees generally, I am pleased to insert in the RECORD the entire text of Mr. Doherty's statement, as well as the charts which were the basis for the statement of Mr. Keating.

In submitting this material for the RECORD, I want to state that this was one of the finest presentations, covering a very complicated subject, ever made before our committee.

The statement and charts follow:

STATEMENT OF NATIONAL ASSOCIATION OF LETTER CARRIERS ON H.R. 9883 AND RELATED BILLS BEFORE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, TUESDAY, MARCH 15, 1960

(By William C. Doherty)

Mr. Chairman and members of this distinguished committee, my name is William C. Doherty. I am president of the National Association of Letter Carriers, AFL-CIO. Our headquarters are located in Washington at 100 Indiana Avenue NW. We represent a membership of approximately 124,000 letter carriers located in each of the 50 States, Puerto Rico, and the District of Columbia.

With me are our vice president, Mr. Jerome J. Keating; our secretary-treasurer, Mr. Peter J. Cahill; and our assistant secretary-treasurer, Mr. R. B. Kremers.

Our organization greatly appreciates the decision of this committee to hold public hearings on pending salary legislation. At the same time, we acknowledge with appreciation this opportunity to present testimony reflecting the position of the letter carriers of the United States.

Before beginning our testimony, I would like to pay tribute, in behalf of the National Association of Letter Carriers, to the unwavering fairness and consideration that we have always received at the hands of this committee. We have many happy memories of working with you on our problems and we are grateful for the treatment we have always received from you, ladies and gentlemen, who serve as the board of directors of the Postal Establishment.

We are here today to support and urge approval of H.R. 9883, introduced by the distinguished gentleman from Louisiana [Mr. MORRISON]. At the same time we want to thank the sponsors of the 60 or more similar bills before this committee, including those introduced by several members of the committee: Mrs. GRANAHAN, Mr. BROYHILL, Mr. CUNNINGHAM, Mr. FOLEY, Mr. HARMON, Mr. LESINSKI, and Mr. OLIVER. We know and appreciate, too, Mr. Chairman, that you and others on the committee including Mr. DAVIS, Mr. REES, Mr. CORBETT, and Mr. GROSS, have sponsored bills to make permanent the current 2.5 percent temporary increase.

PROVISIONS OF BILL

H.R. 9883 has three separate titles. Title I provides for an adjustment in the rates of basic compensation for postal personnel. Title II provides similar treatment for employees paid under the Classification Act of 1949, as amended. Title III provides for miscellaneous provisions, including an effective date of January 1, 1960.

The testimony of our organization will be confined to titles I and III and only as they apply to letter carriers. We most definitely are in favor of title II. However, we feel

that representatives of employees covered by that section, who are also scheduled to appear before this committee, are better qualified to discuss the aims and purposes of title II.

Title I, as you know, proposes to amend the Postal Field Service Compensation Act of 1955, as amended. The bill would provide the following for letter carriers:

1. Advance employees in the lower pay levels by one level.
2. Eliminate the first pay step and place all employees in the same numerical pay step they are in at the present time.
3. Twelve-percent pay increase.
4. Increase the number of longevity steps from three to four.
5. Increase the amount of the longevity increment from \$100 to \$200.

Thus, the number of pay levels in the postal field service schedule would be reduced from 20 to 19. Numerically, letter carriers would remain in level 4, but the pay grades would be as follows:

Step 1	\$4,900
Step 2	5,145
Step 3	5,300
Step 4	5,455
Step 5	5,610
Step 6	5,765

The proposed four longevity steps would be given after 10, 15, 20, and 25 years' service.

A new schedule comparable to the above would be provided for rural carriers.

Title III authorizes the expenditure of the necessary funds to carry out the intent of the bill. It also provides for an effective date to be the first pay period after January 1, 1960.

PLACEMENT OF LETTER CARRIERS

The official job description of the postal employees we represent is city delivery letter carriers.

As this job title indicates, the majority of our members are concentrated in and around the Nation's metropolitan areas. They work in 3,727 post offices of the first-class, and 1,788 offices of the second-class. We serve 38.7 million families, or approximately 150 million people every working day of the year. The number of families served, incidentally, is an increase of 3.1 percent over last year.

In addition, our members serve 3.4 million business establishments of all kinds and sizes. This figure, also, has gone up by 2.7 percent during the past 12 months.

I think it is quite apparent from these figures that city delivery service constitutes the heart and core of the postal establishment. And, as the population trend continues to flow from rural to urban and suburban areas, its importance is growing.

According to figures supplied by the Post Office Department, the average annual salary of all letter carriers today is \$4,640. This means an average monthly wage of \$370; an average weekly wage of \$89.23, and an average hourly rate of \$2.23.

All these figures are in gross amounts.

As I have said, the vast majority of our members work in the metropolitan areas of the country. This means they live and shop in those areas, which have, by and large, the highest cost of living rates in the Nation.

As an aside, I would like to point out that our members do not necessarily live and shop in the same metropolitan area in which they work. There are a number of communities in the United States in which the cost of living is higher than a letter carrier can afford and he must therefore commute each day between his home and his office. I can cite as an example of this some of the communities in Westchester County, N.Y., where the letter carriers are commuting from Manhattan to their jobs while their patrons are commuting in the opposite direction.

I mention the geographical distribution of our membership because, to acquire an accurate appraisal of their economic situation, one must compare their earnings with those of other workers in the densely populated and generally highly industrialized areas in which letter carriers must work, live, and educate their children.

GROSS EARNINGS OF PRODUCTION WORKERS

The U.S. Department of Labor publishes, as most of you know, a monthly report on the Nation's labor force under the title "Employment and Earnings."

In the February 1960 issue of this publication, there is listed (table C-7, p. 39) the "gross earnings of production workers in manufacturing by State and selected areas." The selected areas are the larger cities within the various States.

We have made a comparison between the average weekly salary of all city delivery letter carriers with the salaries of production workers as listed in this official Government publication. For example, in 89 out of the 112 communities under comparison, the average gross earnings of a letter carrier are lower than the average of all production workers.

In the six States for which only an overall average was given, with no breakdown by communities, the letter carrier was lower in five instances.

And, of course, the overall averages presented by the U.S. Department of Labor are weighted down considerably by the heavy preponderance of unskilled or migratory jobs in many production industries.

I might add that these figures I have been citing are the latest available. They are for December 1959. I am reliably informed that the figures for the succeeding month of January 1960, will show even greater economic discrimination against letter carriers.

Traditionally, every postal worker has always been engaged in the frustrating task of chasing that elusive will-of-the-wisp, the cost of living index. He has never caught up with it. He must pay the same prices for the things he buys as do his higher paid brethren in private industry. He gets no special breaks in the consumer market, nor has he ever encountered a merchant who would accept a day's annual leave, or any other fringe benefit in exchange for hamburger meat or a pair of children's shoes.

So, I would like now to compare the average weekly earnings of \$89.23 which a letter carrier receives with the earnings of some of his neighbors who pay the same relative prices in the same shops that he patronizes.

In the January 1960 issue of the Labor Force, (a publication of the U.S. Department of Labor), the following average weekly earnings are listed for production workers in major industry groups. I would like to quote the figures listed for workers in comparable industries.

Industry group	Average weekly earnings
Transportation equipment	\$118.13
Petroleum and coal products	116.11
Primary metal industries	116.00
Ordinance and accessories	108.05
Printing and publishing	105.49
Machinery	105.41
Chemicals and allied products	101.84
Fabricated metal products	100.84
Rubber products	100.44
Instruments and rated products	94.30
Paper and allied products	94.30
Electrical machinery	92.84
Stone, clay and glass products	91.30

I have not included those few industries where the standard workweek is less than 40 hours and in which the pay is geared to the shorter hours pertaining in these industries.

As is easily apparent, the average in each of these industries is higher than the \$89.23 average weekly salary of the letter carrier.

The overall average of these 13 industries cited is a little more than \$104 a week. This is an average of \$15 a week, or \$780 a year, more than the earnings of a letter carrier.

I would like to point out that the same sources I have been quoting show that the national average weekly wage for workers in the mining industry is \$114.24. This national average is \$25 a week more than the average wage of a letter carrier. This comes to \$1,300 a year in excess of a letter carrier's wages.

Again, the Labor Force lists the average weekly earnings of workers in the construction industry as \$117.81, or \$28.60 a week more than a letter carrier's pay.

FRINGE BENEFITS

But, whenever we bring up the subject of letter carriers' salaries there are always some individuals who refer somewhat vaguely to our "fringe benefits" and infer that these are equal to thousands of dollars additional pay.

I do not want to give the impression that I underestimate the value of our fringe benefits. However, since they are taking on more and more prominence at the bargaining table, I think it is very necessary that we do not become mesmerized by exaggerations when we discuss their relative importance.

As I have said, fringe benefits are not considered negotiable by bill collectors and, when discussing their value to employees, since accurate official figures are chronically unavailable, we are asked to place our reliance on estimates which all too often turn out to be mere guesswork.

The last published official information on fringe benefits for all Federal employees, so far as we know, was contained in the Cordier report which was released in late 1957. We shall take up some of the findings of the report later in this statement.

For the moment we wish to refer to an estimate supplied by Postmaster General Summerfield during the hearings before the House Subcommittee on the Post Office Department's current appropriations request. I quote from the published hearings:

"Mr. STEED. How do you feel about the proposition as to the comparison of the pay scales of the people working in the postal service with other wage earners in the country?"

"General SUMMERFIELD. Of course, I think it compares very favorably, particularly when you consider all of the benefits that postal employees, if not all Government employees, enjoy over that of the accepted privileges that prevail in industry generally. I believe our costs for fringe benefits, for instance, this year will approach 31 percent of the total amount."

"Mr. GILLETTE. \$678 million."

"General SUMMERFIELD. \$678 million is the cost per year of the fringe benefits alone. I think you will find that other departments of the Government are less than that total—I think in the area of 29 percent. You will find that industry generally is about 27 percent, as against 31 percent in the Post Office Department."

"And, let's face it. Whatever you pay out in fringe benefits is chargeable to Federal salaries and wages, just like salary itself, because you have taken that burden from personal payrolls and put it on Federal payrolls, so it becomes a part of it. Off the record, please."

(Discussion off the record.)

"Mr. STEED. That is all I have, Mr. Chairman."

Quite frankly, Mr. Chairman and members of the committee, the Postmaster General could be exactly right in his figures or he could be quite inaccurate. Our figures indicate the average cost of fringe benefits for letter carriers is less than 25 percent.

But we do submit that the Postmaster General did not tell the whole story. He

did not indicate whether or not his educated guess of 31 percent reflected the cost of straight-time salaries, with retirement benefits valued at their normal cost to the Government or at normal cost plus the interest on the unfunded liability. The Cordiner report showed that a cost rise from 21.5 percent to 27.2 percent was attributed solely to the inclusion of the cost of this unfunded liability.

The Postmaster General may also be correct in his estimate of 31 percent of total costs for his agency of Government as against an estimated cost of 29 percent for other departments. If we were inclined to be genuinely critical of his guesswork, we might suggest that the difference could be found in the presence of more "chiefs" in relation to "Indians" in the postal establishment than in most other departments of Government. Counting every level of supervision in the field service, and excluding those in the departmental headquarters, there is one supervisor to about every eight rank-and-file employees.

The most significant omission in Mr. Summerfield's remarks was his failure to say how much postal employees pay for their fringe benefits. On this report I quote the Cordiner report:

"They (Federal employees) are required to contribute slightly more than 7.2 percent of their pay for these benefits, whereas employees in the 356 companies (studied by the Industrial Relations Counselors, Inc.) are paying an average of 4.5 percent, and in the 1,000 companies (studied by the chamber of commerce) 3.5 percent."

It is also interesting to note another comment of the Cordiner report on fringe benefits. This certainly casts considerable doubt as to the validity of the Postmaster General's position:

"The Federal Government has lost the advantage it once enjoyed in the area of fringe benefits. In brief, the magnet of interesting work and public service is no longer strong enough to overcome the pull of higher salaries in non-Federal employment."

As many of you are aware, Mr. Ralph J. Cordiner, who headed the study referred to, is chairman of the board of General Electric Co. A recent news item in the Burlington (Vt.) Daily News quotes Mr. Cordiner as saying that the average 1959 compensation per employee of GE, including fringe benefits, rose to a record of \$7,226 a year. The letter carriers in Burlington, Vt. received an average of \$4,640 during that same year. Add 25 percent for fringe benefits and the average letter carrier still receives only \$5,800, or \$1,426 a year less than the average GE employee.

So, we are perhaps conceding some ground in our argument if we agree that our fringe benefits are equal to those enjoyed in private industry. We do not and shall not concede ground to the extent of agreeing that our fringe benefits are greater than those granted in private industry. If anything they are below the average pertaining outside of Government service.

WAGE SCALES OF POLICEMEN AND FIREFIGHTERS

At this point, I should like to present additional salary data to underscore the inadequacy of letter carrier wages.

Like postal workers, policemen and firemen are valued public servants. Their wages and conditions of employment, like those of postal employees, are determined in large measure by appropriations of public funds.

Neither policemen and firemen nor postal workers have ever been overpaid. Certainly neither group is overpaid today. Yet it was not too many years ago that both groups were receiving approximately the same pay in most of our larger cities. In fact, in many communities, the postal workers were paid slightly better than were firemen and policemen.

That is not the case today. In fact, the exact opposite is true. And we hasten to say, in presenting the following comparative salary scales, that it is not our intention or purpose to make an odious comparison. We are glad that the organizations representing our uniformed colleagues in the police and fire departments of our cities have been able to raise the wages of these able and conscientious public servants. So, we are not jealous of their comparative good fortune. We are merely eager to enjoy the same kind of good fortune that they enjoy.

We offer as evidence a few of the salary scales that have been made available to us simply to show that letter carrier wages also trail behind a group of workers who have been traditionally in the lower wage bracket and, unfortunately, have been traditionally underpaid.

By way of preface to these figures, may I again remind the Committee that the salary spread for a letter carrier is from \$4,035 at the entrance rate to \$4,875 7 years later at the top automatic grade. The data for policemen and firemen do not reflect longevity wages.

Arlington, Va., our neighbors in Congressman BROYHILL's district; the entrance rate is \$4,400 and goes up to \$5,560.

In Ridgewood, N.J., the scale is from \$4,688 to \$6,000.

In St. Paul, Minn., \$4,968 to \$5,928 (incidentally, a "sanitation laborer" or street cleaner in St. Paul receives \$2.75 per hour, or 52 cents an hour more than the average letter carrier, and 26 cents an hour more than a letter carrier with 25 years' service.)

Across the river in the city of Minneapolis, the range for police and firefighters is from \$5,544 to \$6,264.

For Sacramento, Calif., the scale is from \$5,520 to \$6,600. This represents a 35 percent increase since 1955. I should also add that the position of dogcatcher in Sacramento pays \$5,040 annually—only \$100 less than the wage of a 25-year veteran in the postal service.

My own home city of Cincinnati, Ohio, is doing its part to enable their policemen and firemen to meet today's high cost of living. The range of pay is from \$5,048 to \$5,382.

An example of another Ohio city is Cleveland; the scale is \$4,704 to \$5,502.

New York City pays \$4,800 to \$6,181.

Boston, \$4,880 to \$5,500.

St. Louis, \$4,365 to \$5,305.

Seattle, \$4,920 to \$5,640.

Denver, \$4,716 to \$5,616.

In Riverside, Calif., the scale is \$4,920 to \$6,000. (Our information from that city also indicates that women assigned to checking parking meters, called meter maids, start at \$410 a month, or \$74 more than the entrance wage in the Post Office Department. These meter maids do even better in nearby Los Angeles, where the monthly rate is \$489, or \$153 more than a letter carrier receives.)

In Milwaukee, Wis., policemen and firemen start at \$4,938 and go up to \$5,726.

For San Francisco, the scale is \$6,228 to \$6,828.

In Chicago, \$4,800 to \$5,640.

In Portland, Oreg., \$4,692 to \$5,580.

In Oakland, Calif., \$6,396 to \$6,828.

In Detroit, \$5,356 to \$5,938.

Ahy and all of these figures could be dramatized by reducing the annual rates given to weekly or even hourly figures. For example, take the Detroit scale. When the employee reaches the top automatic grade of \$5,938 after 3 years' service, he's receiving 51 cents an hour more than a letter carrier can get after 7 years on the job.

Perhaps all of us ought to seek employment in Congressman LESINSKI's area. I suggest that because I received a news clipping the other day, taken from the classified ad section of a Detroit newspaper. It seems as if city hall is looking for janitors. This is the advertisement:

"Wanted—Janitor for city hall. Examples of work: Sweep, mop, scrub, and polish floors. Clean and maintain laboratories. Replace light bulbs. Starting salary—\$4,450; \$5,050 after 2 years."

It takes a letter carrier 18 years to reach that last figure.

And, finally, I should like to cite the scale of a private in the Metropolitan Police Department of the District of Columbia. He starts at \$4,800 per year; at the end of 5 years his base salary is \$5,440. If he is still a private after 19 years, his base pay is \$6,840, or \$765 a year more than a letter carrier with the same amount of service.

GOVERNMENT HELPS OTHER WAGE EARNERS

I would like, now, to draw two comparisons with which we are all familiar because of the widespread publicity they were given during recent months.

The first of these involves a situation very close to home.

About a month ago we all witnessed a strike in the Washington, D.C. metropolitan area. Involved were the meatcutters and retail clerks in chainstores.

Under date of February 18, 1960, the U.S. Department of Labor made a routine report on the termination of this strike. Working with the representatives of management and the unions, Government mediators had worked out a settlement calling for a weekly wage of \$103 for meatcutters and a weekly wage of \$97 for clerks.

Thus, as a result of mediation by the U.S. Government, meatcutters are now receiving \$14 a week more than letter carriers are receiving, and clerks are receiving \$8 a week more than are letter carriers.

We certainly are not suggesting that the Government's mediation facilities be injected into our salary situation. But letter carriers cannot be blamed if they wonder why our Federal Government can use its power, prestige, and good offices to improve the wages and working conditions of practically every type of worker, except the men and women who work for Uncle Sam.

The second recent example is the steel strike. According to the press and other news media, Vice President Nixon and Labor Secretary Mitchell had a great deal to do with the settlement of that controversy. We are delighted that the steelworkers won their strike. We would like to point out, however, that according to Mr. Roger Blough, spokesman for the steel industry, steelworkers were getting \$3.11 an hour before the strike. Under the provisions of the bills introduced by Mr. MORRISON and 63 of his colleagues, a letter carrier after 20 years' service would receive only \$3.06 per hour. And, as I have previously pointed out, the average hourly wage of a letter carrier is only \$2.23, or 88 cents an hour less than the average steelworker was getting before he struck for higher wages.

Mr. Chairman and members of this distinguished committee, I think there is no need of my drawing further comparisons between the wages of a letter carrier and those of other workers, both in the private and public employ. I am confident that the parallels I have quoted present a picture of economic discrimination which is unchallengeable.

FEDERAL WAGES LAG FAR BEHIND

Perhaps our entire case could rest on one single comparison.

The late and distinguished Sumner H. Slichter, professor of economics at Harvard University, in May of last year, addressed the 15th session of the American Assembly. This forum is conducted under the auspices of Columbia University. Participating in last year's meeting were about 60 Americans from business, labor, government (including Labor Secretary Mitchell), agriculture, education, communications, and the clerical, legal and military professions.

In his formal presentation, Dr. Slichter noted the changes in compensation of employees in private industry during the period 1948-58.

He told the Assembly:

"For the entire period the rise in compensation per man-hour was 63.3 percent."

He also cited this fact:

"In every one of the past 10 years without exception average hourly compensation of all employees in private industry rose more than the Consumer Price Index."

May I say that in 1948 the top-grade letter carrier, that is, the man in the top longevity step—a 25-year veteran—received \$3,850 per year, of \$1.85 per hour. Today he receives \$5,175, or \$2.49 an hour. In other words, there has been a 34.5 percent increase in his hourly wage, as compared to the 63.3 percent increase reported by Dr. Slichter's findings for workers in private industry.

ARE COMPARISONS VALED AND MATERIAL

But, there are those who say that we should disregard comparisons. They argue that we should not concern ourselves with what others are receiving, but should confine ourselves only to the adequacy or inadequacy of our own wages.

Of course, I disagree with this argument. The wages that other workers receive are only a reflection of the overall need of such wages; they are a reflection of the skyrocketing inflation which has left the letter carriers so far behind in their struggle for economic equality.

Naturally we deeply resent the oft-repeated inference that we are a cause of monetary inflation. Since, historically and traditionally we have been engaged in a continuing and sometimes frantic effort to catch up with the economic parade, we have been the perennial victims of inflation, not the causes.

We have traditionally been the last segment of the economy to be given the economic assistance needed to give us parity with our brothers in labor, and, when we have been given such assistance we have found ourselves in the position of receiving a bare living wage, and never a saving wage.

So, disregarding for the time being the entire subject of comparative wages, the salary of a letter carrier is still completely inadequate for present day living.

Under the economic conditions existing today, an average salary of \$4,640 a year, or \$370 per month, or \$89.23 a week, or \$2.23 an hour is simply insufficient for a man who has to support an average-size family in the year of our Lord 1960.

HELLER COMMITTEE BUDGETS

In support of this contention I would like to include as part of my statement at this point reprints of two budgets for wage earners. They were prepared recently by the completely independent Heller Committee for Research in Social Economics for the University of California.

It will be helpful to the committee, I think, in its interpretation of these budgets, to say a word about the purpose and concept of the Heller budgets.

Their purpose is to measure the cost of maintaining the commonly accepted standards of living of families in two different occupational groups: a salaried junior professional or executive worker, and a wage earner. In both instances the family consists of a man, wife, boy of 13 and girl of 8 years.

The concept of the Heller committee is to attempt to describe the commonly accepted standard of living as the sum of those goods and services that public opinion currently recognizes as necessary to health and reasonably comfortable living. The term "necessary" as used includes more than merely a minimum of physical needs. It represents what men commonly expect to enjoy. In the words of one noted economist, Dr. J. S.

Davis, it represents what "is urgently desired and striven for, special gratification attending substantial success and substantial failure yielding bitter frustration."

In brief, this concept recognizes the need for looking beyond the rigid confines of the cost-of-living index in fixing wages. We concede that the BLS Index is one of several valid benchmarks in determining wages. But we do not concede that it should be the sole determining factor; nor do we confer on it a badge of omniscience or infallibility. To admit all these would be to concede that letter carriers are entitled to nothing more than a bare living wage. We submit that we are entitled to more. Specifically, we think we are just as much entitled to a saving wage as any other workers in the United States. Certainly we should not be expected always to be teetering on the brink of financial disaster. What gratification can there be in a lifetime of being in debt?

The Heller budget we are submitting is for the family of a wage earner, not that for the professional worker or executive.

If you will notice, Mr. Chairman and ladies and gentlemen of the committee, the Heller committee, after lengthy and exhaustive research and interviews suggests that, for normal living with reasonable security, a wage earner who owns his own home feels that he must be paid \$6,638 a year. A wage earner who rents his home requires \$6,271. And, I might add, under this budget the wage earner who rents his home would be doing so at a rate of \$65 a month. I suggest that the areas where a working man and his family can rent a decent house or apartment for \$65 a month are relatively scarce, and particularly so in those areas of highly concentrated population in which letter carriers must live, work, and rear their families.

I think, as you read these two budgets you will not find many areas of extravagance. As a matter of fact, if there are some items which seem high, they are counterbalanced by others which seem low. Thus, if the suggested expenditure for alcoholic beverages seems extravagant, the suggested expenditure for education seems parsimonious.

The figures presented in these budgets speak for themselves. And, once again I would like to point out that they are based on wages in excess of the amounts provided for in Mr. MORRISON's bill.

LETTER CARRIERS AND FHA

There is a further, and even more compelling argument which proves the inadequacy of letter carrier salaries under the present postal wage structure.

One of the fundamental needs of mankind is housing. And this is a subject which, presumably, will be given considerable consideration by the 86th Congress before it adjourns.

A letter carrier's salary today is too low to qualify him under the rules of the Federal Housing Authority for a loan on even a very reasonable and modest home.

Certainly, in today's market, a \$15,000 home must be considered at least reasonably modest. But, to buy a \$15,000 house through the FHA a buyer needs a \$650 down payment and a \$14,350 loan. This calls for monthly payments of \$89.74. To guarantee that amount, the FHA requires an annual salary of at least \$5,384. Not a single letter carrier in the United States is making a postal salary in that amount.

As a result, a program designed to put home ownership within the financial reach of workers with moderate income is meaningless for letter carriers. By FHA standards our income is not moderate; it is immoderately low.

Along this same line we have a report from our branch in St. Louis. A top-grade letter carrier in that city applied for a credit card with a nationwide organization. His application was returned with the notation:

"Our credit standards include a minimum income requirement. Based on the information available to us, this requirement has not been met."

Here we have a case of a Federal Government employee who from time immemorial has been classified as an excellent credit risk being denied credit. The organization involved has long been noted for its liberal credit policy. But, because of his present inadequate postal income, the letter carrier has been denied a credit card. It is like being denied acceptance in the human race to be refused a credit card these days.

PRODUCTIVITY

And finally, we come down to the basic question of whether the laborer is worthy of his hire. This boils down to a question of productivity.

We willingly concede that some relationship must be demonstrated between increased productivity and a request for a wage adjustment. Having said that, we also submit that once an increase in productivity is shown, there is a responsibility for management to reward those who contributed to the increased efficiency. That has been and is an American tradition. But it has not always been the case in Government.

It seems apropos, too, to point up the nature of the Postal Service. It is just that—a service. It is a great many other things to most Americans, but basically it is service to all Americans.

Unlike a product coming off an assembly line, which can be measured for costs from the raw material down to the finished product, "service" is in itself an unmarketable commodity. It has only one real measurement. Either it is good, or it is bad.

We believe the postal service today is doing a good job. It could be better and it will continue to improve as long as Congress provides the tools, a little prodding and leadership and, above all else, wages and conditions of work that will attract the caliber of dedicated men required to operate and maintain a swift and certain system of communications.

Wherever it can be measured accurately, it can be demonstrated that the productivity of postal workers has been going up with each succeeding year. My understanding is that the rate of increased productivity is an approximate one percent each year over the past few years.

During the hearings on the fiscal 1961 appropriation for the Post Office Department, spokesmen for the agency told the subcommittee:

"In the last 6 fiscal years our volume increase has been 20.2 percent, our manpower increase has been only 7.6 percent, and excluding a 24 percent increase in city delivery service due to expanding areas, the increase in manpower was only 2.2. In other words, 20.2 against 2.2."

As automation and increased mechanization takes place in postal operations, additional spurts in productivity can be expected. Take for example the recent introduction of mailsters in the city delivery service. Whether or not we like mailsters, it is an undeniable fact that the Department can operate the delivery service with 3.1 percent increase in man-years to handle a 5.5 percent increase in possible stops.

Since it takes human hands and eyes and better than average intelligence to operate this equipment, some credit for the increased efficiency must be attributed to the operator.

During the same hearings the Post Office Department also told the subcommittee:

"In 1958, for example, the average number of pieces handled per clerk man-year was 239,223. That increased in 1959 to 241,530. Our estimated 1960 productivity is 243,231, and our estimate for 1961 is based

upon a further increase in productivity to 245,568 pieces per clerk man-year."

The Department correctly described this jump from 239,223 to 245,568 as "quite an increase in production."

Every category of mail and every type of special service rendered by the Post Office Department, with exception of parcel post and postal savings, is expected to increase during the next fiscal year. All in all, the Department has told the Congress that the estimated increase in volume is 5.21 percent, as compared with a 3.2 percent increase in man-years.

So, Mr. Chairman and members of the committee, I feel that there can be no valid argument against the productivity of postal workers. It is good. It gets progressively better with each passing year. Above and beyond all else, its rate of increase easily outstrips the postal employees' rate of increase in pay.

CONCLUSION

Mr. Chairman and member of the committee, we submit that in this argument we have shown that:

1. Letter carriers are grossly underpaid in comparison with both workers in private industry and workers in comparable positions on State and civic payrolls;

2. Letter carriers are grossly underpaid in relation to the generally accepted national standard of living; and,

3. Letter carriers are underpaid according to all recognized standards of productivity. If, in other words, the Post Office Department contends that letter carriers were reasonably compensated as a result of the passage of pay legislation in 1958, then it must admit that, by virtue of its own figures regarding increased productivity, letter carriers are being underpaid today.

I am aware that the cry will be raised to the effect that the U.S. Government cannot afford to pay its postal employees any more than it is paying them right now.

I submit, Mr. Chairman and members of the committee, that this is nonsense. The U.S. Government has got to be able to afford to pay its dedicated and devoted civil servants a decent living wage.

We feel that as a nation we can afford to send our treasure to the distant corners of the earth in the form of foreign military and economic assistance.

We feel that as a nation we can invest billions of dollars in our agricultural program.

We feel that as a nation we can afford to pour billions of dollars into slum clearance, urban renewal, dam construction, and highway programs.

We can afford, so we are told, the cost of sending rockets to the moon and bathyspheres to the lowest depths of the ocean.

I have no intention of discussing the relative wisdom or unwisdom of the multitudinous programs which are financed with the taxpayers' money. I merely insist that if we, as a nation, can afford all these things then we certainly can afford to pay a living wage to the devoted men who carry the Nation's mail.

Postal administrations consistently claim that the postal establishment should be run as a business or, if you will, as a public utility. It so happens that the National Association of Letter Carriers disagrees with this view. We believe that the Postal Service should be exactly what the name implies, a service to the people of this country. But—If, for the sake of argument, we do momentarily accept this concept of the postal establishment—what kind of business is it that seeks to justify the cost of its operation by maintaining its employees at wages of pay far below the generally accepted levels of reasonable subsistence? If the postal establishment really were a business, rather than a service monopoly, it could never survive if it attempted to perpetuate a state of economic peonage among its workers. In the United States of America it is fundamental that, if a business cannot pay its employees a decent wage then it has no business being in business. Postal administrations always want to operate as a business at the top management level, and as a service at the employee level. They consistently show a touching solicitude for the postal budget and no solicitude whatsoever for the budgets of its employees.

It is an old saying that a shoemaker's children must always go without shoes.

I suggest that this has always been true of postal employees in the past and is true today. We are told that the Nation must afford thousands of programs involving the expenditure of billions of dollars in every corner of the earth but, when it comes to paying the men and women who operate and maintain our mail service a wage consistent with their value, their effort, and their just deserts, then we are told that this is something the United States cannot afford.

Mr. Chairman and members of the committee, I am sure you will agree with me when I say that we in the United States are richly blessed by Almighty God. Our good earth produces undreamed-of treasure; our natural resources are the comfort and delight of our allies and the envy and despair of our enemies. We are by all odds the strongest and wealthiest nation in the history of civilized man. We are the hope and the support of free men everywhere. Can all this be true—and, can it still be true that we cannot pay our civil servants enough money to permit them to rear their families in dignity and reasonable security?

President Eisenhower, in his state of the Union message last January said, and I quote: "1960 promises to be the most prosperous in our history."

Specifically his economists see a year of higher production, higher employment, slowly rising prices, about a 2-percent increase of the Consumers Price Index, a continued rise in profits and dividends, higher wages and salaries.

All this does add up to prosperity—and lots of it. But—for whom? For everyone in the United States except the Federal employees? We hope not.

It adds up to prosperity for the butcher, the baker, the candlestick maker. But it will not add up to anything except misery for a letter carrier who is receiving an average of \$4,640 a year, or \$370 a month, or \$89.23 a week, or \$2.23 an hour. For him there can be no share in the great national prosperity unless his wages are increased significantly to a point where he cannot only share in the national prosperity but add to it through an increase in his substandard purchasing power. To deny him that is to make of him a second-class citizen. Economically he is a second-class citizen today. We are asking the Congress to elevate him to a place of economic equality with his brethren.

Once again, Mr. Chairman and members of the committee, I want to thank you for your patience and your consideration in hearing us out on this matter. We are grateful for your understanding.

And now, in order to fortify and expand our arguments somewhat I would like your permission to turn over the presentation of the rest of our case to the vice president of the National Association of Letter Carriers, Mr. Jerome J. Keating.

BUDGET FOR WAGE EARNER

¹ Income taxes are calculated on the total cost of the budget using the method of computation resulting in the lowest taxes. For the wage earner homeowner, in 1959 this meant using either joint or separate returns (the latter under community prop-

erty provisions) and itemizing deductions for both Federal and State taxes. The owner paid lower taxes than the renter, even though the cost of his budget was higher, because his itemized deduction included real estate taxes and mortgage interest.

1B. Total budget for home renter (including sales tax)

Item	Annual cost	Percentages	Item	Annual cost	Percentages
Total cost.....	\$6,271.10	100.0	Total without taxes—Continued		
Income taxes ¹	661.46	10.5	Transportation.....	\$586.95	9.4
Federal.....	646.00	10.3	Automobile.....	569.33	9.1
State.....	15.46	.2	Carfare.....	17.62	.3
Total without taxes.....	5,609.64	89.5	Medical and dental care.....	527.25	8.4
Food.....	1,757.01	28.0	Personal insurance.....	269.08	4.3

2 Veto.

The Waste in Defense

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. HARTKE. Mr. President, over one-half of our annual budget is spent on national defense. This is the greatest area of spending and this is where we should have the greatest efficiency. I fear, though, that there is a tremendous amount of waste in the expenditure of defense funds. The Fort Wayne Journal-Gazette, one of the outstanding papers of my State, recently had an excellent editorial on this. I ask unanimous consent that it be printed in the

What has happened to postal pay? Too few raises, too small raises—The St. Paul pay story—Comparison of the hourly pay of letter carriers with the hourly pay of workers in St. Paul, Minn.—Continued

	1936	1943	1958	1959	1960
Carpenter	1.00	1.38	3.30	3.45	3.45
Electrician	1.00	1.50	3.38	3.50	3.65
Engineer (crane)	1.00	1.20	3.47	3.62	3.62
Lathers	1.25	1.50	3.25	3.40	3.40
Painters	1.00	1.35	3.15	3.30	(?)
Plasterers	1.25	1.62	3.40	3.45	(?)
Plumbers	1.20	1.50	3.22	3.42	3.79
Sheetmetal	1.10	1.50	3.15	3.35	3.50
Steamfitters	1.20	1.50	3.40	3.62	3.79
Structural ironworkers	1.20	1.50	3.47	3.62	(?)
Building laborers	.55	.93	2.55	2.70	(?)

Each year the letter carrier has fallen further behind in his struggle for economic equality.

What has happened to postal pay? Too few raises. Raises too small. Too many vetoes.

Average number of pay increases in past 11 years for 13 other occupations, 10.

Number of pay increases for letter carriers, 4.

In past 11 years 13 other occupations have received average increases of \$1,280 more than have letter carriers.

During past 11 years, average increase in pay, 13 other occupations, \$2,372; letter carriers' increase, \$1,092.

Each year the letter carrier has fallen further behind in his struggle for economic equality.

They see what a vast, sprawling, jerry-built, messed-up thing the defense organization is.

It does not show much evidence of the American genius for brilliant planning and execution.

There are geniuses in defense but they are hampered by redtape, by divided authority, by obsolete ideas, and by the pulling and hauling of rival authorities.

The people have begun to see that they are not getting their money's worth out of the vast sum spent for defense.

The Pentagon is too big, too clumsy, too divided, too snowed under by its paperwork to think and act quickly and effectively.

There is need of immediate reform and reorganization.

The time and money and the security of the Nation are being wasted by this confusion and delay.

The present administration in Washington has had more than 7 years to correct this bad situation. It has not done so. There is no reason to believe that it can or will do the job which is needed during the few months which remain to it.

The defense issue has become a burning issue.

The people of this country are unhappy about the whole situation.

More money is not the answer. More money would only mean more waste.

The answer is plain.

There must be more harmony, more energy, more commonsense, more inspired planning, and dynamic action in the defense set-up from top to bottom.

We cannot tolerate having the adequate defense of the Nation lost in the confusion and redtape of the Pentagon.

The American people must build a hot fire of public opinion under those who are responsible for national defense.

St. Patrick's Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. MULTER. Mr. Speaker, the sons of Erin once again salute the sons of Erin and wish to one another and to all the world liberty and peace.

Each year St. Patrick's Day, March 17, is celebrated as a national holiday in Ireland.

We Americans, of whatever national descent, join the Irish in doing honor to that great apostle, bishop, and patron saint of Ireland. Saint Patrick, like his Ireland, stands before the world as the symbol of indomitable resistance to tyranny and oppression.

According to his own account, Saint Patrick was born in Britain, at a place called Bannavem Taberniae. There is no general agreement as to the location of that place, but scholars now favor the Severn valley as the most probable region. His father, Calpornius, seems to have been a man of some influence in the community, a member of the municipal council and apparently a friend of the Romans.

Somewhere around the year 400 Irish invaders came in several score of ships and landed in the rich west country.

Appendix of the RECORD so that my colleagues will have the opportunity of reading it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WASTE IN DEFENSE

The Government of the United States spends one-half its annual budget on national defense.

This would indicate that the Government believes defense is the most important matter with which it has to deal.

If that is true, then national defense needs far more competent and effective administration than it is getting today.

It should have the most competent administration that any department of the Government has ever had.

It does not have that kind of management today, and the Nation is suffering as the consequence.

The American people are beginning to understand this.

The Twentieth Legion, which for 350 years had been stationed at Chester, had been recalled to defend the home provinces of Rome against the barbarians. The Britons, weakened by prosperity and comfort, fell easy prey to the raiders. Patrick, along with other captives, was carried off to the land that was called Antrim, where he became the slave of a lord who owned land on the slopes of Slemish.

After 6 years of slavery he made his escape to western France and finally found refuge in the Monastery of Lérins, on an island off the west coast of Provence. After some years he returned to his own folk in Britain. They pleaded with him to remain with them, but he felt a call to go as an apostle of Christianity to the Irish. The love of Ireland and the nostalgic memory of the hills of Antrim were in his heart.

To prepare for his mission he returned to Auxerre in Gaul where, after a period of study, he was ordained a priest. In 432 he was consecrated a bishop and then sailed for Ireland.

The task of the new bishop was not only to minister to the Christian communities in the southern and western parts of Ireland, but also to gain the good will of the various local kings and to convert them and their subjects. His knowledge of the Irish language and his insight into the character of the people, gained during his 6 years in the country as a slave, served him well. His enthusiasm, his tireless energy, his ability as an organizer, and his success in dealing with kings and princes, all contributed to his achievements for Christianity. It is said that he founded 360 churches, baptized with his own hand 12,000 converts, and ordained many priests. At the conclusion of his work he had dealt a death blow to druidism in Ireland.

Surely it is appropriate that the memory of such a man should remain forever green among us. A symbol of peace, courage, and freedom, brought to America by the Irish. St. Patrick now belongs to all of us.

Comment on Supreme Court

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. CASE of New Jersey. Mr. President, Mr. Alan F. Westin, associate professor of public law and government at Columbia University, recently wrote a letter to the editor of the New York Times which I feel merits the attention of my colleagues in the Senate. It quotes the splendid statement made by the distinguished senior Senator from California on the subject of attacks which have been made on the Supreme Court during the civil rights debate. I ask unanimous consent that Professor

Westin's letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMENT ON SUPREME COURT NOTED

To the EDITOR OF THE NEW YORK TIMES:

In the quite appropriate concentration of the Times on the tactics of the current filibuster in the Senate, prospects for compromise legislation, and the more extreme statements of the southern orators against desegregation measures of the Federal executive and judiciary, a very meaningful and eloquent comment has gone unreported. On March 1 Senator THOMAS KUCHEL, of California, arose and declared:

"Somewhere, somehow, during the course of this debate, Mr. President, some of us, I think the great majority of us, who object to the continual vilification of the U.S. Supreme Court during the long sessions ought, one by one, to spread on the CONGRESSIONAL RECORD our vigorous opposition to that calumny and our bitter resentment at the manner in which the members of the U.S. Supreme Court have been mistreated during this debate and on some other ugly occasions."

"So far as I am concerned, Mr. President, I have said on this floor before, and I repeat now, that the great majority of the American people have the highest respect for the courage and the independence and the devotion to duty of the U.S. Supreme Court. It is the unflinching defender of liberty so far as human freedom under the American Constitution is concerned. It will live in history long after this debate is forgotten."

Those of us who would not deny the Southerners the emotional catharsis with which to accept their coming defeat but are, nevertheless, concerned about the campaign of slander against the Supreme Court, are deeply grateful to Senator KUCHEL for his declaration. It is dangerous to assume that great lies are best met by embarrassed silences.

ALAN F. WESTIN.

Associate Professor of Public Law and Government, Columbia University.

New York, March 3, 1960.

Civil Liberties and National Security

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a copy of a joint press release issued by my able colleague of New Jersey [Mr. THOMPSON] and myself regarding a measure which we recently introduced. In addition, I place in the RECORD a copy of the proposal, introduced on March 14.

The release, issued on the following day, explains that the legislation would amend the "Administrative Procedure Act to guarantee protection of certain basic civil liberties for the employees and agents of contractors with the United States, as well as for Federal employees."

I might add that as this body engages in historic debate in the area of civil rights we should always keep in

mind that a closely allied matter—that of civil liberties—should also be a constant concern of Congress.

My colleague and I sincerely hope and trust that the Members of this body will give all due consideration to our proposal. We would be pleased, of course, to have others join us in sponsorship of the bill.

The press release and text of the measure follow:

JOINT RELEASE BY REPRESENTATIVE JAMES ROOSEVELT, DEMOCRAT, OF CALIFORNIA, AND REPRESENTATIVE FRANK THOMPSON, JR., DEMOCRAT, OF NEW JERSEY, MARCH 15, 1960

Legislation to amend the Administrative Procedure Act to guarantee protection of certain basic civil liberties for the employees and agents of contractors with the United States, as well as for Federal employees, was introduced jointly yesterday, March 14, 1960 by Representative JAMES ROOSEVELT, Democrat of California, and Representative FRANK THOMPSON, Jr., Democrat, of New Jersey.

The new Roosevelt-Thompson civil liberties bill, only one paragraph long, amends section 12 of the Administrative Procedure Act by adding at the end thereof a new subsection which reads as follows:

"Notwithstanding any other provision of law, the decision or adjudication by any agency as to its officers, employees, and agents in the course of the administration of any Federal employee loyalty or security program or law and as to officers, employees and agents of any contractor with the United States in the course of the administration of any industrial security review program or law shall be made on the record as contemplated by this act and shall be subject to all other provisions of this act."

President Eisenhower issued, on February 20, 1960, a new Executive order revising industrial security procedures despite insistent AFL-CIO requests for an opportunity to discuss the new program before it was instituted. The AFL-CIO News, commenting on the President's Executive order, said on March 12, 1960 that—

"The Executive order sets forth as a principle the right of persons accused of being security risks to face and cross-examine their accusers, but leaves areas of exception. These areas appear capable of administrative contraction or expansion to the point where the principle might become meaningless."

AFL-CIO President George Meany called revision of the confrontations element, as laid down in President Eisenhower's new Executive order, a "welcome liberalization." "However," Mr. Meany wrote Deputy Assistant Secretary of Defense Stephen S. Jackson, "the Executive order likewise contains broad authorizations for the denial of these safeguards in particular cases, so that whether the new program will in actual operation utilize fairer procedures than the old will depend on how the order is effectuated through regulation and in actual operation."

President Meany noted that the AFL-CIO in the past has voiced three major objections to the way the industrial security program operated. These objections were:

1. The fact that the testimony of absent witnesses was allowed to stand without the accused being given the chance to break it down by questioning.

2. The fact that clearance board members did not face the accusers or know their identities, but usually were forced to rely on the summary report of an investigator without even examining the investigator.

3. The practice of permitting employers to clear workers for access to confidential (as distinguished from secret or top secret) data, a power AFL-CIO President Meany said "is

obviously susceptible of anti-union or other abuse" by persons with scant qualifications for such a function.

President Eisenhower's new Executive order revising industrial security procedures has run into a barrage of criticism from other quarters.

The New York Times said editorially (Feb. 23) regarding President Eisenhower's order—"We can't yet say that an accurately just balance has been reached between private and public security. However, some progress has been made, and if necessary the Supreme Court can still pass on the basic constitutional issue of a confrontation. Sooner or later we must ask ourselves what security is—that is, whether it consists in the liberties of the citizen or in the smooth functioning of the agencies of government."

The Washington (D.C.) Post, commenting on President Eisenhower's new executive order, said (Feb. 22) editorially—"the second category of exception seems to us much more serious—and especially because it embraces the bulk of the sources of information in security cases. In special circumstances, statements of so-called casual informants—neighbors, coworkers, servants, and other such acquaintances of an accused employee—could be used without requiring the informant to appear in person and submit to cross-examination, if the head of the department handling the security case excused him on account of death, severe illness or some other good and sufficient cause. That phrase, good and sufficient cause has an otiose, catchall quality that is disquieting. Casual informants ought not to be used at all unless their allegations can be tested by cross-examination. Cross-examination protects the Government no less than an accused individual. For it safeguards justice. It ought to be given full application in the Federal employee security program as well as in the industrial security program."

TEXT OF ROOSEVELT-THOMPSON BILLS—H.R. 11151 AND H.R. 11155

A bill to amend the Administrative Procedure Act to guarantee protection of certain basic civil liberties for the employees and agents of contractors with the United States and other United States citizens.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 12 of the Administrative Procedure Act (5 U.S.C. 1011) is amended by inserting "(a)" after "Sec. 12," and by adding at the end thereof the following new subsection:

"(b) Notwithstanding any other provision of law, the decision or adjudication by any agency as to its officers, employees and agents in the course of the administration of any Federal employee loyalty or security program or law and as to officers, employees, and agents of any contractor with the United States in the course of the administration of any industrial security review program or law shall be made on the record as contemplated by this Act and shall be subject to all other provisions of this Act."

Resolutions of Oklahoma Association of Soil Conservation Districts

EXTENSION OF REMARKS OF

HON. ROBERT S. KERR

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, March 17, 1960

Mr. KERR. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD resolutions adopted at the State convention of the Oklahoma Association of Soil Conservation Districts, held on January 10, 11, and 12, 1960.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

A SOUND SOIL CONSERVATION PROGRAM ON OUR FARMS WILL KEEP US IN BUSINESS

Since the resolutions adopted at our State conventions determine the policy of OASWCD, I think it important that each soil conservation district board have a copy of the resolutions adopted at our last State convention, January 10, 11, and 12, 1960. They are here reproduced in the language adopted:

RESOLUTION 1

Whereas the conservation, use and management of soil and water resources for present and future generations is a major objective of the Oklahoma Association of Soil and Water Conservation Districts; and

Whereas this association recognizes that good land treatment, flood prevention, and multi-purpose runoff water management structures are essential in a progressive watershed protection and development program; and

Whereas the Oklahoma association recognizes an urgent need for a greatly intensified research program on the soil and water conservation problems in our State; and

Whereas the working committee appointed by the Secretary of the U.S. Department of Agriculture, recognized a high-priority need for a watershed protection research program emphasizing research on land treatment practices in the southern Great Plains in the Washita River watershed, a national research laboratory on the engineering design of conservation structures, and a national research laboratory on moisture conservation for the Great Plains, as outlined in Senate Document No. 59, 86th Congress, 1st session, entitled "Facility Needs—Soil and Water Conservation Research"; Therefore be it

Resolved, That the Oklahoma Association of Soil and Water Conservation Districts go on record strongly endorsing the soil and water conservation research program proposed in Senate Document No. 59, with particular emphasis on the proposals listed above having a direct relation to the conservation problems in our State; furthermore be it

Resolved, That a copy of this resolution be given to each member of the Oklahoma delegation in the U.S. Congress, and to members of the Subcommittee on Agricultural Appropriations in both the House and Senate of the Congress, and officers and directors of the National Association of Soil Conservation Districts.

RESOLUTION 2

Whereas in the development of the upstream flood prevention projects in the State of Oklahoma, it is necessary in some instances to inundate county roads or portions thereof; and

Whereas the attorney general of the State of Oklahoma has ruled that a board of county commissioners does not have authority to grant to a soil conservation district the right to close or inundate a county road or highway; Therefore be it

Resolved, That the Oklahoma Association of Soil and Water Conservation Districts sponsor appropriate legislation before the next Oklahoma legislature which will authorize boards of county commissioners of the State of Oklahoma to grant a soil conservation district the right to close or inundate county roads or county highways.

RESOLUTION 3

Whereas the Watershed Protection and Flood Prevention Act (Public Law 566, as amended) provides that the contracting for

the works of improvement in projects constructed under said act shall be the responsibility of the local organizations; and

Whereas most of the local organizations in Public Law 566 projects in Oklahoma have experienced difficulty in providing the necessary finances and personnel to properly award and administer contracts resulting in a hardship on such organizations; and

Whereas H.R. 4866, 86th Congress, was introduced by the Honorable WILBUR MILLS, of Arkansas, amending Public Law 566, and is now before the U.S. Congress for passage authorizing the Secretary of Agriculture, through the Soil Conservation Service to award and administer contracts for works of improvement in Public Law 566 projects when requested to do so by the local organizations; and

Whereas the Soil Conservation Service has been the contracting authority on all contracts for the Washita River watershed and that said authority has been exercised to the satisfaction of the local organizations involved in said projects: Therefore be it

Resolved, That the Oklahoma Association of Soil and Water Conservation Districts endorse and seek the enactment of H.R. 4866, 86th Congress, amending Public Law 566, now pending before the U.S. Congress. Further, that copies of this resolution be sent to the Honorable WILBUR MILLS and to all members of the congressional delegation from Oklahoma. Also, that this resolution be submitted to the 1960 Convention of the National Association of Soil Conservation Districts for adoption.

RESOLUTION 4

Whereas the conservation and beneficial use of water resources is of paramount importance to the continued growth and prosperity of agriculture in Oklahoma; and

Whereas the existing laws now in effect in the State of Oklahoma regulating the use of water are conflicting, confusing, and inadequate for the proper development of our water resources; and

Whereas the 26th Oklahoma Legislature enacted House Joint Resolution No. 502, adopting a statement of basic principles of a proposed water policy for the State of Oklahoma; and

Whereas there has been no specific legislation enacted to implement said policies: Now, therefore, be it

Resolved by the Oklahoma Association of Soil and Water Conservation Districts, That the Oklahoma Legislature be requested to study the need for water legislation and prepare a water code, implementing House Joint Resolution No. 502 of the 26th Oklahoma Legislature.

RESOLUTION 5

We propose that a program, implementing and supplementing the small watersheds program of the Department of Agriculture, be instituted through the normal operations of soil conservation personnel assisting the soil conservation district, in that: When a location for a stock water dam may be enlarged and complemented with a flood storage reservoir, drawdown tube, and/or other appurtenances as recommended by the Soil Conservation Service technicians, and where flood-control benefits will justify the additional cost, that the Federal Government, under an expanded agriculture conservation program, shall stand the full cost of the construction over and above the 70 percent ACP participation and 30 percent contributed by the landowner for normal stock water requirements.

RESOLUTION 6

Whereas the youth of the State of Oklahoma is the most important product and resource of our State; and

Whereas the continued development and use of our soil and water resources is dependent upon the knowledge and interest of our youth; and

Whereas there is at present no organized effort to educate and inform our youth in general about soil and water conservation: Now, therefore, be it

Resolved by the Oklahoma Association of Soil and Water Conservation Districts, That the association sponsor and carry on an educational and informational program among all the youth of the State of Oklahoma.

RESOLUTION 7

Whereas the utilization and conservation of our soil and water resources through the upstream flood prevention program has proven to be a proper type of cooperative effort by the local people, our State government and the Federal Government; and Whereas the roads and highways of Oklahoma receive tremendous benefits from the installation of upstream flood prevention projects; and

Whereas the area in the rights-of-way of our roads and highways are in need of proper soil and water conservation practices: Now, therefore, be it

Resolved by the Oklahoma Association of Soil and Water Conservation Districts, That the association seek the enactment, by the Oklahoma Legislature, of legislation authorizing the department of highways of the State and the boards of county commissioners in the counties of the State to cooperate with the soil conservation districts and expend funds for the installation of erosion control practices and measures on the rights-of-way of the county and State roads and highways: Furthermore be it

Resolved, That said legislation authorize the Oklahoma State Department of Highways and the boards of county commissioners to cooperate in the development of upstream flood prevention projects by expending State or county funds to acquire lands, easements or rights-of-way needed for works of improvement in said watershed projects, where a direct benefit will result to a State or county highway as a result of the installation of said works of improvement.

RESOLUTION 8

Whereas the 27th Oklahoma Legislature appropriated in senate bill No. 10 \$100,000 to the small watersheds flood control fund (revolving fund); and

Whereas said act contained the provision that none of said funds were to be expended in a watershed until 90 percent of all the necessary easements were acquired; and

Whereas this provision has resulted in a restriction of the development of the watersheds in the State: Now, therefore, be it

Resolved by the Oklahoma Association of Soil and Water Conservation Districts, That the association sponsor legislation to reduce the percentage of easements that must be acquired to 75 percent of the necessary easements in a watershed.

RESOLUTION 9

Be it resolved, That this practice be included in ACP conservation practices; wheatland terraces are channel type and are generally constructed level, but may be graded if conditions indicate they should be. They are constructed on the high plains area and on large fields where small grain or grain sorghums are the principal crops. They are usually constructed in rainfall areas of less than 28 inches. The ends may be closed or left on land slopes of 5 percent or less but may be constructed on slopes up to 8 percent. The vertical interval will be indicated in Specification No. OK-1. Emergency spillways should be provided for closed-end terraces so that end enclosures can be opened in case drainage of the channel becomes necessary. The minimum distance from the back toe to the top of the ridge will be 12 feet. The minimum width of the bottom of the channel will be 12 feet.

Outlet protection will be indicated on Specifications Nos OK-1 and OK-2. The wheatland terrace may be built from the back

side on permeable soils with a land slope of 3 percent or less, but the terrace height will then be indicated as to table 3 of Specifications No. OK-1; be it further

Resolved, That 70 percent of cost be paid by the ACP, but not in excess of \$3.50 per 100-linear feet.

RESOLUTION 10

Be it resolved, That recommendation be made by OASWCD to the Soil Conservation Service that all recurring practices be reported each year, if and when reapplied by district cooperators in accordance with their district conservation plan, and/or Soil Conservation Service technicians.

RESOLUTION 11

Be it resolved, That recommendation be sent to the legislative committee at the State soil conservation district meeting for a complete study of the geographical location of the area lines, especially pertaining to area II which extends from the Texas to the Kansas border.

RESOLUTION 12

Be it resolved, That the State association work out an awards program for soil conservation districts having the highest percentage of attendance at their regular and special meetings during the year. In case of a tie, awards to be made to both districts.

RESOLUTION 13

Be it resolved, That the OASWCD recommend that the State ASC committee approve the following proposed practices to meet special county conservation needs:

The control of weeds and competitive shrubs in permanent tame pastures by the use of chemicals and/or mechanical means to aid and maintain desirable pasture plants, and at the same time permit the use of the pasture during the period of treatment.

Minimum rate of cost-sharing: 50 percent of the actual cost, not to exceed \$4 per acre.

(a) Initial treatment (chemical)—50 percent of the cost, not to exceed \$2 per acre.

(b) Second treatment (chemical and/or mechanical means)—50 percent of the cost not to exceed \$2 per acre.

Technical recommendations: Recommendations of the experiment stations with respect to rates of application, formulation, and time of application should be followed.

Performance: If the average infestation is less than 10 percent, the area is not eligible for cost-sharing. The percent of infestation shall be determined as the area of land occupied by destructive plants in relation to the total area on which the practice is to be performed. The methods and operations performed in the control of undesirable plants shall be such that they will normally insure against the future growth and development of these plants on the area. The county committee will not approve cost-sharing for the initial treatment unless the producer agrees in writing to carry out a subsequent treatment the next year after the initial treatment. Do not report on any acreage from which the growth has been mowed and used for feed, for threshing, for seed, or sold for any purpose. This practice will not be approved for areas on which it is determined that the area should be treated under practice 9.

RESOLUTION 14

Be it resolved by the Oklahoma Association of Soil and Water Conservation Districts, That said association go on record as favoring increased appropriations for planning and construction of upstream flood prevention projects in the United States.

Upon motion of Harrall Allen, all resolutions heretofore adopted by the OASWCD were unanimously reaffirmed.

Respectfully submitted,

LAVERN FISHEL,
President, OASWCD.

General Klein Urges Firm Stand on Berlin

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FLOOD. Mr. Speaker, Gen. Julius Klein, widely known and respected public relations counsel, journalist, and Army officer, one of our most patriotic citizens, discussed the meaning of brotherhood at a B'nai B'rith Brotherhood celebration, in Scranton, Pa., on March 6. He urged the United States to take a strong stand on the Berlin problem in the forthcoming summit conference.

Under unanimous consent I ask permission to reprint General Klein's lucid address in the RECORD as an extension of my remarks:

ADDRESS DELIVERED BY GEN. JULIUS KLEIN, OF CHICAGO, BROTHERHOOD WEEK, B'NAI B'RITH LODGE, SCRANTON, PA.

The opportunity to revisit Scranton and renew old friendships is deeply gratifying.

I am indebted to Mr. Parker and my good friend, Congressman Flood, for having asked me to join with you in honoring a fine young leader of this community who has made an outstanding contribution to the service of our country.

Your city has many pleasant associations for me. I had the privilege of coming here on a number of occasions when I was national commander of the Jewish War Veterans. Each time, I was greatly impressed by the outstanding pattern of community relations that exists here. This dinner tonight is an example of the continuing attention this community gives to the advancement of sound human relations in the best traditions of American democracy.

The measure of a community is the type of leadership it produces.

The pursuit of the ideal of genuine brotherhood among men has suffered some rude setbacks in recent weeks. Men of good will on both sides of the Atlantic were shocked by the episodes that began in Cologne, Germany, on Christmas Eve and spread with epidemic speed to our own and other countries. The deep emotional reaction to these incidents is understandable. But I found one significant fact missing from the thousands of columns of news and editorial comment about this ugly phenomenon. The missing fact was that an act of blind hatred by two sick young men had exploded the complacency of a country which had come to accept the idea that the miracle of its economic recovery from the ashes of World War II was enough to insure the safety and stability of its formal structure of political democracy. In the long run, it may well turn out that two lost young men performed an unwitting service for the cause of brotherhood by shocking the young democracy of Germany, and older democracies such as ours, into a reexamination of their national consciences.

I like to think that these unhappy episodes produced an ultimate good. Certainly, they brought out the best in thoughtful, responsible men here and in Europe.

My old and good friend, the great past president of B'nai B'rith, Phil Klutznick, was among the first to warn against applying emotional standards in judging the causes of these outbreaks in Germany. B'nai B'rith, as an international organization, has approached this problem with a sense of re-

sponsibility and an analytical sense that should be a matter of pride to all Americans. It was the first to point out that, by no stretch of the imagination, could the Germany of Adenauer be considered in the same light as the Germany of Hitler. It reminded the world that if there are shortcomings in the German educational system, there are equal deficiencies in the schools of the older Western democracies. And it reminded us that the trend of education in Western Germany was set by the Western occupying powers at a time when it was within their means to have established the reforms about whose lack we now complain. Very much to the point, too, was Phil Klutznick's reminder that democracy in West Germany is only 10 years old. Political democracy has had a brief and fitful life in Germany. The Weimar Republic came into being after World War I and went down in ruins in one short decade, a victim of economic hardships and human frustrations that brought on the long dark night of Hitlerism. Germany has given the world men of genius in philosophy, science, poetry, music. The hope now must be that its contributions of a Beethoven, a Koch, a Goethe, will be matched in future generations by German Washingtons, Lincolns, and Jeffersons.

The encouraging thing is that much the same sentiments are to be found among responsible leaders in every walk of German life. One of the most eloquent expressions I have seen on this subject was an address by the owner of the largest newspaper chain in Germany and, for that matter, on the Continent, Mr. Axel Springer. With your permission I should like to quote from his speech to a World Brotherhood Conference in Berne, Switzerland, a year ago—before a sudden act of violence made it necessary for any leading German to comment on either his country's past or its future. These are Mr. Springer's words:

"Wantonly, my people unleashed a catastrophe. In the end this catastrophe almost destroyed the German nation. My country has burdened itself with terrible guilt. It has become guilty of terrible crimes against humanity, against other nations, above all, against the Jews. I am a member of this guilty nation. I am exerting what influence I have to see to it that this guilt is being atoned for. That the monstrous wrongs that have been done are being compensated for as far as one can undo wrongs of this kind.

"Thirteen years have passed since the end of the war. Today I am facing you also as a representative of what has been called Wirtschaftswunder—the German economic miracle. My own house is not much older than 10 years. It is part of this miracle. What, actually, is this economic miracle? I cannot say that it is the achievement of the German nation. The German nation did not exist any more after 1945. It had lost contact with its history. It also lost its faith. It continued to exist only as a conglomeration of individual beings, millions of them. Within each and every one of these millions amongst the rabble and the ruins the desire developed to once more have a roof over his head, a warm room for himself, food in his stomach and clothes to wear. For these aims all the German people have worked as hardy ever in history human beings have worked. The German economic miracle is the sum of these millions of individual determinations to rebuild the very means of existence. It did not arise from the idealism of a nation, it was fostered by materialistic aims and, it may be said, by the egotism of the individuals.

"That may be a negative view although this miracle has become visible in the form of new factories and skyscrapers of concrete and glass.

"I frankly express these things because I also have positive things to say about my

people. All of you have been able to see how reluctantly these people consider playing at soldiers again. You have been able to see how passionately these people have taken a stand against nuclear arms. The many recent trials, such as those of Ulm and Bayreuth, may serve you as evidence that today we bring to court those who were guilty in the past, so that guilt may be atoned for and justice done. I am especially satisfied that material compensation for the Jewish nation has been enacted and is being carried through. Western Germany has no radical right wing and no radical left wing any more; there is no radicalism in Germany. We want to live peacefully in partnership with other nations.

"It is not possible for a people to live for any length of time in the materialism of the economic miracle alone. That alone cannot satisfy its hunger. To work and to make money, to eat and to drink, to buy clothes and furniture, to build homes and to travel, all this will serve its purpose for a limited time only; one day it will fail to do so. A nation has its history and it cannot live without history.

"The German people have learned their lesson, and do not believe in nationalism any more. Nationalism is madness in a world in which continents are getting closer together every day. We believe in large federations. For our part, we believe in an all-European federation which we want to join as a serving, helping member, and also as a member doing its very best to compensate for past wrongs. We want to join this federation lock, stock and barrel. But we should be an empty and dangerous nothing, open to all dangerous influences, if we belonged to such a federation divided and without history, carrying with us nothing but our materialistic achievements."

The outlook and philosophy of so distinguished a German as Axel Springer does much to explain why the people of Germany—particularly the young student and intellectual classes—were quick and vigorous in their public condemnation of the anti-Semitic incidents.

Yet I share fully the wise and considered judgment of Phil Klutznick and his distinguished successor, Label Katz, when they echoed the appeal of responsible Germans themselves. That appeal was for understanding, and cooperation from our side of the Atlantic to help in the building of a democratic future for Germany. There is a great deal we can do. We can and should expand our cultural, educational and scientific exchanges with Germany. There may be some limited profits in our exchange programs with the Soviets. But, it's time we paid greater attention to those whose friendship for us is a lot clearer than anything we have seen from the Soviets. As a former newspaperman, I can understand why our press reserves its large displays of type and pictures for visitors from Russia. It's news when Khrushchev or any of his underlings has a kind word to say for us these days. But it seems to me that our public information media can make a useful contribution to strengthening ties with our friends by increasing coverage of those of our friends who are fighting the battle of democracy in the free world.

I should like now to report to you briefly some of the anxieties I found among our friends in Europe during a 2-months visit from which I returned this week. I had the privilege of talking with a number of the leading military and diplomatic personalities in NATO. Almost without exception, they are concerned over the possibility that we Americans are so occupied with Soviet missile gains that we may be overlooking dangerous Russian gains in another direction. They are concerned that the Russians may be palming off the fiction that Nikita Khrushchev is prepared to abandon

some, if not all, of the Marxist-Leninist doctrines for achieving Communist world dominion.

I found on all sides a good deal of anxiety over Soviet successes in exploiting the peaceful coexistence propaganda theme to persuade world opinion that the Communists are really interested in arriving at an equitable formula for reducing world armaments and establishing firm and workable atomic controls.

Many European leaders were specially troubled over the after effects of the Khrushchev visit to the United States. They are troubled by the possibility that this visit may have lulled American public opinion into an unjustified sense of assurance over the Soviets' readiness to relax their tough stand on the Berlin problem.

Let me say that I am the first to hope I will be proven completely wrong when I predict that no agreement will have been reached on effective disarmament and atomic control and inspection by the time the East-West summit conference convenes in May. But the facts about Soviet behavior in Geneva until now speak for themselves. This behavior has made it plain that any concessions in these areas by the Soviets will be tied to demands that the Western Powers capitulate on the issues of Berlin and German reunification.

After my talks in Europe, I am more convinced than ever that the decisive issues of the summit talks will be the preservation of Berlin's freedom and the start of realistic steps toward a solution of the problem of a divided Germany. We must stand fast by the Eisenhower-Dulles-Adenauer policy on Berlin. We must remember the lessons of Munich, Teheran, and Yalta. The freedom of Berlin is an essential underpinning in the security of the free world. If we yield an inch, we will surrender the last shred of our victory in World War II. The Korean war, too, will have been fought in vain. Above all, we will have surrendered our chance to leave a real legacy of freedom to future generations of mankind. I am confident that President Eisenhower understands better than anyone else that the maintenance of a strong and united Western alliance hinges on the exercise of firm U.S. leadership in standing by the Western commitment to preserve Berlin's freedom. But there can be no question that the task before him is a hard one. Khrushchev's repeated threats to turn over Russian controls in Berlin to the Communist puppets in East Germany hold no promise for a useful outcome of the Geneva meetings.

Certainly, we have gone out of our way to ease East-West tensions. We have met the Soviets more than halfway in the various exchange programs. Now we are being pressured for an expansion of trade. I have the feeling that we would be wise to follow a go-slow policy in this area—particularly at a time when, on the one hand, the Soviets complain about our refusal to grant them long-term credits, while, on the other hand, they boast of ample capital resources to permit them to extend long-term, low-interest loans to countries they have singled out for economic and political penetration. It would seem to me to be suicidal to take a course that would make available American dollars to underwrite the unshakable aims of Soviet imperialism.

A far better use of our money, it seems to me, would be to expand our people-to-people programs with non-Communist countries. We ought to pay more attention than we have to students and intellectuals of the Asian, African, and Latin American nations.

From their ranks have come many of the leaders of the newly emerging sovereignties. It is these classes that have been special targets of the Soviets for many years. The answer is to demonstrate through our educational and cultural exchange programs

that we are far more interested in advancing the welfare and dignity of the individual than in getting into political popularity contests with the Russians.

Here is a field that deserves increased attention to the part that the local community can play in broadening the effectiveness of people-to-people programs with an occasion such as the one that brings us together tonight can speak the essence of America with telling effect to any foreign visitor who has a chance to see it for himself. It is the kind of continuing process in community relations that takes place in hometowns throughout America. It can give foreign visitors the perspective they need to understand the essential values of our free society.

I thank you for the privilege of permitting me to join you in paying tribute to a young American who has given fine service to our Department of State and who represents so splendidly the future leadership of our communities and our country.

Above all I thank you for this chance to participate in another of the programs that has given the city of Scranton a unique status as a community where the ideals of brotherhood are translated into the fabric of daily living.

Who Will Be Next, After Castro?

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial reprinted from the Indianapolis Star for March 15, 1960:

WHO WILL BE NEXT, AFTER CASTRO?

The Castro government of Cuba has now seized four American-owned properties, three sugar mills and a railroad. Its so-called intervention of these properties is the prelude to outright nationalization. Under present Cuban law the Government can repay the American investors with 20-year bonds at 4½ percent—bonds which no doubt will be worthless.

This is only the latest of indignities heaped upon the U.S. Government and American citizens by this Communist led, Communist controlled government installed just 40 miles from our coast. Our Government has been falsely accused of bombing Cuban cities and canefields, of exploiting the Cuban people, of blowing up an ammunition ship, of every sort of heinous crime Castro and his Red henchmen can think up. We have been insulted, laughed at and threatened by this pipsqueak dictator.

Yet the Eisenhower administration still stands helplessly by, looking like a big, fat, and sloppy Uncle Sam while these attacks and depredations against us and our people continue. Our country has been made to look like a cowardly fool who can be abused and kicked at by any little bully boy that happens in the neighborhood.

It is clear that it will not be long before Castro, encouraged by the pusillanimous and inept policies of the President and Secretary of State, will soon demand the ouster of the U.S. Naval Base at Guantanamo Bay. At the same time Castro is certain to go even further along the dangerous road of Soviet-Cuban political, diplomatic, and even military cooperation. Soviet diplomats are experts on secret international agreements, and a Soviet-Cuban friendship pact could well

have been signed during the recent Havana visit of Soviet Deputy Premier Mikoyan.

This would be a direct violation of the American Monroe Doctrine which has been successful for over 100 years in keeping foreign domination away from this hemisphere. It will be a direct threat to the military security of this country. For should we lose the base at Guantanamo, and should a Soviet-Cuban cooperation agreement be a reality, the Soviet Union will have a fully equipped naval base at its disposal right under the shadow of our shores.

If the Government of the United States permits this situation to deteriorate any further the consequences will be the seizure of American property from Cuba to Argentina. Who will be next? The leftwing governments in Colombia and Venezuela are just waiting to see whether Castro can succeed before taking their turn at making the eagle squeak. If Castro gets away with his insults, his seizures of American property, his ousting of American business from Cuba, it will be only a matter of time before Venezuela and Colombia follow by seizing American oil which constitutes one of the largest oil reserves in the world, mostly developed by American investors.

It is long past time for the President to get up off of his easy chair and take a stand against this bush-faced dictator. His first move should be to reinforce the American naval base at Guantanamo with U.S. Marines. Second, he should tell Castro in plain words that the United States will look upon any co-operation agreement with the Soviet Union as a direct threat to the security of the United States and will take any necessary moves to prevent it. He should make it clear that this Government will use any measures in its power, military if necessary, economic or political, to insure the rights of American citizens in Cuba or American investors in Cuba. Diplomatic relations with the Cuban Government should be severed until the demands of American security are fulfilled. At the same time subsidy payments on sugar to the Castro government should be abolished forthwith.

This is a real and present danger to the people of the United States. It should be met with firmness and speed. Appeals to the Organization of American States for intervention are as fruitless as the Hungarian appeals to the United Nations for help. But we need no help. We have the power. The danger exists. It must be met and met now—before it is too late.

One Hundred and Twelfth Anniversary of Hungarian Revolution

SPEECH

OF

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ZABLOCKI. Mr. Speaker, March 15 marked the 112th anniversary of the Hungarian Revolution of 1848. It is fitting that we join with Americans of Hungarian descent and with freedom loving peoples everywhere in commemorating this date and in assuring those suffering behind the Iron Curtain that they are not forgotten.

The brave people of Hungary have kept alive the spirit of freedom through the years of Communist oppression and enslavement. Their strong national feelings and their love of liberty, were dem-

onstrated clearly during the October 1956 revolution. Their spirit will not be broken in spite of the reign of terror which still prevails in their homeland.

The people of Hungary must not lose their determination to regain their independence, and their hope in the eventual liberation of their nation. Our Nation will continue to work toward this end through every peaceful means, and we hope that our efforts to this end will bring added courage to the Hungarian people and to the peoples of other Communist-dominated nations.

At Bat for Gettysburg

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FENTON. Mr. Speaker, on March 3 last I placed in the Appendix of the CONGRESSIONAL RECORD an editorial regarding the preservation of Gettysburg Battlefield as a national shrine, and as a member of the Interior Appropriations Subcommittee of the House, which handles these appropriations, I made some clarifying statements regarding the present situation at Gettysburg.

There has been some very fine and complimentary reaction to my interest in perpetuating Gettysburg Battlefield in the best traditions of our American history, and to prevent commercial encroachment at this historic spot.

Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include an article from the Pottsville (Pa.) Republican, from the "Editorial Musings" of Mr. Walter S. Farquhar widely read columnist who is an authority on the history of Gettysburg and who has lectured many times on the subject. Mr. Farquhar's article follows:

AT BAT FOR GETTYSBURG

It was gratifying to read in the CONGRESSIONAL RECORD that our old friend, Dr. Ivor FENTON, is going to bat for Gettysburg.

Congressman FENTON, in urging against commercial encroachment, is acting in sympathy with many of his constituents in Schuylkill and Northumberland Counties. He might be surprised to know how much interest there is in Pottsville, Shenandoah, Mahanoy City, and other places.

This column, having read of desecration of the hallowed ground, was agreeably surprised to find, last November, that the trouble wasn't as bad as had been feared, though eternal vigilance may be necessary to prevent permanent defacement.

One of the bones of contention was a grade school built on the first day's battlefield, not far from Barlow's Knoll. It is on the battlefield, all right, but is small and does not change the aspect of 1863 greatly. Nearby is the Poor District building, just as it stood before the battle. That should be preserved.

We needed a guide to point out the automobile dump, after falling to find it. It is on Powers' Hill, considerably behind the Union battle line on Cemetery Ridge. There was no fighting on the site but it definitely is on

the battlefield and is of considerable historic value. It was there General Meade was forced to establish his headquarters, after being driven from two other sites by the Confederate cannonade which preceded Pickett's Charge. Meade, first was in the cottage of Lydia Leister, only about 200 yards back of the Union line. When the cottage became untenable he went back a little way to a barn, where his staff tried to carry on its work. But he soon had to vacate his new location, deciding to join Gen. Henry Slocum, commander of the 12th Corps, where the latter had established headquarters on Powers' Hill.

That is why Powers' Hill is historic. It marks one of the few times when a general commanding a whole army was forced to seek new headquarters, twice, because of the fierceness of artillery fire. The auto dump, not too large, ought to be moved from there.

In his speech, in the House of Representatives, Dr. FENTON brought out the fact that Gettysburg had lost an appropriation of \$450,000 because Adams County politicians were arguing about some aspects of the situation. The appropriation, then, was allocated to Bull Run, a place where the original appearance has been altered so greatly, it hardly can be recognized today, while Gettysburg retains its original appearance to a wonderful degree—for which reason it is the finest battlefield park in the world. It is something in which Pennsylvanians have reason to take pride.

Dr. FENTON states that the United States has spent \$3 million on Gettysburg in the last 10 years and proposes to allocate \$2,415,000 more, for the acquisition of 691 more acres, which will be expended as soon as Adams County officials set up adequate zoning regulations. He says, too, the Government is willing to trade some of its property for battlefield real estate which is of greater historical significance. He notes, too, that the Gettysburg Battlefield Preservation Association is proceeding with a fund-raising plan to purchase additional land. The association appears to be a private one which has done a great deal for the historic site.

Gettysburg is the classic battle of the world because it offers more illustrative situations for study of military tactics than does any other site, for which reason even its approaches are of great value. One of the main strategic considerations was the excellent concentration of the Union Army, most of its units being below the Mason-Dixon Line when the battle was joined. For that reason the terrain is historic as far as Pipe Creek, in Maryland.

Present encroachment is not great, but commercialism always is rampant and often triumphant. If allowed to go unchecked, it may deface what every loyal American views as hallowed ground.

Pay for the Mail

EXTENSION OF REMARKS OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. CANFIELD. Mr. Speaker, it has long been my contention that we must increase postal rates if we are to improve postal services and put the Department on a self-supporting basis. If users would pay their proper share it would benefit taxpayers, reduce our national debt, promote modernization, and help postal employees. I am inserting in the

CONGRESSIONAL RECORD a timely editorial which appeared in last night's Washington Evening Star:

PAY FOR THE MAIL

Congress should forget its election-year coyness and authorize the postal rate increases recommended by President Eisenhower.

Failure to do so, in the face of an estimated \$554 million postal service deficit in fiscal 1961 under existing rates, would be completely irresponsible and an affront to budgetary good sense. Furthermore, it would amount to a violation of policy which Congress itself spelled out in 1958 to the effect that "rates should be adjusted whenever necessary to recover postal expenses."

The longtime failure, and it is primarily the fault of Congress, to put the Nation's postal service on something approaching a self-supporting basis has been a costly one to the taxpayers. As the President pointed out in his budget message, and again in his special message to the Congress last week, the cumulative postal deficit for 13 postwar years totaled \$6.8 billion—almost half the increase in the Federal debt during that same period. Interest charges alone on this \$6.8 billion fragment of the debt amount to \$200 million yearly.

Economies and improved efficiency in postal operations during the postwar years have been more than offset by two factors. One has been the vast increase in volume of mail. The other has been the steady rise in cost of virtually everything the Post Office Department uses or buys. Revenue-producing rates have not kept pace. Increases recommended at this time would apply to virtually every category of mail, but would raise by only 1 cent the basic charges on first class and airmail. The Department estimates that this increase on first-class letters, for example, would cost the average family only about \$1.80 yearly. In the long run, perpetuation of the deficit habit is apt to cost more—either in money or in deterioration of the service.

The Philippine Sugar Industry

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Mr. R. L. Pagula, Administrator, Sugar Quota Administration, Department of Commerce and Industry, Manila, Philippine Islands:

DEPARTMENT OF COMMERCE AND
INDUSTRY, SUGAR QUOTA ADMINISTRATION,
Manila, March 10, 1960.

HON. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: On behalf of the sugarcane planters, millers and exporters of sugar from the Philippines to the United States, allow me to express my heartfelt appreciation for the inclusion in the appendix of the CONGRESSIONAL RECORD for Tuesday, March 1, 1960, as an extension of your remarks, taking the cudgels for the Philippine sugar industry.

As you already know, the Sugar Quota Administration is the Government agency in

the Philippines charged with the duty of promoting and enhancing not only the interests and welfare of the Philippine sugar industry but more importantly the larger interests of the country as a whole. That is why, while our sugar industry will doubtless directly benefit from a share in the increased sugar consumption in the United States annually, the larger beneficiaries will ultimately be the people of my country through expanding employment opportunities, strengthening of our dollar reserves and stabilizing the general economic situation of the Philippines.

Based on the latest information at hand, we estimate that we will have available at the end of this crop year a surplus of about 400,000 short tons of sugar after meeting our regular export requirements in the United States and the world market as well as our domestic consumption. You can therefore see that the Philippines could supply any emergency need of the U.S. market to the extent of 400,000 short tons this year.

We have read with a great deal of interest the editorial appearing in the Journal of Commerce of New York, for February 17, 1960, entitled "Castro Shows the Way" as quoted in your extension of remarks. Since all the right thinking people anywhere will not feel glad over the fulminations of Dr. Castro against the U.S. Government, we as Christians cannot feel happy either when our neighbors go wrong. That is why, notwithstanding the current developments engendered by Dr. Castro's regime in Cuba, we hope the pleasant and States and Cuba in the past will eventually be restored. The Philippines only would want to receive from the United States what in justice belongs to it or to which it may be entitled. We do not like to be opportunistic nor rejoice over other people's misfortune, such as is now seemingly the lot of the Cuban people.

We are always cognizant of the unique relations that have existed between the United States and the Philippines for the past 60 years and are certainly glad to know that we can count on your friendship and support in time of our need. We hope that you will continue to bestow upon the Philippines your invaluable help in obtaining for our country its just share in the increased sugar consumption of the United States or at least in placing our country on an equal footing with the other foreign sugar suppliers in the United States.

Yours very truly,

R. L. PAGULA,
Administrator.

Purifying Democracy for Action

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. SANTANGELO. Mr. Speaker, the right to vote is the key to all civil rights. The right of full and free expression through the ballot is long overdue on the American scene. The Congress has been debating the merits of the Celler bill, H.R. 8601, to enforce a citizen's constitutional rights. The Nation is deeply concerned with the progress of this all important bill. We are trying to bridge the gap between the pronouncements of our Declaration of Independence which declared that all

men are created equal and the practices of our everyday life which display discrimination and inequality.

Religious leaders have also spoken out on this very important subject. One of my constituents, Dr. Zev Zahavy, rabbi of the Congregation Zichron Ephraim, located at 163 East 67th Street, New York City, delivered a sermon on March 5, 1960, entitled "Purifying Democracy for Action." This sermon is a clear expression of viewpoint and a cogent call to action. I am certain that the readers will profit from its reading. The sermon follows:

The fate of a democracy is presumably in the hands of the voters. Through the free ballot, a majority may indicate its choice. Yet, one cannot help but wonder at the paradoxical nature of American democracy. There are certain inequities which defy the full expression of democracy on the American scene. These inequities exist above and below the surface of the American sociological fabric. Their religious significance and racial overtones call for analysis from the pulpit.

The right of full and free expression through the ballot is long overdue on the American scene. The time has come for a purification of American democracy. Biased practices now contaminating the American election process should be eliminated once and for all.

This noble Nation boasts of more than nine score years of democracy's heritage. Strange enough, though we have passed the halfway mark in an enlightened 20th century, the outmoded prejudices of the early Founding Fathers still await correction. In an era of advanced science and technology, American citizens going to the polls are still denied the right of direct ballot. The old-fashioned electoral system with its many potential inequities prevents Americans in this democracy of the United States from voting directly for the national candidate of their choice. Under the present system, it is even possible for a presidential candidate to receive a plurality of votes and yet suffer defeat at the hands of the electoral college.

The electoral system in national elections should be abolished immediately. It is a dangerous contaminating factor and only its complete elimination will help to purify American democracy. Present-day citizens are certainly mature enough to exercise their will at the polls through a direct vote.

The poll-tax system in some States is a blight upon the concept of democracy. Every citizen deserves the right to exercise a free indiscriminate vote. The poll tax, with its clearly racial designs, has contaminated American democracy long enough. Its elimination is vital if this Nation desires to claim the highest refinement of democracy before the court of world opinion.

Are candidates for public office to be selected on the basis of their qualifications alone? The time is at hand when an individual should have the right to seek office regardless of sex, race, or creed. The undercurrent of popular prejudice in connection with the election of a President of these United States is a blemish on our democracy. There is no reason why a woman should be barred from this high office, simply because it is unprecedented for a member of the female sex to occupy the presidency. Neither should religious prejudice bar an able candidate from election. If a Roman Catholic seeks the presidency, he should be judged on the basis of his record, qualifications, and policies, not on the basis of religion.

Similarly, if an able American citizen of another race indicates the ability to hold public office, his election should not be prejudiced because of his color.

The unwritten law of politicians demanding that an American presidential candidate be a white, male, Protestant Mason, should be repealed in the minds of Americans who seek to strengthen and purify the fabric of this democracy. By refining the impurities and by removing the contaminating factors, American democracy may become the model to inspire all nations in a promising free world.

The State Versus Alice Marie

EXTENSION OF REMARKS OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. BRAY. Mr. Speaker, are there any practical limits to the absurdities which will be undertaken in the name of officialdom? Some of us who wonder periodically about this question were again discouraged by a recent story of an adoption case in New Jersey.

I believe the column by John Ackelmire, which follows as it appeared in the Indianapolis News on March 12, reflects the feelings of so many Americans who have seen theories replace feelings and regulations supersede hearts as government activity has become more and more entangling. We have been encouraged to learn in the meantime that little Alice Marie will be able to stay in the home which love has made for her and which will surely be a better stimulus for her exceptional intelligence than the greatest of libraries and museums pervaded by an antiseptic chill.

The article follows:

THE STATE VERSUS ALICE MARIE—A TEST CASE FOR 1984?

(By John Ackelmire)

I am not a member of any organized political party; I am a Sorehead. In nearly four decades of varying degrees of political awareness, I often have felt like the lady who said of the 1948 presidential election: "Thank God, only one of them can win."

But if I were a political candidate, or a political manager, or a political manipulator, I should take the case of Alice Marie Combs and squeeze every last drop of vote-getting advantage out of it.

Here is a case made to order for the human heart. At the same time it presents in understandable everyday terms the epic struggle of our age—the struggle of the individual and the family unit against Mass Man, that mythical beneficiary of the ugly, faceless superstate.

Most readers are aware of the case of Alice Marie. At 4 she is the central figure in a deeply significant legal tussle now in the hands of a three-judge superior court panel in Trenton, N.J.

Alice is a foster child technically under the jurisdiction of the New Jersey Board of Child Welfare. But since infancy she has been in all but a biological and legalistic sense the very real daughter of Mr. and Mrs. Richard Combs, of Old Bridge, N.J.

This drama of the individual versus the superstate reached its denouement after the Combses sought to adopt Alice.

The board said no. It said the Combses are not fit culturally or financially to develop the child's abilities.

Although she does not know it in her innocent joy and the security of a happy home with loving foster parents, Alice has a near-genius intelligence-quotient rating.

The board's social workers, psychologists and assorted worrywarts do not claim there is anything really wrong with the Combses. They are decent, honorable citizens. He earns about \$120 a week, and they have a \$17,000 home.

But, a board report states, the couple appears "to have little cultural interests." Too much television, not enough books.

A sociologists said Alice's superior mind "unfolding in a process of maturation requires a wealthy educational environment and cultural predilections so that she can profit from these experiences."

In short, jerk the child from the home she knows and loves, place her with some rich strangers, and maybe she can learn to talk the same sort of mumbo-jumbo as that sociologist. She may not be happy but she will be glib.

The board evidently is not too concerned about the emotional warp that might result from such a move; it simply wants Alice to have better blue gowns and more culture.

So here it is. The State of New Jersey versus Alice Marie Combs, age 4. A sort of test case for the all-powerful Big Brotherhood foreseen, too prophetically, I fear, by George Orwell in his famous novel, "1984."

The individual means nothing; the family unit means nothing; love and warm sentiment mean nothing.

The state—ah, the state means everything. Bow down to the State, you craven nobodies, you nothings, you expendable ants of shared labor.

Yes, if I were an antistatist politician, I'd try to make something of the Alice Marie Combs case.

One might start out by checking into the cultural and financial credentials of quite a few Americans who served their country, their world and their God far above and beyond the capacity of most persons with inherited wealth and silverspoon educations. Abe Lincoln and Tom Edison come swiftly to mind. The list could be expanded indefinitely.

And, then, there was a Man whose parents, by all accounts, were miserably poor and probably lagged shockingly in the cultural attainments that seem so important to the New Jersey Board of Child Welfare.

Before the Roman superstate washed its hands and the mob lynched this Man, He spoke often to the multitudes of love and of little children—but never, so far as is known, of IQ ratings.

Prayers for Slovakia

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of Friday, March 11, 1960:

PRAYERS FOR SLOVAKIA

On March 14, 1939, Slovakia was proclaimed an independent state under the tremendous pressures and confusion prevailing in that troubled era. In anticipation of the 21st anniversary of this declaration of independence, Americans of Slovak extraction in northeastern Pennsylvania and

in many sections of the country will offer prayers and supplications at special masses in their churches on Sunday, asking God to deliver the land of their forefathers from the Red tyranny and to grant those who are carrying on in the old country under the most difficult circumstances the grace of perseverance until their suffering comes to an end.

It is understandable that in Luzerne County, where the first Slovak Roman Catholic church in America was established and where such an outstanding churchman as the late Reverend Joseph Murgas labored, the observance of this milestone should take on a religious flavor.

With the demise of the Republic of Czechoslovakia in 1939, Slovakia declared its independence. For 6 short years, it maintained a precarious existence and then it was overrun by the Soviet Union which formally set up a Communist "republic" in 1948.

So the Iron Curtain was rung down on Slovakia with incredible hardships and privations for the 4 million natives, persisting to this day. The outside world can only guess at what has happened there, but obviously these persecuted people, harrassed on so many sides, have suffered a great deal. When it will end is anybody's guess, but many will share the hopes of some 50,000 Americans of Slovak extraction locally that the liberation of the land of their forefathers and the restoration of peace with liberty and justice will not be postponed too long.

The Rosemary Johnson Case and the Governor of West Virginia

EXTENSION OF REMARKS OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. HAYS. Mr. Speaker, on February 29 I brought to the attention of the Members the shocking story of the Rosemary Johnson case and the part played in it by the Governor of West Virginia. I am now inserting in the RECORD a copy of a letter from Mr. V. L. Martin, of Mount Hope, W. Va., to the editor of the Beckley Post Herald, giving Mr. Martin's views on the Governor's reaction to my remarks:

OUR READERS SPEAK

V. L. MARTIN.

Mount Hope, W. Va., March 2, 1960.

EDITOR, BECKLEY POST HERALD,
Beckley, W. Va.

DEAR EDITOR: Referring to the news item "Underwood Scores Lawmaker Critical of Rosemary Case," in which Gov. Cecil H. Underwood suggested that the Honorable WAYNE L. HAYS, Democrat, of Ohio, should tend to the business of representing his constituents and leave West Virginia affairs alone, of course that is Mr. Underwood's own private opinion, however, as a citizen of West Virginia and knowing that thousands of our West Virginians owe their very existence to the economic progressiveness of the State of Ohio and having full knowledge of the desperate situation in West Virginia it would appear that the Honorable WAYNE L. HAYS would have time to spare from his constituents and certainly West Virginia stands in need of outside help.

In his public expression the Governor emphasized that because Representative

HAYS did not see eye-to-eye with the Governor in the Rosemary case, that the Representative is a demagog. It should be pointed out to the Governor that by this measure multiplied thousands of his West Virginia citizens are demagog and the Governor may be looking to these "demagog" for his support to the office of U.S. Senator.

Yours very truly,

V. L. MARTIN.

Baring Calls on Secretary of Commerce To Cause Resignation of Those Who Are Responsible for Issuance of False Technical Data by the Bureau of Public Roads

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES
Thursday, March 17, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD an extract of a certain document dated October 16, 1959, and certain relevant letters of a subsequent exchange between Frederick H. Mueller, Secretary of Commerce, and me. These letters previously have not been released. These items studied in context reveal more clearly the gravity of the highway program scandal, the fact that parties ranking the Bureau of Public Roads know about the unrefuted charge of issuance of false technical data by the Bureau of Public Roads in the Reno matter and have not acted to cause resignation from office of those officials and engineers who are responsible for the falsification, the magnitude of the task which must be accomplished by the John A. Blatnik Special Subcommittee on the Federal-Aid Highway Program, and the degree to which the interstate highway program administration has eroded the moral fiber of the American people. I now wish to insert in the RECORD the relevant extract of a document signed by Walter S. BARING, Congressman for Nevada, dated October 16, 1959, and sent on October 22, 1959, to Frederick H. Mueller, Secretary of Commerce, and acknowledged by the Secretary, and the letter of November 4, 1959, from Frederick H. Mueller which dates the acknowledgement. Continuing the letter exchange, on January 27, 1960, I addressed a letter to the Secretary of Commerce now appearing in the CONGRESSIONAL RECORD of February 4, 1960, pages A963 and A964. In that letter to Mr. Mueller I showed conclusively that the Bureau of Public Roads did falsify pertinent technical information in presenting its side of the picture to the John A. Blatnik special subcommittee investigating the selection of the routing of the interstate freeway system from the California State line through Reno and Sparks to Vista, Nev. I now wish to insert in the RECORD the unresponsive answer Mr. Mueller sent me on February 18, 1960, and the letter

I addressed to Mr. Mueller on March 9, 1960, in which I set forth that it appears incumbent on the Secretary of Commerce to cause the resignation from office of those officials and engineers who are responsible for the falsification of technical and economic fact. The extract of document and letters follow:

RELEVANT EXTRACT OF A DOCUMENT SIGNED BY
WALTER S. BARING, CONGRESSMAN FOR NEVADA, DATED OCTOBER 16, 1959, AND SENT ON OCTOBER 22, 1959, TO FREDERICK H. MUELLER, SECRETARY OF COMMERCE, AND ACKNOWLEDGED BY THE SECRETARY
NEVADA

The President, the Members of Congress, my constituents, and the American public at large know that for more than 2 years I have been opposing efforts by the Bureau of Public Roads and the methods employed by it to bisect downtown Reno with a Third Street interstate route which would cause irreparable damage to Reno's industrial growth.

The people of Reno sense that the planning and geometric design standards demanded by the Bureau of Public Roads for the Third Street route will permanently injure Reno, yet these people and the Congress of the United States have been confronted with the presentation of false data by the Bureau of Public Roads.

Public resentment against the Third Street route caused the House Subcommittee on the Reno Interstate Highway to hold hearings in Reno on February 24, 25, and 26, 1959, as reported in "House Report No. 292," April 23, 1959.

As shown on page 10 of that report, the Bureau of Public Roads submitted a 4.6 benefit-cost ratio for the Third Street route and only a 1.1 benefit-cost ratio for the North Rim route.

The North Rim route is important because the people of Reno believe it would spare their city and they have asked its adoption as opposed to the Third Street route.

Analysis of the data on page 10 of the report, on the map in the report, and in "Road User Benefit Analyses for Highway Improvements," American Association of State Highway Officials, reprinted April 1957, reveals that the 4.6 benefit-cost ratio for the Third Street route is false, as it derives from a necessarily implied assumption that operating costs on the present streets and Highway Route 40 exceed 18.8 cents per mile, which is false.

The Bureau of Public Roads, by its presentation of this false information before the House subcommittee in favor of the Third Street route which the Bureau had approved, has influenced the judgment of the Congress of the United States in a manner to deprive the people of Reno of the effectiveness of their constitutional right for a redress of grievances.

Elsewhere than in Nevada I learn the citizens have found the Bureau of Public Roads at work with State highway departments and their consultants to force unwarranted highway construction upon the public.

THE SECRETARY OF COMMERCE,
Washington, D.C., November 4, 1959.
HON. WALTER S. BARING,
House of Representatives,
Washington, D.C.

DEAR MR. BARING: I have received your note of October 22, 1959, and the accompanying papers. We have discussed the materials with the Federal Highway Administrator and will consider them in our future administration of the Federal-Aid Highway Act.

With respect to the situation in Reno, we have approved the Third Street Route

as requested by State officials. It is our belief that the initiative for any change lies with the State government.

I appreciate very much your courtesy in sending me the materials on the administration of the highway program.

Sincerely yours,

F. H. MUELLER,
Secretary of Commerce.

THE SECRETARY OF COMMERCE,
Washington, D.C., February 18, 1960.
Hon. WALTER S. BARING,
House of Representatives,
Washington, D.C.

DEAR MR. BARING: This is in reply to your two communications dated January 27 and February 3 concerning the location of the interstate route in the Reno-Sparks area in Nevada.

The Bureau of Public Roads has authorized the State of Nevada to acquire the right-of-way on the section of this interstate route extending from the California State line eastward to Lawton, Nev. One parcel was authorized on November 7, 1958, and the remainder on October 30, 1959.

In your letter of January 27 you discuss the calculation of the benefit-cost ratio used in justifying the Third Street Route. This ratio was computed on the basis of standard procedures which have been developed by the Bureau of Public Roads in cooperation with the States, and which are published and available to any interested person. The factors developed in the Reno case are not substantially different from those in many other urban route studies in all parts of the country.

The benefit-cost ratio is used as an objective guide to engineering judgment, but was not the sole basis for the decision on the Third Street Route. There was in addition to considerable volume of engineering and traffic studies which took into account local conditions. All of this material was available to the State highway department, and the county and city governing bodies in their decision to recommend this route to the Bureau of Public Roads, after consultation in detail with the Bureau on the same basis as is done on other projects throughout the country.

All of the pertinent materials and records were made available to the Blatnik subcommittee and evaluated by that group. In all our highway work we deal with objective data which are developed and presented to us by State officials, who in turn deal with local governing bodies. In the Reno case all the responsible governing bodies have been informed and have participated in the interstate route location, and the decision that was made has not been changed by them.

We have been requested by the House Public Works Committee to express our views on your bill, H.R. 9802, which would prohibit the expenditure of Federal funds on the Third Street routing. We shall present our views to the committee in the near future. Generally, this Department does not favor legislation dealing with specific routes, believing that such matters should be handled through the authorities of the States acting in cooperation with the Federal Government as provided in the present law.

We realize that in matters of individual route location there is room for disagreement. We feel that our policy of using objective criteria and continued cooperation with the duly constituted State and local authorities will provide the best means of appraising the issues involved in route location.

Sincerely yours,

F. H. MUELLER,
Secretary of Commerce.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 9, 1960.
Re issuance of false technical data by the Bureau of Public Roads.
Mr. FREDERICK H. MUELLER,
Secretary of Commerce,
Commerce Building,
Washington, D.C.

DEAR MR. SECRETARY: This will acknowledge your letter of February 18, 1960.

Thank you for the information that the Bureau of Public Roads—a bureau of your Department—"has authorized the State of Nevada to acquire (the remainder on October 30, 1959 of) the right-of-way on the section of this interstate route extending from the California State line eastward to Lawton, Nev."

The Bureau of Public Roads made this authorization after I sent to you on October 22, 1959, in a document dated October 16, 1959, a charge that the Bureau of Public Roads did falsify pertinent technical information in presenting its side of the picture to the John A. Blatnik subcommittee investigating the selection of the routing of the Interstate Freeway System from the California State line through Reno and Sparks to Vista, Nev.

This matter is recorded in the CONGRESSIONAL RECORD, February 4, 1960, pages A963, A964.

To date, my charge has been accepted without objection.

I am not discussing whether the 4.6 benefit-cost ratio assigned by the Bureau of Public Roads to the Third Street Route in Reno "was computed on the basis of standard procedures which have been developed by the Bureau of Public Roads in cooperation with the States, and which are published and available to any interested person."

I am not now discussing the issue of route location.

I am discussing the issuance of false technical data by the Bureau of Public Roads.

If my charge remains unrefuted, it appears incumbent upon you to cause the resignation from office of those officials and engineers who are responsible for the falsification of technical and economic fact.

On February 4, 1960, I wrote a letter to Congressman JOHN A. BLATNIK, Chairman, Special Subcommittee on the Federal-aid highway program, which contained the following paragraphs:

"Misstatement of technical or economic fact is almost invariably a necessary first step to collusion and fraud.

"Do you believe payment of Federal appropriation or aid funds should be withheld from any agency at any level of Federal, State, county, or local administration as long as any revealed falsifier continues to hold office in the agency or continues to advise the agency as a consultant?"

The continuing viability of the United States of America depends on the furnishing of accurate technical and economic fact to public bodies by constituted authorities and their consultants.

Sincerely,

WALTER S. BARING,
Congressman for Nevada.

A Canadian Looks at Our Growth Mania

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following letter to the editor from the Wall Street Journal of February 29, 1960:

CURB ON GOVERNMENT

EDITOR, THE WALL STREET JOURNAL:

Your excellent editorial in the February 11 issue, "How To Play 'Grow'," reminded me of the cartoon you carried some weeks ago. This showed two Senators back-dropped by the Capitol with one Senator saying to the other, "Honestly now, wouldn't you sooner be President than right?" I think that deep down all the members of the "growth-by-Government" club would sooner be President than right.

Reduced to fundamentals, the idea of growth-by-Government is absurd. It is self-evident that the Government can only give what it has already taken away. That is to treat it with magnanimity. In practical reality the Government can only give a great deal less than what it has already taken away due to the immense burden of the national debt and other costs of Government. Thus the Government takes from the economy purchasing power equal to the total tax collected and returns to it an amount which has been reduced by the interest on the national debt and the other costs of Government administration. The thing I can't see is how that can possibly cause any overall growth. Industrial and administrative productivity and market demand would seem to me to be more fundamental to growth and yet such words are never mentioned by our learned friends.

History itself proves that growth-by-Government is nonsense. Roosevelt's "spend ourselves rich" presidential campaign was nothing but a vote-getting gimmick, albeit mighty successful as a vote getter. Although much humanitarian legislation was passed in the hungry thirties during Roosevelt's Presidency it was certainly not the Government spending which brought the country back to prosperity. Prosperity returned because of the underlying economic forces and the world crisis of World War II.

The best thing the Government can do to spur economic growth is to leave the purchasing power and the money where it rightfully belongs, in the pocket of the American citizen.

R. G. ROSE.

WILLOWDALE, ONTARIO.

Duncan C. Taylor, Top Executive in Eberhard Faber Pencil Co., Promoted to Rank of Colonel in U.S. Marine Corps Reserve

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of Wednesday, March 9, 1960:

COLONEL TAYLOR'S PROMOTION

Promotion of Duncan C. Taylor, an executive of the Eberhard Faber Pencil Co. at Mountaintop and a resident of White Haven, to the rank of colonel in the Marine Corps Reserve is impressive recognition for a man who has served his country with distinction in peace and war.

Colonel Taylor emerged from the Second World War with an outstanding record of service in the Pacific where the corps wrote many stirring chapters in its brilliant history, spanning almost two centuries. It is easier to understand the achievements of the Marine Corps in the conflict against Japan when the service of men with the background, resolution, courage and qualities of leadership Colonel Taylor possesses is considered.

Colonel Taylor, despite the demands upon him by Eberhard Faber and the United States Trademark Association, of which he also is director and member of the executive committee, still devotes considerable time to the Marine Corps as administrative officer for a volunteer training unit under the jurisdiction of the Fourth Marine Corps Reserve with headquarters in Philadelphia. It is reassuring to his fellow countrymen to know that men of Colonel Taylor's caliber continue to share their talents with a branch of the service that is a part of our first line of defense.

Emergency

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. CANNON. Mr. Speaker, I am including in the CONGRESSIONAL RECORD excerpts from a statement by Mr. Fred V. Heinkel, president of the Missouri Farmers Association.

Mr. Heinkel is head of one of the largest State farm cooperatives and is one of the ablest farm leaders in the Nation.

In stressing the need for sound and effective farm legislation at this session of Congress he explains:

Long-range farm legislation is highly desirable and should have urgent attention but unless emergency legislation is enacted now, applying to 1960, and becomes effective at an early date, many farmers will not be around to participate in a long-range program.

Many farmers are facing bankruptcy. Many others have taken or are seeking off-the-farm jobs for which they are unsuited, untrained, and unskilled. Many farm wives have been forced into urban employment to the neglect of their homes and families. As the economic crisis deepens throughout rural America not only farmers but many small businessmen and small rural communities, who also depend directly upon farm income for their support, are losing hope for the future.

Provisions spending bills for the disposal of present Government stocks, and long-term objectives for the commodities covered would in my opinion be very desirable for the future welfare of American agriculture. However, I do not believe they provide the pricing help needed now.

The proposals in effect provide that by agreement the farmer to reduce his production of feed units for 1960, 1961, and 1962 not to exceed 33 1/4 percent for any one year, would receive from Government stock feed units equivalent to such reduction.

The farmer's incentive for this reduction would be about 33 1/4 percent of his production without production cost. However, for the 3 years 1960, 1961, and 1962 there would be available for marketing or feeding ap-

proximately the same tonnage of feed grains as produced over the past 5 years. Therefore, prices received by farmers could be expected to decline even further for this period.

From reports I am receiving daily from farmers, bankers, production credit associations and others, I am genuinely concerned that very few farmers can stand even 1 or 2 more years of our present price situation in agriculture.

If such proposals could be amended to provide for deficiency payments for the transition period of 1960, 1961, and 1962, with such payments on all farm products and being based on previous years' average market prices in each case, it could be the basis for solving our long-range problems in agriculture and saving thousands of family farmers from bankruptcy in the immediate future.

Mr. Speaker, my office is receiving from day to day an unprecedented number of letters from farmers who, due to the low price of farm products and the high price of everything entering into their cost of production, are unable to meet their bills and who can not borrow from the local bank, or the Farm and Home Administration or the local production credit association enough money to put in their crops and feed their livestock during the coming spring.

It is to be hoped that, as Mr. Heinkel proposes, prompt action can be taken at this session of Congress to meet this pressing situation.

Time is running out.

Why not spend a little less time on politics and do something for the farmer and the country?

Air Force Flag

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, this morning the U.S. Air Force honored the Committee on Science and Astronautics by presenting it with the official Air Force flag. The presentation was made by Gen. Thomas D. White, Chief of Staff of the Air Force, in the presence of committee members and Air Force Under Secretary Joseph V. Charyk. I should like at this point to include my remarks, made in acceptance of the flag on behalf of the committee:

Mr. Secretary, General White, distinguished guests, and members of the Committee on Science and Astronautics, on behalf of the Committee on Science and Astronautics I want to thank you, and each of you, and the Air Force generally, for this beautiful official flag of the U.S. Air Force. It is a gift to the committee and will stand in its proper place in a proud position here in this committee room throughout the long, and I believe, glorious, career of this new standing committee of the Congress of the United States.

The Air Force is the youngest department of the Department of Defense. In a few short years, however, it has built for itself an enviable position in the minds of the people of the United States and a glorious

history because of its fine accomplishments and outstanding achievements.

I can recall when the Air Force was a part of the Signal Corps. Later on, it expanded the bonds which held the Air Force tightly within the confines of the Signal Corps and it became the Air Corps, with its own organization and with its own command. The day came when those with imagination conceived the idea that the Air Force should be a coequal part of the armed services along with the Army and the Navy—brothers in arms in joint defense of the United States. This seemed a simple matter to most of us but others in Congress did not agree. A bitter fight ensued, but out of the smoke of battle and out of the travail of our efforts came this great patriotic and defense organization known as the Air Force.

This fact alone did not make the Air Force a coequal branch in the Defense Department. On the contrary, the Army and the Navy both had academies to teach their young officers all the routine and the knowledge of their own branches. The Air Force had none. I am proud to say, Mr. Secretary and Members, that I was one of those who introduced a bill to establish an Air Force Academy. True, Mr. Secretary, I had in mind that the Academy would be located in Louisiana—that is really the best place for it—but instead it went to Colorado and it is now performing its appointed task of turning out graduates for commissions in the Air Force. At this time, there are other jobs to be done—not major ones, but minor fringe-types to round out the Air Force into a well-ordered, well-organized, coequal branch of the Department of Defense. I am not going to go into that matter here. It is not the proper place, it is not the proper time for a presentation of such a discussion. In the final analysis, the Air Force can continue to function in a manner which is the pride of the people of the United States.

Since World War I almost on every field of battle, members of the Air Force have actively participated and by their gallantry brought glory to this banner. They have been rugged, vigorous, brave, and patriotic persons who have been willing to die—and many have died—in the defense of this banner.

Of course, therefore, Mr. Secretary and General White, we are proud of this flag—proud that it will belong to this committee and will have a proper place in this committee room where all who come to help us in the work of legislating within our jurisdiction may see it and glory in the fact that men like you and others have given unstintingly of their time and talent in their efforts to help this committee chart a direct course in this new field, so that that banner may be held aloft with pride and conviction.

Let me again thank you, Mr. Secretary and General White, that your kindness has brought you here this morning and for your interest in our committee and for your patriotism and devotion to our membership.

The Blessing of Struggle

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. DORN of South Carolina. Mr. Speaker, every student, parent, and educator in the United States should read

the following address by Hon. Sam Pettengill:

[From the Vermont Academy Bulletin, June 1957]

THE BLESSING OF STRUGGLE

(By the Honorable Samuel B. Pettengill, V.A., 1904, delivered at the ceremony of induction of new members of the cum laude society, Sunday evening, May 24, 1957)

When I got through Vermont Academy, college and law school, I played a good deal of chess while waiting for clients who were bold enough to let me practice on them.

Chess, as some of you know, is the most difficult of all games. The combinations and permutations on the chessboard run into the octillions and no man ever has, or ever will completely master it.

Chess masters are relative only to other players. Nevertheless they are remarkable men. One of several I got to know was Emmanuel Lasker, of Berlin, Germany, who had been world's champion for 24 years. He was not a mental freak. He had a doctor of philosophy in mathematics and wrote a profound book on philosophy. In addition, he was a kind and gentle man—then in his sixties.

We got him to come to my hometown of South Bend to put on an exhibition match with some 30 local players. At supper that night, we asked this grand master why he had given so much of his life to chess.

He said: "The chessboard is a symbol of life—of all life. The essence of life is struggle. Take struggle out of chess, or out of life, and what is left? In chess I have found happiness."

That was 35 years ago. I have never forgotten his words and have often said to young parents, "Don't take struggle out of your children's lives."

The instinct of fathers and mothers is to do just that—to make life easier for my boy than it was to me. It is interesting to note that youth is sounder in this matter than age. Youth revels in competitive sport, whether to do something better than his fellows, or to beat some previous record.

Even small children, when they invent games of their own, always put struggle into them.

Struggle is a blessing to be sought for, not an evil to be avoided.

We have met tonight to honor those who have won the honor of a cum laude student. But honors are silly toys, unimportant in themselves, important only as evidence of something well done. Those of you who did not win had the struggle as well as the winners—which is the thing that counts.

So I congratulate both the winners and those who tried but did not win. I know who is going to get the big rewards of life.

In recent years, society has gone nuts on the pusillanimous cult of security, guaranteed by Government; in short, a nation of parasites. The illusion of the age is that people can vote themselves rich. It is a superstition that social security depends on the promises of politicians; not on the character, competence, and courage of men. It is a fable and a fraud that the output of society can be greater than the input of individuals.

It is a universal complaint that nobody wants to work any more, or only enough to get by. Employers are frantic for dependable employees. Labor unions have the laudable desire to improve the position of their members, but they overplay this hand when they say "Stretch it out." Take it easy. Do no more than enough to stay on the payroll.

When young people apply for their first job, they ask, "When will I begin to draw a pension? How many coffee breaks in a

day? How many holidays? How long and frequent are the paid vacations? And if I work more than 40 hours in the 144 hours in 6 days, do I get time and a half?"

The young men who ask none of these questions are sure to get and hold a job. In fact, this sort of young men have a golden age ahead of them. They will have less competition than that kind of men have ever had—and greater rewards.

When I was at Vermont Academy, Theodore Roosevelt was President. He attracted national attention when he said: "I wish to preach not the doctrine of ignoble ease, but the doctrine of the strenuous life." He said of himself, let me wear out, not rust out. He told young men to hit the line hard. He told women not to shirk their prime function to bear children. He said this at a time when any woman who had more than two children was considered subhuman, if not a little indecent.

Theodore Roosevelt dreamed nobly of his country, and by the fire of his example, lit other fires in millions of homes. It was said that Washington founded the Nation, Lincoln saved it, and T. R. revitalized it. He appealed to the strong side of men as is now done chiefly by marine sergeants and the coaches of athletics like my old friend, Knute Rockne.

"Rock" had no use for "lounge lizards" or "tea hounds" on a college campus. Youth liked that. They flocked to Notre Dame to play under Rockne, and when his players were behind at the end of the first half, they proceeded to pull the game out of the fire because "we can't let 'Rock' down."

A century ago, Italy was under foreign rule. It was then that Mazzini, or was it his fellow patriot, Garibaldi? appealed to the strong side of men with these words: "Young men of Italy, I offer you nothing but the water of the streams as your drink. I offer you nothing but black bread as your food, and nothing but the blue canopy of heaven and the lights of the eternal stars as your covering at night. But if you follow me, young men of Italy, you and I will be free."

They followed and Italy became a republic.

But today, the general appeal is to the soft side of men—envy, self-pity, covetousness, class hatred. Our elections have become auctions in which rival politicians of both the old parties out-bid each other by opening the door of the treasury in exchange for votes.

"Could and get it" is the slogan as people become the vandals of their own country and "bread and circuses" the formula for political advancement.

In the educational field, men like John Dewey have tried to eliminate struggle from the classroom. No required subjects! No examinations. They develop inferiority complexes, rather than the challenge to do better. Never punish a child. Children should be wholly free. And so forth. With the result that employers despair because Johnny can't read and Mabel can't spell.

So we have cities with few citizens, but many who wish to share the blessings of liberty, but shirk its burdens.

This is not the spirit of 1776, nor of the great chess master, nor of Theodore Roosevelt. America needs a rebirth of "the strenuous life" and I know I am talking to young men who will take their part in it.

It was said of those who crossed the Appalachians down into the valleys of the Ohio, the Mississippi, and the Missouri and pushed the frontiers of freedom to the Pacific shore that the cowards never started and the weak never arrived. With no capital save courage and no resource except resourcefulness they built the American empire.

Here are the hundreds of miles of stone walls of Vermont—every stone dug from the ground and moved to where it now lies by ox power and human muscle alone. We think

of the pyramids of Egypt, and the tens of thousands of slaves who dragged the huge stones across the desert under the whips of their masters. It is my guess that the stone walls of Vermont represent more toil than the pyramids. But the walls were laid by the free choice of freemen. They scorned delights and lived laborious days.

It is good to have a school for young men in sight of those stone walls.

Avoid struggle, and life becomes sterile, vapid, and meaningless. Our mental hospitals are being filled with thousands of neurotics, many of whom feel inadequate to meet life because they were protected from taking the bumps in childhood.

No man was ever greater than the difficulties he overcame. Great difficulties, great men. Small difficulties, small men. From struggle comes strength, and physical and mental health.

It is only struggle that calls forth hidden powers we do not know we have. The great psychologist, William James, said the average person does not put forth more than 10 percent of his potential.

Let me tell you a story of my great grandfather Peter Pettengill, who came to Vermont in 1787. One time his hired man was chopping down trees in the virgin forest and did not come to the house at noon for lunch. My great grandfather went to see what was wrong. He found that a tree had fallen on the hired man and killed him. With nothing but the strength of his own powerful body, Peter lifted the tree off the dead man and carried him to the house.

Whence came his strength to do that? From the challenge before him. That tree was never cut into timber or firewood. It lay where it fell. Other strong men in the neighborhood came and tried to lift the tree. They could not. Why? Because they did not have the incentive that Peter had. Nor could Peter himself ever lift the tree again. The incentive was gone.

You have all seen athletes at times play over their heads. Why? Because of the challenge and its acceptance.

It is men who have counted struggle as a blessing who get the big rewards of life. As Emerson said, God keeps an honest account with men.

The hard surgical cases, where life hangs on a heartbeat, do not go to the dilettante surgeon. The tough engineering problem, like building a bridge across a mighty river, does not go to the engineer who has always looked for the easy jobs. And the same for lawyers, and top executives in business.

If at times you feel that you did not have the same chance that others have, ask yourself what chance did Abraham Lincoln have? Remember that "it is not so much the size of the dog in the fight that counts, but the size of the fight in the dog."

You young men face a time of struggle with an enemy of your country more dangerous than King George III in 1776—the godless Caesars of atheistic communism. Face up to it. Lick it. Put it and all its teaching out of our schools, churches, public affairs, and private life. What our fathers bequeathed us is still the last best hope of earth. Save it for your boys and girls.

Remember robust Robert Browning: "I count life just a stuff to try the soul's strength on, educe the man."

Remember Tennyson's "Ulysses" and the old Greeks "who ever with a frolic welcome took the thunder and the sunshine"—the hard hours with the same zest as the pleasant ones.

Remember the poem of the frontier:

"I dream no dream of a nursemaid state,
That spoons me out my food.

No, the stout heart sings in its strife with fate,
For the toil and the sweat are good."

Adenauer Visit

EXTENSION OF REMARKS
OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. BARRY. Mr. Speaker, on the occasion of this visit of Chancellor Adenauer to President Eisenhower, it would seem appropriate to express the great satisfaction that we all feel on the continuing close cooperation between the people of West Germany and the people of the United States. It is a source of satisfaction to realize that both countries have been able to change from former enmity of a few years ago to the firm friendship which now exists. Today West Germany is the keystone of the North Atlantic Alliance on the continent of Europe. During the NATO Parliamentarians' Conference held in Washington last fall, to which I was a delegate representing the United States, it was a heartwarming and satisfying experience to participate with the West German delegates in our deliberations. West Germany is a pillar of strength to the allies in their uncompromising stand against communism. On the freedom of West Berlin, Chancellor Adenauer sets the tone for the whole free world. We honor him for his leadership and his heroic stand.

West Germany has taken a prominent lead in the new European economic groupings which are resulting in freer trade and greater economic prosperity to Western Europe.

To a country which had just suffered the greatest devastation in her history, the achievement of such a prosperity as she has never before known is largely due to the inspired leadership of this great Chancellor.

America has many historical ties with Germany. The first large unit of German settlers, who arrived in America in 1683, under the leadership of Franz Pastorius founded Germantown, Pa. To this body belongs the honor of having published the first formal protest in this country against slavery.

Among the recent great of our Nation of German ancestry, Generals Wedemeyer, Stratemyer, Kreuger, Spaatz, and Admiral Nimitz come to mind. One of the founders of our country was General Von Steuben who offered his services to General Washington as a volunteer during the War of Independence. He served as Inspector-General of the Continental Army and trained the colonial troops at Valley Forge. Of all the foreign officers who served in the Continental Army, he alone remained to become an American citizen. In his honor a great society exists today which bears his name. The members of the Steuben Society of America are American Citizens of Germanic origin dedicated to the principles of duty, justice, charity, and tolerance. It endeavors to instruct its members in their rights, duties, and obli-

gations as citizens so that they may exercise their right to vote with intelligence, and symbolizes the bond that exists between the people of the United States and the people of West Germany.

Highway Research Activities

EXTENSION OF REMARKS
OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following informative address by Mr. Fred Burggraf, director, Highway Research Board, National Academy of Sciences—National Research Council.

HIGHWAY RESEARCH ACTIVITIES¹

(By Fred Burggraf)

This is a most opportune time to give you a review of highway research activities, as just last Friday we concluded the largest and most successful annual meeting in the 39-year history of the board. The attendance at this meeting was approximately 2,600 with representatives from practically every State in the Union, from many of the Provinces of Canada and from over a score of other foreign countries. There were a total of 222 formal technical papers and reports presented along with 49 informal papers at 55 sessions during the week. I could easily devote the time allotted me on this program to reviewing briefly the highlights of this annual meeting, but outside of referring later in the paper to some of the presented items of special interest to this group I will now discuss the broad concept of the increasing rate that highway research is playing in highway transportation affairs.

Highway transportation has become a part of the American way of life. Our economic structure is dependent on it and it is interwoven into the fabric of our society.

Highway transportation has played a great role in making possible the high level of economic activity and the social and cultural benefits the Nation now enjoys, but with it have come problems of great magnitude and far-reaching effects. Some have been or are being solved; others demand solution now, or are still emerging. Their solution will come through research, just as research in the past has developed the policies and practices we now accept as routine.

In pursuance of a resolution adopted by the executive committee of the highway research board, a special committee on highway research priorities was established during the past year. To aid the committee in its assigned task of reviewing research needs, estimating costs and establishing priorities, it first sought the advice and recommendations of all project and special committees of the highway research board. These committees include highway officials and engineers and representatives of industry, universities, and associations. Each committee was requested to supply in uniform manner a description of the research problem in its area of interest that it felt deserved highest priority of attention, and to estimate its cost. Over 100 carefully considered proposals were received in a most gratifying response.

¹ Presented at the 15th annual convention, National Limestone Institute, Inc., Statler Hotel, Washington, D.C., January 19-21, 1960.

These proposals fall within the following fields of interest:

1. Economics, finance, and administration	25
2. Design	18
3. Materials and construction	21
4. Maintenance	3
5. Traffic and operations	17
6. Soils, geology, and foundations	11
7. Urban research	3
8. Night visibility	2
9. Electronics	1
Total	101

The committee after careful review of the problem statements submitted decided it was not feasible to set a numerical rating for individual projects. Instead, the committee selected 19 broad areas of research which would embrace the most important and urgent of those proposals from the viewpoint of administration and management of the highway program and thus of nationwide interest.

These specific areas of needed research are: (These are areas and not specific research projects; and the order of listing in no way indicates relative urgency or importance).

1. Controlling development of land in vicinity of freeway interchanges.
2. Design, traffic control, and spacing of ramps and interchanges.
3. Intensive investigation of accidents.
4. Comprehensive study of passenger transportation in metropolitan areas.
5. Comprehensive study of freight transportation by motor vehicle in rural and urban areas.
6. Translation of the results of the AASHO road test in Illinois to conditions in other States.
7. Snow and ice removal treatment.
8. Improvement of highway maintenance.
9. Improvement of knowledge of aggregates and soils.

Of importance to this group is the following statement under this project:

"The accelerating demand for roadbuilding materials and the diminishing supply of aggregates of desired quality makes a better understanding of the performance of aggregates of various characteristics in concrete and bituminous pavements most urgent. Tests to determine in advance the probable performance in service are needed to permit classifying aggregates in terms of appropriate use. Means of improving poor quality aggregates through various processes of beneficiation must be developed. Possibly nuclear energy may transform undesirable materials into useful aggregates. In short increasing demands for more and better materials whose performance can be forecast with confidence require renewed study in one of the oldest fields of highway research, employing to the fullest, new sources and techniques now available."

10. Improvement of techniques for forecasting traffic and revenues.
11. Sharpening of figures of tangible road-user benefits and development of method for appraising benefits now called intangible.
12. Conceptual study of nonuser and community benefits of highway construction in relation to user benefits.
13. Warrants for lighting freeways.
14. Standards for secondary and local roads.
15. Development of driving simulator.
16. Electronic control of vehicles.
17. Analysis of the interactions of road and vehicle.
18. Simulation of traffic flow.
19. Improvement of motor-vehicle administration.

The total estimated cost of the research described in the 19 areas listed above is \$34 million. The committee believes that it

represents a practicable approach to a 4- or 5-year program in areas in which new knowledge is most urgently needed, a program that will quickly produce the most needed answers and permit the completion of usable portions of research activity that is broader in scope or of longer duration than can reasonably be accomplished in this period.

AN ANALYSIS OF FISCAL SUPPORT

The latest survey of the highway research expenditures in the United States was made by the Board during the past year and it covers the calendar year 1958. The survey included the highway departments of 48 States and the District of Columbia.

The survey was extended to cover 62 of the engineering colleges. The U.S. Bureau of Public Roads supplied figures for highway research financed from both the 1½ percent funds, and from the administrative funds. The expenditures for the AASHO Road Test are prorated on an annual basis.

A summary of the expenditures shows a grand total of 17.7 million dollars spent for highway research in 1958 by the above-mentioned agencies. The amount expended by each is as follows:

[Millions of dollars]	
Source:	Expenditure
1. State funds alone.....	4.9
2. 1½ percent funds.....	4.7
3. U.S. Bureau of Public Roads (administrative funds).....	2.3
4. State educational institutions.....	1.5
5. AASHO road test (prorated).....	4.3
Total.....	17.7

In the case of 1.5 million expended by State educational institutions about .5 million came from industry.

A comparison of the relative amounts spent for research as related to disbursement for State administration of highways reveals that only 2 mills of each total road dollar was spent for highway research in 1958 (\$17,700,000 ÷ \$9,927,000,000). This is only about 10 percent of the rate of expenditure by industry for research.

APPLICATIONS OF HIGHWAY RESEARCH FINDINGS

The central objective of this staff project was to obtain material evidence of benefits of research which would bring reassurance regarding the justification of additional research as an integral component of the increased highway program. The staff engineers obtained through personal visits to 48 States and the District of Columbia, citations of the utilization of highway research findings. A total of 348 citations of the application of research findings were obtained. The following summary shows the number of examples received by broad areas:

Economics, finance, and administration.....	29
Design.....	100
Materials and construction.....	116
Maintenance.....	9
Traffic and operations.....	56
Soils, geology, and foundations.....	38
Total.....	348

To the same extent that these acknowledged improvements are the dividends of the past investments in research, so will the research expenditures of today be the dividends of better operations and techniques of tomorrow.

In assessing the benefits derived from research, a net gain or saving in out-of-pocket costs may not always be found, but an increase in knowledge and understanding of basic principles and truths will usually lead to the avoidance of error. This can bring benefits in convenience, conservation, satisfaction, service, and welfare which are not

recorded in statistics. In fact, the application of newly found truth to highway standards may actually result in greater out-of-pocket cost but may fulfill the demands for greater convenience, safety, and service which are supportable from a resulting increase in general economy. For example, the cost of reducing accidents may increase but the resulting social and economic benefits will apply to offset these costs.

The three reports which I have very briefly reviewed—(1) Research Needs in the United States, (2) An Analysis of Fiscal Support of Highway Research in 1958, and (3) Application of Highway Research Findings—will be published in a bulletin by the board later in the winter.

Just a further word on application of research: The complete research program includes not only programming, operating, and reporting but also the application of findings. The research organization itself often completes its role with the report of findings. There often follows a considerable timelag before the results are put into practice.

In all cases the problem of application resolves itself into three elements—communication of findings to proper authority, evaluation of findings for propriety of utilization, and administrative authorization for their use. No standard pattern has evolved for translating findings into practice, but the proper inclusion of the three elements above noted will expedite the utilization of research findings.

THE AASHO ROAD TEST

At this time last year when Mr. Ward, the assistant director of the board, appeared before you, the research being conducted at the AASHO road test had been underway for only a few weeks.

During the ensuing 12 months, the research has moved steadily toward its goals. A huge mass of data has been collected and summarized. Programs for analysis of this data are constantly being produced, reviewed, improved, and put into use. The staff research engineers have many interesting facts before them to study and appraise.

The road test, as you know, consists of three separate major experiments: one involving rigid pavements, one involving flexible pavements, and one involving certain types of bridge spans. It appears that all three experiments will produce findings that will be invaluable to the Nation's legislators, highway administrators, and engineers.

One facet of the research work during the past year should be mentioned here. The project staff, aided by an advisory panel, has completed the development of a method of pavement rating which holds great promise as a worthwhile tool for the State highway departments. A detailed description of the concepts involved was given in a paper presented last week at our annual meeting.

The research phase of the AASHO road test has now been under way for approximately 14 months. The present schedule contemplates the end of the regular test traffic phase next July 1. Thus, in terms of time, the test is 70 percent completed.

Following the test traffic phase, an estimated 3 months will be devoted to special tests which will include the operation of certain types of military vehicles over the test pavements and bridges. An additional 6 to 7 months will be required for data analysis and report writing as well as disposing of the physical plant and equipment. The goal for ending all activity at the test site is April 30, 1961, and the final reports on the research should be in print within a short time thereafter.

More important than the time schedule is the rate of application of axle loads to the test pavements and bridges.

Last week the project began the addition of 48 test vehicles to the fleet of 78 previously operated on the test loops. This in-

crease in traffic is in accordance with the wishes of the American Association of State Highway Officials, sponsor of the project, and was recommended by a special subcommittee appointed by AASHO at its Boston meeting last October.

On the project's 4 main test loops, this means an increase from 6 to 10 vehicles per traffic lane. On the smaller traffic loop, carrying light trucks, one lane increases from 4 to 6 vehicles and the other from 8 to 12. Additional standby units will also be available for each traffic lane. The traffic is now rolling 7 days a week and over 6 million miles of test traffic have been accumulated to date.

This expanded operation, which is being supported by the U.S. Army Transportation Corps Road Test Support Activity, is aimed at increasing the number of axle load applications between now and July 1. At present, each section of pavement still in test has received approximately 400,000 applications of a specific axle load. The goal by next July 1 is 650,000 applications.

Of course, this expansion has necessitated an increase in the project's budget. Other budget items also have increased during the past year, and the total estimated cost of the project now stands at \$25 million.

The extensive worldwide interest in this outstanding research activity is amply demonstrated by the following fact: To date slightly over 10,000 registered visitors have visited the project including engineers from 57 different foreign countries.

Since crushed stone was used as a base type on many of the bituminous pavements and also on some of the special base type wedge section studies, I am sure many of you will be very much interested in the final report of this project.

RECENT RESEARCH ACTIVITIES

During the past year there has been much activity in highway research as the Board alone has published over 6,000 pages of reports. Many of these deal with aggregates and as such are of interest to this group. I would like to mention very briefly just four of these reports: (1) "Report on Cooperative Freezing and Thawing Tests of Concrete." This is a report on a program of cooperative freezing and thawing tests of concrete conducted by 13 laboratories using the four ASTM Tentative Methods of Tests. (2) "Relationship of Concrete Strength to Maximum Size of Aggregate." This investigation indicates that changes in maximum size of coarse aggregate involve two opposing influences on strength. For increases in size up to about three-fourths of 1 inch the effect of reduced water predominates and strength increases. Beyond this point the advantage of reduced water is more than offset by the large pieces of aggregate which in themselves cause strength reduction. (3) "Skid Prevention Research." Many road surface factors affect skid resistance including type of aggregate. Almost all aggregates will become polished under intense traffic, some, however, much sooner than others. The relative polishing characteristics of bituminous mixtures composed of 22 different mineral aggregates are given. Also the use of vibrating anti-skid aggregate into the surface of concrete pavements during construction is advocated. (4) "Lime and Lime-Fly Ash as Soil Stabilizers." This should be of general interest to this group.

There were also some papers and reports given at our meeting last week which I believe you should know about and I will give only their title:

1. Economic Blending of Aggregate for Various Types of Concrete.
2. Service Behavior and Laboratory Evaluation of Aggregates.
3. Characteristics of Kingston Carbonate Rock Reaction.

4. Effect of Illitic Clay on the Chemical Stability of Carbonate Aggregates.

5. Recent Soil-Lime Research at Massachusetts Institute of Technology.

INCREASED RESEARCH ACTIVITY

The impact of the expanded and accelerated program has already made itself felt in many ways. In the highway department, for example, many old problems have acquired a new significance and many new problems have arisen. The program has brought problems and questions for which there are no ready answers to every division of the highway department.

There is strong evidence that the accelerated highway program has greatly increased research activity. Based on the number of papers and reports presented at the annual meetings of the highway research board and the attendance at these meetings, there has been an increase of approximately 80 percent in these categories during the past 4 years.

CONCLUDING COMMENT

While these comments have necessarily been very general, I have attempted to give you a glimpse of some of the broad areas in which stepped-up research activities are needed as well as some of the current fields of special interest to this group.

I think a good description of the combined efforts in this field of highway research activities is contained in the following inscription on the front of our National Academy of Sciences Building here in Washington:

"The search for truth is in one way hard and another easy. For it is evident that no one can master it fully nor miss it wholly. But each adds a little to our knowledge of nature, and from all the facts assembled there arises a certain grandeur."

Increasing the Minimum Wage to \$1.25 Per Hour

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following report to the City Council of the City of New York by the Special Committee To Investigate the Causes of Low Wages in the City of New York and the Feasibility of Establishing an Adequate Minimum Wage together with two resolutions adopted by the council with respect to this important subject:

REPORTS OF SPECIAL COMMITTEES

M-275—REPORT TO THE CITY COUNCIL OF THE CITY OF NEW YORK BY THE SPECIAL COMMITTEE TO INVESTIGATE THE CAUSES OF LOW WAGES IN THE CITY OF NEW YORK AND THE FEASIBILITY OF ESTABLISHING AN ADEQUATE MINIMUM WAGE

To the City Council of the City of New York:

Report of the Special Committee To Investigate the Causes of Low Wages in the City of New York and the Feasibility of Establishing an Adequate Minimum Wage, created pursuant to the council's resolution of December 22, 1959.

The committee held public hearings on February 18, 23, 26, and March 2, 1960. The

mayor and other representatives of city government, trade union officials, representatives of business and industry, and the privately supported social service, civic and welfare groups were invited to attend and testify.

In all, 45 witnesses appeared and testified. The committee also sought and secured written statements from the heads of city agencies affected, studies relating to the subjects under investigation, and available statistics. Other documents relevant to the subject were also scrutinized. Appendix A of this report is a schedule of the material and testimony considered by your committee.

The committee's analysis of the studies and statistics available from the Bureau of Labor Statistics of the U.S. Department of Labor, the New York State Department of Labor, the New York City Department of Labor, and those of private agencies established that there are no comprehensive studies available which adequately cover all of the problems which the committee has under consideration and investigation. It was therefore necessary for the committee to reach its conclusions after a study of the material available, the testimony adduced at the hearings, and the various statements, statistics, and documents listed in appendix A, as well as upon the personal general knowledge of the members of the committee on conditions in the community.

Initially, it was evident that many of the workers of our city and their families are living under substandard conditions. The primary cause is low wages.

THE FEDERAL LAW AND EXCLUSIONS THEREUNDER

Thousands of wage earners and heads of families in New York City are being paid for their work at rates of less than \$1 per hour.

This condition exists and is possible under the Federal Fair Labor Standards Act, which requires payment of a minimum wage of \$1 an hour, because the act excludes from coverage many employed in a great variety of occupations. Excluded from the benefits of the law are employees of any retail or service establishment making more than 50 percent of its annual dollar sales of goods or services within the State in which it is located. Employees in the fields of laundering, cleaning, or repairing clothing, or fabrics, with limited qualifications as to the amount of intrastate business, are excluded. Employees of firms of purely local nature are not covered thereunder. Many others are excluded. These exclusions leave uncovered and unprotected millions of workers who are probably in greater need of protection than many of those who are provided for in the law.

THE STATE LAW

The laws of New York State provide that minimum wage rates in certain fields of employment may be set by the State industrial commissioner by order on the basis of recommendations, after public hearings, by tripartite wage boards. The wage order promulgated by the State industrial commission in 1952, and still in effect, covering confectionery workers set a minimum of 75 cents per hour and in the amusement and recreation field, rates from 75 cents to \$1 per hour are established for straight time workers and those whose rates are not established on piecework or per event basis by an order. In some of the other minimum wage orders promulgated by the State industrial commissioner, we find the minimums established for laundries at \$1 per hour, beauty services at \$1.05 an hour, cleaning and dyeing at \$1 per hour, and retail establishments at \$1 per hour. In all there are nine such orders affecting limited fields now in effect. A tenth is inoperative because of pending litigation.

Clearly, the State of New York has not filled in the gaps left in the Federal law

and, in some instances, where it has undertaken to do so it has established rates below the \$1 per hour minimum. As a result of exclusions from the Federal law, and the extremely limited character of the State law, both resulting in narrow coverage, there remain large pockets of workers not only in this city, but in the State and throughout the Nation, who are wholly unprotected and are being paid at rates of less than \$1 per hour. The New York State Department of Labor estimates that about 700,000 employees at present are not covered by State or Federal minimum wage provisions.

FAMILY BUDGETS

Even the rate of \$1 per hour, if applied to all, is wholly inadequate in New York City to afford to a family the absolute necessities of life.

In October 1959, the Community Council of Greater New York set a budget for a family of four at \$93.12 per week. It included provisions for Federal and State taxes. A family breadwinner, on that basis, would have to earn more than \$2 per hour to earn the budget requirement. The State labor department found in 1956 that a working woman in New York City required \$51.23 per week to support herself adequately.

As modest as are the standards of living represented in these budgets, we do realize that at this time they are not attainable for all in our city.

We have been compelled to consider a lower standard and, therefore, went to the welfare department of the city in an effort to ascertain what is a minimum budget for health and safety. The city welfare department, under mandate from and in cooperation with the State department of social welfare, determines the cost of items of living at minimal standards of health and safety in New York City. The degree of need varies with the size of family, age, sex of the children, and the rent paid. In the interests of simplification, we considered only families of two, of three, and of four. So limiting the family size, the great variable left is that of rent. This widely inconstant figure renders it difficult to set in practice an accurate figure as to what would constitute an appropriate minimum relief budget for health and safety of a family of two, of three, and of four. Probably the most reliable amounts for minimum budgets of such relief families is found in a table prepared by the city department of welfare and which is used in determining eligibility for the free school lunch. Under a minimum budget for health and safety, a family of two would require \$52 a week; a family of three, \$63 a week; and a family of four, \$74 a week to live according to minimal welfare standards in the city of New York. These standards are accepted by the State department of social welfare as the basis for authorizing reimbursement.

Based upon the requirements of these minimum budgets, a wage earner in a family of two, presently earning \$1 per hour for a 40-hour week, received \$12 less than the amount required under minimal welfare standards; for a family of three, \$23 less; and for a family of four, \$34 less.

COST TO THE CITY

It is estimated that there are at least 375,000 people in New York City today whose incomes are below public assistance allowance levels.

At the present time, the wages of 44.3 percent of the families on home relief in the city include wage earners whose incomes are being supplemented by the department of welfare. These payments represent a subsidy which is paid out of tax money.

The cost to operate the city department of hospitals for 1958-59 was \$161,996,776.54. Collections from all sources amounted to \$38,424,261.57. Of all cases investigated

during 1958, 55 percent were potentially nonrevenue producing. Of the remaining 45 percent, only 6.2 percent were considered able to pay in full or in part. The other 38.8 percent were covered by Blue Cross, hospital insurance, workmen's compensation, or were cases on which reimbursement by the State or Federal Government were in prospect.

The department's records are not maintained on a basis which shows what part of the budget is used for those which we are considering, but it is not an unfair assumption that a substantial amount is used for hospital care of very low-paid workers and their families.

The city department of health has a budget for 1959-60 of \$26 million of which \$13 million are expended for the maintenance of health stations in slum areas, child care, and similar services. Some part of this service is for the low-paid workers and their families.

Another item of the city's current budget is payment to charitable institutions including private and voluntary hospitals. The total required thereunder is \$72,246,909 of which \$48,241,063 is paid out of tax levy funds, \$22,895,846 by the State, and \$1,110,000 reimbursement received from parents or from legally responsible relatives. The amount allocated for care, maintenance, and treatment of sick and infirm in hospitals and sanatoriums is \$30,857,907. Some part of this budget item must be attributed to the low-paid workers and their families.

There are other city services, all requiring the expenditure of large sums of money, which are in part required for those that we are here considering.

COST OF VOLUNTARY AGENCIES

The voluntary agencies of the city, charitable, social service, hospital, and others, expend great sums, exceeding \$200 million per year and there is little question but that low-paid workers and their families are among the beneficiaries of these expenditures.

OVERALL COST

Although it appears impossible to determine accurately the actual amount which is paid out of tax funds and by the voluntary organizations to and for the underpaid earner and his family, there is no doubt it runs into millions of dollars each year.

A REQUIRED MINIMUM WAGE

The businesses and industries which have been utilizing the labor of these workers at rates of pay that do not enable them to support their families on even relief standards must be required to assume greater responsibility toward the support of those who work for them.

An essential of any solution of this grave condition is the establishment promptly of a minimum wage which is truly a minimum and which has a broad base.

The privilege of doing business carries with it the responsibility of paying wages sufficient to enable the workers to live on a standard which is at least a minimum adequate for health and safety. It is morally wrong for a business or industry to enjoy the services of workers who are able to exist only as a result of subsidies granted by public and private agencies to them and their families.

The \$1.25-per-hour minimum wage would be a step in the direction of bringing the workers of our city, State, and the Nation toward the dignity of supporting themselves and their families on such a minimum basis. True, a \$50-per-week minimum for a 40-hour week would still be \$2 less income than required by a minimum budget for a family of two, \$13 less than required for a family of three, and \$24 less than the sum required by a family of four; but it would bring most \$10 or more per week closer to the goal of minimum self-sufficiency. In terms of relief

to the taxpayers, it was estimated—very conservatively, we believe, by the commissioner of the department of welfare that such an increase in minimum wages would result in a reduction of \$1 million a year in relief costs, or approximately 5 percent of the annual expenditures for home relief. There would also be reductions in the demands upon the department of hospitals, department of health, the city through aid to private hospitals, other city services, and the private voluntary charitable, social service and hospital groups.

We have not touched upon the price that poverty exacts in terms of crime, disease, juvenile delinquency, and the loss of sense of human dignity. This is one price that we are paying which is known to all of us. Independent of the relief which such an increased minimum wage would give to the taxpayers and to the private voluntary organizations, the value of a step forward in this area in establishing a minimum wage would be incalculable.

VIEWS OF WITNESSES

While there was unanimity of opinion expressed by representatives of the public, the social agencies and the labor representatives who testified in support of an increase to a minimum wage of \$1.25 per hour with a substantially broader coverage—a view which most of the employers shared a few representatives of management spoke against an increase. They urged delay and recommended that further detailed studies be made before any action be taken. We find little merit in the objections made. If the immediate goal were \$1.50 or more per hour, the delay for the studies would be justified—but when we are considering a minimum rate of \$1.25 per hour—a rate which even the most optimistic can only describe as one which will barely meet the necessities of life, we cannot support such a position.

No convincing argument has been advanced to warrant support for the continuance and increase (as is inevitable with rising living costs) of the great public and private subsidies now being paid the workers of these low-paying employers.

None of the employers who testified pay employees less than \$1.25 per hour; many of them pay wages substantially in excess of that figure. Some members of employer associations, representing the great majority in their industries, testified that they are competing with a few employers within the city and State, and some in other States, who are paying less than \$1.25 per hour. This is a problem for them but, nevertheless, they prefer, as businessmen with a sense of responsibility, to continue paying the higher wages rather than to follow the callous course of their unfair competitors. They are convinced that the higher wages paid by them bring greater productivity and encourage their workers to acquire higher skills. It is to these factors that they attribute their ability to successfully compete with the few in their industries who pay extremely low wages. Some also stated that wherever substandard wages are paid the turnover in employment is great and that as wages improve, the turnover correspondingly decreases with resulting economies.

Most of these businessmen are convinced that a minimum wage of \$1.25 per hour, if promulgated even in the State alone, will not result in removal of business from the city or State, but, rather, believe that those who would be affected will adjust themselves to the requirements and continue here on a \$1.25 per hour minimum rate. This they attribute to the fact that the substandard wage-paying employer needs the labor available to him here and knows that a fairer wage will result in greater productivity. Another and a most important element is that the city is the greatest market for his products and he must stay in his market.

It was also developed that most of the industries, which in effect are excluded from coverage under the Federal law, are service industries dependent upon the market in which they exist for their continuance. For example, the retail trades, amusement and recreation, beauty service, cleaning and dyeing, laundry, restaurants and hotels, all render services in the areas in which they exist. They are dependent on the people of the city and those who visit for their patronage. The opinion was expressed that it is virtually impossible for these businesses to pick up and move out of the city or the State.

A representative of an employer association stated that one large manufacturing concern had moved from the city to another State and mentioned the possibility of another concern doing likewise. Upon inquiry, it developed that in both instances the firms involved were paying their employees in excess of \$1.25 per hour, and it was acknowledged that the establishment of a \$1.25 minimum rate would not have had any effect on their decisions.

In one or possibly two instances, it was said that an increase in the minimum wage to \$1.25 an hour would automatically result in increases to those being paid in excess of that rate. We are inclined to reject the view that this would automatically occur. We believe it would have no effect on those receiving good wages. As to those in a limited marginal area, above the \$1.25 rate, it may have some effect but, in our opinion, this would be of a minor character. There are a great many elements to prevent this, such as, existing collective bargaining agreements which would not be affected by such a minimum wage. We do not look upon this as a valid argument against the establishment of a \$1.25 minimum rate of wage.

In one area we found substantial unanimity—that there should be Federal and State legislation establishing a \$1.25 minimum on a broad basis. Others, although desiring joint action by the Congress and State legislature, would consider it a step forward, Congress failing to act, if the State adopted the \$1.25 minimum on a broad basis.

There is general recognition that a wage of less than \$1.25 per hour begets poverty and all of the health and social problems which follow poverty, that there is an obligation on the part of business and industry to pay a living wage, and that it is wrong for the taxpayers and the private charitable organizations to be required to subsidize any business in this manner.

NONPROFIT AGENCIES

The committee has discussed and heard the opinions of witnesses on the question of whether or not minimum wage laws enacted should cover regular nonprofessional employees of nonprofit agencies such as hospitals. We believe they should. The employees of such agencies are confronted with exactly the same problems as those of employees of industry. They can, no better than the employees of industry, meet the expenses of living and supporting families on substandard wages. To the committee it seems of the utmost importance that these workers in hospitals who, directly or indirectly, serve our sick or injured must live at least in modest decency if they are to be able to properly perform these essential services.

There is no doubt and we recognize that such coverage poses a serious financial problem. However, it is one which can and should be met in common by the hospitals, by those served where possible, by the generous supporters of these institutions as well as by the city of New York. It is a cause in which we all must join and hear the resulting costs.

OTHER AIDS TO A SOLUTION

The city of New York is preparing a master industrial development plan. It has for its

purpose the encouragement of new industries to establish themselves in the city and the expansion of existing industries. The city has a great deal in its favor in this effort—available manpower and the fact that it is the center of the largest metropolitan market area in this country. Success in this effort will mean more jobs with decent wages and conditions.

Another undertaking of the city has been the establishment of the mayor's committee on exploitation of workers. The committee is composed of leaders of industry and labor, city agencies and community groups. It has for its immediate purpose an educational training program to improve the job skills, the productivity, and the earning power of the low-waged workers of the city. Progress in this area will lend material aid in advancing the industrial development plan.

These programs are important to the welfare of the city and to the well-being of its people. Every effort should be made by the administration to press forward on these programs and to intensify activities therein. The public should be made better acquainted with the programs and their support enlisted in aid of them.

It is interesting to note that the city government is taking a position of leadership in the establishment of a minimum wage of \$1.25 per hour. The committee received a communication from the city department of labor which includes the following statement:

"The city of New York has already established as a matter of city policy that no employee of the city government be employed at less than \$1.25 an hour. At present, except for some few titles involving part-time seasonal, or student positions, all employees receive wages not less than \$1.25 per hour. Even in the exceptional situations, studies are underway to insure that there is no violation of the minimum wage standard of \$1.25 per hour."

ESTABLISHING MINIMUM WAGES BY WAGE BOARDS

The committee has given consideration to the procedures prescribed in the New York State law for the establishment of minimum wages. The State industrial commissioner, by order, on the basis of recommendations of tripartite wage boards, after public hearings, may presently provide a minimum wage rate in a specified industry or field. The committee seriously questions the usefulness and effectiveness of wage board procedures. They are involved, long drawn out, costly, and, in the end, only affect but a comparatively small segment of those who need relief. In our opinion, the only truly effective course which should be followed, is to forthrightly establish a minimum wage upon a broad base with but few clearly defined and necessary exceptions thereto.

CONCLUSION

On the basis of its studies, the committee finds that a serious emergency situation exists which requires action by both our Federal and State Governments.

Therefore, we recommend that this council call upon the Congress of the United States and the Legislature of the State of New York to enact laws without delay, which will establish at the earliest feasible date, a minimum wage of \$1.25 per hour for a 40-hour workweek, with appropriate premium overtime thereafter, the same to apply to employees in all businesses and industries and to regular nonprofessional employees of voluntary nonprofit organizations such as hospitals.

Practices existing in industry of computing tips, board and lodging or other considerations of actual value as part of wages may be permitted to continue, but the real value of such allowances must be such as assures receipt by the employee of at least the minimum wages prescribed.

Exceptions in these broad laws should be narrowly limited to carefully defined areas as similarly should be the discretion of the Secretary of Labor and the Industrial Commissioner to grant exceptions.

Dated, New York, N.Y., March 7, 1960.

Respectfully submitted, Earl Brown, chairman; John J. Merli, vice chairman; James F. Dulligan, David Ross, Thomas J. Cuite, Edward V. Curry, Stanley M. Isaacs, Joseph T. Sharkey, ex officio; Edward C. Maguire, counsel to the special committee.

Appendix to the Report of the Special Committee of the New York City Council To Investigate the Causes of Low Wages in the City of New York and the Feasibility of Establishing an Adequate Minimum Wage.

(s) Summary Analysis of S. 1046 as Reported From Subcommittee on Labor.

In connection herewith the following resolution was read.

RESOLUTION 865

Resolution requesting the city council to adopt the report of the special committee to investigate the causes of low wages in the city of New York and the feasibility of establishing an adequate minimum wage (By Messrs. Brown, Merli, Dulligan, Ross, Cuite, Curry, Isaacs, and Sharkey.)

Whereas the special committee to investigate the causes of low wages in the city of New York and the feasibility of establishing an adequate minimum wage has made its report, findings, and recommendations to the council: Now, therefore, and after due consideration thereof, it is

Resolved, That members of the council adopt the report of the committee, its findings and recommendations and concur therein.

Adopted.

RESOLUTION 866

Resolution urging the New York State Legislature to enact a minimum wage law of \$1.25 per hour

(By the special committee to investigate the causes of low wages (Messrs. Brown, Merli, Dulligan, Ross, Cuite, Curry, Isaacs, and Sharkey).)

Whereas the Council of the City of New York, through its special committee to investigate the causes of low wages in the city of New York and the feasibility of establishing an adequate minimum wage, undertook a study which had amongst its purposes the ascertainment of the causes of low wages in the city of New York, the extent to which low wages have increased the cost of services provided by the city of New York to those workers who receive low wages, and ways and means of remedying this serious basic problem; and

Whereas the study included analysis of available statistics and other pertinent material, as well as public hearings to which representatives of the city government, trade unions, industry and business and privately supported social service, civic and welfare groups were invited and were heard; and

Whereas it was found that many thousands of families in the city of New York are subsisting under substandard living conditions primarily because the low wages paid to wage earners of the families, that this constitutes a social and economic danger to the welfare of our city, the State and the Nation, that this condition with living costs mounting, has resulted in great demands for, and expenditure of many millions of dollars annually by the city of New York and by private voluntary social services, hospitals and charitable organizations in an effort to alleviate these conditions; and

Whereas under present conditions, unless remedied, such needs and expenditures may mount to a point where they cannot be met; and

Whereas this problem is not unique to the city of New York but exists to a greater or lesser degree in every community throughout the State of New York and the United States; and

Whereas these vast expenditures constitute subsidies by the taxpayers and contributions by business and industry, which are neither morally nor economically justifiable; and

Whereas the immediate means of affording some relief to the low paid workers and to the local governments and charitable organizations, already too heavily burdened, is by the establishment of a minimum wage which comes closer to meeting actual needs: Now, therefore, be it

Resolved, That the council of the city of New York most urgently petitions the Legislature of the State of New York to enact a law, without delay, which will establish, at the earliest possible date, a minimum wage of \$1.25 per hour for a 40-hour work-

week, with appropriate premium overtime thereafter, the same to apply to employees in all businesses and industries and to regular nonprofessional employees of voluntary nonprofit organizations such as hospitals. Practices existing in industries of computing tips, board and lodging or other considerations of actual value as part of wages may be permitted to continue, but the real value of such allowances must be such as assures receipt by the employees of at least the minimum wages prescribed. Exceptions in the law should be narrowly limited in carefully defined areas as similarly should be the discretion of the Industrial Commissioner to grant exceptions; and be it further

Resolved, That the Legislature of the State of New York enact such a law without waiting for action which may be taken by the Congress of the United States; and be it further

Resolved, That the clerk of the council is hereby directed to transmit a copy of this resolution to: the Governor of the State of New York, the Lieutenant Governor of the State of New York, the majority leader of the senate, the minority leader of the senate, the speaker of the assembly, the majority leader of the assembly, the minority leader of the assembly, to each member of the senate and assembly whose district is in the city of New York and to the industrial commissioner of the State.

Adopted.

Freedom of Captive Nations Should Be on Agenda of Summit Meetings

EXTENSION OF REMARKS

OF

HON. THADDEUS M. MACHROWICZ

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. MACHROWICZ. Mr. Speaker, on Monday, March 14, 1960, the representatives of the Polish American Congress—Charles Rozmarek, president of the organization; Rev. Valerian S. Karcz, general secretary and Stanley P. Turkiewicz, treasurer; presented a memorandum to the Department of State requesting that the freedom of captive nations be placed on the agenda of the forthcoming meeting.

This is an important expression of the Americans of Polish descent and should deserve favorable consideration.

Under leave to extend my remarks, I submit the text of the memorandum which is as follows:

In a speech delivered in Novosibirsk, on October 10, 1959, Soviet Premier Nikita Khrushchev, commenting on the supposed end of the cold war and the beginning of a peaceful coexistence between the East and the West declared:

"Coexistence is the extension of the struggle of two social systems . . . we believe, this is an economic, political and ideological struggle, but not a military struggle."

This definition of the meaning of peaceful coexistence is tantamount to a declaration of political war, which, according to Khrushchev's many utterances, is to bring the world under Communist rule. One of the elements of this political warfare is the relentless Soviet drive aimed at forcing the United States and other Western Powers to recognize the present status quo in Eastern Europe, i.e., to accept the Soviet rule over Poland and other countries behind the Iron Curtain. This, in effect, would enable Soviet Russia to consolidate her conquests.

In view of this, the forthcoming summit conference scheduled for May 16, 1960 in Paris, should be analyzed from the perspective of the Soviet political aims, enunciated by Khrushchev in his Novosibirsk speech. We must bear in mind that for the Soviet Premier the summit conference means only a field of one battle which he is determined to win. One of the strategic moves in this conflict will be his insistence that the status quo in Eastern Europe be recognized. This demand should not only be rejected, but at the same time the West should seize the initiative ahead of the Soviet move.

The following considerations are virtually compelling American diplomacy to take such a step in the pursuit of a just and durable world peace:

(a) Limiting the summit conference to the Berlin issue, with the exclusion of all European questions, could result in a psychological defeat for the West and corresponding adverse reactions. In 1939 for instance, there were some people in Western Europe loudly proclaiming that they were not going to die for Gdansk. Possibly, there are some people today in the United States, as well as in other Western Powers, who might say that they are not going to take any serious risk for the sake of Berlin.

Bold and imaginative measures should be applied to convince these people that Berlin is only a part of much larger problems involved in, and inexorably linked with German reunification and the liberation from the Soviet yoke of central and East Europe, within the framework of an international settlement.

Not only the division of Germany and the present status of Berlin belong to the abnormalities caused by the war. These abnormalities are compounded in the enslavement by the Soviet imperialism of 10 formerly independent states in Eastern Europe with a total population of nearly a hundred million. These problems are closely linked together, and the solving of only one of them separately will not bring us closer to a durable peace. The world will not know peace so long as Europe remains half free and half enslaved.

(b) Nations of Eastern Europe hate Communist dictatorship forced on them by Soviet Russia in Poland, Albania, Bulgaria, Czechoslovakia, Estonia, Lithuania, Latvia, Hungary, and Rumania, and are demanding restoration of their independence, freedom, and democracy. The spirit of independence and the psychological resistance against communism are amazingly strong in the lands behind the Iron Curtain. Thus, the West has behind the Iron Curtain a hundred million allies who are ready to sacrifice even their lives for the cause of independence and freedom. This has been proved by the Poznan revolt of June 1956, by the Hungarian uprising of October 1956, and the "October Revolution" in Poland in 1956. And the reception accorded by hundreds of thousands of Poles to Vice President RICHARD M. NIXON in Warsaw on August 2, 1959, speaks dramatically and eloquently of the friendship the Poles cherish toward the United States and all it represents. Due to this attitude, the nations behind the Iron Curtain constitute an Achilles heel in the makeup of Soviet Russia, and at the same time represent for the West a significant force in the political warfare. This force should be kept alive. It could, however, be lost without bold and imaginative diplomacy from the West, particularly in view of the fact that Khrushchev is trying to convince the countries behind the Iron Curtain that they have been forsaken forever by the West and must accept Soviet supremacy. But the mere rejection of the status quo is not sufficient to bolster and to perpetuate the spirit of resistance of nearly a hundred million people in Eastern Europe. In order to achieve this goal it is necessary to demand that Russia restore independence to these peoples. The propiti-

ous movement for this type of political offensive will lend itself to the West at the summit conference May 16. The Western initiative in this matter could prove to be far reaching and beneficial for the free world in the political warfare.

(c) In the event the Western Powers would not take such an initiative at the summit conference, they could find themselves in a disadvantageous position of demanding liberation of the satellite states only as a countermove to Russia's call for the recognition of the status quo. Taking only a defensive position in the East European problems and using the idea of liberation only as an argument against Russian demands would cut the political value of such a move in half.

(d) It is within the realm of probability, that the placement of East European problems on the summit conference agenda will be rejected by Russia, under the pretext that these problems are internal matters of the states behind the Iron Curtain. However, the attempt to place the East European problems on the summit program of deliberation would convince the subjugated peoples that the European situation is still in the state of flux, subject to international decisions, and that the United States and its associated nations regard it as an open question which must be solved, and not as an internal problem of Soviet Russia.

(e) In the present military situation, often described as a nuclear stalemate, the spirit of resistance among the peoples behind the Iron Curtain is an invaluable factor in the deterrent power against the Soviet Union, and as such represents strong elements of military values. As long as this spirit of resistance is alive, the Soviet Union cannot rely on the satellite armies in its military planning, and must consider dangers to its line of communications passing through the satellite countries. As a result of this situation, the satellite countries are forcing now, and will do so in the future—commitments of certain Soviet military forces.

(f) The rights of Poland and of other nations behind the Iron Curtain to free and independent existence is based not only on the commonly accepted principle of self-determination, but is also based on the Atlantic Charter of August 14, 1941, later incorporated in the United Nations Declaration of January 1, 1942, and the United Nations Charter of June 10, 1945, article 1. In addition it is founded on the following international pronouncements:

(1) President Eisenhower's speech of April 16, 1953, proclaiming that: "This free community and the full independence of the East European nations could mean the end of the present unnatural division of Europe."

(2) Bermuda Declaration of December 8, 1953, which reads: "We cannot accept as justified or permanent the present division of Europe. Our hope is that in due course peaceful means will be found to enable the countries of Eastern Europe again to play their part as free nations in a free Europe."

(3) The Potomac Declaration of June 29, 1954 which reads: "We will not be party to any agreement or treaty which would confirm or prolong the subordination of the formerly sovereign states of Central and Eastern Europe, now held in bondage by the U.S.S.R."

(g) Among all the nations behind the Iron Curtain, the Polish people have exhibited the greatest determination in the fight for restoration of their freedom and the principles of democracy. These people likewise have wrung from Russia and its Communist Warsaw regime great concessions for themselves in personal freedom, which they still hold to a certain degree today. In only one aspect has Russia been able to identify her interests with the vital national interest of the Poles. This unity

of interests arises from the fact, that Russia had recognized the present German-Polish boundary, in defense of which all Poles are unanimous; and, mindful of the German attack on Poland in 1939, are justifiably apprehensive of the remilitarization of the German Federal Republic, which refuses to recognize this boundary. In order to dispel these fears and to create better atmosphere between the German Federal Republic and Poland, and at the same time to build a political counterweight against Russia, it is vitally necessary that the United States, proposing discussions and settlements for Eastern Europe, declare unequivocally that Poland is considered as a state with its western boundary running along the Oder-Neisse Rivers.

For these reasons, we appeal to you, Mr. Secretary, to demand from Russia at the forthcoming summit conference of May 16, 1960 that she withdraw the Soviet army and agents from Poland and other East European countries; and that she agree to free and unfettered elections in those countries under an international supervision, to enable these people to choose the form of government under which they desire to live.

Respectfully,
POLISH AMERICAN CONGRESS,
CHARLES ROZMARSK, President.
REV. VALERIAN S. KACRZ, General Secretary.
STANLEY P. TURKIEWICZ, Treasurer.

Human Resources Key to Local Development

EXTENSION OF REMARKS OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an article from the Uniontown (Pa.) Evening Standard, written by the editor, Arnold Goldberg. This is a very heartening article to me. Mr. Goldberg tells how the community of Uniontown, which is in my congressional district, has been pulling itself up from economic and industrial depression by its own bootstraps. This community has suffered from chronic unemployment for quite a number of years caused primarily by the decline of employment in the coal industry. Efforts to rehabilitate the community were initiated by local groups, who held industry-promotion campaigns, fundraising campaigns, plant-building programs and other self-help activities. While the job is far from done, much commendation is due these groups who have achieved creditable results from their efforts thus far. The article follows:

HUMAN RESOURCES KEY TO LOCAL DEVELOPMENT

(EDITOR'S NOTE.—The following account of the Uniontown district's efforts toward industrial development and economic recovery was written by Arnold Goldberg, editor of the Evening Standard, for the "Community Bootstrap" series by AP member newspapers. It was sent via wire, as below,

for use today in all AP newspapers in the State.)

(By Arnold Goldberg)

Uniontown's future glows brighter today. On the skids a decade ago, facing economic strangulation, the one-time soft coal capital of southwestern Pennsylvania is making a courageous comeback.

Like many other districts with large natural resources, the greater Uniontown area had its boom, years ago. Surrounded by the world's finest coking coal, the city and its residents became wealthy.

Billions of tons of coal were mined from the huge Pittsburgh seam. The supply seemed inexhaustible.

Suddenly the coal was depleted. In the few mines still operating, automation moved in.

Jobs were lost. Older folks were laid off. Young people, out of school, could not find employment. Many packed up their families and moved to Ohio, to California, to Michigan.

The battle to survive economically and industrially began.

The community, headed by a stalwart band of citizen leaders, looked up one day and decided it did not want to become a ghost city. It wanted to keep pace with the rest of the Nation, to share in the national prosperity.

In 1945, 14,500 were employed in the coal mining industry in Fayette County. Last year 2,500 miners were employed.

Unemployment reached the alarming figure of 12,300 or approximately 25 percent of the employable population of the county.

The county population dropped from 201,000 in 1940 to an estimated 175,000. In Uniontown the population declined from 21,000 to an estimated 18,000.

"It was either to slip backward forever or grab hold of ourselves and go forward," Tom Bundy, the executive director of the Chamber of Commerce, said.

A greater Uniontown industrial fund composed of business and professional people was organized in 1952.

Its members contributed \$80,000 to finance itself and to buy and develop land. The fund also sold \$130,000 in bonds to finance 15 percent of the construction of the W. F. Rockwell Meters Co. plant which covers 80,000 square feet and employs 300 persons.

Two years ago the Rockwell plant added 30,000 square feet to its building.

Twenty-five thousand dollars more was contributed by the fund to construct a knitting mill that employed 150 persons.

This was not enough, the fund leaders decided to take care of the great influx of unemployed.

A \$400,000 industrial campaign was begun one evening in April 1956. It was appropriately called the "5-in-4 drive," or five factories for Uniontown in the next 4 years.

Enthusiastic volunteers drew up battlelines for the attack on the city's economic ailments.

Attorney Herman M. Buck, then president of the fund and now its counsel, gave the keynote address.

"All of us must put faith in this program," he said. "It is our salvation."

A flying squad of Uniontown business leaders traveled around the country at their own expense interviewing possible industrial prospects.

The money came in. Some Uniontowners contributed in the thousands, others gave 50 cents per month in payroll deductions.

Within 3 months the \$400,000 was pledged, to be paid over a 4-year period.

The money was not a loan. It was contributed for the good of the city.

"The day when coal was king is past," said Don Sweeney, now president of the fund. "We need help and we can get it from nobody but ourselves."

Working in conjunction with the Pennsylvania Industrial Development Authority,

the industrial fund has taken a gigantic stride toward its five new plants since that first meeting 4 years ago.

Under the PIDA program with which the fund works, 50 percent of the cost of construction of a plant is provided in bank loans, 30 percent in low-interest PIDA loans, and the fund kicks in with the other 20 percent.

First of the new factories was the Steel Scaffolding Co., a plant of 60,000 square feet that employs 100 men. The industrial fund's share was \$106,000.

Next, when the M. Berkowitz Co., a pajama manufacturer, needed additional warehouse space, the fund constructed a building of 30,000 square feet making jobs available for 50 more persons.

The fund purchased the Rheem Manufacturing Co. building for \$100,000 and divided it into small industrial units. New industry there employs 100 persons.

It bought 90 acres for an industrial district along busy Route 119, 4 miles from the city. Another 44 acres for an industrial district was purchased along Route 51, the highway to Pittsburgh.

Last March a blitz campaign was started to obtain \$250,000 for two more plants.

In one night \$103,000 from 43 firms and individuals was pledged.

Today construction is ready to begin on buildings for three new industries.

A Midwest steel fabricating firm that will employ 300 persons will construct a plant of 150,000 square feet, costing \$1,250,000. The fund will spend \$250,000.

Steam cleaning equipment will be manufactured in another new plant, costing \$300,000, with 36,000 square feet. It will employ 50 persons. The fund's contribution is \$60,000.

Construction has started on a "speculative" building of 56,000 square feet by an Ohio real estate developer. He became so interested in the Uniontown program he was willing to invest the necessary funds in a "shell" building. The industrial fund made the land available, fully developed, as its share of the project.

To keep the program rolling the industrial fund leaders plan to seek \$100,000 more in low-interest bonds.

The battle is not over. The new industries offer only 1,100 jobs, not enough to fulfill needs.

With \$700,000 already contributed by the city people, more money will have to be sought.

The city has spruced up in other ways.

A master plan has been adopted by a community planning commission for a long-range program to make the city one of the standouts in the State.

A \$300,000 bond issue was approved by the city voters for redevelopment purposes. Slums are being cleared. City tax money has been added to Federal and State funds for development projects that will bring parks and parking, commercial sites and playgrounds to the community.

Uniontown is constantly on the move.

It discovered, not too late, that when its natural resources played out its own human resourcefulness was the best replacement.

there are very many which have as their standard bearer a patron saint. In most cases this patron saint is a person who brought to the people concerned the living word of the Lord and a vivid awareness of and love for their God and His doctrine. In all the history of the world, Mr. Speaker, no such patron saint is so widely renowned or so widely loved and remembered as good St. Patrick, patron saint of the Irish people. And indeed, also, Mr. Speaker, no group, no people in all the world is so dedicated to their patron saint as are the Irish people to St. Patrick. In fact a most prominent characteristic of the Irish people has always been their intense and unswerving devotion to their God and their faith. This lasting dedication may be traced to St. Patrick and his untiring efforts in bringing to the people of Ireland the word of the Lord and in so inspiring those people with the faith that they have never swerved from their devotion nor ceased their efforts to promote the growth of that faith throughout the world. On this St. Patrick's Day, Mr. Speaker, may I salute the Irish people and nation and may I also take this opportunity to deliver a brief testimonial to the great Irish patron saint.

ST. PATRICK'S DAY

More than 14 centuries ago an old bearded man, about whom we know so little, departed from this earth; yet each year his memory is venerated on the 17th day of March. This is his day, St. Patrick's Day. He was born in western England about A.D. 389. At the age of 16, he was seized by Irish raiders, and the Christian youth was enslaved in a pagan Ireland. Here he was, a boy, a slave from Britain, guarding swine on the snowy sides of Slemish, dreaming that he would one day bring Rome and Christianity to the ends of the earth. Patrick's dreams were realized. He escaped to the Continent, entered the Holy Orders, and about 432 returned to Ireland as a missionary. There he labored with notable zeal until his death. He earned and fully deserves his title of "Apostle of Ireland."

The spirit of St. Patrick was an early immigrant to the New World. Like many other notable Irish, the "Apostle of Ireland" became a part of our culture in the first half of the 18th century. He was brought to these shores along with his people who were seeking freedom and a new way of life. The earliest American celebration of St. Patrick's Day, of which a written record has been found, took place in 1737. On March 17, of that year, the Charitable Irish Society was organized in Boston, Mass., by a number of leading Irish citizens. The preamble adopted by the founders reads, in part, as follows:

Whereas several gentlemen, merchants, and others, of the Irish nation residing in Boston in New England, from an affectionate and compassionate concern for their countrymen in these parts, who may be reduced by sickness, shipwreck, old age, and other infirmities and unforeseen accidents, have thought fit to form themselves into a charitable society, for the relief of such of their poor and indigent countrymen, without any design of not contributing toward the provision of the town poor in general as usual.

Even though the Charitable Irish Society was comprised of a single nationality and faith, and their foremost purpose was to help their Irish brethren, the "in general" phrase in the preamble was all inclusive and enveloping. Thus it was, St. Patrick had arrived in America.

There are many early records of St. Patrick's Day celebration in the early history of our Nation. St. Patrick traveled with the Irish immigrant but was readily adopted by all settlers. On March 17, 1757, a celebration of the day was held at Fort William Henry, at that time the most northerly outpost of Great Britain in America. The fort was built by Sir William Johnson, an Irishman by birth. On the evening of March 16, 1757, it was recorded that an extra ration of grog was distributed to the Irish troops in the fort, in which to "drown the shamrock." In 1763, St. Patrick's Day was celebrated at Fort Pitt. Captain Ecuyer, in command at the fort, wrote to Colonel Bouquet, and in the course of his communication said:

We had St. Patrick fetes in every manner.

St. Patrick's Day was enthusiastically observed in the ranks of the American Army during the Revolution. The British evacuated Boston on St. Patrick's Day, 1776, and the Americans marched victoriously into the city to take possession. General Washington, in the camp at Cambridge, authorized the password of the day to be "Boston" and the countersign to be "St. Patrick." Again, in 1778, March 17 was recognized by George Washington and his men at Valley Forge. It was on this occasion that Washington is alleged to have said, "I, too, am a lover of St. Patrick's Day." An extra issue of grog was poured out to the troops "and thus all made merrie and were good friends."

From the earliest period of our country's history until the present time, St. Patrick's Day has become an integral part of our way of life. Brought to America's shore by the Irish, St. Patrick is shared by all. From few celebrations in the mid-18th century, the observation of St. Patrick's Day has become a fixed institution in most American cities and towns. Every community gives welcome and honor to the Irish patron saint's anniversary. From north, south, east and west, bits of green are worn on March 17 by all races, religions, and creeds. To America, the green, the shamrocks, the harps, these are the symbols of Ireland's patron saint. A saint who, from slavery, became a symbol of peace, Christianity, and freedom to all of Ireland and all of America.

Ireland's Patron Saint

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. DEROUNIAN. Mr. Speaker, this is the day of Patrick, the patron saint of

Begorrah, 'Tis St. Patrick's Day

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. RABAUT. Mr. Speaker, of all the many various ethnic and national groups

Ireland. And if from such a grand event some seem to draw forth merely gaiety and mirth, let us recall that this in no way precludes reverence; for, indeed, the Irish are a deeply reverent clan.

Admittedly the day is one of great rejoicing, devoted to the wearing of the green, the singing of songs, and general celebration. But all too often the real meaning of St. Patrick appears to the observer lost beneath such artificial trappings. And yet, in fact, it is not lost but burns eternally in the Irish heart.

For nothing is more clear to the Irish than the serious nature of St. Patrick. In centuries past when foreign sentries stalked the land and the people lay crushed beneath the hand of foreign rule, what but Patrick's steadfast influence carried them through to victory and freedom. Nor is it likely that the Irish today will soon forget the fact, which plays so vital a part in their everyday lives.

True to the optimistic traditions of democracy, the Irish are a happy clan and true to the devout nature of Western civilization they stand by Christian principles.

No wonder that the rest of the free world responds today to the sound of their rejoicing. For in these sounds one senses the hope—indeed, the faith—of God and the future, so typical of the Irish nature; so admirable in the eyes of all.

The free world joins today in paying respect to St. Patrick, the patron of a noble race and sponsor of a mighty dream. Long may his influence prevail.

The Christian Science Monitor Says "The Nation's Capital Is Probably the Busiest Party-Going City in the Land"

EXTENSION OF REMARKS OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. McDOWELL. Mr. Speaker, the Christian Science Monitor is one of the truly outstanding newspapers in the world. It has an office in Washington, D.C., and it is the organ of a great religious organization with numerous churches and thousands of members in the Nation's Capital. Obviously, it is in close and intimate contact with thousands of people of substance in the Federal city.

These facts give added significance to an editorial of March 11, 1960, in the Christian Science Monitor which was critical of the cultural status of the Nation's Capital, or lack of cultural status.

"Almost every night," according to the Christian Science Monitor, "there are hundreds of parties going on all over Washington. For the Nation's Capital is probably the busiest party-going city in the land."

Various proposals in the Congress to advance American culture and educa-

tion generally, the Christian Science Monitor says, "constitute a drive which is rapidly gaining momentum." This drive, in the view of this great national newspaper, will "give Washington parties some competition by the development of a cultural center in the Nation's Capital."

Perhaps the time is not far distant when the Nation's Capital can move on to more serious things than cocktail parties. Obviously, a more serious view is essential in this cold war period of increasingly serious competition from the Soviet Union.

I include as part of my remarks the editorial of the Christian Science Monitor to which I have referred, as well as letters I have received from Science Service and the American Federation of Musicians in support of the legislation which the editorial discusses:

[From the Christian Science Monitor,
Mar. 11, 1960]

THE NEED FOR A CULTURAL CENTER

(By Josephine Ripley)

Almost every night there are hundreds of parties going on all over Washington. For the Nation's Capital is probably the busiest party-going city in the land.

There's a reason for this. Parties may be fun, but for the majority of Washingtonians they are something more. From small, intimate dinners to huge receptions, they are part of the never-ending business of politics.

They provide the means of communication—between politicians and the press; between diplomats and the press; between diplomats and politicians, and so on.

All this tends to make Washington different from other cities, lacking in the usual diversity of interests and activity.

It has few night clubs. It has only two theaters, the National Theater, and the small theater-in-the-round, the Arena Stage.

Despite the Capital's magnificent National Gallery of Art, its beautiful buildings and historic memorials, it is not a cultural center.

This troubles many people. They feel that the Nation's Capital should foster and feature the performing arts; that money should be provided to build a cultural center to attract the country's finest and most promising talent.

To point up the way in which other cities support the arts, Representative HARRIS B. McDOWELL, Democrat, of Delaware, asked the Library of Congress to make a survey. The Library came up with these facts: that Baltimore provides \$448,588 to support the fine arts; Philadelphia, \$789,760; St. Louis, \$320,007; San Francisco, \$817,256; and New York, \$4,718,824.

Washington, which Mr. McDOWELL notes is both larger and richer, per capita, than San Francisco, gives only \$16,000 to the fine arts.

Representative McDOWELL is a cosponsor with Senator HUBERT HUMPHREY, Democrat, of Minnesota, of a bill to provide 1 mill out of each dollar of tax revenue of the government of the District of Columbia to be set aside to defray, in part, the expenses of the National Symphony Orchestra, the Corcoran Gallery of Art, the Washington Opera Society, and other nonprofit art and cultural programs of the Nation's Capital.

At the present time the arts are supported by the Federal Government or by private benefactors. "Such a situation would be unthinkable in any European capital city, or, indeed, even in any large provincial city in Europe or the U.S.S.R.," says Mr. McDOWELL.

Indeed, there are many vocal and persistent boosters for the arts, including Representative FRANK THOMPSON, Jr., Demo-

crat, of New Jersey, who along with others has repeatedly called for the creation of a Federal Advisory Council on the Arts.

In addition, several Members of Congress have introduced bills to establish what they call a national showcase of the arts and sciences in the District of Columbia, featuring a biennial international olympiad of the arts and sciences.

Its purpose would be to encourage competition among talented young people from all over the world, similar to the competition in Moscow from which Van Cliburn rose to fame.

In line with the encouragement of national talent, Mr. McDOWELL has proposed that college and university music and drama groups be included in the cultural exchange program.

This proposal is receiving the serious consideration of the State Department. At present some 20 college and university music and drama groups are sent abroad each year by the Defense Department to entertain American troops. It is Mr. McDOWELL's idea that this program be expanded so that these groups may have contact with the young people of other countries.

These various proposals constitute a drive which is rapidly gaining momentum to support the arts and particularly to give Washington parties some competition by the development of a cultural center in the Nation's Capital.

The Washington Post and Times Herald, in commenting editorially on the difference between Washington and other cities in providing for the arts, put it this way: "There are reasons for this contrast. More than in other cities, politics predominates locally, and this tends to crowd out the arts in a city overdedicated to government. Lack of home rule helps to stifle civic initiative and community enterprise here. More than other cities, Washington is populated by transients who donate their efforts (and endowments) elsewhere."

"But even when these limitations are acknowledged, Washington can and should do more to provide a better balanced cultural program worthy of a capital and more representative of the Nation."

SCIENCE SERVICE,

Washington, D.C., March 15, 1960.

HON. HARRIS B. McDOWELL, JR.,
U.S. Representative from Delaware,
House of Representatives, Washington, D.C.

DEAR CONGRESSMAN McDOWELL: We were very please to have been sent a copy of H.R. 9503 by your legislative assistant, Mr. George Frain.

As you probably know, Science Service is responsible for the operation of three distinct youth programs which have made a great impact on the development of young scientists in this country. These activities are:

1. The Science Clubs of America: More than 600,000 students are members of the some 25,000 science clubs throughout the United States and in several foreign countries.

2. The Science talent search: This is the first nationwide effort to identify young scientists. The current search represented the 19th such effort. Tens of thousands of boys and girls have found great incentive for studying science because of the Westinghouse scholarships offered to the top winners of this search.

3. The National Science Fair—International: This year marks the 11th National Science Fair held under the auspices of Science Service. Some 200 regional fairs which, in turn are fed by some 5,000 to 6,000 school and local fairs, will send their two top winners to Indianapolis where the fair is to be held from May 11 to 14.

In recent years this has begun to take on an international aspect with the National

Science Fair of Japan sending its winner, and there also being included winners from Canada and the Armed Forces schools in Europe. This year Thailand is also scheduled to send winners from its national fair.

Obviously Science Service has a backlog of experience which could be very helpful in furthering this bill. In conversation with Mr. Frain, he suggested that it might be a good idea for some of us to have a short conference with you in which we could work out some areas of future cooperation.

Enclosed is an announcement of the 11th National Science Fair, a copy of the list of 40 top winners of the science talent search and list of the 400 students in the honors group, and a copy the sponsor handbook which is distributed to all 25,000 science clubs. Perhaps you will have a chance to glance through these before our meeting. I shall get in touch with your office on Thursday to see whether or not we could arrange a conference for some time soon.

We feel you are to be congratulated for pushing such legislation as this, and because of our contacts throughout the Nation with thousands interested in science development, we believe that we may be able to be of help. We shall look forward to a meeting with you.

With warm regards,

Very sincerely yours,

FREDERICK A. INDORF,
Education Director.

FEBRUARY 27, 1960.

The Honorable HARRIS B. McDOWELL, Jr.,
House of Representatives,
Washington, D.C.

DEAR SIR: I write to commend you for your continuing efforts in support of legislation to elevate the cultural standards and activities in the District of Columbia. I am very close to the serious problems of the National Symphony Orchestra, the Washington Opera Society, and the District of Columbia Recreation Department.

An appropriation to the National Symphony would surely alleviate the strain of a hard-working fund-raising group that even now is out soliciting nickels and dimes so that this great orchestra can exist. The season is short and the weekly pay is inadequate to the extent that the symphony musician, in most cases, is forced to drive a cab, work in a department store or other type of work for 20 weeks out of the year in an effort to approximate a livable annual income.

The Opera Society is wonderful but it just can't get off the ground. It needs help—now.

The only way the District of Columbia Recreation Department has been able to provide a semblance of free cultural programs has been through the cooperation of this organization which has matched its \$10,000 dollar for dollar in an effort to sustain the Watergate concerts. Unfortunately, new agreements between the recording industry and the American Federation of Musicians that provides this fund indicate that the amount available to us will be sharply reduced and our cooperation with the District of Columbia Recreation Department will suffer proportionately and eventually this worthwhile project will have to rely solely on the meager appropriation of the District of Columbia which will spell the end to free music in the Greater Washington Area.

If my personal testimony should in the near future prove of any value, please call on me at any time. I have already met with Mr. Carson Fralley, president of the National Symphony Association, Mr. Herman Williams of the Corcoran Gallery and Messrs. Christiansen and Price of the District of Columbia Recreation Department. We are all highly enthusiastic about the prospects of doing

a better job which can only be done through passage of your cultural bill.

Reassuring you of our great interest and with repeated thanks, I am,

Most sincerely,

SAM JACK KAUFMAN,
President, Local 161, A.F. of M.

America's World Position

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BOWLES. Mr. Speaker, Pablo Casals needs no introduction to the American people. For more years than many of us know, we have listened enraptured as he helped us to see more deeply and clearly the beauties of the great music of the world. But, Senor Casals is more than a musician. He is a scholar, a humanitarian, and a keen observer of the world around him. For these reasons, I believe that his letter to the New York Times this morning ought to become a permanent part of the RECORD of this body.

I commend the letter, which follows, to the careful attention of my colleagues:

AMERICA'S WORLD POSITION—DEMOCRATIC PARTY VICTORY DECLARED IN INTEREST OF PEACE

(The writer of the following letter is the famous cellist who has lived in exile since the fall of the Spanish Republic.)

To the EDITOR OF THE NEW YORK TIMES:

During the last 4 years I have lived in Puerto Rico, close to the American people and within the sphere of direct influence of your system of government. This has made it possible for me to study and evaluate, with better elements of judgment, some of the traits of the U.S. Government which perhaps might escape the observation of a European living in Europe.

Such an analysis might be of interest to the average citizen of the United States. Particularly if it came from a European who is both a liberal and a Democrat, who loves your people and admires your institutions.

For I hold the conviction and the faith that the United States has the material and spiritual capabilities to establish the principles of freedom and justice that will insure a lasting peace on this restless and turbulent world of ours.

INTEGRITY OF IDEALS

In all fairness I must say that, in general, in my analysis there is a favorable balance for your system on the basis of the integrity of your ideals and the sincerity with which you strive to realize them.

I am, however, aware of the fact that despite the good intentions and the good will of your leaders, the desirable action does not always go hand in hand with the ideals that inspire it.

In my judgment, that has been the case, as a general rule, under the traditionally orthodox conservatism of the National Republican Party. This conservative attitude of the Republican leadership has been promptly reflected in the foreign policy of the United States and in the world reaction following the implementation of the policy. I strongly feel that this is the source of the misunderstandings and the resentments that frustrate the desire of the United States to

live fraternally and in peace with the other peoples of the world community.

This Republican attitude is in sharp contrast with the wise, reasonable, and moderate liberalism which has enabled the Democrats to win over the friendship and cooperation of other peoples professing the same ideology, whenever they have ruled and promoted the basic democratic ideals of your people in the foreign field.

FAITH IN PRINCIPLES

I should like to reaffirm my faith in the lofty principles of freedom and justice which inspire the American credo of life. I am convinced that these principles, placed at the service of mankind with liberality and nobility, would bring about in the world the welfare and the peace to which all men of good will aspire.

All this can be accomplished through clearly democratic policy and behavior, a position devoid of insincerity and of the ambiguities which today erode the foreign policy of the United States.

This is why the free peoples of the world, and those who aspire for freedom, have pinned their hopes on the victory of the Democratic Party of the United States. For that victory will strengthen world confidence in the expectation that there shall be no more vacillations and delays in the attainment of peace supported upon the immovable pillars of liberty and the solidarity of man.

PABLO CASALS.

SANTURCE, P.R., February 21, 1960.

Casavina's Dream Realized—From Erin to Italy to America, Irish Marble Coming for Important Edifices

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. CANFIELD. Mr. Speaker, I am inserting in the CONGRESSIONAL RECORD a remarkable story of how a Paterson businessman is promoting the Irish marble industry with the help of Italian craftsmen and American consumers. The story—particularly fitting on St. Patrick's Day—appeared in the March 14, 1960, issue of the Paterson Evening News:

CASAVINA'S DREAM REALIZED—FROM ERIN TO ITALY TO AMERICA, IRISH MARBLE COMING FOR IMPORTANT EDIFICES

A one-man, three-way point 4 program aimed at creating jobs for Irish and Italian marble workers and a cultural heritage for America is being developed by a Paterson industrialist.

He is Paul R. Casavina, dedicated backer of the Forward Paterson movement, owner of the Casavan Carrara Marble Co. of Paterson and Ridgefield Park, and head of the Casavan Industries, whose products range all the way from thermonuclear metals for atomic warheads to mosaic marble.

The firm's Paterson plant is located in the former Barbour Flax Mills, in the old Dublin section of the city. A new, modern office building is being constructed at the Ridgefield Park location to provide for the expanding operations in its marble division.

Casavina is a unique combination of hardheaded businessman and deep-dyed idealist. He came out of World War II a

full colonel at age 26 (he enlisted as a buck private) with his ideals intact and the deeply embedded conviction that if ever the goal of universal peace is to be achieved, it will come not through pious pronouncements and pageantry, but the increasingly horrendous mass slaughter men call war.

SAYS FULL STOMACH WAR DETERRENT

"When people have enough food in their stomachs, when they have work in which they can take pride and can know the joy of creating, then we will have people too busy and too happy to think about war," he says. Toward that end he has been working since his return to civilian life.

His marble quarries in Carrara, Italy, have provided jobs for some 3,000 workers, who have been taught to merge the age-old skills handed down to them through the generations with modern production techniques. Up until a few months ago these quarries provided all of the marble used by the Casavina firm in its extensive American enterprise.

Recently he was able to complete negotiations to take over the operations of Irish Marble, Ltd., whose home office is on O'Connell Street, Limerick, Ireland, with quarries in such poetic sounding places as Connemara, Galway, Limerick, and Marlin Park.

Last Thursday, Casavina visited the Irish consulate in New York by invitation of John Conway, Minister Plenipotentiary, Consul General of Ireland, to talk over his plans for developing the Irish marble industry. He presented ashtrays made of green Irish marble to the members of the consular staff. He was warmly welcomed by the Government officials who see this linking of the two nations doing much to benefit the Irish economy and further deepening friendships between the people of both lands.

As might be expected, green marble comes greenest and fairest from the Emerald Isle, but according to Casavina, the Irish Republic has been unable to make any great progress in commercializing this industry. What exports do leave the country amount to only small shipments of the marble which usually end up as bookends or paperweights.

TO TEACH IRISH CRAFTSMEN

Under this new arrangement, modern production methods will be introduced to the Irish marble industry. Italian craftsmen will be brought from Carrara to teach the Irish workers the techniques employed by their craft that cannot be replaced by 20th century technology. In addition to providing jobs, this bringing together of artisans from two countries, to work and live together will serve as an effective program for bettering international relations, Casavina believes. Initially he expects to be able to provide some 3,000 to 4,000 jobs for Irishmen in his Irish quarries: eventually up to 10,000. In an agricultural nation like Ireland, where the bulk of the income is derived from small family farms, the impact of such an operation should serve as a powerful shot in the arm to the national economy, he says.

The Irish Government is greeting the project with enthusiasm. One of the handicaps preventing the full exploitation of the Irish marble industry has been the lack of modern transportation facilities that would permit bringing out marble in bulk quantities. Now, the Government has agreed to construct a hardtop road from the quarries to the nearest port, over which Casavina's heavy equipment will be able to bring the big marble blocks out for bulk shipment.

FIRST AMERICAN IRISH MARBLE ALTAR

The raw marble will be sent from Ireland to Italy for processing at Casavina's Carrara works and then to America where it will go into church altars, statuary and building mosaics installed by American workmen.

The first project in which it will be used is on the high altar of St. Mary's Roman Catholic Church, Closter.

The altar is estimated to cost about \$13,000 to \$14,000, and the church itself \$340,000, according to the Rev. Kevin Cahill, pastor, a native of County Kerry.

The shipment of Irish marble from which St. Mary's altar will be carved consists of 200 cubic foot blocks, weighing a total of 35 tons. These blocks will be carved and sawed into 27 pieces.

George Vuinovich, church architect of Englewood Cliffs, says the altar will be in contrasting shades of green and black marble. The Irish marble will be used on the main altar, two side altars, the altar rails, lectern and sanctuary floor. The church is expected to be completed by Easter, Father Cahill says.

Casavina sees this three-way jobs-across-the-sea program as making an important contribution toward cementing the already warm friendships and developing greater understanding between the peoples of Italy, Ireland and America. At the same time he believes it will do much to raise the standards of living in the two European nations.

DIGNITY OF WORK

"By giving people honest work, and the chance to earn a fair wage we can accomplish far more for democracy than with all of the handouts we might be able to distribute among the depressed areas of the world," he says.

But he is quick to point out that work alone is not the answer.

"A man must find dignity in his work. He must be able to feel that he is working with and not for his employer. He must be given fair compensation, a chance to know that he is an appreciated member of the team, that he is creating something of value and that through his work, his life has been given meaning and purpose."

Statement of Federation of Homemakers

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 29, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD a statement of the National Federation of Homemakers presented by Mrs. Ruth G. Desmond before a hearing examiner of the Food and Drug Administration in connection with the order delisting certain food and cosmetic coal tar colors.

Mrs. Desmond expresses very well the reason for concern of American housewives and women over coloring substances going into food and cosmetics.

The statement follows:

STATEMENT OF FEDERATION OF HOMEMAKERS—PUBLIC HEARING ON OBJECTIONS TO FINAL ORDER DELISTING CERTAIN D. & C. COAL-TAR COLORS FROM THE LIST SUBJECT TO CERTIFICATION

Mr. Examiner and gentlemen, I am Ruth Desmond, secretary of the Federation of Homemakers, a group which consists of housewives residing in this area and in many of our States. We also have junior members attending local colleges. Our federation is most appreciative of being afforded this opportunity to express the views

of its members regarding colors used in lipsticks.

First, we wish to commend the Food and Drug Administration personnel as a whole for their efforts to protect the well-being of consumers, and especially to commend the scientists of this agency, who are highly regarded in their professional fields. The present testimony has disclosed that these FDA scientists have made numerous contributions to scientific literature. We wish to state that our members have confidence in the ability, responsibility, and integrity of these FDA scientists to make competent decisions in their respective fields.

Last spring before our federation was formed, an interested group (now charter members of our organization) inspected certain of the laboratory facilities of FDA. We were impressed with the dedicated attitude of the scientific staff, but disturbed that these scientists were carrying out their experiments in cramped, congested quarters not even their own. We hope that this present session of Congress will remedy this deplorable situation by an appropriation for the construction of the building recommended for this agency by the Citizens Advisory Committee in 1955.

Here, I would like to note that the late Sir Edward Mellanby in his Sanderson-Well Lecture on "The Chemical Manipulation of Food," delivered at the Middlesex Hospital, May 4, 1951, which appears in the British Medical Journal of Saturday, October 13, 1951, praises the experimental work carried out by the U.S. Food and Drug Administration and the official inquiries held by this agency on specific matters of interest. Sir Mellanby expressed regret that at that time there was no such competent agency in his country carrying on this important work.

We also wish to compliment the cosmetic industry for its continuous efforts over a long period of time to furnish completely wholesome cosmetic preparations to the public. Their good record proves the effectiveness of this diligence.

It is appropriate to remind you here that in 1939 American housewives, through their various organizations and clubs, went on record at hearings conducted by the Federal Security Agency that they wished only colors certified as absolutely safe used in their foods and cosmetics. If today's housewives were consulted about this problem of colors added to foods and cosmetics, our federation feels confident they, too, would go on record as wishing safety of the product to be paramount.

Now that American women are accustomed to the brightness which lipsticks give to their faces and the lift to their spirits they would be loath to forgo their addiction to them—but our members to plead that only harmless dyes be used in their lipsticks. Members of our sex start using lipsticks these days at the age of 12 or thereabouts and continue their use till they depart this existence. Because of such universal and continuous use of lipsticks by all ages of our female population, cumulative effect of the dyes must be seriously considered. (Our members are positive they ingest a certain amount of their lipsticks and feel that the method of applying lipsticks determines the quantity ingested. Those users who blot their lipsticks do not ingest as much as those who prefer a moist effect and apply their colors liberally and do not blot.) It must also be noted that lipsticks are used by young girls whose cells are still dividing rapidly. Such dyes may have a different effect on these young persons than on mature individuals. Lipsticks are also applied by expectant mothers, whose bodies undergo many drastic changes during the stress and strain of pregnancy. Then consideration of the possible effects upon the elderly, who may be taking medication for

chronic illness is suggested. May we point out that the seriously ill use lipstick to conceal the ravages of disease. In fact hospital staffs encourage women patients to primp, feeling morale will be improved by improvement of appearance. Yet concern should be expressed, we feel, to the fact that while morale of the ill is being bolstered by application of cosmetics, damage might possibly be sustained from synergistic reactions of medicines with impurities, however minute, of cosmetic dyes.

It is our understanding that in carrying out tests to determine the harmlessness of these lipstick colors, now being considered, all the animals selected were healthy, both controls and test animals alike. These animals obtained a balanced diet, the only difference being the addition of color to the diet of the test animals. It is our understanding also that rats are not as sensitive to dyes as humans and dogs. With humans we do not always have such an advantage of both good health and correct diets. Numerous surveys conducted by responsible nutritional and medical groups have revealed that our American young girls (both at high school and college levels) have poor food habits. These authorities deplore this revelation as they feel this is a time when our young girls should be receiving adequate, balanced diets to prepare them to be healthy mothers later. These same adolescents use lipstick generously and frequently.

Modern conditions of living force the human system to cope with air pollution and water pollution as well as the products of atomic fallout. We ingest traces of pesticide residues, food additives and dyes. Therefore, it seems especially needful that discretion and caution should be observed in the choice of dyes to be used in our lipsticks. We feel that total impact of all of these elements and substances on the human system must be taken into consideration in permitting certain colors to be used in the manufacture of lipsticks. Dr. W. Coda Martin, testifying before the House Subcommittee on Health and Science of the Interstate and Foreign Commerce Committee, during the recent food additives hearings, stated on page 279 of the printed report as follows:

"The first line of defense must be to protect the health of the consumer; otherwise, the long-range 'calculated risk' is that this country will become a Nation of invalids, weak in body and mind."

Dr. Morton L. Levin, assistant commissioner, Division of Medical Services, State Department of Health, Albany, N.Y., stated after remarking that cancer is regarded as a common disease, at page 355 of the printed hearings:

"In the presence of a common disease, of which most cases are of unknown causation, I think you can understand the sensitivity of physicians and public health authorities to the possibility that substances which we do not suspect today may be causative of cancer."

Sir Edward Mellanby, discussing the effect of chemicals on the human system, warns in his lecture mentioned previously:

"Even when such chemical substances have passed through a battery of tests from the point of view of toxicology, unexpected harmful results have often ultimately been demonstrated."

"Medical science often cannot give adequate answers to questions of toxicological action, not only as regards new compounds but even in the case of substances long in use. Indeed, to the medical man unpleasant surprises are constantly being revealed, in the case both of drugs and of chemicals used in food preparation."

It seems to our members that simply because it may take years to recognize the damage done to the body cells and function by certain pesticides, additives and dyes, dis-

cretion and caution should not be abandoned and their use permitted in our foods and cosmetics. We feel that the old adage "an ounce of prevention is worth a pound of cure" applies to this particular problem.

I thank you gentlemen for granting me this opportunity to convey the opinion of our members.

Italian Labor Leaders Tour Springfield, Mass., Plants

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. BOLAND. Mr. Speaker, three representatives of Italy's democratic labor unions, visiting in the United States under a State Department-sponsored program, are spending 1 week in my home city of Springfield, Mass., to get a first-hand impression and knowledge of labor-management relations and industrial training in this country.

I welcome these representatives of free Italian labor organizations to my city and know that they will absorb much during their tour through Springfield industries, conferences with Springfield labor officials and management officials and with members of the Springfield Trade School faculty.

Under leave to extend my remarks, I include in the Appendix a news story published in the Springfield Daily News on Tuesday, March 15, 1960, concerning the visit of these Italian labor leaders:

ITALIAN LABOR LEADERS TOUR PLANTS—THREE UNION MEN SEE UNITED STATES UNDER INVITATION OF STATE DEPARTMENT

Representatives of Italy's democratic labor unions Monday toured a Springfield manufacturing plant and Springfield Trade School to get ideas on labor-management relations and industrial training in the United States.

Guests of the Western Massachusetts CIO Council, the three men were given a tour of the Springfield plant of Chain Belt Co. where they watched the entire manufacturing process that goes into the local firm's power trains.

Guglielmo Volpi, Ettore Foschi, and Gaetano Montanari are spending a week in Springfield as part of a program sponsored by the State Department.

One of the things which impressed them most was Springfield Trade School, where youths are prepared for positions in the production phase of industry.

NEEDED ABROAD

"This is something we need in Italy," said Mr. Volpi. "We have schools to train doctors and lawyers, but none to train workers."

He added that in many cases, workers in the trades are trained on an apprenticeship basis, studying under an experienced workman, and that technical training is rare.

Mr. Montanari, unofficial interpreter for the group, all of whom spoke English, said that about 60 to 65 percent of Italian labor is unionized, with the Communists holding a large portion of the workers. There are, he said, two democratic and one Communist union in Italy.

A great difference was noted, too, in the status of the laborer in the two countries.

In a quick exchange of comments, Mr. Foschi said that Italian labor was not protected by law as is American labor. He said that there are neither provisions nor requirements for collective bargaining between labor and management in that country.

Each individual trade, he said, made a national contract, which the company may or may not follow. There is no law requiring the company to adhere to the contract. "Our labor unions are divided and weak," he said, and noted that efforts were being made in Italy to unify labor and labor unions to get a better bargaining position.

Comparing standards of living, Mr. Montanari said:

CAN'T COMPARE

"You cannot compare them on a wage basis, but on what the wage can buy. In the United States a worker can buy a package of cigarettes for one-eighth of an hour's pay. In Italy, a package of cigarettes costs the worker an hour to an hour and a half's pay."

The Italian worker, he said, works a 48-hour, 6-day week.

An interesting look into the recent collapse of the Segni government in Italy was provided by Mr. Montanari, who said that a labor battle was one of the causes. "The Liberal Party wanted labor laws," he said, "and the others did not." The ensuing quarrel between parties, he said, helped to split and weaken the government and cause its eventual collapse.

All three looked toward unification and new industries as the key to bettering the Italian worker's lot. Unification, they agreed, needed no explanation, but was simply necessary to improve labor's position for negotiation. And they pointed to the electric, synthetic, crude oil, and petrochemical industries growing up in the south of Italy as examples of the country's expanding industrial development and a possible key to improving the labor picture there.

To Buttress Argument—Political Polls Being Used in "Numbers Game"

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, many of my colleagues have asked me how things are shaping up for the Wisconsin primary on April 5. Ron May, Washington correspondent for the Capital Times in Madison, Wis., has analyzed the situation in an article in the March 14 Capital Times. Under leave to extend my remarks, I would like to include that article in the RECORD:

TO BUTTRESS ARGUMENT—POLITICAL POLLS BEING USED IN "NUMBERS GAME"

(By Ron May)

WASHINGTON.—Public opinion polls are still being used in a questionable numbers game in connection with the Wisconsin primary.

This column previously reported that in January Gov. Gaylord Nelson was told by a representative of Senator JOHN KENNEDY that a private poll showed the latter leading Senator HUBERT HUMPHREY by 63-37, in percentages. The Governor was being pressured by leading KENNEDY partisans to endorse the Massachusetts Senator.

Nelson refused to join the "sure winner." After this became clear, the Senator's

brother, Robert, reversed the tack and told reporters at a New Hampshire press conference that he had advised JOHN not to enter Wisconsin because he was an "underdog" there.

A few days later columnist Joseph Alsop took up the "underdog" theme in a big way and reported that KENNEDY's private pollster, Lou Harris, put KENNEDY ahead by only 53-47. This somewhat bolstered the underdog claim, but—if true—still far from supported it.

Told by this column of the discrepancy between the two polls, Alsop conceded that he had got his figures from KENNEDY, and promised to check them—presumably with Harris, who is a close friend. Alsop reported back that he was sure his figures were authentic.

But the leaks of poll "results" did not stop. This column, which a year earlier had "bit" on an inconsistent Harris poll on Pennsylvania, taken from KENNEDY's file, got another one 2 weeks ago, allegedly from the same source.

While this reporter was still checking the authenticity of the latest leak, pertaining to Wisconsin, it was presented as genuine in a syndicated column by Robert S. Allen and Paul Scott. Scott told this reporter that he was sure the new report was real.

But the third "poll" is different from either of the other two. It shows KENNEDY with 57 percent—not 63 or 53. However, its heading would seem to indicate that, like the first two, it had a specific political purpose—a message to "sell." The data is titled "The Wisconsin Vote Steal."

The report says its contents are based on "present polls." Dated February 1, this would mean it was drawn up only a few days after both the 63-percent and 53-percent figures were circulated and was presumably based upon the results of the same early January questioning by Harris agents.

The district-by-district estimates add up to KENNEDY winning 4 of the 10 congressional districts (for 10 delegates) and the statewide count (for 5 delegates), while HUMPHREY takes 6 districts (for 15 delegates). The report argues that, under the figures given, KENNEDY would get the same number of delegates as HUMPHREY—15—but would have more votes.

The listed statewide totals are 323,000 for KENNEDY and 242,000 for HUMPHREY.

But the clear intent of amassing the figures to buttress an argument, rather than to report the truth, discredits the "results."

The ratio of votes between KENNEDY and HUMPHREY in the various districts would appear to be credible, from other sources. For example, KENNEDY hopes to pile up his winning margin Milwaukee's two districts). In the fourth and fifth (represented by Democrats CLEMENT ZABLOCKI and HENRY REUSS) the report gives KENNEDY 150,000 votes to only 60,000 for HUMPHREY, or a majority of 90,000. His statewide majority is given as 81,000.

The other districts claimed for KENNEDY are the eight (Green Bay), with 15,000 majority and the sixth (Fox River Valley), with 20,000 majority.

The Plight of Small Store Owners

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. FRIEDEL. Mr. Speaker, the serious plight of the small businessman

grows worse every day due to the increasing tempo of mergers, consolidations, and unfair trade practices on the part of big business. The small retail merchants are often compelled to close their doors and go out of business. As a direct result, stores are vacated and remain unoccupied, thereby causing further loss to the owners of the properties and to city tax officials who are deeply concerned about revenues to operate the many and varied functions of municipal governments. In the city of Baltimore alone, there are now over 255 vacant stores.

Fortunately, however, Baltimore has such civic leaders as Herman Katlow, president of the Affiliated Neighborhood Merchants Association; William Boucher, III, executive director of the Greater Baltimore Committee; George E. Thomas, director of the Independent Grocers Association; and Sidney Hollander, Jr., marketing analyst, who are now studying this particular problem.

The Baltimore Sun of March 16, 1960, reported the problems of the small store owners. I recommend that it be carefully read by my colleagues in the Congress as it focuses attention to this pressing matter. It is as follows:

SMALL STORE OWNERS MEET—DISCUSS MUTUAL PROBLEMS IN AUTO-SHOPPING CENTER AGE

About 60 of Baltimore's small store owners met at the Enoch Pratt Free Library last night to discuss mutual problems in the age of the automobile and the shopping center.

The question before them was: "Is the Neighborhood Merchant Obsolete?"

The consensus seemed to be that the small merchant is not obsolete, but he may soon become so unless he does something to help himself.

WARNING GIVEN

Herman Katlow, president of the Affiliated Neighborhood Merchants Association which represents more than 1,000 retail stores, warned that the number of vacant stores in Baltimore has about doubled in the last 2 years.

There are now 255 vacant stores in the city, which presents a problem not only for merchants but for city officials worrying about tax revenues, Mr. Katlow said.

He suggested neighborhood organizations of retail men who would seek to solve mutual problems with mutually sponsored sales programs.

Mr. Katlow also said that "the time has come to call a halt to the haphazard spread of shopping centers."

YOU MUST ORGANIZE

William Boucher 3d, executive director of the Greater Baltimore Committee, took somewhat the same tact.

"You must organize yourselves to solve your own problems," Mr. Boucher said.

He told the merchants that metropolitan Baltimore's population is now 1,600,000 and that it will increase by 1 million in the next 20 years.

"If you're going to survive, you must attract to your doors a higher percentage of the million people," he said.

George E. Thomas, director of the Independent Grocers Association, told the merchants they could avoid obsolescence by moving to a good location in a new area and offering the little extra services to customers that big stores do not provide.

Mr. Thomas suggested that small merchants be allowed to move their stores into new housing developments.

Sydney Hollander, Jr., marketing analyst, said shopping centers now account for about

16 percent of retail sales in Baltimore, compared with only 2 percent in 1948. He noted, however, that total retail sales have increased in that period from \$1,017,600,000 in 1948 to about \$1,392,500,000 today.

"Ben-Hur," by Gen. Lew Wallace, Hoosier Soldier, Statesman, Diplomat, and Author

EXTENSION OF REMARKS

OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. WAMPLER. Mr. Speaker, on March 15, 1960, I had the distinct pleasure of viewing the premiere Metro-Goldwyn-Mayer performance of "Ben-Hur," based on the epic novel written by the Hoosier soldier, statesman, diplomat, and author, Gen. Lew Wallace.

I am quite proud to say, Mr. Speaker, that Indiana-born General Wallace was a longtime resident of Crawfordsville, Ind., which lies within the Sixth Indiana Congressional District, which I have the honor to represent.

On April 4, 1960, an election will be held in which I and every other Indian, I am sure, have a keen interest. This election, however, will have nothing whatsoever to do with politics. I refer to the academy award voting now under way within the motion picture industry.

Twelve of the nominations for "Oscar" awards are of direct interest to Indiana because they are award nominations based on MGM's "Ben-Hur."

The following short history and list of little-known facts about "Ben-Hur" will, I believe, be of interest to all:

"Ben-Hur," as a novel, became the leading best seller of its day.

For more than 20 years it topped the list in popularity and to date is believed to have sold more copies than any book ever published, with the exception of the Bible.

It has been translated into every language throughout the world, been as popular abroad as in America, and is still widely read today. More than a dozen different pocket editions have been on the bookstands since the author's copyright expired in the mid-thirties.

Gen. Lew Wallace, soldier, statesman, and diplomat, wrote his story in part as an answer to Col. Robert Ingersoll, a famous agnostic of the 1870's. The two men had met on a train and engaged in a lengthy discussion on the subject of religion.

It was Ingersoll's contention that the existence of a God or a hereafter is open to considerable speculation. Wallace, who for some time had been planning a book set in the early days of Christianity, determined to make the novel an answer to Ingersoll's challenge.

He spent 7 years writing it. During some of this time he was serving as Governor of the Territory of New Mexico. It was published by Harper Brothers in 1880, and literary historians record that its inspirational and richly dramatic story caught the public's fancy at once. Within 8 years an unprecedented half a million copies had been sold and the demand was just beginning.

Soon the name Ben-Hur was everywhere. Or so it seemed. There were Ben-Hur commercial products on every storecounter. Sunday schools and churches staged Ben-Hur pageants. Ben-Hur chariot races were held at county fairs; Ben-Hur marches were played by John Philip Sousa and his band. Even today there are a number of commercial items that bear the name Ben-Hur, and it has been given to an insurance company as well as a popular fraternal lodge.

In 1900 the name achieved even wider fame when the book was adapted into a play and presented on the stage of New York's old Broadway Theater by the firm of Klaw & Erlanger. It immediately became as big a hit in the theater as it had been as a novel.

William S. Hart, later to become a famous film cowboy star, was the original Messala. William Farnum, also destined for fame in the movies, took over the role of Ben-Hur in 1901 from Edward J. Morgan, who created it, and played it for 2 years. Two chariots, operating on treadmills, were a sensation of the stage presentation. Within 6 years the number of chariots had increased to eight.

The play ran continuously somewhere in the United States for the next 17 years. It was also performed with great success in London, Paris, Copenhagen, Berlin, and other cities throughout the world.

In 1907, when motion pictures were in their infancy, it was made as a one-reel film by the old Kalem Co., of New York. The 16 magnificent scenes had been filmed at Pain's Fireworks Show, Manhattan Beach, with costumes from the Metropolitan Opera House.

The chariot race was performed by the 3d Battery of the Brooklyn Fire Department. This film had to be withdrawn when the Wallace heirs sued the producers on ground no permission had been obtained for the filming. The case was fought through to the U.S. Supreme Court with a decision handed down against the Kalem Co. It was a suit that vindicated the legal right of authors in a new and extensive field—motion pictures.

Through 45 years every American within reach of print and pictures, and most foreigners, must at least have heard of Ben-Hur. Most came to know it and remember it; thousands upon thousands read the book, saw the play, enacted it themselves.

Then, in the mid-1920's, MGM produced a film version which has become one of the great classics of the silent screen.

A new generation became even more familiar with Ben-Hur, Messala, Esther, Quintus Arrius and the other colorful characters in the story.

Today, as MGM launches its spectacular new entertainment, millions upon millions more will now thrill to the adventures of this most exciting of all fictional heroes.

General Wallace wrote the "Ben-Hur" manuscript in longhand in purple ink.

Soon after the book's publication a deluxe two volume edition sold for \$30, unheard of at that time.

The first stage presentation cost an unprecedented \$75,000; boasted a company of 400.

At the London opening first nighters included A. Conan Doyle, Marie Tempest, and Sir Henry Irving, England's King Edward and Queen Alexandra watched from a special box built in center of the pit.

Barnum and Bailey staged a chariot race in their circus in competition with the one in the play.

William S. Hart, the original Messala, claimed the Roman did win once (1901) at a Boston performance when a treadmill failed.

In San Francisco the play took in \$128,000, a record in those days, and the railroads ran special "Ben-Hur" trains to the city.

Aviation Week Editor Questions Effectiveness of U.S. Defense Program

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Aviation Week magazine. Editor Robert Hotz' views on "The Defense Debate" are worthy of our attention and belong in the record of the administration's handling of the defense problem.

The editorial follows:

THE DEFENSE DEBATE

(By Robert Hotz)

The running 4-year debate over the effectiveness of the U.S. defense program in relation to that of the Soviet Union has reached an incandescent glow on Capitol Hill that indicates it may be a major issue in the fall elections as well as a matter of vital interest to American citizens concerned with the survival of our country and its democratic institutions. One of the main difficulties in assessing the merits of the conflicting viewpoints in this bitter debate is that all contenders are basing their cases on a different time period.

For example, the administration spokesmen in the White House, Senate, and Pentagon who are assuring Americans that all is well, are talking about our military position today. This is, of course, completely irrelevant to the principal issue of the defense debate which is: Are we making the correct decisions today to insure that our military superiority will continue for the predictable future? As Lt. Gen. Bernard Schriever, Chief of the Air Research and Development Command, testified before the Senate, the decisions made in 1960 will irrevocably determine our military strength in 1984 just as the fateful economy decisions of 1958 and 1959 have made inevitable the potentially dangerous missile gap of 1961-64.

There are several strong indications that the administration is finding it increasingly difficult to defend its military policy in the face of evidence of Soviet capability in aircraft, missile and space areas which it tried so hard to ignore and denigrate for so long. First, it has been forced to yield to critics' demands in a number of vital areas, although most of these actions are coming about a year later than they should to achieve maximum results. These retreats by the administration include:

Expansion of the Atlas ICBM program demanded by congressional and public critics a year ago when the fiscal 1960 budget was being debated. The administration increase in the Atlas program, however, merely tacks on more production at the end of the original schedule and does not accelerate the current production rates to provide additional capability during the critical years of the missile gap.

Provision of initial, though inadequate, funds to begin preparation for an airborne alert for Strategic Air Command bombers during the period when they will be forced to operate without any certain warning of a Soviet missile attack.

Increased funding of the Saturn space booster program after a year of fumbling and administrative indecision over whether this program was vital and over which agency should develop the rocket cluster.

Increased Polaris missile-launching submarine program, where congressional pressure has added two-thirds of the present program size to the original budget request.

Another major crack in the administration defense policy has come from increasing evidence that the channels through which defense information flows to the White House often deliver incomplete, distorted and inadequate facts to the Commander in Chief. It is evident that the intelligence data on which the President and his chief military informants—Defense Secretary Thomas Gates and Gen. Nathan Twining, chairman of the Joint Chiefs of Staff—are basing their position, differs considerably from the data presented to the Senate by Allen Dulles, head of the Central Intelligence Agency, concerning the Soviet missile threat.

Although the President is, in effect, the direct Commander in Chief of Strategic Air Command and has some pronounced views on the operation of SAC, he has, as far as we have been able to determine, talked directly with the present SAC commander only once in the 3 years he has held this vital post. It must be somewhat of a shock to the American public which still has great faith in the President's military capability to find that he has just paid his first visit to the Cape Canaveral Missile Test Center during his 7 years as President. He apparently spent about as much time inspecting this key installation as it normally takes for an 18-hole round of golf.

The numerous technical inaccuracies that appeared in his two postspatnik television speeches on defense, the incredible episode of Trevor Gardner's 10-minute attempt to brief him on the ICBM development program several years ago and the Turkish radar incident all provide further indications that the flow of current defense information to the President leaves considerable to be desired. Another indication of the gravity of the defense issue is the administration's desperate attempts to defend its own position by blackening the character and impugning the motives of any who dare to criticize it.

Assistant Defense Secretary Murray Snyder, who functions as an appendage of White House Press Secretary James Hagerty, has been quoted by Life magazine and Drew Pearson, without any public denial, as ordering defense officials to "kick in the teeth" of reporters who question administration defense policies and to impugn their patriotism. General Twining, in a statement that would be unbelievable if it were not part of the printed record of Senate hearings, accused defense critics of being defeatists who "would rather be red than dead." It must be obvious to General Twining that defense critics want more effective defense, not less, and are urging this country to improve its position vis-a-vis the Soviet Union—not lay down and open the door to communism. This statement of General Twining's must cast serious doubts on the validity of any other testimony he may provide on this crucial issue.

The basic issues involved in this defense debate are simple and clear, despite the obfuscations aimed at screening them. They are:

First, are we utilizing the full technical, industrial, military, and economic capacity of this country to attain a military posture of unquestionable and undebatable superiority that will enable us to continue to provide world leadership? To this we regrettably conclude the answer at present is "No."

Second, are we organizing our defense program around the basic requirements for continued survival as a free nation in the face of the Communist challenge or are we organizing it around arbitrary fiscal limits? Again the answer appears to be a sad "No."

These are the questions the American people should continue to ask their leaders and those who aspire to leadership.

Religion in Action

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Dr. A. Russell Stevenson in which he describes teaching the ABC's of bumper crop farming at a Christian Service outpost in Pakistan. In his assignment as program director for Church World Service, Dr. Stevenson's duties take him into every part of the free world where projects supported by American churches bring both promise and realization of a better life to millions of the world's neediest.

In this article he tells the story of a practical Christian agricultural missionary who, working side by side with the impoverished villagers, is helping them to help themselves.

The article follows:

David Stockley is a tall, heavy-set redhead in his early thirties. He looks like a British farmer—set him down anywhere from Dorset to Northumberland and he would seem to have grown out of the soil.

But David Stockley's present farm is a long way from his ancestral England. It is in Khulna, 40 miles from the city of Jessore in east Pakistan.

To get to Khulna from Jessore you travel 4 hours on one of the slowest railroads in the world. Then you walk along a crowded, dirty street amid the seething confusion of men, animals, and vehicles, past a Baptist mission church, and you come to the edge of Stockley's project. It is called the Khulna Agricultural and Village Uplift Center. And it is working a modern-day miracle.

The farm at the Khulna Agricultural and Village Uplift Center, as farms in England or America go, is small in size—only 8 acres.

But as the loaves and fishes, which were only seven—being five and two—were multiplied until "the multitude * * * did eat and were filled," the fruits of David Stockley's labors at Khulna too are multiplied many thousandfold and because of them hungry multitudes of Pakistani are fed.

A missionary of the British Baptist Board, it is sobering to realize that David Stockley is the only agricultural missionary in all of east Pakistan, a country whose 40 million people live mainly in tiny villages and whose entire and precarious subsistence must be wrested from the soil.

I went to Khulna in November during a 2-month journey for Church World Service, a journey that took me to 15 countries in the Middle East and Asia. Through such appeals as the "One Great Hour of Sharing," our churches provide Stockley with leverage money, the funds over and above his mission board's appropriation which allows the leeway to experiment and to invest in a wide variety of projects that build for the future even as they serve the present.

I found him in his usual dress, a pair of old trousers rolled up to the knees, a shirt with an open collar that had seen lots of wear, and bare feet.

Bengali villagers don't wear shoes to wade into their rice paddies, and David Stockley lives the life of a Bengali villager. He spends days at a time with villagers, eating their food, speaking their language, and working beside them in their fields.

The chief difference between them is that David has a degree in agricultural science from an English university, has mastered the proper ways to plant, cultivate, and harvest rice, and—what is most important—knows how to pass this on to Pakistanis who still are doing things in centuries-old ways.

The Khulna Center's purpose is to become the very best farm in the country, and to encourage individual farmers to come and see for themselves the difference that is made by modern methods of cultivation under natural conditions identical to those of their own fields.

Stockley gets his message across by farming his own 8 acres, cut down a few years ago from 30 by a governmental requisition of the land for building purposes. The result of patient experimentation and of improved methods of planting seed, preparation of the soil, fertilizers, better ploughing, and other "new" ideas is a bumper rice crop.

It is there for everyone to see and copy. The villagers' eyes grow wide with wonder when they see for themselves what is happening at Khulna. Invariably the question is planted in their minds, "If it can be done here, why can't I do it?"

Stockley is an effective teacher. He is blunt and to the point. He hasn't time for diplomatic phrases. Sometimes he loses patience with villagers who have ignored his advice.

"I showed you what to do but you didn't do it," he will say in effect. "Now don't complain to me." His village friends respect his forthrightness.

Stockley explained why the rice yield in East Pakistan is so uncertain and so low.

The area has possibly the heaviest rainfall in the world, as much as 300 inches a year. Seed improperly planted washes away. In times of drought, there is inadequate irrigation.

The villagers still use wooden ploughs which penetrate only a few inches. Seed selection is unknown; there is no pest or disease control; harvesting is by archaic methods.

The staff at Khulna is proving that practically all these things can be overcome with a modest amount of knowledge, careful methods, and with inexpensive but improved tools.

In addition to rice and other field crops, the Khulna farm has begun to experiment with fruit trees—banana, mango, guava, fig, coconut.

A poultry project was started 5 years ago with flocks of Rhode Island Reds and white leghorns. Eggs, three times the size of the eggs available in the villages, and chicks are now available for village distribution and use.

Efforts are also being made to improve the strain of cattle. The result will be better cows for the villages and a milk yield of gallons per day instead of a few pints.

Other things are going on at Khulna.

Stockley and his staff are persuading a growing number of villagers to invest in shares for a small cooperative, they are experimenting with designs for a rice thresher patterned after a Japanese model but only half as expensive.

Hand drawn charts are prepared for village teaching. Joyce Stockley works with village women and demonstrates easier and healthier ways of homemaking. One unemployed man is being taught to make wooden toys.

Wherever there is need, wherever—among people living on the very margin of life—a small assist can be a mighty help, the Stock-

leys and their staff try to do something about it. Practical, versatile, persevering, they have achieved a high percentage of successes.

The center at Khulna is not an end in itself. It is a beginning.

It serves the people in a way and on a level they can understand.

Nothing is forced. Nothing in free. The villager has to make the effort and give of himself. Once he is willing to do that there is help available to put him, his family, and his community on the road to better economic health. This is technical assistance at its highest level of effectiveness.

Through such devoted people abroad, the American churches are reinforcing ecumenical ventures in many places, of which not the least is Khulna.

In all of them Christian understanding and Christian effort, only seeking unselfishly to help, are generating freedom from want, building the dignities and liberties that ensue, and making a witness in deed as well as in words.

H.R. 10385

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mrs. KELLY. Mr. Speaker, on February 11, I introduced a bill, H.R. 10385, to provide a much-needed salary increase for postal employees and those paid under the Classification Act schedule.

In sponsoring this bill, I am pleased to associate myself with more than 50 of my colleagues from this body who have introduced similar pay measures. Particularly am I pleased to note that this is a bipartisan effort to give a modicum of financial relief to these public servants; both Democrat and Republican Members have joined in sponsoring more than 50 pay bills thus far in the current session.

Unfortunately, this effort to grant a measure of economic equality to these workers has not found favor in the White House or with the Postmaster General. Both the President and Mr. Summerfield have been quoted in strong opposition to any pay bill this year.

In his most recent budget message, President Eisenhower said that a wage increase now was "unwarranted." Instead, he suggested that we "study" the problem. The Postmaster General has suggested that postal wages compare very favorably, particularly when one considers the fringe benefits Congress has approved for employees over the years.

If an increase in Federal salaries is unwarranted then I think our Republican friends in high places in the executive department owe it to Congress and the employees to explain one thing. I would like an explanation of why Vice President Nixon and Labor Secretary Mitchell considered it all right to urge the steel industry to grant better wages—and the steelworkers had my complete sympathy in their wage de-

mands—while at the same time ignoring the plight of our own civil servants.

According to Mr. Roger Blough, spokesman for the steel industry, steelworkers were getting \$3.11 per hour before the recent strike. Under the terms of my bill, a postal worker with 20 years' service would still be paid only \$3.06 per hour.

In reply to Mr. Summerfield's suggestion that fringe benefits take the place of hard, cold cash in the marketplace, I should like to read an excerpt from a letter recently received from one of my constituents.

He is a letter carrier, 43 years of age. He is married and has a wife and two children to support on an annual gross postal salary of \$5,075.

This is his story:

As for Mr. Summerfield, I haven't found a grocer, butcher, or baker yet who will take a day of my leave, sick or annual, for the groceries, meats, etc., that I buy.

Mr. Speaker, the committee to which my pay bill has been referred, the Committee on Post Office and Civil Service, under the chairmanship of the distinguished gentleman from Tennessee [Mr. MURRAY] has a well-deserved reputation for its interest in legislation affecting Government employees. I, along with the million and one-half workers covered by my bill, have complete confidence in the continued interest and concern of that committee. It is my earnest hope that it will forthwith schedule hearings on this vital subject and that we will have an opportunity in the near future to consider the recommendations of the committee here on the floor.

Auto Smog Can Be Eliminated

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. McDONOUGH. Mr. Speaker, automobile exhaust is a major cause of air pollution in Los Angeles and southern California causing excessive smog to the detriment of the health and well-being of all our citizens in that area.

It is time that effective action be taken to eliminate this cause of smog at its source, the automobile engine. The automotive industry in Detroit has the knowhow to produce either an effective exhaust for automobiles which will eliminate any substance which would pollute the atmosphere, or an automobile engine designed to completely combust fuel within the cylinder.

If the automotive industry fails to act to eliminate the source of air pollution from the automobile engine, then the State and National Governments will be called upon to enact legislative measures to require smog-control devices on all automobiles.

Such legislative measures are already under consideration in the Congress, and

are being brought to the attention of the California State Legislature.

I introduced a bill to require smog-control devices on all automobiles last year, and my bill, H.R. 1297, is currently pending before the House Committee on Interstate and Foreign Commerce.

It is inevitable that smog will be controlled, and that necessary smog-control devices be equipped or installed in all motor vehicles in the process of their manufacture. It is only a question of whether the automotive industry shall accept the responsibility for this improvement in the automobile engine, or whether the smog-control device on all automobiles must be required under Federal or State law.

The following article, "Smog Isn't Inevitable," by Kimmis Hendrick, appeared in the March 15 issue of the Christian Science Monitor:

[From the Christian Science Monitor, Mar. 15, 1960]

SMOG ISN'T INEVITABLE

(By Kimmis Hendrick)

LOS ANGELES.—Why doesn't the American auto industry win the gratitude of all Americans, and Californians in particular, by getting rid of smog production before the new cars leave Detroit?

This question is more and more pushing itself into people's thought here as they contemplate what it means that California is on the verge of building a great State bureaucracy to stamp out smog. Reasonable assurances keep coming from respected auto engineers that nothing of the kind is necessary. Detroit, they say, could do it. But Detroit doesn't.

Secretary of Health, Education, and Welfare Fleming said in Washington the other day that if the industry doesn't take the initiative, Congress will have to. The problem of air pollution is becoming rapidly nationwide. It seems bound to increase. It can be ameliorated, experts know, if auto exhausts are kept from exuding smog-triggering pollutants into the atmosphere.

For Los Angeles, the city Henry Ford made, this is a consideration of the utmost urgency. The smog attacks get more frequent. The autos get longer, faster, in some respects more handsome. And they make more smog. The upshot? Gov. Edmund G. (Pat) Brown is putting on a special legislative session call, an elaborate proposal for a State program to inspect, approve, and require antismog devices on all autos, to enforce the law, and to monitor the air.

It can be intelligently argued that this is a reasonable prerogative of State government. California holds itself responsible for numerous health standards, and omitting the pollution of the atmosphere seems far too important to leave off the list. But it is going to cost money. It is going to take new bureaucrats. It is going to take new bureaucrats.

None of this would be in itself bad, necessarily, if this were the only answer. But Americans have had a long experience leading them to imagine that where products are concerned, as in this case, industry can make a better product, and that a better product is more desirable than rules and bureaus to control the bad ones.

Bad? Have you ever stood in the Baldwin Hills of a fine bright morning and looked across this city toward the old Hollywood sign? The sky above is good enough for the Mediterranean. The Santa Monica Mountains are etched so clearly against the west you can see the firebreaks and even some of the houses. But city hall? It is lost in a dirty haze, and all the way along Wilshire Boulevard hangs a brown veil made

by traffic. Mt. Washington? Where did it go?

And this is a middling day—not a day when the nearest view is the market down the hill and the handsome Prudential Building might just as well never have been built. Pasadena has vanished quicker than the Cheshire cat. Other cities have smog like this sometimes, even San Francisco with its breeze, and even where smog isn't spectacular it is an undesirable intruder, often the partner of industry but more often now the trail of growing dependence on automobiles. And the worst thing, in the Los Angeles view, is that the smog isn't necessary.

Air pollution has numerous causes but here auto fumes rank first. It is now well established in public testimony that the auto industry could put devices on all new cars that would eliminate or greatly curtail the fuel emissions leading to smog. Governor Brown's central program is to make this the driver's responsibility. Secretary Flemming wants to see it made the industry's. If it's good for California, he argues, it's good for the Nation, and every American car should be sold with smog-control devices, not as optional equipment, but built in.

An automotive parts engineer, veteran in the industry and responsible for many improvements, J. A. McIntosh, of Detroit, says the industry can do better than that. It can design engines that completely combust their fuel within the cylinder, Mr. McIntosh says. This won't cost any more, he insists, and it will give better performance. Better with maybe one minor exception—start-off power. Today's engines are made for get-away, and they make smog. Mr. McIntosh, who knows California well and engines better, says they can be built for high efficient overall performance and clean air.

What's the catch? Sometimes it looks as though private-enterprise people talk a lot against big government, but when it comes to the draw, they leave the job to Uncle Sam—or in California's case, to Pat.

But Mr. McIntosh suggests the catch may lie with an unthinking public. "It is only the demand of a given district that is required of the sales department," he insists, "to have this new type of car supplied." Is the public too bemused by fins and speed? Or too busy writing checks for monthly payments? Or thinking that maybe the foreign cars will give the answer? In California, the public will get a shock in the tax bill unless someone takes a lead.

Dead Cities in the Desert

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Record an article appearing in the Washington, D.C., Star of March 14, 1960, entitled "Dead Cities in the Desert":

DEAD CITIES IN THE DESERT—CHANGES IN ONCE DESOLATE PLACES STIR INTEREST OF SOJOURNERS

(By Ralph McGill)

The earth is the Lord's and we are but sojourners on it. It says that somewhere in Holy Writ. And it is true.

A nation, troubled by ever-increasing summer drought and the need for more and more water, and disturbed by the disappearance

of forests and the ruthless attempts to take over national conservation areas and parks, might well remember we are but travelers on a journey, sojourning here for awhile.

Others will come after us.

They will witness what we have done during our sojourn.

In the ancient places on the earth, where man first was, and where recorded history first began, that which brings a sense of awe and excitement to the traveler is the sight of cities dead now for thousands of years. There is a stirring of the mind, too, in seeing their ruins in deserts, knowing that once there were fields and vineyards there, wells, aqueducts, and irrigation streams * * * that once caravans came laden with spices and foods—that once children ran and played where now are ruins and desert.

One can find them—the filled-in wells, stretches of painstakingly made aqueducts bringing water from distant slopes, deep-dug cisterns, and old terraces where once crops grew.

Flying over the reaches of Syria, Lebanon, Jordan, Israel, North Africa—one can see the remains of irrigation patterns.

One can drive southward out of Israel's Beersheba and find ruins of cities which once flourished as bustling urban centers on the great caravan routes.

The Romans were great colonists, irrigationists, and builders of roads and cities. (Standing on a stretch of road built a few hundred years before Christ, one meditates that a really honest road perhaps hasn't been built since the time of the Romans.)

Nothing strikes the traveler more forcibly than the fact that vast amounts of land, now desert, once were fertile, cultivated.

In Syria and the Lebanon the Romans cultivated land inland for 150 miles which today is desert. So abundant was its production of small grains, or corn, that much of it annually was exported to feed crowded, always hungry Rome.

"What happened?" I asked an archaeologist.

"They cut the trees," he said, "and they began early. You recall Solomon sending men to cut the Cedars of Lebanon. He sent three sets of 10,000 men each.

"Ancient Egypt had thousands of woodcutters on the Lebanon mountains and carried on a huge lumber export business 5,000 years ago," he said.

"Cedars of Lebanon went into Solomon's Temple on Jerusalem's high hills. And Cedars of Lebanon were built into the palaces of kings in Persopolis, a thousand miles from where they were cut. The Romans continued the destruction. Their chief lumber port was Baniyas (or Banias). Even in their time the trade declined to nothing because all the timber within reach of it had been cut * * * oh, how the ancients cut trees * * * and they never planted a seedling.

"And then," he said, "the winds came and blew the treeless soil. And the seasonal rains washed the soil from the slopes and tore great canyons in the valleys and the goats and sheep came, with their cutting feet * * * and when the land about the cities was dead the cities died."

"We haven't learned yet," he said.

And, of course, we have not.

In great, rich, surplus America, where vast amounts of wheat, corn, rye, and oats are stored in Government granaries; which we have too much butter, too many potatoes; too much cotton—even here we have not been shaken out of our complacency.

Great cities tremble and see that if pollution of streams isn't halted there will not be enough water to drink. More and more farmland is given over to industry and the pressure grows on what is left.

Suddenly, in the midst of too much, a fear begins to gnaw.

The 112th Anniversary of Hungarian War of Independence of 1848

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. FEIGHAN. Mr. Speaker, by leave previously obtained, I insert in the RECORD my address delivered to the United Hungarians Societies of Cleveland, on Sunday, March 13, on the 112th anniversary of the Hungarian War of Independence of 1848:

Hungary has a proud record of more than 1,000 years of history. In my judgment, the outstanding chapters in this long history point up the unbroken record of dedication by the Hungarian people to human values and the dignity of man. These same values are the foundation of all our liberties and freedom and the high road to national independence.

King Stephen, who reigned in the 10th century, set these goals for the Hungarian people. Down through the ages the Hungarian people have remained staunch defenders of these ideals and basic spiritual values. The long history of Hungary in world affairs is replete with heroic chapters of sacrifice in support of these ideals. This record of deeds by the Hungarian people has earned for their nation the merited accolade of "defender of the West."

It is little wonder then that King Stephen is the patron saint of Hungary and a great saint known and revered by all the Christian world.

The war of independence of 1848 led by Louis Kossuth was based on the historic ideals of the Hungarian people. But Louis Kossuth also received much stimulation from the events which had taken place here, beginning with the American Revolutionary War. Kossuth knew well the ideals and methods of the new American experiment in representative government.

Kossuth was aware that we were pledged to constitutional government and that our Constitution was a guarantee for government of, by, and for the people.

Kossuth also knew that our form of government under law, which took its authority from the consent of the governed, was in sharp contrast with government by the whims and fancy of the few—whether that few be a hereditary aristocracy or an imposed autocracy.

Kossuth felt the powerful stimulation of the meaning of national independence of all Americans, and saw in it the answer to the strivings of his people for complete self-government.

In our times we have seen the Hungarian nation realize the full flower of its national independence. We have also seen that national independence snuffed out by the new colonialism, the new imperialism of the Russian despots. Hungary was a victim of World War II—a victim of profound ignorance on the part of the leaders of the Western World concerning the true nature and intent of imperial Russian communism. This profound ignorance led our leaders to believe that the Russian Communists were our allies and that they would support the pledges of the Atlantic Charter. What a price we paid to dispel that ignorance. Hungary, along with Poland, Czechia, Slovakia, Rumania, and Bulgaria, were subjected to the nightmare of Russian occupation which today plagues all those once independent nations.

It is tragic that the leaders of the Western World failed to realize that the Soviet Union was nothing more than a prison of nations, that is, non-Russian nations. It is equally tragic that they failed to understand that these captive non-Russian nations of the Soviet Union desire their national independence just as much as any subjugated nation of the world. Had the leaders of the Western World understood these basic facts, the world of our times would be quite different than we find it today.

All the world knows that Hungary, true to her long and rich traditions, rose up in total political revolution against Russian occupation in October 1956. The people, from small children to aged grandmothers, rose up spontaneously against the organized tyranny of the Russians. That is why I call the Hungarian freedom revolution a total political revolution. In 5 days the Red Army, which had been publicized as an unbeatable force, was completely defeated and driven from Hungarian soil; and I repeat, this was done by the Hungarian people without any assistance from the outside world. Then, for 5 historic days, the Hungarian people were free of alien rule and on the road to reconstructing their national independence and restoring freedom to all the people.

The events which followed are known equally well to all the people of the world. In the absence of any support from the free world—even words of encouragement from the heads of any Western nation—the Russian despots reinvaded Hungary to crush the provisional government and to smother all liberty and freedom. Here again the leaders of the Western World, particularly the United States, as leaders of the free world coalition, maintained a strange silence. The many pleas for assistance from the Hungarian patriots in their hour of greatest need went unanswered.

In these circumstances, I telegraphed President Eisenhower requesting that he take the lead in supporting the cause of the freedom fighters. Allow me to read to you from my telegram to the President—which I sent to him before the revolution was 3 days old, and 9 days before the Russians reinvaded Hungary:

"I urge you instruct our Ambassador to the United Nations to take necessary steps to bring about emergency session of the United Nations Security Council in order to take positive measures to support the brave people of Poland and Hungary in their great struggle to throw off Russian occupation of their homelands. The cruel acts of aggression committed by the Russian armies against these brave people stand as a serious and imminent threat to the peace of the world. We cannot help but aid the cause of human freedom and dignity throughout the world by taking this step. Our many millions of allies behind the Iron Curtain look to the United States to take the lead at this critical hour in history."

I received no answer from President Eisenhower to my appeal for the Hungarian patriots. The State Department, however, provided an answer to my appeal and the appeal of millions of other Americans to act in support of freedoms cause. Forty-eight hours before the Russians reinvaded Hungary the State Department sent a cable message to the Dictator Tito informing him that "the Government of the United States did not favor governments unfriendly to the Soviet Union on the borders of the Soviet Union." This message was sent in the certain knowledge that Tito would relay this good news for communism to his cronies in the Russian Kremlin. This message stands as clear and precise notice to the Russian tyrants that our Government would not intervene in any action taken by them to crush the freedom revolution then taking place in Hungary.

Within 48 hours after the message was sent by our State Department to Tito, the Russians reinvaded Hungary—in the certain knowledge that they could do so without fear of provoking a counteraction by the United States.

I am confident that if this message had not been sent to Tito the Russians would not have dared to reinvade and today Hungary would be free.

Long after the Russians had reinvaded Hungary and when they were in the process of carrying out mass terror and reprisals against the people, then and only then did the United Nations General Assembly take up the cause of human freedom in Hungary. The wave of public indignation which swept the world forced this action.

You and I know that the General Assembly of the United Nations, after a long and bitter debate, adopted a resolution which condemned the Russians for their aggression against Hungary and called for the immediate and complete removal of all Red army elements on Hungarian soil. The only votes against the resolution in the General Assembly came from the Russian delegation and their trained seals who have been put up as alleged representatives of seven of their captive nations. The record is clear that the Russian imperialists have since not only ignored this resolution, but have exposed it to contemptuous attack.

As of this late date, almost 4 years after the action taken by the United Nations, nothing whatever has been accomplished to support the purposes of the resolution. Recognizing the danger of this situation, the dangers to the cause of peace when one member of the United Nations completely disregards a resolution to prevent war, I have carried on a campaign, the objective of which is to cause the Russians to adhere to the United Nations Resolution on Hungary or be ejected from membership in the United Nations.

The most powerful sanction the United Nations has against aggression is the denial of membership in that body to an aggressor nation. Nothing would harm the cause of the Russian Communists more than to be ejected from membership in the United Nations for nonconformance with the resolution on Hungary. This would be not only a severe blow to Russian prestige, but it would also serve notice to the hundreds of millions of captive peoples and the many submerged nations under Russian control that the nations of the free world were determined to make the United Nations an effective organ of peace with justice. I shall continue my efforts to bring about Russian conformity with the United Nations Resolution on Hungary and I invite you to join with me in this effort.

One of the major considerations which caused me to be one of the original sponsors of the Captive Nations Week resolution was my concern for the growing ignorance of the nature of Russian Communist imperialism in the Eisenhower administration. The present trend toward appeasement of the Russians, which I am sure is well known to all of you here, is the certain course to war. Two world wars in my lifetime were started because of appeasement of the dictators. No thinking person can deny that the more the dictator is appeased, the greater becomes his appetite for more conquest. The only way we can prevent war is to stand up against the dictator and to be firm in our support of the right of all people and all nations to self-government and free political institutions.

The people of the world were uplifted by the action taken in Congress to memorialize the third week of July as Captive Nations Week. The stirring words of this resolution brought a message of hope not only to the hundreds of millions of people who yearn for freedom behind the Iron Curtain, but

also to the people in the some 20-odd countries of the free world which have won their national independence since the end of World War II, and those now struggling for this goal on the African continent. This was the clarion call of freedom's cause, and it was received as such by the multitudes of the world who had been awaiting positive political leadership from the Government of the United States. To the common man the world over, the Captive Nations Week resolution stands as a denouncement of any efforts to appease the Russian dictators.

The people of the United States were shocked when, a few days after Congress enacted the Captive Nations Week resolution and it became the law of the land as Public Law 86-90, President Eisenhower announced that he had invited the bloody handed Russian leader Khrushchev to make a state visit to the United States. This shock resulted from the inability of the common man the world over to reconcile our Government issuing a universal declaration of national independence, and a few days later witnessing our President embracing the leader of the most brutal tyranny known in the long history of mankind. It is little wonder that people the world over are losing faith in our word when the actions of our President belie that word.

I do not know what caused President Eisenhower to invite the new Russian Czar Khrushchev to the United States, although several reasons have been advanced for this strange behavior. Some people hold that the Khrushchev tour of the United States, accompanied as it was with complete access by him to all our mass media of communication, particularly television, was part of the "mirage of peace" concocted by the Madison Avenue soap salesmen. This was intended to be a 1960 political special in which the "mirage of peace" would be used to justify the Republican campaign slogans of peace, prosperity, and progress. Fortunately for the cause of peace with justice, the "mirage of peace" has now been exposed as a fraud and a massive deception of the American people.

For those who innocently believe that by allowing Khrushchev to see first hand the great industrial power of the United States, he would be dissuaded from his evil ways and would, practically overnight, give up the Communist objective of world conquest, the evidence is overriding to the contrary. Khrushchev has interpreted his visit to the United States as a sure sign of the triumph of communism in the world, as an indication of weakness on the part of the United States, as reason to believe that the policy of appeasement guides our foreign policy. Our allies in NATO and SEATO have begun to wonder whether the United States has wearied in its task of leading the cause of human freedom. The uncommitted peoples of the world are showing dangerous signs of looking toward Moscow and its claims to represent the wave of the future. The people of the captive nations behind the Iron Curtain are surely wondering whether the United States is being led down the road to associating the destiny of our Nation with the Russian despots in a common effort to hold the slave empire of communism together. This, my friends, is the Pandora's box in the field of world affairs which President Eisenhower's invitation to Khrushchev has opened up.

But there is a brighter side to life than that which results from the Khrushchev visit to the United States. There are evergrowing signs that the people of the United States are becoming restless and dissatisfied with the failure of leadership by the Eisenhower administration. The American people will not long suffer at being second best, too little, too late, and a national posture of passivity in circumstances of opportunity calling for dynamic action. Here is what I mean by

circumstances of opportunity calling for dynamic political action:

1. The second summit meeting: President Eisenhower must challenge the Russians on the Captive Nations Week resolution. He should make certain that the Russians understand that we mean business by the terms of this resolution. He can seize the initiative by challenging the Russians to permit free and unfettered elections in all of the captive nations listed in Public Law 86-90, now the Captive Nations Week resolution, such elections to be under United Nations supervision.

2. President Eisenhower should challenge the Russians to either live up to the terms of the United Nations Resolution on Hungary or face action by the United States to strip them of their membership in the United Nations.

3. President Eisenhower should demand that the Russians live up to their 1955 summit conference pledges for a free and united Germany. A free and united Germany, attained by unfettered elections under United Nations supervision, would automatically eliminate the Berlin crisis.

If the President fails to take action on these three points it will be fair and proper for the American people to say that the second summit conference was nothing more than a part of the Republican "mirage of peace" and a further step along the road of appeasement.

I share with you the glorious memory of the ages long struggle of the Hungarians to win and maintain their national independence. Like you, I am convinced that the cause of justice among and between nations must be made the foundation stone of our foreign policy. The Captive Nations Week resolution, now Public Law 86-90, proclaims that the aspirations of the people of the captive non-Russian nations for their national independence and freedom, is a powerful deterrent to war and one of the best hopes for a just and lasting peace.

I am completely convinced of the truth of this statement and shall continue to support this cause with all the strength and vigor at my command.

The Right To Vote

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. HOLTZMAN. Mr. Speaker, the right to vote has been described as the very heart of our democratic way of life, and I know of no one in or out of public service who would take issue with this proposition. Given that right, men and women immediately acquire dignity and status. Take it away and you open the door to the totalitarian philosophy.

At this very moment we are engaged in a consuming debate on a bill designed to put teeth into the guarantee against the deprivation of our right to vote, contained in our Constitution, and it is my impression that we will enact into law in this session some form of this bill.

Mr. Speaker, responsible leaders of Government, however, need to do more than just to make certain that qualified persons are not denied this constitutional right. We must perforce, as such leaders, do everything within our power

to enlighten and inform our citizenry that this fundamental right carries with it the crucial responsibility that it must be exercised if we are to enjoy the fruits of a full and free society. Too often have we read statistics that reflect an abundance of apathy on the part of our citizens in the exercise of this great right. Too often have I, as a Member of Congress, been approached by postal workers and civil service employees who advise me that they have been given little or insufficient time to get to the election polls on the basis of economy and efficiency.

In a democratic government, I submit that this kind of thinking is narrowminded and shortsighted. Economy does not just mean saving money; it means spending it wisely and in the public interest. On election day we cannot afford to save this kind of money. Our postal workers, our civil service employees, yes, Mr. Speaker, all our citizens, are entitled to dedicate their thinking and to cast their votes on election day without the pressure of knowing that they must return quickly to work. With this in mind, I am today introducing a joint resolution declaring the first Tuesday after the first Monday of November in each even-numbered year to be a legal public holiday.

This resolution if enacted will give national recognition to the great importance of the exercise by our citizens of their right to vote, and will result in sparking even greater interest in Government participation by all.

In 37 of our States the importance of this day has already been recognized and election day is a full holiday. So it would appear that about three-quarters of the States have already attested to the need for this resolution on a national basis.

I do hope that my colleagues will support me in this effort.

More Evidence of the Need for a New China Policy

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PORTER. Mr. Speaker, our China policy must be changed. This demand is being voiced by many thoughtful persons in the United States and elsewhere. Mrs. Evelyn Isom recently sent me a copy of a letter she had written to the Senate Foreign Relations Committee which indicates the careful consideration given to this question by the Pendleton branch of the American Association of University Women.

Under a consent previously granted I am including the text of Mrs. Isom's letter:

ECHO, OREG., February 16, 1960.
Senator J. W. FULBRIGHT,
Senate Foreign Relations Committee,
Washington, D.C.

DEAR MR. SENATOR: At a recent meeting of the Pendleton branch of the American Association of University Women a "buzz session"

type of program was put on that covered several phases of the Far East. Afterward it was voted that the results of the thinking at this meeting be mailed to you in order to help you assess the opinions of your constituents. Please let it be understood that the following are the opinions of the majority of individuals at the meeting. This is not sent as an opinion in the name of the Pendleton, Oreg., branch itself.

The meeting was divided into seven sessions. Each session discussed a different question and then presented the conclusion before the whole group.

First session: Do you think Moscow and Peiping will split? Can there be peaceful coexistence; e.g., between Russia-United States-Red China? Answer: Self-interest clearly dictates that Moscow and Peiping support each other in their mutual conflicts with the non-Communist world. And if we cannot have coexistence with Russia and Red China then war will be the answer. Perhaps our best contribution toward this would be in relaxing the pressures we exert which keep the Sino-Soviet alliance sealed and which also keep the United States as the No. 1 bogey.

Second. Should we recognize Red China? How do you feel about admitting Red China to the United Nations? The answer the session group gave: Yes, we should recognize her, but we should do a bit of bargaining with her in exchange for the recognition; i.e., have her drop her aggression in Formosa, North Korea, etc. The first need is for more knowledge of actual conditions in Communist China. Also it is very necessary that U.S. Government representatives be trained in their language and their social, cultural and economic life. Our past policy hasn't been a success and recognition would permit more exchange of knowledge of conditions there and here. This is needed to further understanding. We cannot continue to ignore Red China's existence. As for admitting Red China to the U.N.: it was noted that events seem to be pointing to the fact that the United States may soon be outvoted and Red China will be admitted over our protest, so to "save face" perhaps we should make an effort regarding this; e.g., to get them to come in under the same agreements the other nations joined and include a nonaggression clause.

Members of the audience challenged the above and it seems to the writer that the above questions need more publicity both pro and con to the general public; however, the majority of this group seemed to side with the opinions given above.

Third. Do you think Eisenhower's Asian trip achieved anything? Answer: Yes. His trip has been beneficial in Asia for the United States. He listened to their problems and in return received an insight on the magnitude of the Asiatic problems. Also his tour made Americans more aware of Asia and what it means to us.

Fourth. Should we give aid to a country not in our defense alliance, such as India and how can we aid her? Answer: Yes, because it finally will act as a definite benefit to us—India especially, because India is the only hope of democracy in Asia. We need her. We can do it through a combined loan from the United States, the British Commonwealth and Western Europe based on one-sixth of 1 percent of their combined national income.

Fifth. Should we continue support of Nationalist China? Would it be an improvement if Nationalist China won back the mainland? How do you feel about the offshore island problem? Answer: To discontinue our support as soon as gracefully possible to its contention of regaining the mainland, since Nationalist China probably would fall to solve the mainland problems now, and too, it is not worth another war. Nor should we uphold their offshore island

policy, since internationally these islands are considered a part of mainland China.

Sixth. Why do you think Communist China embarked on aggression when she was liked in Asia? Answer: Difficulties and failure of solving some of their internal problems, such as the peasant problem, has caused popular support for the regime to be at its lowest ebb since 1949, so as to break this the regime turned to the field of foreign policy in the form of aggression. This is the common pattern of all dictator-type governments.

Seventh. Should we pull out of Asia? Answer: No, definitely no. How Asia goes politically and economically means the answer to our way of life in the United States and, more materialistically, its potentials for trade with us is limitless.

I hope that you have found this letter both interesting and helpful in regards to the opinion of a segment of eastern Oregonians.

Yours very truly,

Mrs. EVELYN ISOM,
International Relations Chairman, Pendleton, Oreg. Branch, American Association of University Women.

Address by Boyd E. Wolff

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DENT. Mr. Speaker, a few weeks ago I was honored to be guest of a group of Pennsylvania farmers.

At this dinner I heard some fine speakers who covered the farm situation in a way that made it easily understandable to any Member of Congress interested in this serious and vexing problem.

One of the speakers from my district, Boyd E. Wolff, of New Alexandria, Pa., made a pointed and informative talk that should be read by every Member of Congress.

It gives me a feeling of personal pride to be permitted to present Boyd Wolff's talk to the U.S. House of Representatives, as follows:

Mr. Chairman, honorable Congressmen, guests, and members of the Pennsylvania Farmers' Association, when asked to talk with you this evening on the dairyman's view of the farm problem, I was anxious, if I might use that word, to do so for principally two reasons. The first of these being that we are concerned over recent articles concerning the farm problem in national magazines such as Time, Life, and Newsweek, as well as many daily newspapers. These articles tend to picture the farmer as having his hand out constantly asking for free donations from the Government. This is certainly not the case, and continued publicity of this sort will in time jeopardize many beneficial farm programs of the Government such as soil conservation, research, and the work of the agricultural colleges and extension associations. Another reason for my wanting to talk with you is that, as a Pennsylvania dairyman, I have been alarmed with talk about cow or milk production quotas which are being proposed.

Since I did not know when Government first entered the farm picture, I thought I should do a little research. Briefly, here are some of the things I found.

The first talk of Government aiding farmers came after World War I. In 1922, Secretary of Agriculture, Henry Wallace, Sr., called a conference of farm leaders. It is said that most of the plans tried since then originated with this conference. In 1929, Congress set up the Agricultural Marketing Act which created the Federal Farm Board. This had two purposes. The first being to encourage the development of farm cooperatives owned and controlled by the producers. The second purpose was to stabilize farm prices. The attempt to organize farm cooperatives was apparently successful because we have many cooperatives today serving the farmers of the Nation. This early effort to stabilize farm prices, however, apparently was not overly successful and the \$500 million allotted for this purpose were soon gone.

In 1933 the Agricultural Adjustment Act was passed. The object of this act was to reestablish the ratio between prices of things farmers sold and the things they bought based on a 1910 to 1914 relationship. This is what we know as parity. From then until 1939 the Federal Government tried different plans to bring this about. But none were too successful.

Then, during the war, the Government switched from price boosts to price guarantees. But these had no great effect on the economy because prices were often above the price guarantee, due to the great demand. In fact, prices were often held down by price ceilings.

Since World War II these high supports have been continued and must be at least partially at blame for the huge surpluses we have today.

I think you will agree with me that these various plans tried in the past to solve the farm problem have not been successful, although some, like the acreage reserve and the conservation reserve, have undoubtedly helped.

These problems are best exemplified, I think, by wheat. Wheat is the only thing that most of our city cousins think of when they hear of the farm problem. Why is this so?

For the year beginning July 1, 1959, we had the biggest stockpile of wheat in the history of our country—almost two and a half billion bushels. This is enough wheat to supply our domestic and foreign needs for two and three-tenths years. As of November 30, 1959, the Commodity Credit Corporation, or CCC, had almost \$3½ million invested in wheat. This was 36 percent of CCC's commodity investment as of November, while wheat represented only 6.2 percent of the total farm receipts from 1954 to 1958.

Why have these huge surpluses built up? The major reasons, I think, are these.

Under present legislation the national wheat allotment cannot be reduced under 55 million acres.

Any farmer is allowed to grow up to 15 acres of wheat and this brought many farmers to grow wheat outside the traditional wheat belt.

Also the per acre yield of wheat is going up, particularly in the moist regions such as Pennsylvania, and in areas where irrigation is practiced.

The domestic consumption of wheat remained constant for several years. Actually per capita consumption is declining, but this has been offset by the population increase.

Another reason why the surplus has been built up, is that exports have been holding constant. Actually our exports would have gone down if they were not subsidized by the Government at a high cost to the taxpayer.

And finally, in recent years the price gap between wheat and corn has widened so that wheat has been priced out of the domestic feed market.

To reverse this build up of surpluses and to return to the farmers the decisions that

are rightfully theirs, the American Farm Bureau Federation adopted a 4-point plan at their 41st annual meeting in Chicago last December.

These four major objectives are:

1. To encourage expansion of the wheat market.

2. To reduce production incentives by lower price supports.

3. To minimize economic hardships on wheatgrowers while adjustment is made.

4. To avoid shifting the burden of adjustment onto producers of other farm commodities.

To achieve this 4-point plan we recommend the enactment of four specific provisions. They are:

Eliminate all acreage allotments and marketing quotas for wheat effective with the 1961 crop. This would permit each grower to determine for himself the acreage of wheat he could grow on his farm which would make the most effective use of his land, labor, and capital. This would help the traditional wheatgrower to produce wheat at his lowest possible cost of production.

The second point is to establish price supports for wheat on the support level for corn with adjustments being made for differences in weight, nutritive value and buyer preference. This would also begin in 1961 and the price for that year would not be less than 120 percent of corn. Under the current corn program the price is either 90 percent of the last 3 year's market price or 65 percent of parity—which ever is higher.

This price support policy would do several things.

First and probably the most important, it would expand the use of wheat for livestock feed without creating unfair subsidized competition for producers of corn and other feed grains. From 1930 to 1949, excluding the war years, 15 percent of the wheat produced was fed to livestock as it averaged only 28 percent higher in cost than corn. But from 1955 to 1959 only 4.9 percent of the wheat grown was fed to livestock because the cost was 58 percent higher than corn.

Basically we can do only four things with wheat. We can eat it—but I have already mentioned that per capita consumption of wheat is going down. We can export it—but this is limited by international demand and competition. We can store it—but this has proved too costly. Or we can feed it—and this appears to be the best way to increase utilization of wheat. However this only can be done if the price of wheat is not out of line with corn and other feed grains.

The third thing this price-support policy would do is remove the incentive for further expansion of wheat on humid and irrigated areas which are also suited for other crops.

It would greatly reduce the incentive for increasing yields through heavy use of fertilizer.

It would permit growers in traditional wheat-producing areas to return to the practices that offer the greatest efficiency and thus lower production costs.

This price-support plan would also provide a basis for greatly reducing the high costs of wheat exports. Under the present conditions our Government is forced to pay much more for our wheat than for what it sells for on the world market.

And finally it would reduce the criticism of the U.S. export policies by other countries that compete with us on the world wheat market.

The third of the four specific provisions proposed by the American Farm Bureau Federation would be to provide adequate protection for all farmers from the accumulated wheat stocks held by CCC. This would be done by providing that no wheat leave CCC storage for less than 150 percent of current wheat prices. Over several years wheat stor-

age could be used domestically or exported without competing with current wheat production. The wheatgrowers need this 150-percent price protection so that wheat produced in the future without price supports would not have its price depressed by these accumulated supplies.

The last specific provision would cushion the effect on producers of wheat and other grain feeds caused by the reduction in the support level and elimination of acreage allotments and marketing quotas. This would be done through a substantial increase of the conservation reserve program.

How does all this affect me as a Pennsylvania dairyman? Mainly it would reduce the cost of the feed I buy by bringing the price of wheat down to its true relationship with corn and other grains.

The members of the Pennsylvania Farmers' Association strongly recommend immediate action toward this solution to end the wheat crisis. I feel the only true test of a farm program is that it be in the long range interest of the public. And I hope you will agree that this four-point plan is that.

Also as I stated earlier, of deep concern to myself and the many dairymen in the over 10,000 membership of the Pennsylvania Farmers' Association, is talk of production quotas and direct payments to dairymen. Both the American Farm Bureau and the Pennsylvania Farmers' Association have repeatedly voiced their strong opposition to production quotas and direct payments to producers. Rather we favor less interference from the Government in the marketing system so that this system would be freer to operate effectively and efficiently.

If we can judge by what happened to other commodities when under strict production and price controls those things would happen to the dairy industry.

Exemptions from the production quotas would be inevitable. This is comparable to the 15-acre exemption of wheat production whereby many farmers who could not economically produce wheat did so. Applying this to the dairy industry it would mean that many small, inefficient dairy operations would spring up. Also areas of our country which are better suited to other types of agriculture would enter the dairy picture. These new dairy farms, by production restrictions, would be small and inefficient. In a long run this would remove the incentive for efficient operation and would eventually mean a higher cost of dairy products which would be paid by tax money rather than by the consumer at the store.

Another effect of production quotas would be that farmers now making their living by dairying, like myself, would have their quotas reduced. This is clearly demonstrated by the burley tobacco industry, which shows where production controls ultimately lead. Since the minimum allotment per farm is one-half acre, cuts in allotments had to come from the larger producers. In 1955, 60 percent of the burley tobacco producers had the minimum quota of one-half acre. This does not leave an operation large enough to be efficient or allow the producer to make an adequate living. It is foreseeable that the same thing could happen to the dairy industry.

Also these quotas would make it much harder for a young farmer to get started in the dairy industry. He would either have to inherit or buy a quota which would add to the already costly task of getting started dairying.

I realize that there are always some requests for the Government to step into agriculture and guarantee a high price. Some of these people, I'm sure, don't realize that production quotas must follow guaranteed prices. I also wonder what the background is of those who make these requests. Are all of them full-time farmers?

I have a neighbor back home who is constantly asking for subsidies and controls. Let's briefly examine his background.

Although he had little farm background or experience, he bought a farm during the war expecting to make a quick financial "killing."

He works in an industrial plant in Pittsburgh at something over \$3 per hour, which is all well and good. However, due to the small amount of time he can devote to the farm it is a small operation. It is also inefficient. At one time last year his 17 milking cows were producing 24 gallons of milk a day instead of the 85 to 100 gallons that should be expected of that many cows.

This man constantly complains that his farm is not profitable because, as he reasons, it is not subsidized by the Government as are some farms of our economy.

Let's compare this man with my other neighbors and many members of the Pennsylvania Farmers' Association. They are constantly striving to adapt their dairy enterprises to meet changing conditions. They are trying to be more efficient through the use of labor-saving machinery such as gutter cleaners, silo unloaders, pipeline milkers, and improved tillage and harvesting equipment. From observing these people I am not worried about the family farm's future in America, for these farms are still managed and often operated only by the farmer and his family. They are not complaining about the lack of Government help nor did the farmers of our 13 Colonies who showed the world the price they were willing to pay to be free from orders and unfair treatment.

Along with the Pennsylvania Farmers' Association and the American Farm Bureau Federation membership, I would much, much rather face the future producing milk, or any other agriculture product, in an economy controlled by the balance of supply and demand rather than in an economy controlled by the Government.

Tight-Money Policy

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ULLMAN. Mr. Speaker, under leave to extend my remarks, I wish at this time to enter into the RECORD a resolution passed recently by the board of directors of the American Public Power Association. This resolution indicates, I think, the growing feeling of concern across the country with regard to the tight-money policy and in opposition to the proposal of H.R. 10590 to lift the ceiling on interest rates in particular. The resolution reads as follows:

RESOLUTION BY BOARD OF DIRECTORS, AMERICAN PUBLIC POWER ASSOCIATION

Whereas the electric power industry requires an unusually high amount of capital investment per dollar of revenue; and

Whereas much of this investment by local publicly owned electric utilities is financed by long-term borrowing; and

Whereas the interest rates which apply to this borrowing therefore have a substantial effect upon the ability of these local publicly owned electric systems to supply an abundance of low-cost power to their consumers; and

Whereas the interest rate on public agency borrowing has recently approached the high-

est level in a quarter of a century: Now, therefore, be it

Resolved, That the board of directors of the American Public Power Association, a service organization which represents more than 1,000 local publicly owned electric systems throughout the United States, urges the Congress to support policies favorable to low interest rates, and to oppose legislation such as H.R. 10590, which would breach the traditional ceiling on long-term Federal borrowing and would adversely affect the interest rates on bonds issued by local publicly owned electric systems.

White Rose Organization Fights Castro

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a statement of the White Rose Organization which is fighting for a free and democratic Cuba and against the dictatorship of Fidel Castro. This is a very worthwhile statement and I commend it to the attention of all my colleagues and the American people.

The statement follows:

FIDEL CASTRO JEOPARDIZES THE SAFETY OF THE UNITED STATES AND THE ENTIRE WESTERN HEMISPHERE

Fidel Castro's recent pact with the Soviet Union, after an 8-year severance of Cuban-Soviet diplomatic relations, threatens the physical safety of the United States, and all Americans of the Western Hemisphere. As a result of Fidel's "sweet" deal, he will be paid off in Soviet aircraft for his sugar. Since no Cubans can either fly or service these Migs, Soviet air and ground crews will man these enemy airbases. Migs have already been delivered from Czechoslovakia, Raul Castro's old stamping grounds.

Missile bases now under construction deep in the Cuban interior round out an entire enemy striking force only 90 miles from our southern coast. Ninety miles. That's the distance between New York and Philadelphia. A little less than the distance from Washington to Richmond or Cleveland to Cincinnati. Let that filter into your thinking. Not much comfort in knowing the enemy is encamped minutes away by jet and missiles. How much of a warning can you get from that quarter?

Bases from which the enemy can strike without warning are now primary facts of life for Americans if they continue to tolerate that two-bit Hitler in Havana.

Fidel, the muddled messiah, has surpassed Hitler in sheer disrespect of other nations and their rights. Castro has demonstrated his disregard of decency and fairplay in his dealings with the United States, historically Cuba's friend and ally. Not only has he seized American property in Cuba without payment, and has exposed Americans to direct Soviet attack, but he violates the most elementary international relationships by sending his henchmen to encroach upon American liberties in American cities. Castro gangsterism is rampant in New York and Miami.

American rights of free speech and lawful assembly were eliminated by Castro & Co. on January 28, 1960, in New York when a group of Cubans and American citizens, in-

cluding women and children, and their police escort were attacked by a large, armed and howling mob of fidelistas. Central Park South was turned into a riotous battlefield because the White Rose Organization, anti-Castro Cubans, meeting to honor Cuba's liberator, Marti, were going to say things that little Fidel wouldn't like to have said. New York's shrine to Marti, Cuba's White Rose freedom fighter, was desecrated. The organization's wreath of white roses was flown to Havana's Central Park where it was triumphantly burned by "victorious" fidelistas. Our Bill of Rights bit the dust. This staged riot was really an aborted assassination attempt directed at White Rose leaders. Masterminded by Fidel and engineered by Havana hoods, it was led by a convicted cop killer and pimp. Reaching a new low in exploiting basic diplomatic courtesies, Castro fixed up this unsavory character with diplomatic credentials to fly to New York on an airborne mission of assassination. New York police were helpless to deny entry to this known criminal because of "diplomatic immunity," and American citizens were endangered as a result.

That same evening of January 28 Fidel's followers picked a New York hotel meeting of the White Rose Organization. Scores of police protected the area where quasi-uniformed Castro gangsters set up skirmish lines. On this occasion, the only blood shed was that of a young Brooklyn high school graduate who gave them no "provocation" other than the white flower in his school prom dinner jacket. Any white flower makes Fidel and friends see red.

These were not the first breaches of peace in New York City by 26th of July movement gangsters. Assaults on persons expressing opinions critical of Castro are not uncommon in New York City's Spanish-speaking areas by roving bands of fidelistas. Fidel's well-known hypersensitivity to criticism has rubbed off on his bellicose followers. Assaults on other persons, robbery of their homes, patrolling of streets by Castro auto patrols are weekly events as Castro's hatchmen continue their rampage. Miami has been the scene of street battles, attempted assassinations, and attempted kidnappings. Forays by fidelistas in the United States are played up in the Havana press to encourage their bully boys. Where will they stop? Even the Gestapo never had it so good in "the good old U.S.A."

MEET THE WHITE ROSE ORGANIZATION

In the tradition of Jose Marti, the "George Washington of Cuba," who formed an organization for Cuban freedom himself in New York City in the 1890's, the White Rose Organization is striving to free Cuba from her present mid-twentieth century bondage and Soviet domination. The White Rose Organization is not affiliated with, nor does it sympathize with, the former dictator, Batista. As an independent organization, it has neither contact nor commitment with Trujillo or the Cubans who are wasting their time expecting help from the Dominican dictator in liberating Cuba from Castro. Do not be misled. Our enemies distort the truth by alleging a tie between the late and unlamented Batista regime and the White Rose, this is false and misleading. The White Rose Organization is independent. The White Rose is "clean."

In the tradition of Marti, whose humanitarian principles are milestones in Cuban history, the White Rose Organization preaches a gospel of brotherly love. "Cuba sin odio"—Cuba without hate—Cuba without vengeance—Cuba without blood baths. Fidel's fate when he is overthrown by the White Rose will not be that of a Mussolini. A nice quiet place in the country will be reserved for this "Little Boy Lost" who has yet to find himself but who has done much damage to Cuba and America by his ruthless opportunism. Nor will his followers shed

their blood in what should be a bloodless change of government. Capital punishment will be outlawed in Cuba.

When democracy is restored in Cuba, landowners whose lands have been subjected to uncompensated confiscation will receive immediate and equitable adjustment.

Many attempts at social reform were tried during past regimes. What social reforms have been initiated will be continued with respect to justice for all parties concerned. Confiscated properties honestly acquired by the original owners and which were under production will be restored to them. Confiscated properties which were lying fallow will be purchased from their owners in order to make operable a program designed to raise the standards and the way of life for farmers and workers according to the principles of Cuba's democratic constitution of 1940.

Most important to Americans is the White Rose's unalterable stand against communism in Cuba. Castro's apparent indifference to communism is due to his being a rebel without a cause, except the cause of Castro the Righteous. (His telethons are symptomatic.) In effect Castro has compromised Cuba to communism and threatens the security and solidarity of this hemisphere against Soviet military attack. Communists in Cuba are not going to serve Cuba but their Soviet masters.

Americans have a tendency to forget that the Soviets are fighting a sworn ideological warfare against our way of life. They, the Soviets, have not stopped fighting since 1917 and will not stop fighting until the world is sovietized. In Cuba, 90 miles south of Florida, they have gained a tremendous tactical advantage in capturing, courtesy of Castro, an advance outpost, minutes by jet and missile away from the United States. The White Rose Organization stands for:

1. Restoration of a liberal, democratic government in Cuba and removal of any dictator in a bloodless change of government. No executions. No torture.
2. Elimination of Communists from Cuba; outlawing of communism in Cuba again; abrogation of Iron Curtain country treaties; destruction of Soviet bases in Cuba.
3. Land reform with justice for all. Property seizures adjusted.
4. Renewed confidence of foreign investors in Cuba with new investment opportunities in free enterprises.
5. Renewal of historical bonds of friendship between the United States of America and Cuba.

The White Rose Organization with the help of American friends will eliminate the threat to our mutual security.

Since the White Rose Organization embodies the best of Cuban and American ideals and principles, it already has hundreds of thousands of organized adherents in Cuba fighting in the underground, waiting for support of their plan to remove Fidel Castro from power.

It is the purpose of the White Rose Organization to direct these Cubans and by every means to help them overthrow the Castro Red regime. The White Rose Organization will work until Cuba is liberated and a liberal democratic government exists in Cuba, through free supervised elections.

The White Rose calls out Cubans and friends of Cuba. The White Rose, formed by Cubans and Americans, summons all Cubans and friends of Cuba to strive for the overthrow of Castro and the Communists. Everyone, if sincerely pro-Cuban and anti-Communists, is welcome to be integrated into this fight for democracy and dignity, adherence to the principles of Christ, Marti, and Lincoln, "With malice toward none and charity for all," is the only membership requirement.

Statement by Hon. Douglas Dillon

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a statement made before the Foreign Affairs Committee by the Honorable Douglas Dillon, Under Secretary of State, on March 3, 1960. The statement deals with the impact of the mutual security program on the state of our gold holdings and on the U.S. balance of payments. This is one of the best statements I have read on the subject. It is clear, concise, enlightening, and informative.

The statement follows:

SUPPLEMENTARY STATEMENT BY THE HONORABLE DOUGLAS DILLON BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE, MARCH 3, 1960

Mr. Chairman, I understand that you would also like me to address myself to the impact of the mutual security program on both the U.S. balance of payments and the state of our gold holdings.

The only impact which can be measured even approximately is the amount of mutual security program expenditures made directly in the United States as compared with the amount expended in foreign countries. We have attempted such an estimate for fiscal year 1959. Total expenditures under the mutual security program were \$3,863 million; of this amount about \$2,860 million was expended within the United States. The remainder, about \$1 billion, was spent to purchase goods and services in foreign countries. This \$1 billion, amounting to slightly more than a fourth of total mutual security program expenditures, may be called the direct effect of the mutual security program on the balance of payments in fiscal year 1959.

However, it would be misleading to conclude that this measurable direct effect tells the whole story. In fact, the \$1 billion spent abroad affects the U.S. balance of payments only to the extent that these funds are not used for purchases in the United States. The recipient countries may spend them to make purchases in the United States or they may spend them in third countries which in turn make purchases in the United States. To the extent that such dollars do return to the United States, the balance of payments impact is reduced accordingly. Under the conditions prevailing 10 years ago, virtually all such expenditures were eventually spent in the United States. Even in recent years when the reserves of some foreign countries have increased substantially, many other countries remain so short of foreign exchange that any increase in receipts is likely to be converted directly into increased expenditures for imports.

A rounded judgment of the overall impact of the mutual security program on our balance of payments must look further. Thus, over the past 3 years sales for dollars of military equipment under the mutual security sales program have averaged \$372 million a year. These sales are closely related to grants of military equipment in earlier years to countries now able to pay for all or part of their replacement and maintenance needs.

Moreover, the level of economic activity and the consequent purchases of U.S. goods

by countries which received mutual security program assistance in prior years would undoubtedly be substantially lower at the present time if such aid had not been extended.

These indirect effects are not susceptible to measurement. It is impossible to estimate what the balance of payments of the United States would have been in 1959 had there been no mutual security program in the preceding years.

Similarly, it is very difficult to predict the effect of drastic reductions in the mutual security program proposed for fiscal year 1961 on the U.S. balance of payments. I am not at all sure that any improvement would result; if it did its magnitude would certainly be small.

Expenditures under the mutual security program are now running about a third lower than they were between 1953 and 1955 when our balance of payments situation was much more favorable than last year's results. The deterioration which subsequently set in occurred in spite of the reduction in mutual security program expenditures, not because of any increase in such expenditures. It resulted primarily from a decline in our exports at a time when our demand for imports was rising. Some of the factors in this situation were of a temporary nature and have since been corrected. It is through the encouragement of U.S. exports that we can and should look for improvements in our balance of payments. This we are doing. We have moved energetically and successfully during the past year to obtain the removal of remaining restrictions against our dollar exports. The January figures on our commercial exports and imports which have just become available are most heartening. Our January commercial export surplus amounted to \$354 million compared to \$94 million in January last year. While 1 month does not make a year it is worth noting that the improvement in the one month of January alone amounted to \$260 million. This clearly indicates that a very substantial improvement in our overall balance of payments picture can be expected in 1960.

If the mutual security program were to be reduced out of concern for our balance of payments, we would have no assurance that a significant improvement would result. On the other hand, the adverse economic and political effects in those foreign countries that look to us for help would be substantial. Our national security would be seriously impaired. It is these effects that we cannot risk; it is these effects that we cannot afford.

Representative Gilbert Elected To Serve on House Committee on Post Office and Civil Service

EXTENSION OF REMARKS

OF

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. GILBERT. Mr. Speaker, I am gratified to be elected to serve on the House Committee on Post Office and Civil Service.

I am very happy to have the honor to serve on this important committee, whose work directly affects the lives of all of us. It will give me an opportunity to be of special service to our post office and classified Federal employees, as well

as to work for the best interests of all the people of our Nation in all matters under the jurisdiction of our Post Office Department.

The Disarmament Carousel

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, with the constant barrage of phony Soviet propaganda that has spread throughout the world, the danger develops that their diabolical smokescreen might distort peoples' thinking from the issue facing us in the cold war. It is always a source of gratification to me when an outstanding newspaper presents a penetrating analysis of our diplomatic struggle with the Soviets.

The Chicago Daily Tribune, well known to all, carried the following editorial in a recent issue, which I am including in the RECORD for the consideration of my colleagues:

THE DISARMAMENT CAROUSEL

The Soviet Union barely bothered to glance at the latest comprehensive scheme for disarmament submitted by the United States and all its Western allies at Geneva before turning it down.

The details are of no great consequence. It can be said that the scheme would probably work if all the nations were intent on disarmament. As much could be said for most of the other Western proposals which have been tendered to the Reds during the last 14 years.

So the Communist reaction was awaited with no great suspense and when it came was no surprise. Soviet spokesmen always have resorted to one formula or another in saying the Western plan won't do. Either they flatly say no, or they engage in such prolonged haggling that the outlines of the plan get lost in a fog of technical objections.

Of late the Soviet tactic is to stand on Premier Khrushchev's argument last year before the United Nations that there is no trick to disarming. According to him, everybody would simply disarm within 4 years and there would need to be no inspection or control. You would just trust old Khrush.

That is not good enough for America and its allies. They feel that the thing has to be foolproof; so the latest approach provided for full policing of all parties. There would be ground inspections, aerial inspections, radar systems, advance notice of all flights of aircraft, etc. The Soviet reply to this sort of arrangement invariably has been that Russia cannot suffer the indignity of being spied upon.

Furthermore, the Western plan, if carried to its goal, would create an international policing agency with more force than any nation individually possessed. We cannot conceive that the Soviet Union would ever agree to that, and we are not sure that it would even be a good thing if the United States were to subordinate itself to any independent force which would enjoy mastery.

The whole issue of disarmament is out of focus. It serves the Soviet purpose of creating propaganda, in which the Communists are represented as having a monopoly on peaceful intentions. Disarmament will re-

main a practical impossibility as long as the Soviet Union harbors the hope of gobbling up the world, and as long as the subject peoples hope that some day the Reds can be evicted from their satellite empire.

The United Nations originally came into being as an instrument for preserving the status quo among "the great powers" at war's end. Some of those powers soon found they were no longer great. They became dependent on the military umbrella provided by the United States. But the Soviet Union quickly demonstrated that the military occupations at the end of the war were not temporary. Russia had come to stay. More than that, as aggressive feelers in various directions and the subversion of Hungary and Czechoslovakia proved, Russia was intent on reaching out.

As long as that ambition exists, Russia is not going to disarm and the West cannot afford to. It still requires coinciding interests to make for peace.

"What Goals for Africa's New Leaders" Topic of Raymond J. Smyke

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. BOLAND. Mr. Speaker, Africa is one of the areas of the world that presents many challenges today, challenges to both Americans and the African leadership of the emerging and newly independent countries in that continent.

The majority of today's African political leaders came from the teaching profession, as have many Members of Congress and other political leaders in the United States at the municipal, State, and national levels of Government.

Mr. Raymond J. Smyke, of Washington, D.C., the special assistant for Africa for the World Confederation of Organizations of the Teaching Profession, an international nongovernmental organization of professional teachers' associations whose secretariat is also in Washington, delivered a most interesting and enlightening speech Tuesday night on the subject "What Goals for Africa's New Leaders."

The address deals specifically with the teaching profession in Africa and the role that African teachers have played in the development and political leadership of African countries. Mr. Smyke, who is a graduate of Georgetown University School of Foreign Service and has a masters degree in African studies from Boston University, spoke at Baltimore Junior College before public school faculty members in the "Great Decisions Program," sponsored jointly by the Foreign Policy Association and the United Nations Association of Maryland. His address was carried over WJBC-FM radio. Under unanimous consent I include Mr. Smyke's address with my remarks, as follows:

Mr. Moderator (Mr. Dukert), distinguished guests, fellow teachers, I would like to take a few minutes before launching into the subject of tonight's discussion and introduce two African guests who will assist in answer-

ing some of the difficult questions I know you will pose at the close of the lecture.

Mr. Thomas Odongo-Okelo is a graduate student at Howard University from Kenya, East Africa. Tom has been studying in this country for several years, and more recently has been lecturing at Howard prior to completing final arrangements for his return home. In addition to lecturing and his heavy course work at American University, Tom is executive secretary of the All African Students Union of the Americas, which has its headquarters at Africa House in Washington.

Next to Tom is Chinaka Essiaba, a graduate student in biology at George Washington University; his home is Nigeria. Chinaka is studying to be a teacher. Some of the difficulties and hardships these men faced to secure their education go beyond what we ordinarily think of as working your way through college. Both are married—Tom to an American wife who will return to Kenya with him. Chinaka's wife was with him during the first year and a half. Now she is the only American trained half-dresser in the large city of Aba, Nigeria.

One more point—these men do not know what I'm going to talk about, there is no prearrangement to agree or disagree, but they have known me for some years and I have known them and I believe we understand each other's values and beliefs and ideas on Africa. We are also on a common ground because we are basically teachers.

Since I've been asked to explain what WCOTP is, I'll do so briefly. The World Confederation of Organizations of the Teaching Profession is an international nongovernmental organization of professional teachers' associations. This says a lot, but let me explain. WCOTP has in its membership 161 national and associate teachers' organizations in 61 countries throughout the world. Although there are no individual members belonging to it, the total number of teachers represented is almost 4 million. The Secretariat is in Washington with offices in London, Paris, and New Delhi. The Paris office deals largely with Unesco and acts as a liaison with European teachers' organizations, while the New Delhi office serves Asia. An office will soon be established in Africa. WCOTP is governed by an annual assembly and executive committee. Since its founding in Copenhagen in 1952, annual delegate assemblies have taken place in Oxford, Oslo, Istanbul, Manila, Frankfurt, Rome, Washington. This year the World Assembly will be held in Amsterdam, with three regional conferences in Malaya, Uganda, and Costa Rica. Simply stated, the purpose of WCOTP is to enable members of the teaching profession at all stages of education to exert an influence corresponding to the importance of their social function. It may surprise you to know that many of you are members of WCOTP through your affiliation with the National Education Association in the United States, a member of WCOTP. The Secretary General of WCOTP and the man very instrumental in its founding is William G. Carr, whom many of you know.

How does Africa come into this picture? Well, there are 11 WCOTP member organizations in Africa representing over 200,000 teachers. The WCOTP program for Africa and its links with teachers the world over plus the development of truly professional organizations of teachers there, is my specific responsibility within the framework of WCOTP.

Now all this is going to taint my comments tonight because I look at everything in Africa in the light of educational development there. As a member of the secretariat of an international nongovernmental organization, my comments will be a political without stress on any one country's achievements or lack of achievements in Africa.

Perhaps this is where my two colleagues will be most helpful.

Being teachers, you may be interested to know that the new leaders, whose role we are discussing tonight, are in the clear majority former teachers. Let's run down the list quickly. I am here referring to those men who are either recognized as nominated or elected leaders of a party, government, or state as well as to those who are popularly the leaders in their own country or area. In some areas of the French community and the Congo it is difficult to discern who the real leaders at this time are. Nevertheless, let's begin with Ethiopia in the northeast and work around the map. While Haile Selassie is not a teacher—he is the only chief of state, anywhere in the world, who holds the ministerial portfolio of education—indicating the extent of his interest in education for his country. Neither General Abboud of the Sudan, a military man, nor Premier Abdullah Issa of Somalia were teachers. However, the first Sudanese Prime Minister after independence in 1955 was a distinguished teacher. In Uganda there seems to be no definable national African leadership. In Kenya while Tom Mboya, whose name is most closely associated with African advancement was never a teacher, other equally important people like Kikomo Kiamo, who received his Ph. D. from the University of California and Ronald Ngala, who was a co-leader in the recent London Constitutional Conference, are both teachers. Dr. Kioko is presently lecturing at Royal Technical College in Nairobi. In Tanganyika Julius Nyerere who is presently in the United States on a leadership grant and who without doubt will be the first Prime Minister in Tanganyika—was both teacher and headmaster for many years. In northern Rhodesia Harry Nkumbula, longtime leader of the African National Congress, was a teacher; in Nyasaland Orton Chirwa, head of the Malawi Congress Party, was a teacher and college lecturer. African political activity in southern Rhodesia is in ascent. In the high commission territories of Basutoland, Bechuanaland, and Swaziland, while advancing economically, remain politically quiet. In the Union of South Africa there are no Union-wide parties as such. Although an African or Bantu National Congress operates, it has no influence on the basic decisions taken in the management of South African affairs. A more recent development in the area of southern Africa is the formation of two political parties in the disputed territory called South West Africa. The territorywide group, the Southwest Africa National Union, known as SWANU, is led by Willy Kalkuete, who trained to become a teacher at the University of Capetown. The other party, the Ovamboland People's Organization, though larger, is confined to members of the Ovambo Tribe. In the Portuguese territories of Angola, Mozambique, Guinea, and Cabinda there is virtually no political activity or emerging indigenous leaders. It is safe to say that none of the identifiable leaders in the Congo were teachers. Up until 1954 there was no provision for higher education or professional training for the Congolese. It was not until 3 years ago that a Congolese could leave the country for anything except seminary training.

Thus today it is reliably reported there is not one Congolese doctor or lawyer in the Congo. In the Cameroons, which became independent on January 1, this year, Prime Minister Ahijo as far as I could determine, was not a teacher. In Nigeria the Federal Prime Minister Alhaji Abubakar was a teacher for many years, as was the Premier of the northern region, Al Hadji Sir Ahmadu Bello, the Sardauna of Sokoto. Dr. Azikiwe, former Premier of the eastern region and now President of the Federal Senate, taught school in the United States after finishing his education here. Dr. Kwame Nkrumah,

of Ghana, trained as a teacher, but never taught. In about half of the 12 French Community countries the leaders were former teachers.

This brief survey is significant for several reasons. In addition to the popular leaders who were formerly teachers are the countless supporting officials in elective and public service posts, in such numbers that it is safe to say the present and foreseeable future African leadership are and will be in the majority from the teaching profession. Now this statement usually brings smiles to American colleagues who think about any of the scholarly studies on the general subject of "Why the Teacher Leaves the Profession."

Very briefly, if I may offer my own interpretation, in many parts of Africa the only connection that indigenous people had with the written word was through local teachers. Add to this the teacher's ability to speak the white man's language as well as his tribal tongue and you have a natural leader in any group. For many, many years the only access to further education for many Africans was through the teacher training center, not a college or institution of higher education, but merely a different kind of secondary school. The early west African elite so often written about, the sons of first families from the Gold Coast and other areas who went to England around the turn of the century, returned to the leisurely life they were accustomed to. Since there was then really no arena for politics as it is known today, the elites entered the professions—only rarely did they go into teaching. So Africa's sons who became her leading educationists were in every sense homegrown. The contribution of Fourah Bay College in Sierra Leone to education in west Africa is significant, even though graduates were in extremely limited numbers. It was an entirely natural involvement for teachers, dissatisfied with the pace of political development after the war and urged on by less literate, urbanized countrymen, to lead local organizations which in many cases led to national prominence. This is a brief and simplified picture of one of the results of several decades of ferment. But, in the final analysis, who were best prepared, the only prepared people to assume the leadership role foisted upon them by their own people? In retrospect it is providential for Africa that its leaders, with supporting cadres, were from the ranks of teachers who brought to their new calling the basic characteristics so briefly summed up in the descriptive term—a good teacher—and all that this implies.

Placing the so-called new leaders in perspective, we must yet discuss their roles. The organizers of the "Great Decisions" program chose an apt title for the African discussion, leaving just enough rope at the end for any lecturer to hang himself if he so wishes.

It would appear that Africa's new leaders have both general and specific goals to deal with. For convenience these may be placed in several rather general categories.

GENERAL GOALS

1. Independence—for those who have not yet attained it.
2. Rapid economic development.
3. Rapid educational development.
4. Consolidation of position of leadership.
5. Interregional cooperation.

SOME SPECIFIC OF SHORT-TERM GOALS

1. Africanization of the public service.
 2. Attraction of foreign capital.
 3. Development of natural resources.
- There are other goals, with somewhat different emphasis, but in my estimation it all boils down to those just mentioned. Let's go into each one briefly.

INDEPENDENCE

This requires, perhaps, least comment of all. The fact sheet prepared for this discussion is excellent and if you all did your

homework, you will know that the surge of nationalism throughout Africa culminating in independence is and has been the primary objective of all African States since the end of the war. The exceptions of course, are such independent countries as Liberia, the Union of South Africa, and Ethiopia, which has been independent for all but 5 of its 3,000-year history. This is not the forum to discuss the many aspects of nationalism and the drive for independence which are facts of the mid-20th century which the family of nations must adjust to. My only comment here is that we are extremely fortunate to have such a viable and accommodating United Nations Organization which can receive these new nations on equal terms and with equal respect of all nations. The leaders in dependent territories today are leaders because they champion and strive for independence harder than the next man. Conversely, it is difficult to conceive of an African leader who is cautioning his people to go slow and wait until everything is ready.

ECONOMIC DEVELOPMENT

After independence the African leader today must carry on in a business-as-usual basis with reduced or altogether withdrawn grants from the mother country. Thus the need, even before independence, to cultivate a climate for investment and technological aid. He must show that under the new regime there will be stability and ancillary supports for an economic complex, including transport and banking facilities, but perhaps most important—a pool of trained workers, not technically trained, for many companies prefer to do this themselves, but merely the qualified clerks, secretaries, accountants, machine operators to carry on the day-to-day business operation. This is a problem which is tied up very closely with general goal No. 3, rapid educational development.

EDUCATIONAL DEVELOPMENT

Most if not all the dependent and recently independent countries have inherited their educational systems from the mother country. In the British and former British areas, for example, the system of primary, middle, and secondary school education was styled to train an elite to man the services of government under expatriate direction. While the Colonial Office was able to keep pace with changing constitutional demands for most of the territories, the educational system was not so flexible. Any expansion of the system with the shortage of trained teachers and already strained educational budgets implies a lowering or at least compromising of the previously high academic standards. African parents are likewise leery of any system of education that may not lead to the university. There is the very real problem of African students, who read for the arts at the university, because manual labor or a skill developed with the hands has never been held in high regard; thus students in engineering, agriculture, animal husbandry, and forestry, for example, are relatively few compared to those in the arts. The leaders must strike a balance encompassing rapid increase in the number of places for school children at all levels, with an increasing number of pupils in mechanical and manual arts, and in teacher training institutes, while not diluting the quality of the country's education—all this on limited budgets, with minimum outside help.

I place consolidation of position of leadership No. 4 because it is generally a year or two after independence that threats to leadership arise; in the interim developments under 3 and 4 above, take place during the honeymoon period of a new country. Consolidation of leadership is brought about in several days. Since we cannot expect new countries to operate as full-fledged constitutional democracies, strong central leadership must emerge. In a constitutional

democracy, when a loyal opposition has full play, that opposition must be able not only to criticize and bring about the fall of the government of the day, but it must itself be in a position to assume responsible leadership after it has brought about the fall of a government. In no case, to my knowledge, is an opposition in a new country able to carry out this mission. The alternative is a consolidation of leadership in one person, and generally one party, or chaos and perhaps violence. Consolidation of leadership is going on now in Ghana, Guinea, and Cameroon. One of the manifestations of consolidation of leadership is goal No. 5, interregional cooperation.

INTERREGIONAL COOPERATION

There are, of course, many reasons for such pacts as the Ghana-Guinea Union, the Mali Federation, the proposed link up of the two Cameroons, and the greater Somalia movement. Among the reasons are economic advantage, greater prestige at home and abroad, and the transfer of aspects of leadership consolidation at home to an exterior arena.

All of the five long-range goals I have mentioned go on somewhat before and after independence. They become a part of the fabric of everyday life and the work necessary for reaching the goals is one of the binding factors in keeping the new country together. The specific or short-term goals may be termed the visible aspects of the country's life—those that you see when you are there.

Africanization of the public service means exactly that—the striving on the part of leaders and their governments to replace European or white civil servants with trained indigenous people. There are several reasons for this: First, it is much cheaper to have your own people on a unified salary scale than to pay premium salaries for expatriate staff; second, it is a mark of responsibility and progress when the public or civil service is entirely African; third, it makes for fewer areas of friction in the running of the machinery of government. Africanization is closely tied with education and economic development. The newer countries realize that for some time to come they will need to have European experts to advise on technological development—experts from such international bodies as the U.N., WHO, and FAO, some even from the former mother country. But expatriate staff to run the common services of government is what Africanization is designed to replace. It is carried out by crash programs such as the emergency science training scheme in Lagos, Nigeria, by large numbers of students attending schools abroad; and by building up the facilities of local institutions of higher learning.

THE ATTRACTION OF FOREIGN CAPITAL

In most cases after independence the largest grants from the mother country, while not completely withdrawn as in the case of Guinea, are sharply curtailed. Into the breach must come loans and grants for day-to-day obligations from public and private international lending agencies. Most important, however, for the exploitation of a country's natural resources, either agricultural or mineral, is private or corporate investment capital. There must be a climate for investment and the leader of the new country is his own weatherman in this case. He is in control of the various factors which either attract or deter corporate capital, and if his country goes about it on a businesslike basis, there is always investment capital to be found. Last, but closely linked to the attraction of foreign capital, is the development of natural resources. As long as a quarter of a century ago when few Americans were seriously interested in Africa, Prof. William Leo Hansberry, the noted African archeologist and prehistorian from Howard University, was showing graphically that Africa was nature's favored continent, from almost every conceivable aspect:

mineral wealth, including the largest deposits of the world's most strategic metals; water power; spoils; agriculture potential, including cocoa, rubber, and forestry products; labor supply; rainfall, comparative absence of nature's disturbances, such as cyclones, hurricanes, floods, earthquakes; and recently petroleum. These resources and combinations of them exist in almost every territory of Africa. The leaders realize that of themselves they cannot muster the capital and means of production to exploit these resources; nor are they of any value in the ground. Thus the quickest road to financial solvency and independence from outside grants-in-aid is to develop whatever you have in your own backyard. This is a high priority on the timetable of practically all African leaders, because with economic independence comes the prosperity long overdue to the people of Africa.

In concluding I want to emphasize again the importance of teachers and the teaching profession in every aspect of African life, in and out of the classroom. These dedicated servants are shaping the future generation of leaders just as you are doing. Moreover, they must give themselves to the present leadership of their country, not only in the exalted positions of premier or prime minister, but in the subordinate cadres that perform the all-important function of making the government run. How many countless teachers, some of whom are my dearest friends, struggle within themselves and decide to leave the profession, the classroom, the children—all that they truly love, to fill a gap in a hard pressed newly forming government civil service—these people are Africa's leaders. Thank you.

Chicago Truck Drivers, Chauffeurs & Helpers Union of Chicago and Vicinity—Independent

EXTENSION OF REMARKS

OF

HON. DANIEL D. ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ROSTENKOWSKI. Mr. Speaker, pursuant to my remarks which appear in the RECORD on Tuesday, March 15, 1960, I ask that the final part of the financial statement of the Chicago Truck Drivers, Chauffeurs & Helpers Union of Chicago and Vicinity—covering the union fund—be published herewith.

The article referred to follows:

CHICAGO TRUCK DRIVERS, CHAUFFEURS & HELPERS UNION OF CHICAGO AND VICINITY—INDEPENDENT

To Our Members, Employees, and the Public:

Pursuant to our past practices and in conformity with the provisions of the Labor-Management Relations Act of 1947, and the Labor-Management Reporting and Disclosure Act of 1959, we present herewith financial statements for the year ended December 31, 1959. These statements have been certified after audit by Peter M. Shannon & Co., certified public accountants. Copies of the full text of these audit reports, including subsidiary schedules, are available upon request by letter or telephone.

ED FENNER.

UNION FUND

The principal purpose of the Union Fund is to serve the individual and collective employment interests and rights of its mem-

bers. The secondary purpose is to introduce the benefits of collective bargaining and also its trade union philosophy to others.

Balance sheet, Dec. 31, 1959

Current assets:

Mid-City National Bank, checking account.....	\$40,221.46
Michigan Avenue National Bank, savings account.....	416,370.20
Continental Illinois National Bank & Trust Co., savings account.....	367,978.27
Petty cash.....	50.00
Total.....	824,619.93

Investments:

U.S. Treasury bonds (\$2,500 par value deposited with the clerk of municipal court of Chicago).....	2,448.10
Fixed assets: Office furniture and fixtures.....	27,212.01
Total.....	854,280.04
Net worth: Surplus.....	854,280.04

Statement of cash receipts and disbursements for the year ended Dec. 31, 1959

Cash receipts:

Membership dues.....	\$866,894.07
Application fees.....	69,422.15
Per capita tax.....	1,638.00
Interest income.....	18,315.70
Total.....	956,269.92

Cash disbursements:

Administrative:	
Salaries and expense allowances—officers and field personnel.....	448,593.00
Salaries of office personnel.....	59,649.11
Trust fund contributions for employees.....	8,061.06
Payroll taxes.....	4,269.12
Office supplies.....	11,835.88
Utilities (rent, electricity, telephone, telegraph).....	17,679.94
Postage, printing, and stationery.....	10,850.36
Decorating and remodeling.....	10,326.61
Insurance.....	3,616.69
Compensation for services of union stewards—members.....	41,472.64
Payments to retired personnel and their survivors.....	8,320.00
Redemption of bond certificates.....	5,494.00
Miscellaneous.....	447.62
Total.....	630,616.03

Professional:

Legal.....	49,655.47
Auditing.....	10,000.00
Medical.....	1,000.00
Total.....	60,655.47

Labor-management relations:

New organizational work.....	565.00
Labor-management conferences.....	10,357.50
Convention.....	650.00
Total.....	11,572.50

Public relations:

Publication of financial statements.....	5,490.34
Advertising.....	1,150.00
Public relations and surveys.....	18,949.36
Contributions to various incorporated tax-exempt educational and philanthropic organizations and religious institutions.....	4,300.00

Statement of cash receipts and disbursements for the year ended Dec. 31, 1959—Continued

Cash disbursements—Con.	
Public relations—Con.	
Contributions to other organizations.....	\$490.00
Scholarship awards.....	4,255.00
Flowers for hospitalized members and dependents.....	7,345.02
Contributions for recreational activities of member groups.....	1,566.70
Participation in intramural recreational activities.....	2,642.50
Publication of quarterly magazine.....	764.50
Total.....	46,953.42
Grand total.....	749,797.42
Cash receipts in excess of disbursements.....	206,472.50
Respectfully submitted.	ED FENNER.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. _____ addressed the Senate (House or Committee)". His remarks will appear hereafter in the Appendix, and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

What Are We Waiting For?

EXTENSION OF REMARKS OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine address made by former Interstate Commerce Commissioner Mr. Anthony Arpaia, who recently asked that he not serve another term on the Commission. He has been a very valuable member of the Commission since 1952. In his address he sets forth some of his ideas and summarizes some of his views after serving a long time on the Commission.

I think his address is an excellent contribution to the whole field of transportation. He makes some pertinent suggestions as to what is wrong with the governmental regulation aspect of our transportation industry, with the administration of the ICC, and other agencies, as well as some suggestions as to the Administrative Procedure Act, and other matters pertaining to the role of governmental agencies in the problems of transportation that face the country. It is a very provoking speech and comes from one who, having left the Commission, is completely objective in what he feels as a result of his experience.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT ARE WE WAITING FOR?

(Address of Anthony Arpaia, member, Interstate Commerce Commission, before the Chicago Chapter of ICC Practitioners, Palmer House Hotel, Chicago, Ill., March 11, 1960)

Because of my experience of only 2 months as a Commissioner, when I made my first talk before the New York Chapter of the Practitioners' Association on September 17, 1952, I chose to speak in the capacity of a dues-paying member of your association. Now I shall summarize some previously expressed views as a Commissioner. It will be my last occasion to talk in that capacity. Beginning next Wednesday, whenever I stay up until the wee hours of the morning, it will be because I am engaged in a hot game of cribbage, hearts, or gin rummy; and, if I work on weekends, it will be in my garden.

As I look back and review the past 8 years, it seems to me that substantially the same problems that were with us then are still with us. I won't catalog them. You know them as well as I do. First I shall ask: Hasn't the Government itself contributed to the exercise in frustration which characterizes some aspects of public transportation? If so, what can be done to help develop a system of public transportation in this country which serves the public and national interest?

I shall state some basic premises:

1. That transportation from a public aspect is a single problem although made up of many parts and it should be treated in a unified manner by the Government.

2. That the economic regulation of transportation by the Federal Government should be correlated so that there will be a single direction and policy by the major regulatory agencies. It is now divided principally between the ICC, the CAB, and the Maritime Board.

3. That all other Government nonregulatory activities affecting transportation, such as location and construction of facilities and other Federal assistance programs, should conform to a basic, overall, coordinated plan, whether applicable to air transportation, railroads, highways, rivers, and harbors.

4. That the responsibility and action in the various committees of the Congress should be likewise correlated.

5. That the collection of data and statistics should be organized and centralized. One of the principal deficiencies to appropriate Government action at any level is lack of sufficient information. There is a vital need for research and statistics to provide the basic facts and figures so that the regulatory, planning, administrative, and enforcement job can be performed with a sense of direction and without waste. In this connection allow me to point out that, at present, at least 40 different Government agencies are engaged in some kind of transportation research and compilation of data and we still don't have all the facts and statistics which are needed.

6. That the structure and procedures of the independent agencies affecting transportation should be reformed so that they can perform their proper functions with consistency, efficiency, and expedition.

7. That the cost to the taxpayer, to support such amorphous, confusing, ineffectual, and duplicative Government activities, and the direct expense to individual parties who must deal with the present conglomeration of agencies, should be reduced without delay by grouping these activities into three separate agencies with the scope of their activities and jurisdiction clearly defined: (1) planning, (2) economic regulation, and (3) administrative or executive.

8. That the functions of Government in the economic regulatory area properly belong to the Congress and should be exercised through an independent instrumentality which would continue to report directly to the Congress without executive interference and influence. As Justice Holmes pointed out, ratemaking is legislative in kind.

There may be some who will disagree with these general propositions, but I doubt that they are familiar or close to the contemporary problems of transportation. If I had time I could again document each one of them in more detail. However, within the limits of time available to me, I will develop as far as I can the general thesis that, to the extent that Government participation may be necessary, transportation should be treated as a unified whole. The present methods obviously have proved to be wasteful and ineffectual.

A good place to start is with the Interstate Commerce Act itself, which covers the large field of surface transport since, in my opinion, the structure of the law as presently

constituted may be partly responsible for the divisive forces which weaken transportation. I don't mean by this that the act has not been changed in an attempt to meet new developments as they arose. In fact, it has been amended about 200 times since its origin. Nevertheless, the Interstate Commerce Act as it is now constituted resembles a patchwork quilt. The reason is that, in the last 40 years, practically every amendment has been made under the stress of emergency. Pieces were added to meet the problems of the moment with little regard for consistency, uniformity, and harmony. There was no opportunity for the development of a congruous plan of legislation.

This was not true in the beginning. To use a simile—a structure was engineered in the 1880's to fit the conditions which existed at that time. After several years of careful evaluation of conditions, circumstances, and needs of the public, a plan of regulation was devised. The shell of the structure was finally erected in 1887. It was perfected by subsequent legislation, without disturbing the original design, up until the First World War.

Since 1920, a job of patching has been performed, when changed conditions required. The present law, therefore, is a bizarre accumulation of additions to the structure. As you know, the law now consists of five parts, four of which separately treat a major segment of transportation. Some parts don't fit the original design at all. A few pieces are modern and useful, others have become obsolete and unnecessary. I think the lack of a single basic uniform law has heightened the difficulties facing public transportation ever since competitive forms of transportation were brought under regulation. If there was justification for separate treatment then, times have changed.

Some of the inequalities in the law are not of major consequence. Nevertheless, they psychologically operate to create a feeling of unfairness, part real, and part fancied. There are other inconsistencies and inequalities which are more fundamental and which do not foster the public purposes of regulation. I won't list them but will give a ready example or two insofar as they unequally affect the public: It is difficult to justify affording no redress to a shipper for past unlawful charges merely because he uses a motor carrier, while giving a rail shipper the right of reparation for unreasonable charges on past shipments; or to permit a motor carrier to be free to route traffic on interline movements over a more expensive route, contrary to shipper's routing instructions, while a rail carrier who does not follow routing instructions of a shipper does so at his peril.

We talk about integration or coordination of the various kinds of transportation, but a prerequisite is the integration of the laws affecting them. I think the time is overdue for a comprehensive overhaul of the act. Transportation in all of its form is a single fabric and presents but a major single problem.

The entire law should be reviewed and rewritten with an eye to formulating a practical and workable scheme for the regulation of all transportation, including air. There may still be sound reasons for some separate treatment of each form, but each such deviation should be justified. The present parts of the law are unrelated to the other. They

were written almost as if the other forms of transportation did not exist. Realities of the transportation requirements of our economy do not permit regulating transportation in isolation, and that is what we have now.

There are many worshippers of the status quo. They will not concede that in the long run they and the country and the economy might be better off with some reorientation of the Government's role in transportation. They insist that established patterns are safe. Safe for whom? Those who resist any improvement or change resort to the convenient escape: "In spite of defects, things are not too bad—freight and people are being moved and the economy of the country has not suffered." The need for improvement becomes obscured by the attitude of self-interest groups, competitive tensions, and political pressures against a background of public apathy.

But Government action in the field of regulation, if it is to be continued at all, is serious business and has a vital purpose.

The fact that the use of public transportation is not proportionate to the quantity of freight moved in this country is a danger sign for all forms of regulated transportation. To the extent that the law is responsible, however slightly, it ought to be corrected if we are to preserve and encourage economic stability for public transportation as one of the basic segments of our economy.

Government interest is not intended to comfort the afflicted or afflict the comfortable. It is to provide an efficient and economical transportation system to meet the commercial and defense needs in this country. Perhaps an ideally perfect law will not result but the force of commonsense could supplement its inadequacies as time goes on. Unless the beginning is made soon, the deterioration of public transportation may become so aggravated that more drastic measures will follow.

The present attitude of the carrier industry toward competition is truly unique. It is fostered by the law itself. The big central problem is hidden by the emotional and spontaneous outcries of self-interest which the law itself engenders. Competition normally means that one tries to develop a service or a product which is better than that of its competitor at the lowest possible price. The normal aim is to obtain consumer satisfaction and to produce a profit. In transportation, competitors, following the alignment they are given in the law, have placed less emphasis on improving service and more emphasis on impeding, obstructing and defeating any such purpose or ambition on the part of a competitor. It is unnecessary to point out that such obstructionism has proved to be of no productive value to either the participants, the general public, or the economy.

There should be competition because it is necessary for progress and is in the public interest. But the competition must be such as to preserve competitors, not efface them. The millennium will come when one combination of services of various forms will compete with another such combination. I was hoping to see this happen before I left the Commission, but I have been disappointed.

At present the problem has always struck me as a curious and explosive mixture of unscientific economics and human relations. Any step which can eliminate frictions and dissension should be undertaken. Setting up an appropriate governmental structure to handle the several aspects of the problem, as I shall point out later, and creating more perspective by means of a basic law affecting all of them equally to the extent possible will help.

Regardless of whether or how soon the law is restated and reformed, the machinery of

regulation should be improved as soon as possible.

As far back as 1941, the Commission, in its annual report said:

"So great is the volume of business to be transacted by a Federal administrative agency like the Commission that extensive delegation of authority is an obvious necessity. * * * More and more it is becoming difficult for members of the Commission to avoid becoming buried in an avalanche of detail and to find time for the thorough study and constructive thought which ought to be given to the major issues which come before it."

I only ask: How many times greater is the mass of detail borne by Commissioners today?

The Commission's organization should be geared to handle the economic problems of transportation expeditiously and well. To do so Commissioners must be relieved of trivia, in addition to duties which are inconsistent with the performance of the Commission's real mission as stated in the national transportation policy. It should stop treating every matter, however insignificant, with the same time-consuming formalism which it should accord only to matters of policy and major importance. There are several procedural changes which can be made to decrease delay. These are now and have been under study. The practitioners, through their advisory council, can give them a push.

Furthermore, many more specific functions could be delegated to boards of employees, or even to single employees if section 17 of the Interstate Commerce Act were amended to so provide. Besides staff processing, Commissioners and their examiners now give time and attention to many matters which can have no perceptible impact on the economics of transportation.

Let me give only a couple of extreme examples. Almost 20 years after the Commission had warned that its growing volume of business made extensive delegation of authority a necessity, even such things as the simple withdrawal of a complaint or application still requires the preparation of the draft of an order of dismissal by a bureau, a recommendation in an accompanying memorandum, and approval by a Commissioner. A voluntary request by a carrier for revocation of his authority makes the rounds the same way and must be acted upon by Division I. With the burning problems before the Commission, this paper shuffling and waste of time and manpower is inexcusable.

In the same year in which the Commission's annual report called attention to the need for more delegation of authority, former Commissioner Aitchison, speaking before the ICC Practitioners' annual meeting in New York, said: "The members of the Commission daily are confronted with an enormous volume of administrative detail which insistently demands from them a wholly disproportionate part of their time, attention, interest and energy."

Experience has shown that when authority and responsibility for performance of administrative duties are divided among several coequal executives, inefficiency, waste, delays, poor coordination and poor programming result. This can be cured by separating from the ICC such functions as policing, enforcement, safety, education, collection of statistics and accounting.

I don't know what Commissioner Aitchison included when he referred to administrative duties, but let me emphasize that when I talk about administrative matters, I am not talking about housekeeping. Every organization needs a housekeeper to take care of budget, personnel, space; to furnish the pencils or paper clips, so to speak. I am talking about substantial and important

administrative functions. These are sometimes called executive functions. They are not suitably performed by a board-type organization. The contribution men of the stature of commissioners can make, individually and collectively, is by the exercise of independence of thought and expertness of judgment in the decision of matters involving substantial economic problems affecting the welfare of the public and the carriers.

The separation of administrative from quasi-judicial functions also will have an important bearing on the effectiveness of economic regulation. Let me give you an example: The Commission has developed the strict judicial approach. Some think that it has been overdone. Nevertheless, it usually waits for parties to come in and decides each matter on a record, good or bad, without regard to its effects on the public or on transportation. When it does institute an investigation on the theory that the situation involved is important and critical, it simply sets the matter down for a hearing and depends on shippers, carriers, and other interested parties to furnish the facts. Often the investigation flops not because the basis for the investigation has evanesced but merely because an unsatisfactory record is made. Yet, the act places an affirmative duty upon the Commission to protect the public interest and keep transportation sound.

The fault is not entirely that of the Commission. Under the Administrative Procedure Act, it cannot and should not play the role of party and arbiter at the same time. To authorize its own employees to take a position in the case would come close to doing so. It has no public counsel. Therefore, the best it could do is to place in the record official statistics and information under the doctrine of official notice. This might require further hearing and more delay since the record has already been made before the matter reaches the Commissioners.

If the administrative functions were separated, the Administrator could come in as a party and the making of an adequate record would be assured. It is for this reason that the assignment to the Administrator should include what is now the entire operations of the Bureau of Economics and Statistics and the Bureau of Accounts, including its Section of Cost Finding, so that he will be equipped to make a record.

In conclusion, let me say a word about a planning agency. Planning, especially when it is fostered by Government, is sometimes considered a dirty word. Its connotation is that we are dealing with a socialized state. On the other hand, without intelligent planning, disorganization, overlapping and confusion follow. Public transportation has now reached a turning point. A growing America needs a completely modern transportation network by rail, motor, water, and air.

Highways and airports are being constructed without relation to each other or to existing facilities whether water or rail. Operating authority is being granted in a vacuum. There is no overall plan—just a churning out of grants piece by piece with insufficient knowledge of the existing pattern or of their relationship to the whole transport picture. Railways, highways, waterways, airways, pipelines and other means of transportation underway or still to be devised are now being constructed and located as separate entities. They all should fit into an overall scheme in which each form of transportation efficiently and economically supplements, complements and supports the other.

The planning now is distributed among several agencies of the Government. It should be centralized in order to provide a sound and orderly growth of all public trans-

portation in the public interest. The programs for airport location, river and harbor improvements, highway location and construction, and rail assistance should be coordinated and related to the present use and prospective demand. Before they are undertaken, there should be a unified and comprehensive appraisal of how each will fit into the total public welfare and thereby produce a substantial contribution to the national good. Proper coordination and adaptation of the various services will come about more readily with such correlation.

It will require real strength of purpose and real moral courage by all concerned with the project, but, in my judgment, only if steps such as I have outlined in a general fashion are taken can expensive duplication of services and wasteful competition be subordinated to the ultimate benefit of all users of transportation and to the national defense. When this has been accomplished, we will no longer have the transportation problem which now faces the Nation. Then we can look forward more confidently to the adequacy of public transportation for a flourishing and expanding economy.

The True Philosophy of Public Housing and Urban Renewal

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. MOORHEAD. Mr. Speaker, no man in public life has done more to carry out housing and urban renewal concepts in terms of local community growth than Governor Lawrence, of Pennsylvania. A pioneer in this field when he was mayor of Pittsburgh, Governor Lawrence took the occasion of a recent meeting in Pittsburgh to take a broad look at the true philosophy of housing as reflected in the growing alliance between public action and private enterprise. Here, under leave heretofore granted to extend my remarks, I include the remarks of Governor Lawrence and commend their reading to my colleagues:

REMARKS OF GOV. DAVID L. LAWRENCE, OF PENNSYLVANIA, BEFORE NATIONAL ACTION, INC., AND ACTION-HOUSING, INC., PITTSBURGH HILTON, JANUARY 27, 1960

Most of us here today know housing and redevelopment in terms of the great physical changes that have come to our city in the past 15 years. These are the results that have ultimately brought these projects the great public support they deserve—and that they must have if they are to succeed, and if we are to advance in the future as we have in the past.

Equally important as the physical results of the housing and redevelopment programs in Pittsburgh is the great innovation in public philosophy which these results represent. They were achieved through an alliance of public action and private enterprise.

The theme of your meeting is "Innovations To Achieve Good Housing in Good Neighborhoods." Sometimes, it seems, the brief history of American housing programs has been one long series of innovations.

In many respects, we are just now leaving the experimental stage. We have just begun to accumulate enough legal and political tools to do a thorough and respectable job of rebuilding our cities.

The solutions proposed and the tools de-

vised, so far, have been varied and ingenious. We have come up with zoning and planning commissions, redevelopment and housing agencies, and various enforcement units. Still, the most striking innovation—one which should have occurred to us a long, long time ago—is represented by our guests here today, from Action, Inc.

A national citizens' committee drawn from all economic and political interests in the country, they have set themselves the task of solving our great American problem—the problem of our cities. Action, Inc.—like Pittsburgh's Action-Housing—obliterates the imaginary boundary between public action and private enterprise—between what government must and should do, and what is required from the body of the community itself.

Projects of great magnitude, like the revitalization of our cities, will never succeed unless they get active support at the citizens' level.

Government, in this country at least, cannot—nor does it want to—tackle such problems alone.

I like to think—and I hope my bias is excusable—that this new alliance of private and public action was born in Pittsburgh in 1943, when leadership from all walks of life formed the Allegheny Conference on Community Development. Before the united, cooperative spirit engendered by this organization, Pittsburgh was fast fading.

Today, all around us, we see examples of innovations in housing and redevelopment that have prompted a national pattern for the improvement of blighted neighborhoods. The renewal of the area in which this hotel is located prepared the way for Federal title I legislation in 1954—a major boon for other American cities fighting the same battle.

This entire concept brought new life to Pittsburgh. For 25 years, there were no major new private investments. Since redevelopment first began in Pittsburgh, \$197,500,000 in private funds have been invested in eight projects of the redevelopment authority alone. And both the Gateway and Lower Hill projects inspired an additional \$75 million in private investment beyond their boundaries.

And perhaps more remarkable yet, because of the heavy reliance upon private investment, the rebuilding of Pittsburgh has so far cost each citizen of Pittsburgh about \$1.40 per year.

And as a result of this investment, the city now taxes \$175 million in new property values.

The redevelopment of Pittsburgh and other Pennsylvania cities has been an inspiration.

But without the substantial help of the Federal Government, with its enormous resources, the cities are fighting a rearguard action.

Local financial capabilities are already strained to the utmost.

The Nation's new growth patterns, tax practices, governmental organization—all are sapping the vitality of our cities. Yet the cities generate the overwhelming bulk of the national economy, and they are home for the great majority of Americans, and indications are that even more people will be urban dwellers in the coming decades.

It is people, after all—not factories, buildings, and real estate—that we are talking about. Since the earliest days of civilization, the city has been the wellspring of culture and manufacture. But only because of the men who lived in them.

In all of our discussion here today, we are concerned with the continuing development of a philosophy of citizen understanding in the accomplishments of the past and participation in the great work that lies ahead.

There is a task for each of us, if the job is to proceed. And as our talks go on this afternoon, I would urge each of you to participate with the object of finding where you may best lend your talents to the reshaping of your city.

Our Dwindling Sea Routes

EXTENSION OF REMARKS

OF

HON. JOHN MARSHALL BUTLER

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. BUTLER. Mr. President, over the years the New York Journal of Commerce has been a staunch supporter of the U.S. merchant marine. As a leading business publication, it has fully appreciated both the value of foreign trade to our Nation's economy and the necessity for maintaining a merchant marine under the American flag adequate to service our foreign trade.

An editorial in the March 3 issue of the Journal, entitled "Our Dwindling Sea Routes," calls for serious thought on the part of both Government and labor, "before it is too late," to halt the continuing erosion of our merchant fleet. The editorial merits the attention and consideration of every Member of the Congress. I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

OUR DWINDLING SEA ROUTES

The decision by the only two subsidized American flag shipping lines using the St. Lawrence Seaway to reconsider their long range plans for building a sea route from the Great Lakes is another example of how the American merchant marine is being forced to entrench at a time when it should be planning to expand.

The situation is common not only to the seaway but extends into the coastal and intercoastal trades where rising operational costs have virtually pushed U.S. shipping out of business.

It is no secret in the trade that several American flag lines which last year were pushing the Maritime Administration for subsidies for inland routes have cooled on the recently opened multimillion dollar seaway.

The situation which has arisen is in no way the fault of the seaway or the men who operate it. Instead, it's the old bogey . . . very little cargo and too high handling costs for what is offered.

Both American flag lines lost heavily last year on their seaway services and there is a reluctance on the part of their directors to cover the books with more red ink at a time when some of their other routes could hardly be called healthy. The same applies to the coastal and intercoastal lines.

The rate cutting on Great Lakes shipments as well as coastal and intercoastal trades by the eastern railroads has had an adverse effect on the operations of American flag lines on these routes by making it more attractive to use the rail lines than the ships.

Many prospective midwest shippers have been reluctant to change old established shipping practices calling for shipping via the ocean ports. And the railroads' willingness to help by keeping rates to the seaboard low enough to wipe out some of the seaway savings has done nothing to shake their disinterested attitude toward using the seaway.

But these are only incidental factors in the cutbacks in U.S. shipping trades. The big factor has been the rising costs of U.S.-flag operations both ashore and afloat.

The time has come . . . and we hope it is not too late . . . for the Government

and the labor unions to take a fresh look at what is happening to this country's merchant marine and how its previously considered-vital trade routes are rapidly passing into the hands of its competitors.

It was hoped that the introduction of containerized cargo-handling methods would supply at least part of the answer toward assisting the merchant marine battle for survival. But up to now it has given the industry only a partial lift.

The companies themselves admit they don't know all the answers for survival of the U.S. merchant marine. However, they are in common agreement that an assist from the Government in the way of greater aid and some realistic thinking by labor could solve many of the ills.

Before it is too late and the trade routes have either disappeared or have been gobbled up by the competing countries, some real soul-searching appears to be in order.

An Open Letter to a Congressman on the Need for a Fair Increase in Postal Pay

EXTENSION OF REMARKS OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. STRATTON. Mr. Speaker, last Sunday, March 13, in my home city of Schenectady the local branch of the National Association of Letter Carriers, under the able leadership of Robert Le Gere, held a pay rally to enlist support for an increase in postal pay in line with the provisions of H.R. 9383, the so-called Morrison bill. The rally was attended by the mayor of Schenectady, the assemblyman from Schenectady County, the supervisor of the town of Rotterdam, and a large number of outstanding citizens, labor leaders, and rank and file letter carriers. It was, I am sure, most successful in presenting the case for the increased pay and in enlisting support for it from the people of our community.

The rally developed, for example, that postal employees' pay after 7 years is computed at the rate of only \$2.34 an hour or some \$4,700 per year. This rate is lower than the rate for many other Federal employees, even though the letter carrier is the most direct day-to-day ambassador of the Federal Government to its millions of citizens.

Under leave to extend my remarks I include an "Open Letter to a Congressman" which was presented to me at this rally:

OPEN LETTER TO A CONGRESSMAN

Congressman SAM STRATTON.

MY DEAR CONGRESSMAN: I know that you are in our corner, for which I am grateful and thankful.

There are a few things I think that you should know about a postal employee's job, and maybe find us an answer.

In the early thirties, when I came into the postal service, the job had many advantages that other employees of industry did not have.

A postal job gave:

1. Security.

2. You became a top-grade employee in 5 years.

3. The pay was \$1,700 to \$2,100, a top grade, which was higher than most trades in industry in our area.

4. Now a postal employee starts at \$1.94 an hour and after 7 years gets \$2.34, compared to a union laborer starting at \$2.61. A truck-driver starts at \$2.57 and has benefits.

A postal employee did not have to have a second job, neither did his wife have to work.

Now he must get a second job and sometimes his wife must get a part-time job or a full-time job.

A three-bedroom home then cost \$3,500 to \$4,500. Now it is \$13,000 to \$17,000. The taxes then were \$40 to \$60 a year. Now they are \$290 to \$500 a year.

Since then the Wagner Act was passed and labor has the right to organize. Since labor has organized they have gotten all these benefits and have received pay increases, with Government backing, far surpassing the postal employee.

How come the Government backs organized labor, but does not back its own employees?

Postal employees have to first go and beg the public, then the Congress of the United States, and if all agree it goes to the President of the United States. If he does not like the program, he vetoes it, and another year is gone by.

There are many postal employees who would like to know why they have been left by the roadside.

CONFUSED POSTAL EMPLOYEE.

The Fear for Thee, My Country

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. BYRD of West Virginia. Mr. President, the Great Wall of China required many years to build. We are told that it was breached, not by battering from without but by bribing the men who sat at the gates. Abraham Lincoln said that if this country were ever destroyed it would be destroyed not from without but from within. I think Edwin Markham gave us a glimpse of the same prophetic warning when he wrote "The Fear for Thee, My Country." I commend its reading to the attention of my colleagues, and I ask unanimous consent that Markham's poem may be printed in the Appendix of the RECORD.

There being no objection, the lines were ordered to be printed in the RECORD, as follows:

In storied Venice, where the night repeats
The heaven of stars down all her rippling
streets,

Stood the great Bell Tower, fronting seas
and skies—

Fronting the ages, drawing all men's eyes;
Rooted like Teneriffe, aloft and proud,
Taunting the lightning, tearing the flying
cloud.

It marked the hours for Venice: all men said
Time cannot reach to bow that lofty head;
Time, that shall touch all else with ruin,
must

Forbear to make this shaft confess its dust,
Yet all the while, in secret, without sound,
The fat worms gnawed the timbers under-
ground.

The twisting worm, whose epoch is an hour,
Caverned his way into the mighty tower;
Till suddenly it shook, it swayed, it broke,
And fell in darkening thunder at one stroke.
The strong shaft, with an angel on the crown,
Fell ruining: a thousand years went down.

And so I fear, my country, not the hand
That shall hurl night and whirlwind on the
land;

I fear not Titan traitors who shall rise
To stride like Brocken shadows on our skies;
These we can face in open fight, withstand
With reddening rampart and the sworded
hand.

I fear the vermin that shall undermine
Senate and citadel and school and shrine—
The Worm of Greed, the fatted Worm of Ease,
And all the crawling progeny of these—
The vermin that shall honeycomb the towers
And walls of state in unsuspecting hours.

Community Living

EXTENSION OF REMARKS

OF

HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. EVERETT. Mr. Speaker, a speech was given before the Florida Telephone Association's 52d annual convention in Jacksonville, Fla., on November 30, 1959, by Mr. Claud J. Yates.

Mr. Yates is a native of Trenton, Tenn., which is in our congressional district. A copy of this speech was printed in the Herald-Register, one of the outstanding weekly newspapers in Tennessee, on Thursday, March 10. I think this speech is very appropriate.

Mr. Yates is the vice president and general manager of the Southern Bell Telephone and Telegraph Co. in Florida. He is very able and capable and has done an outstanding job for his company throughout the years. His speech follows:

COMMUNITY LIVING

(By C. J. Yates)

(EDITOR'S NOTE.—The following speech by Mr. Yates, which was delivered before the Florida Telephone Association's 52d annual convention in Jacksonville on November 30, 1959, was so highly regarded by company officials that they included it in their management bulletin for February. Mr. Yates is a native of Trenton, son of Mr. H. C. Yates of this city.)

I am pleased that you have asked me to talk with you today. I am especially pleased that you left me the choice of a subject because this gives me an opportunity to discuss with you some of the things which I feel are of importance to the telephone industry in this great State of ours.

The subject which I have chosen, as you will note from your programs, is, "Community Living." At the start of my brief remarks today, perhaps we should have an understanding of what is community living. How are we living—you and I—in the communities in which we operate? What representation do we have in our respective communities? Are our companies—our employees—a vital part of every community in which we operate?

Many of the communities in which we operate are much bigger than they were several years ago. The important question

for you and me to ask ourselves is—even though these communities are much larger, are they better communities? What contribution has the telephone industry made to build a bigger and better community?

You and I have shared in the rewards of Florida's growth in the communities in which we operate, and we must continue to share in responsibilities that go along with that growth. We—as businessmen and women and as a society, will continue to have the problem associated with growth. The solution will require a greater knowledge of a wider range of subjects and more energy, patience and vision than ever before. The proper solution will surely lead to further growth and all of us want that growth to be healthy and stable with a high degree of permanency.

We, in Florida, have experienced a larger proportionate increase in demand for service in the past several years than any other part of the country. We are also familiar with the problems as a result of this heavy demand for service. These problems in a growing economy have been lessened to a degree by the business climate in the communities and at the State level.

In conducting our operations in a growing State, I feel that we, too often overlook some of the vital and important fundamentals which have made our State what it is today. Florida, being one of the fastest growing States in our Nation, did not, in my opinion, just happen, but is a direct result of plans made by men with vision, resources and confidence in the future. Stating it another way, I feel that we are enjoying a business climate which is a direct result of community living on the part of a number of people, both at the local and State level.

You know that the problems that confront us as a result of high demand for telephone service will remain with us in the future. While they might be different, from what they have been in the past, we must continue to find ways and means of solving these problems regardless of what they might be.

If we are to retain our business climate in the years ahead—we must—as practical business people, give serious consideration to what we, as individuals, can do. What the entire organization of our respective companies can do—and what our company as an organization, can do to make our communities a better place in which to live and do business.

In the final analysis, we, as all other business people, must depend upon the initiative of man, motivated and encouraged to our form of society by freedom of economic enterprise. Today—we know how to make more things for more people and we have more ways to be of service to each other than ever before. There seems to be no limit to the possibilities, in the future, for us—provided—we have the foresight and courage to keep our system of free enterprise in balance and on a realistic basis.

TAKING MORE INTEREST

I have noted with considerable interest, as I am sure you have, that since our last national election in 1958, many business organizations, some national in scope, have been aroused to the necessity of more interest in public affairs. Some of these organizations have labeled their programs in various ways—some, "business and politics," others, "political action." To me, these programs are closely associated with a better job of community living on the part of business firms as well as the managers of the businesses.

We hear statements made that business should throw off the past restriction and "get into politics." I feel that business could make no bigger mistake than to get into partisan politics. You are all familiar with the extent to which unions have gotten into politics in the past several years. Let

me quote from George Meany, president of the AFL-CIO, a recent statement—"We soon found out that if we got any more victories like we had in 1958, that victory might ruin us."

In the long run, I feel that if business would attempt to get candidates nominated and elected, this approach would fail, even though they might, in some instances, result in some immediate success. The reason I feel it would be a failure is, at any time the American people decide that their representatives have been maneuvered into office by a particular group, be it organized business or organized labor, they will and should—vote them out of office.

WHAT TO DO?

You might well ask these questions—what should we in business be doing about these things? How can we bring about a better relation between ourselves and our representatives in government? What is our proper responsibility in public affairs? How can we increase public understanding of the problems of business and industry and establish confidence in our ability to serve the public interest?

We, who are engaged in the public utility business, must realize that we are a highly regulated business, regulated by the legislature at Tallahassee, as well as the Congress in Washington, "that we exist through public trust." On the other hand, we must realize that we play an important and vital role in the communities in which we operate, through the service we render, as an employer, as a taxpayer—and as a community contributor.

WHAT CAN WE DO?

1. I would put at the head of the list the rendering of the best possible telephone service to the people in the communities in which we operate. We must realize that good telephone service yesterday is not necessarily good enough today and will not be acceptable by the public tomorrow. We must be known in our respective communities as an organization which takes an active leading role in all worthwhile community programs and contributes substantially to the success of such programs.

2. We must tell our story and tell it convincingly. We must see that the public really knows us and that the public representatives in government are directly, fully, and honestly informed about what we are trying to do.

In those instances in which we are given treatment that we honestly believe to be wrong, we must say so and why, and never stop working until we get the situation corrected. On the other hand, when we secure encouragement, then we must work to the limit to justify this encouragement.

3. We must get over the habit of going to people in public office when we need something and ignoring them when we have nothing to ask for. Let's recognize that we are in the public utility business and that we have an obligation to all public officials both at the local and State level and we should invite them on all suitable occasions to review with us the progress that we are making and explain to them our plans for the future to the extent we can foresee them. We should make a sincere effort to increase our understanding of their problems and be hopeful that they will gain new insight into ours. If we in business are the kind of people we ought to be, then it should be good for people in government to know us as we are. In addition, this relationship should foster more interest in government on the part of more people in our business.

4. I do not want to convey the impression that I feel that people connected with the telephone company should run for public office, as I think it might be difficult, for example, to be the mayor of a city and at the same time manager for a local telephone

exchange. On the other hand, there will be situations where there is no possible conflict of interest where we can serve our respective communities.

5. Public officials should constantly be informed that the telephone industry more than meets its share of taxation in the State of Florida. As you know, the telephone industry in the State of Florida is the State's largest taxpayer, having paid some \$12 million in taxation to the counties, cities, and State during 1958.

We take pride in paying our share of taxes, but the payment of this tax is one thing and the securing of proper credit from the public and public officials is another. This is an item that we can continuously bring to the attention of the public in our community living programs.

6. This subject of increased importance of Government requires our study and understanding. It can involve not only our business, but those who depend on it for our services and those who are supported by us. The well-being of businesses in general and the welfare of all citizens are too closely tied together for business, and those who exercise control over business to ever work at cross-purposes.

Sound business operations are imperative to a sound economy. Because of this, businessmen must not only keep themselves informed about our intricate economy, and problems of Government, but must see that those in Government are well informed about the problems of business. This is important to everyone and it is particularly important in the telephone industry.

A good business manager of today—as never before—must keep himself informed of the problems of society, and of how he and his business fit into these problems. He must prepare himself to participate in their solution by keeping himself informed of the technological advancement, trade regulations, legal decisions, legislative proposals and a host of other matters which he does not control but in which he may find himself involved.

BASIC OBJECTIVE

Let me review briefly what I see as our basic objective in community living.

First, we should take part in the worthwhile community programs and encourage other people in our organizations to do likewise. I do not mean that we should join every type of organization that exists in our communities, but I feel that we should select those, which in our opinion, have objectives that are worthwhile for our respective communities. As an example, I would like to cite you an instance that recently occurred when a young man desired to be transferred in our organization to Florida, and the individual who was trying to sell him to me stated that this young man had associated himself with 13 different organizations in the community in which he lived. I was somewhat interested up to that point. I do not think that any individual can do justice to the objectives of 13 different organizations. What I would like to see is more young men associating themselves with one, two or three organizations and then making some real contribution to their objectives.

KNOW OFFICEHOLDERS

Second, we should get acquainted with the people in public office in our respective communities. They might not be the ones which we feel are the best qualified for the office which they hold, but they are our representatives—they are our city commissioner, our mayor, our county officials and our representatives at the State and national level. They are yours and mine and so long as they hold that office they are entitled to our interest and support. But above all, they are entitled to be kept informed with reference to our business,

They are entitled to know the progress we are making, the problems which we are confronted with as well as our views on the important items that are involved in the running of our cities, counties and State government.

Third, this problem of community living cannot be performed by commercial managers alone. It should rest squarely on the shoulders of all management people, regardless of department.

Fourth, we have a responsibility of keeping not only our management people informed relative to our business, but we must keep all of our employees fully informed with reference to our particular business operation. This job is a team job and everyone on the payroll should be on the team.

PREPARE PLAN

I should like to leave one challenge with you—that all of us should prepare a comprehensive plan or community living program—that we should give our plan careful thought and continual guidance and direction from the top level.

We shouldn't expect immediate success. This is a job that must be done every day throughout each year by everyone on the team.

It must be done because it is the right thing to do and serves the most worthwhile purpose for the community and for the employees and for the company—not for selfish gain or reward.

Community living is different than getting into politics. The businessman should be actively and sincerely interested in public affairs and should provide the leadership and the climate that is conducive to better government.

In closing, let me say that we should never forget that a healthy economic climate depends upon the political climate that the voters and only the voters establish.

Intensive Study of Food Urged

EXTENSION OF REMARKS OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. YOUNG of North Dakota. Mr. President, one of the very necessary factors in this country's production of both the quantity and quality of food is the growing importance of good, effective, and safe to use chemicals, pesticides, additives, and other productive mechanisms.

Senator will recall that last year at my suggestion the Senate included an item in the agriculture appropriations bill providing \$500,000 for research into alternate methods of pesticide and disease control which would not retain in the finished product any harmful residue.

Unfortunately, this item was not retained in the conference and was not in the final agricultural appropriations bill.

In view of subsequent developments, I some time ago indicated my concern on this subject to both the Department of Agriculture and the leaders of the livestock industry, and I would, at this time, like to have printed in the Appendix of the Record a letter to Mr. G. R. Milburn, president of the American National Cattlemen's Association.

I would also like to have printed in the Appendix of the Record a clipping from today's New York Times on this subject entitled "Intensive Study of Food Urged" and testimony offered yesterday before a committee of the other body by Aled P. Davies, vice president of the American Meat Institute, and J. C. Wetzler, a cattle feeder from Phoenix, Ariz., representing the American National Cattlemen's Association.

These documents clearly show that the responsibility which rests on the Federal Government to proceed to face up to this problem which is a problem of agriculture and consumers is of major national importance.

There being no objection, the letter, article, and statements were ordered to be printed in the Record, as follows:

DECEMBER 9, 1959.

Mr. G. R. MILBURN,

President American National Cattlemen's Association, Grass Range, Mont.

DEAR Mr. MILBURN: Earlier this year when the Senate Appropriations Committee, of which I am a member, was considering various appropriations I had a visit with Dr. M. R. Clarkson, Deputy Administrator of the Agricultural Research Service in the Department of Agriculture, concerning certain problems involved in the use of pesticides and insecticides. As a result of our conversation Dr. Clarkson appeared before the Senate Appropriations Committee supporting proposals sponsored by me and others for greatly increased research funds to find substitutes for the present pesticides which would be completely free of any side effects as are now sometimes obtained with pesticides and the like which are not properly used. We were able to obtain \$500,000 in additional research funds to further this program. Even this was lost, however, in conference with the House.

The cranberry situation, I think, has emphasized the need for far greater research to develop nonchemical methods such as biological control agents or other pesticides which would leave absolutely no residue whatever regardless of how they are used. It seems to me that we will need a crash research program involving from \$5 to \$7 million to accomplish the necessary research. This must be done before we who are interested in the meat business find ourselves in the same trouble that the cranberry people did just a short time ago.

Should the Secretary of the Department of Health, Education, and Welfare make similar charges against the contamination of meat as he did cranberries, as the result of certain pesticide uses, meat prices with the present heavy supplies would undoubtedly drop drastically. Such price declines could cost producers hundreds of millions of dollars. Whether or not the accusations were well-founded would make little difference. The slightest suspicion on the part of consumers would be enough to materially affect consumer purchases.

I know of no industry that has done more to make sure that they have a pure, wholesome product than the meat producers, particularly the cattle industry. Millions of pounds of meat are destroyed each year through our inspection service in order to meet the high standards that have been set. This has received little publicity. I am sure you will agree with me that it would be highly desirable to develop the kind of chemical or biological control agent the use of which could never be questioned.

Already proposals have been made to greatly increase funds for the Food and Drug Administration to carry on substantially this type of research work. My own feeling, and I am sure you will concur, is

that this is work that should continue to be done by the Department of Agriculture. Our agriculture research people have done superb work with the very limited funds they have had in the past. I would greatly appreciate having your views as to the plan of action set forth in this letter.

With warmest personal regards.

Sincerely yours,

MILTON R. YOUNG.

[From the New York Times, Mar. 18, 1960]

INTENSIVE STUDY OF FOOD IS URGED—PACKERS CALL FOR RISE IN FUND TO DEVELOP NEW MEANS TO PREVENT CONTAMINATION

WASHINGTON, March 27.—The American Meat Institute called on Congress today to create a program of intensive research to develop new chemicals and biological measures to eliminate the dangers of food contamination.

In a surprise action, the packers' group urged Congress to increase by 8 to 10 times the \$1,500,000 requested by the administration in the new budget for such research.

The national trade organization of the meat packing industry laid its proposal before the House Subcommittee on Agricultural Appropriations in executive session.

The administration has been studying the problem. Its request for a \$1,500,000 program in the budget for the fiscal year starting July 1 compares with \$500,000 proposed last year. The \$500,000 request was denied by the House subcommittee.

The meat industry's concern stems from the widespread use of chemicals and synthetic hormones in cattle production and meat processing.

Alex P. Davies, vice president of the meat institute, told the House subcommittee that one-third of whatever amount of Federal funds was appropriated for the chemical research program should be set aside in the first year for a modern laboratory and equipment.

In this laboratory, he said, teams of the best scientists can be brought to work on the problem of getting new tools to avoid the "hazards of residues."

"The problem calls for effort on the part of Government producers of agriculture products and processors of agricultural products, in the national welfare," he asserted.

The Department of Agriculture is "doing far too little on chemicals in agriculture because of lack of funds," he said. Its scientists, he went on, have "many leads for new developments, but they have not been able to follow through" on possibilities of combating pests and diseases without leaving harmful residues.

"This is not to say the chemical industry has not done a good job," he added. "However, in areas where residues in food and feed are critical consideration, the Department must take the lead in new developments which will maintain consumer confidence in the products of agriculture."

Mr. Davies presented the institute's proposal after testifying in support of a slight increase in funds for the Department's meat inspection service, which approves all meat and poultry in packing plants to assure its purity.

STATEMENT BY J. C. WETZLER BEFORE HOUSE APPROPRIATIONS SUBCOMMITTEE ON AGRICULTURE

My name is J. C. Wetzler, a cattle feeder from Phoenix, Ariz. I am speaking as a member of the Legislative Committee of the American National Cattlemen's Association. This association has a membership which includes 138 State, local, and regional cattlemen's and cattle feeder associations and thousands of individual cattlemen and cattle feeder members from throughout the United States.

We greatly appreciate the opportunity of appearing before this committee in overall support of the 1961 budget request for the Agricultural Research Service. Singling out two items from the overall request, it is our desire to emphasize the importance of the request as related to Federal meat inspection in the amount of \$21,324,900 and the increase asked for to carry on intensive research to develop chemicals and biological measures for use in agriculture for the purpose of eliminating or avoiding pesticide residues amounting to \$1,502,800.

The American National Cattlemen's Association has long stood for an adequate appropriation of funds in order to carry on the very efficient and effective function of Federal meat inspection. It is felt that the high degree of confidence on the part of the general public in their daily beef supply, largely, can be attributed to the activities carried on over the years by the Meat Inspection Division. This, coupled with the desire on the part of cattle producers and feeders to make available to the public a wholesome beef product, has instilled a confidence that must be maintained.

The recent publicity on the subject of agricultural chemicals emphasizes the importance of the function and services provided by the Meat Inspection Division and the need for appropriating adequate funds for its continuance.

Mention of agricultural chemicals leads into the next portion of this statement. It has become quite evident that we probably will be confronted in the future with more problems from the standpoint of chemical residues in our food supply. This affects us as producers and feeders of the beef supply of the Nation, because it is the sincere desire of the beef industry to continue to produce the most wholesome beef supply for the consuming public. It is mandatory to develop through experimentation and research, chemicals and biological measures for use in agriculture which will eliminate any chance for harmful residues in the food products eaten by the consuming public. The research funds requested this year are, in our opinion, a bare requirement of those which will be needed in the future for this purpose.

Agricultural producers are reliant on certain chemicals to produce the food supply of the Nation. As more refined methods for detecting these chemical residues are developed, the problem becomes more acute, so it further necessitates new approaches for the control of certain diseases and pests as well as find new methods for the more economical production and feeding of beef cattle. As a consequence, private research money of those firms presently developing and manufacturing certain agricultural pesticides and feed additives may be withdrawn. This would put more pressure against the Government, in this case the Agricultural Research Service, to absorb this function previously carried by private money.

For these reasons, we urge this committee to approve the funds requested for 1961.

TESTIMONY BY ALED P. DAVIES BEFORE THE SUBCOMMITTEE ON AGRICULTURAL APPROPRIATIONS OF THE HOUSE OF REPRESENTATIVES

My name is Aled P. Davies. I am vice president of the American Meat Institute, national trade association of the meat packing industry. I greatly appreciate the opportunity of appearing before this committee in support of the 1961 budget request for Federal meat inspection. This request is in the amount of \$21,562,700. While it represents a slight increase over the amount appropriated for the current fiscal year—\$21,324,900—it is our understanding that because of in-grade promotions and Government health program expense the amount actually available for meat inspection will

be less than during the current year. It has been estimated that even with the amount of the budget request the Meat Inspection Division will find it necessary to reduce its inspection force by 30.

The American Meat Institute believes that as a very minimum the amount of the budget request should be provided for Federal meat inspection. Actually it isn't quite enough, and while we feel that additional funds ought to be provided, we recognize the necessity for cutting the Federal budget in all departments of the Government to the absolute minimum.

Witnesses from the Department of Agriculture already have given you figures to show the way in which Federal meat inspection is growing. Its increasing significance is not only an outgrowth of population increase and changing patterns of meat distribution, but it is also a tribute to the Government agency—the Meat Inspection Division—which is responsible for the administration of this program. Over the period of 53 years during which compulsory Federal meat inspection has been in effect, the MID, as it is popularly known, has developed and maintained a reputation for absolute integrity, a reputation which is equalled by few other Government agencies and surpassed by none. There have been times when the meat packing industry and individual companies in it have not agreed with the MID, but no one questions its integrity and its dedication to the public interest.

There is no other food which gets the kind of scrutiny which is routine for meat and meat food products under Federal meat inspection. For many years, it was the only continuous food inspection conducted by the Federal Government. Now poultry is under the same type of inspection. One of the responsibilities of the MID under the Meat Inspection Act is to examine the products of the meat industry for the presence of harmful chemicals. Actually the MID over the past half century has been exercising the same type of control over additives used in meat which is being employed for the first time by the Food and Drug Administration with respect to other foods. However, it is being enforced in a more effective sort of way since the MID inspects every animal and every carcass which goes through a federally inspected plant, and does not have to rely simply on spot checks. Every ingredient going into a meat product must first pass the scrutiny of MID, whether or not it might be technically classified as a "food additive," and every label which is employed on such products must have the prior approval of the Division. Without such prior approval, the product cannot bear the mark of Federal inspection. I must confess that this requirement of prior approval at times has caused the industry some problems, for believe me, the MID takes its responsibility to the public very seriously, and at times we have thought its restrictions were too severe.

I mention this simply to emphasize the high degree of protection which Federal meat inspection provides to consumers and to underline the obvious fact that the cost of inspection is a small price to pay for a public service of this character. Interest in chemicals employed in foods is running high these days, and while we feel the Food and Drug Administration does an admirable job considering the broad field it has to cover and the limited tools with which it works, we are convinced that Federal meat inspection fills a need which cannot be supplied in any other way. It is not general knowledge, but it is a fact that the MID through its continuous inspection system condemns 1 million pounds of meat and meat food products every working day, thereby preventing unfit products from ever reaching the market.

If the emphasis placed on the MID's im-

portant function in the field of chemical additives tends to give the impression that this is its only or even its principal responsibility, that point should be cleared up. Quoting from the Division's most recent annual report, following is an enumeration of its activities during the past year:

"(1) Examination of food animals, including cattle, calves, sheep, swine, goats, and horses prior to slaughter to eliminate those animals found to be affected with diseases or other unwholesome conditions; (2) a thorough postmortem examination of each carcass at time of slaughter to detect and eliminate diseased and otherwise unfit meat; (3) destruction for food purposes of all diseased, unsound or otherwise unwholesome meat and meat food products; (4) supervision of the preparation of meat and meat food products to assure their cleanliness and wholesomeness during their preparation into articles of food; (5) guarding against the use of harmful preservatives and other deleterious ingredients; (6) supervision of the application of marks to meat and meat food products to show that they are 'U.S. Inspected and Passed'; (7) supervision of the application of informative labeling and prevention of the use of false and deceptive labeling on meat and meat food products; (8) certification of meat and meat food products for export; (9) inspection of meat and meat food products offered for importation into this country; (10) examination of meat and meat food products for compliance with specification requirements of governmental purchasing agents; (11) such investigations as are necessary to insure the accuracy and effectiveness of the inspection procedures; (12) supervision of the manufacture and labeling of process or renovated butter; (13) guarding against residues in meat resulting from ingestion, treatment with or exposure to such substances as pesticides, growth-promoting substances, drugs or biologicals; and (14) developing and determining acceptable methods for humane slaughter of meat animals."

Another function of the MID, although a byproduct of its major activities, is the statistical reporting which it does. The figures which are generated in this division measuring the volume of slaughtering and processing of federally inspected plants are the most accurate we have on the livestock and meat industry. I mention this as a 15th point because of the dependence which we all have on these MID figures; therefore, we need to recognize this function of the division in any consideration of its appropriations.

It is remarkable actually that a service of this scope and thoroughness can be conducted with the modest appropriation which is provided. Just one incident of the cranberry-type occurring in the meat industry could cost the public more than the whole year's meat inspection appropriation, and the public can consider itself fortunate that this inspection program is in the hands of such a dedicated group of professionals as Dr. A. R. Miller and his associates.

Mr. Chairman, I have long been convinced that the money spent by the Government on Federal meat inspection was money wisely invested. Sometimes I have felt frustrated because I was not sure that others appreciated the significance of this service. If the public furor over chemicals has done nothing else, it has given new emphasis to the essential work being done by the Meat Inspection Division and to the importance of providing adequate funds for its support. The American Meat Institute most earnestly urges that you approve the amount of the budget request to cover Federal meat inspection for the 1961 fiscal year.

Now I would like to discuss a less publicized but extremely important activity of the Department of Agriculture, i.e., its Crop and Livestock Reporting Service.

As you are well aware, U.S. agriculture is going through a virtual revolution both in the technology of production and in its economic organization. The hog industry is no exception in this respect. Fewer farmers are raising hogs and there is an increase in the number of hogs raised per farm. Along with this trend in greater production per farm has been a shift to the practice of multiple farrowings and a change in the seasonal production of pork. For example, in the early 1930's, 14 percent of the spring farrowings were in the months of December, January, and February. For the 1959 crop, it was 38 percent. In addition, the Southeastern States have expanded greatly in hog and other livestock production. Hogs reach marketable age earlier today than in the past.

These changes multiply greatly the problems of estimating crop and livestock production. Specific procedures for continually evaluating these revolutionary changes would seem to be a necessary part of the Department of Agriculture estimates program.

If my memory is correct, I believe, Mr. Chairman, that several years ago you requested the USDA's recommendation for an immediate and long-range program for the development and improvement of the agricultural estimating work of the Department. This report was made to your committee in 1957. However, to my knowledge, there has been limited progress in the modernizing of the procedures or techniques developed for improving the accuracy of the pig crop estimates as we have moved through this revolutionary period in hog raising.

Basically, the pig crop reports are and have been good, but the present reporting program is not adequately filling present-day requirements.

For example, hog prices have advanced markedly since the first of the year, and currently there is a very lively discussion going on in the swine industry as to whether or not producers have changed their breeding intentions for 1960. A partial answer to this important question will be provided by the quarterly survey released today.

However, a full fledged estimate of the 1960 spring crop will not be released until June 21. By that time some pigs from this crop already will be on their way to market. The absence of specific knowledge as to what is happening to hog production in the meantime will make it difficult for any part of the swine industry to adjust to these changes. Our livestock economy does a better job for both producers and consumers when it can avoid radical changes that occur when actual production trends are not known.

We understand that the Department has a plan which seems very feasible. This would expand the quarterly pig crop from the present 10 States to 16 States: including 12 North Central States, North Carolina, Georgia, Kentucky, and Tennessee. These 16 States accounted for 85 percent of the U.S. pig crop in 1959. These figures would show the number of hogs on farms, the number of sows farrowed and pigs saved during the preceding quarter, the number of sows farrowed by months, the farrowing intentions for the following 6-month period by quarters, and revisions as needed in inventory and farrowing estimates for previous quarters. These details are the same as now published in the 10 States quarterly report except that the present reports do not include estimates of pigs saved, they do not include estimates of sows farrowed by months, and they do not include revisions for prior quarters.

The Institute isn't trying to unnecessarily enlarge the agricultural budget but it feels

that of the large quantity requested for research, some of this sum could be wisely earmarked for improvement of the livestock estimating procedures and reports.

An improvement in the pig crop data would be beneficial to all segments of the industry, including producers, transportation agencies, processors, retailers, and consumers.

The Department of Agriculture is doing far too little research on chemicals for agriculture. Chemicals are an essential part of the production of good food. They always have been. The complexity of consumer demands for variety and quality in the food supply make the use of safe chemicals even more important today.

Everyone is concerned, and rightly so, that only safe chemicals be used. We in the meatpacking industry have adhered closely to this philosophy for more than half a century under the careful control of the Department's Meat Inspection Service.

The producer, especially the producer of livestock and dairy products, needs improved methods for dealing with the multitude of diseases and pests that threaten every day to destroy and contaminate his products. The Department should take the lead in developing new chemicals and biological methods for dealing with these diseases and pests without leaving any questionable residues.

The Department's scientists have many leads for developments of this kind, but have not been able to follow through on them. Such things as the use of powerful lures that will attract insects for long distances to commit suicide in specially designed traps and the use of special chemicals which affect the reproductive capacity of the insects in such a way as to bring about insect rate suicide should be vigorously developed. These things can be done without any harmful effect to man or other warmblooded animals if we just put a real effort into it.

This is not to say the chemical industry have not done a good job. They have and they can be expected to continue to do so. However, in areas where residues in food or feed are a critical consideration, the Department must take the lead in new developments which will maintain consumer confidence in the products of agriculture.

Mr. Chairman, the American Meat Institute is especially glad to see that the Department has requested one and a half million dollars for intensive research to develop new chemicals and biological measures for use in agriculture to avoid hazards from residues. Our only quarrel with this request is that it is in our opinion not nearly enough when we consider that private industry requires a million to a million and a half dollars to develop just one chemical for the market. We think this amount should be increased to at least 8 or 10 times, with one-third of whatever the amount in the first year set aside for a modern laboratory and equipment where teams of the best scientists can be brought to work on this problem.

It is the considered judgment of the American Meat Institute, which has been actively concerned with this problem for several years, that expenditures of Federal funds in this area are essential, wise and in the public interest. It is an area in which the meatpacking industry and the American Meat Institute have and are spending considerable amount of research funds. This problem calls for effort on the part of Government, producers of agricultural products and the processors of food, in the national welfare.

Thank you.

The Businessman's True Interest in Urban America

EXTENSION OF REMARKS OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. MOORHEAD. Mr. Speaker, a few moments ago I spoke of the true philosophy of housing as reflected in the growing alliance between public action and private enterprise. An outstanding example of this alliance and its benefits was offered at a recent meeting in Pittsburgh when Mr. Richard K. Mellon, financial leader and philanthropist, discussed the interrelationship of interests and responsibilities of businessmen and their employees in urban America. Here, under leave heretofore granted to extend my remarks, I include Mr. Mellon's comments:

REMARKS BY RICHARD K. MELLON, PRESIDENT, T. MELLON & SONS, MEMBER, BOARD OF DIRECTORS, ACTION-HOUSING, INC.

Mr. Chairman, Governor Lawrence, county commissioners, Mayor Barr, members of city council, fellow members of ACTION-Housing, Inc., and of national ACTION, and guests, as a board member of Pittsburgh's ACTION-Housing, Inc., and national ACTION of New York, I warmly greet all of you. To those from out of town, welcome to a city dedicated to rebuilding itself. To those from Pittsburgh, thank you for coming.

It is most encouraging to look out over this very large audience and see so much interest and enthusiasm for tackling our overwhelming housing problem. To see public officials and citizen leaders from almost every area of our community life is evidence of a growing momentum.

It is especially gratifying to find so many businessmen here indicating that they have come to realize that their interests, the interests of their employees, and their responsibility to urban America, are all tied together.

Just 3 years ago, I attended a small luncheon here in the city and listened as Jim Lash, national ACTION's able executive vice president, related the shocking facts about Pittsburgh's deplorable housing and the failure of Pittsburgh to provide good neighborhoods for its people.

ACTION-Housing, Inc., has accomplished much in a very short time. More than anything else, it has begun to assemble the parts of the solution. But we have only scratched the surface; much remains to be done in some of our neighborhoods.

Three years ago, the solution was a jigsaw puzzle, spread all over the place. The pieces were people and various agencies. But no unity, no direction was evident. ACTION-Housing has started to put the pieces together. It has developed a comprehensive program.

Now Pittsburgh has what my friends in the housing and planning fields tell me no other American city has: the overall plan, the total approach, a completeness that can accomplish what the pieces could not.

I have been proud to serve on ACTION-Housing's board since its inception. And I am proud to serve on that board today.

ACTION-Housing is doing an outstanding job. It is moving forward with a program

that will bring housing and neighborhoods up to the high standards of our renaissance. I believe an urban center, such as Pittsburgh, does not achieve true greatness until its people are well-housed—regardless of how many new office towers, expressways, and industrial plants are built. I hope our business and industrial leaders will be as productive in the housing phase of the renaissance as they were in the commercial and industrial phases.

ACTION-Housing has justified the faith of all who have supported it. Now it has a great new project in its Pittsburgh development fund. The Mellon Foundations have felt it worth supporting. We are confident that large Pittsburgh corporations will evidence the same faith.

Businessmen all over the Nation are showing increased interest in urban problems. Evidence of this are the many cities represented at this conference, as well as the attention devoted by business publications to urban renewal.

Recently, one of the Nation's outstanding weekly business letters, read by hundreds of thousands of businessmen and industrialists, published one entire letter on housing and urban renewal. It expressed the businessman's stake admirably and pointed out that housing and urban renewal are good business, and there is something in it for almost everybody. It is very much like a new industry and has a pronounced effect on the national economy for decades ahead. The letter also pointed out that while the Government pays a good share of the cost, private capital is essential for the completion of most projects.

It is my belief that Pittsburgh is now organized to do a real job in the housing field, although we admit that we have much to learn. However, it is my fervent hope that when those of you from out of town return here in a few years, we will be able to show you some real progress in the field of housing which is as dramatic as our gateway center development.

Hypocrisy in Civil Rights

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding editorial from the March 17, 1960, issue of the Ridge Citizen of Johnston, S.C., which is entitled "Hypocrisy in Civil Rights."

The Ridge Citizen is very ably edited and published by Mr. J. Luther Aull, one of South Carolina's most talented and respected newsmen.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HYPOCRISY IN CIVIL RIGHTS

The hypocrisy of the proponents of the iniquitous force bill proposals at present being extensively debated in the Senate was never more clear than it was during last week when an amendment of Senator LAUSCHE of Ohio was added on to the portion of the bill that would make resistance to the Supreme Court's desegregation decision a crime. Senator LAUSCHE's amendment would have extended the provisions to labor cases also.

This of course brought forth yelps from the liberal proponents of the force bills as being discrimination against labor. That is of course unthinkable to this particular element. Discrimination against the Southern States, however, is quite the order of the day.

What, though, is the difference in the resistance to Court orders or decisions whether they have to do with labor cases or segregation cases? Why, it depends on whose ox is gored, of course.

The entire section was killed, as it should have been. Personally, it seems to us perfectly proper to resist any decision or Court order by any legal means available. Any other course is tyranny.

Number of Farm Auctions Soar in Kansas

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. BREEDING. Mr. Speaker, a very interesting article appeared in the Topeka Capital-Journal on Sunday, March 13, providing further proof that more people are leaving their farms for economic reasons. I would like to call the attention of my distinguished colleagues to this article, which shows that farmers are leaving the land because they no longer find farming profitable. The article is as follows:

NUMBER OF FARM AUCTIONS SOAR IN KANSAS (By Charles Pratt)

The cry of the auctioneer is being heard increasingly at farm sales over Kansas this year. In some sections of the State the number of auction sales of personal farm property has tripled over those of preceding years.

The reason is an economic one. Farmers—especially small ones—are leaving the land because they no longer find farming profitable. Some of the oldsters are retiring from the farm but many are taking jobs in cities and towns.

In northern and western Kansas counties, especially, the number of farm auction sales has increased, says C. E. Sandeffer, Topeka, secretary-treasurer of the Kansas Auctioneers' Association. In the immediate area about Topeka the number remains stable but in Marshall County there are three times as many as in recent years.

Two large farm sales are advertised within the next 10 days in Dickinson County. And in the upper Ar-Kansas Valley extending from western Kansas into Colorado, farm sales of personal property are reported on the increase.

Some of the sales are big ones, grossing in excess of \$30,000. Most of those in the immediate Topeka area, however, are averaging from \$5,000 to \$10,000, Sandeffer says. Twenty years ago a gross of \$3,000 on the average was considered good.

The size of sales varies, of course, with the amount of livestock and machinery offered. Big farming equipment runs the total high, even though farm machinery is going at less in farm sales this year than in former years.

Dairy cow prices the holding up better at farm sales than most livestock, he said. At Marysville, Byron Guise, editor of the Marshall County Advocate, says good dairy cows are selling from \$250 to \$300 each.

Farm sales down through the years always have been well attended and current auction

sales are no exception, Sandeffer has found. Attendance is good and buying generally brisk.

Farm sales move more rapidly now than in the past and Sandeffer says it's because the auctioneer has become a professional.

"He operates at a faster tempo," he says. "At most farm sales, he tries to have everything sold by 4 p.m. so those in attendance will have plenty of time to get home. In years past, it was no uncommon thing for a sale to continue after dark."

More young men are entering the auctioneering field as a profession, Sandeffer says. There are now 20 professional auctioneering schools in the United States. The Kansas Auctioneers' Association has about 100 members.

Today's auctioneer is becoming more of a specialist, too. Sandeffer cites Joe Rains of Maple Hill as specializing in the selling of cattle. Kenneth Crews of Topeka is the third generation of his family functioning at farm sales.

At Hutchinson, Gene Walker is a pure bred cattle auctioneer and Wes Harris of Holton combines auctioneering at farm sales with his work at his sales pavillion. Jim Wilson of Osage City is a general auctioneer.

In the Marysville area E. M. Fisher and Raleigh Breeding serve at many farm auctions.

Sandeffer sees the increasing number of farm auction sales as evidence that auctioneering is the best and quickest way to liquidate an operation. Nothing has been found better than competitive bidding, he says. The farm auction sale always has been popular and will continue to be.

Voice of Democracy Speech by Philip J. Smith of Cordova, Alaska

EXTENSION OF REMARKS

OF

HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. GRUENING. Mr. President, recently, in the Voice of Democracy contest, in which 51 young men and women from the 50 States and the District of Columbia participated, the representative of Alaska, Mr. Philip J. Smith, of Cordova, was one of the 4 semifinalists chosen from the 51 from whom the overall winner was selected.

I ask unanimous consent that his address on the subject "I Speak for Democracy," be printed in the Appendix of the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

I SPEAK FOR DEMOCRACY

(By Philip J. Smith, Cordova, Alaska, one of four finalists 1960)

I speak for democracy—from the bottom of my heart, I speak for the form and the essence of democracy as it is typified and practiced in the United States of America. I speak for the lazy summer afternoons spent fishing for catfish in a broad muddy river. That is part of America. I speak for the squalor and filth of another "catfish"—the Catfish Row that is also part of our America and of our democracy. I speak for the elegance and splendor of Fifth Avenue and the

tree-shaded serenity of a country town or an equally tranquil fishing village nestled at the foot of towering mountains in the winter-time—waiting for Christmas. I speak for the happiness of the country doctor who is called out early in the morning to take care of one of his townspeople and the equal happiness of the scientist who has perfected a new life-saving antibiotic. I speak for the farmer and the fisherman who have their seasonal duties to perform—and the storeowner whose duties are never completed. I speak for a muddy, boggy road leading to a farmer's fields—and for the broad super highways leading to a different kind of happiness—and sometimes oblivion. I speak for the congressman who guides his country's destiny, and for the councilman who shapes the future of his town. For the harried business executive—and the humpbacked newsboy who hands him a daily newspaper he doesn't have time to read. I speak for the young toughs on the corners of dirty city streets and for the healthy youths who scamper in the snow and ice of a clean, fresh, star-studded winter eve.

But perhaps you ask why I speak for the unhappiness, the filth, the degradation in America? I speak for it because it, too, is part of America, part of our democracy. A portion of the life we ourselves lead—part of the reason we exist. If we had nothing low and base to overcome in our lives, there would be no reason to alleviate these conditions. Our lives would be pointless, and the ultimate achievement—the achievement of excellence—would go unrewarded. There would be no ideals to uphold, no goals to strive for, and no personal glow of a job well done.

Democracy is humanity in action. The expression of the will of the majority—the amazing willingness with which the minority complies with this will. Democracy is all the imperfections, the perversions, and the degradation to which fallen man is subject. But to a much larger extent—it is the nobility and dignity of the true democracy which towers over our fallen man.

We have established the fact that man is subject to various shortcomings. If he can do nothing about them, he is lost. His life has lost its purpose. In America's democracy, he can do something about his shortcomings. There are no political restrictions on selfdevelopment—in fact aid is given those who require and desire it. The individual and his ideals are respected as under no other form of government. Our country doctor—harried businessman—our farmer and fisherman—all are democracy in its truest sense. You too, and I, a mere student, are democracy.

Therefore, I speak for the college student, studying beneath a massive oak on campus or lost in the hysteria of Saturday afternoon's football game. And for the blind saxophonist playing for pennies on a crowded street—and the concert pianist, performing for a crowded hall. For the clear-eyed country lad who grew to be the leader of the greatest nation on earth, and for the wealthy son of a wealthy father who was a bum at the age of 21. I speak for a sleek ballistic missile hurtling skyward, protecting our Nation—and for the two-bit popgun delighting the future scientist. And for the high school teacher delving into the intricacies of nuclear physics with his class—and the young mother teaching her child the equally intricate mechanics of his first words. I speak for democracy—its accomplishments, its present, and its future. I speak with the humility born of inherent pride, for I am of and for America's democracy—as America's democracy is of and for me.

New York State Assembly Shows the Way—Let's Put All Our Major National Nonreligious Holidays on Mondays

EXTENSION OF REMARKS
OF

HON. SAMUEL S. STRATTON
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. STRATTON. Mr. Speaker, last year I introduced legislation, H.R. 8073, to fix four of our major, nonreligious national holidays—Washington's Birthday, Memorial Day, Independence Day, and Veterans Day—on Mondays rather than on fixed calendar dates. This, of course, is precisely what we now do in the case of another major, nonreligious national holiday—Labor Day, established uniformly on the first Monday in September. My proposal has the support of both employee and management groups since it would provide not only that observance of these holidays would involve a long weekend suitable for family travel and recreation, but would also greatly reduce absenteeism which inevitably results when holidays fall within the middle of the week.

Mr. Speaker, I was greatly heartened last week to learn that on Monday, March 14, the assembly of the legislature of my great State of New York passed and sent to the State senate a bill designed to accomplish the purposes outlined in my bill with respect to Memorial Day, making it fall, in New York State, on the last Monday of May rather than on May 30.

I hope, Mr. Speaker, that the State senate and the Governor of New York will join with the assembly in supporting this sound and beneficial State legislation. If it does become law in New York then it will surely follow—if the observances of our great national holidays are to be in harmony throughout the several States, as, of course, they should be—that corresponding action, along the lines of the Stratton bill, H.R. 8073, must be taken by this Congress. For this reason the recent action at the State capitol at Albany, N.Y., represents the first major breakthrough for this legislation of mine and I am hopeful that Members of the House will now soon give their attention and support to this important matter.

Under leave to extend my remarks, I include the text of a news release on this subject which I have issued today:

Congressman SAMUEL S. STRATTON, Democrat, of New York, yesterday hailed the action of the New York State Assembly, which last Monday adopted a bill to establish Memorial Day as the last Monday in May rather than on May 30, as "the first major breakthrough for my bill, H.R. 8073, which would provide for the observance of all nonreligious national holidays on Mondays."

The New York State legislation passed the assembly by a vote of 114 and was sent to

the Senate where it reportedly "has a good chance of passage." The legislation is sponsored jointly by Assemblyman Richard J. Bartlett, Republican, of Glens Falls, and Senator Gilbert T. Seelye, Republican, of Burnt Hills. Actually, May 30 falls on the last Monday in May this year.

Congressman STRATTON, in similar communications to Assemblyman Bartlett and Senator Seelye, praised them for their action and told them, "adoption of this provision by New York State will undoubtedly lead quickly to recognizing the wisdom of designating such other holidays as Washington's birthday, Independence Day and Veterans Day also on Mondays." The Congressman urged the State legislators to "persuade their colleagues to memorialize Congress to support H.R. 8073 and thus bring the rest of the country into line with New York State." He expressed agreement with the views attributed to Assemblyman Bartlett that the bill would not only provide a long weekend for travel and recreation, but would also reduce absenteeism in industries.

The National Foundation Establishes New Institute Near La Jolla, Calif., To Combat All Diseases

EXTENSION OF REMARKS
OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. ENGLE. Mr. President, I am very pleased to report that the National Foundation has announced the founding, at La Jolla, Calif., near San Diego, of an institute to combat all the diseases and problems of man. This institute will be headed by Dr. Jonas E. Salk, and will be supported by March of Dimes funds. Financing for the actual construction of the study center will come from other sources. The institute should do much to further man's efforts to conquer the diseases of the mind and the body. I ask unanimous consent that the press release issued by the National Foundation, an accompanying statement by Dr. Salk, and a fact sheet on the institute be printed in the Appendix of the Record.

There being no objection, the items were ordered to be printed in the Record, as follows:

SAN DIEGO, CALIF., March 15.—The National Foundation today announced the founding, with Dr. Jonas E. Salk as director, of an institute of leading scientists from the United States and abroad to attack the complete range of ills and problems of man with every weapon of natural science.

The National Foundation, which is supported by the march of dimes, will initially commit \$2 million for the institute and will be a chief financial supporter in years to come, according to Basil O'Connor, the National Foundation president.

Financing for actual construction of the study center at nearby La Jolla, Calif., will come from other sources, however, Mr. O'Connor added.

"This is the world's first institute of such broad scope to be founded by a voluntary health agency," Mr. O'Connor said. "In this

and other countries either government or large philanthropies are the sole support for this type of activity."

The National Foundation support of the Institute would not, however, preclude other expected financial support, Mr. O'Connor added.

The Institute was envisioned by Dr. Salk as:

"A nonprofit facility devoted to the advancement of knowledge, relevant to the health and well-being of man, by research—including research in fundamental biology—in the cause, prevention, and cure of disease and in the conditions conducive to the fulfillment of man's potential."

The multimillion dollar institute, which is as yet unnamed, will be built on a 70-acre ocean shore site offered cost free by action today of the San Diego City Council, subject to voter approval in June 7, 1960, primary election.

Construction would begin immediately after such approval with the institute expected to open about September 1, 1961, Mr. O'Connor said.

The land adjoins a 1,000-acre area previously made available by the city for the proposed University of California community approximately 12 miles northwest of San Diego, according to the announcement.

Even though the National Foundation is a principal financial supporter, the institute will be completely independent and self-governing with its own board of trustees, Dr. Salk explained. Names of the trustees could not be revealed until a later date, he added.

Dr. Salk, Mr. O'Connor, and other national leaders have been formulating plans for a study center of this nature for nearly 3 years, it was said.

Dr. Salk, who is commonwealth professor of experimental medicine at the University of Pittsburgh, has been associated with that institution since 1947.

His intentions have been made known to University of Pittsburgh officials and by mutual agreement he will remain a faculty member until he assumes active directorship of the new institute, Dr. Salk explained.

The institute will have a permanent staff of scientists, he said. In addition, there will be facilities for visiting researchers from here and abroad to spend varying lengths of time at the institute. There will also be provision for young scientists, early in their careers, to come to the study center as fellows.

The National Foundation will contribute \$1 million a year up to a total of \$10 million for an endowment fund, Mr. O'Connor stated. An additional \$1 million a year will go to the institute to support annual activities and research, he added.

Dr. Salk emphasized that the work of the institute would be concerned with basic research and the practical implications of such investigations.

From these will flow studies that will have a bearing on such problems as cancer, virus diseases, immunologic disorders, genetic problems, and mental health, he predicted.

The nature of the research also promised significant developments in the fight of the National Foundation against birth defects, arthritis, and polio, Mr. O'Connor declared.

STATEMENT BY DR. JONAS SALK

For some time there has been under consideration the establishment of an institute broadly oriented and concerned with the problems of man as these can be approached by the methods of the natural sciences; an institute devoted to the advancement of knowledge, relevant to the health and well-being of men, through research in fundamental biology, in the means for prevention or cure of disease, and in the conditions that may be conducive to the fulfillment of man's potential.

The time seemed opportune to consider the possibility of establishing such a facility for persons from different disciplines and backgrounds who are interested in the organization and processes of life. The recent great advances in knowledge in some of the fundamental aspects of biology has created the basis for considering the possibility. Another reason derived from the increasing success of man's continuing search for control of the forces of nature which has brought further to the fore, questions of the meaning, the purpose, and the value of human life. Man is more than an organism that can be disordered or diseased; the spirit of man, as exemplified by his aspirations and achievements, is as much a part of him as his other attributes and problems.

The interested response to these thoughts by many diverse interests provided encouragement to pursue the feasibility of such an undertaking. It is self-evident that its character and success would be determined by the men who associate themselves with it.

It seems that it would be best to initiate the development of such an institute with a group engaged in studies upon some of the fundamentals of biology. This would provide the basis for deeper understanding of such biological processes as growth, development, and adaptation of living organisms. Not only would this then lead to new and fundamental areas for further exploration, but it is conceivable that from this would flow ideas for developing further means for contributing to the control of some of the many unsolved problems of disease.

In addition to permanent members with overlapping interests, it seemed desirable that there be as part of the institute a group of visiting members with more diversely spread interests, from this and other countries, who would spend a certain amount of time each year at the institute, and there would be related interests to others who would come for 1 or more years. An additional important part would be formed by young people who would spend a period of time at the start of their careers as fellows of the institute. It is hoped that in these various ways, freshness of spirit and vitality would be maintained and new ideas generated and exchanged.

Mr. Basil O'Connor, president of the National Foundation, together with whom these ideas were developed, expressed the desire and the willingness of the National Foundation to help found and support such an undertaking. The National Foundation has agreed to provide a minimum of \$1 million annually, for an indefinite period, and to contribute additionally toward an endowment fund, at least \$1 million per year until the National Foundation's contribution to this fund reaches \$10 million. While the support, to the extent indicated, will come from the National Foundation, the institute will not be precluded from receiving support from other sources, either for its annual activities, or for its capital or endowment funds.

It was clear at the outset that the institute, although self-governing, would thrive best in the vicinity of a major university in which strong intellectual associations would develop. This requirement is particularly well fulfilled in the San Diego area of California because of the possibility that the University of California might establish a major campus in the La Jolla area where there now exists the University Graduate School of Science and Engineering and the Scripps Institution of Oceanography. This weighed heavily in the favorable consideration of this area.

Encouragement from the various other institutions in the area, gave further incentive for exploring the possibility that a desirable site could be found in the vicinity of this projected University of California campus.

When this interest became known to the officials of San Diego, discussion of sites ensued. This soon led to agreement in principle upon a site on the Torrey Pines Mesa. In making this site available, the officials of the city of San Diego conveyed their interest in establishment of the proposed institution by submitting the matter for consideration by the city council and the electorate.

In the event of a favorable response on the part of the city council and the electorate, detailed plans will be announced. This will include the names of trustees, the initial and visiting members, along with contemplated land use and architectural plans.

The availability of a sufficiently extensive land area for development that will inevitably arise will make it possible to consider, without the usual restrictions, undertakings that might not otherwise be possible. If the limits within which the institute functions can be set only by the limits of the imagination and ingenuity of those who compose it, then the purpose for which it is being created will have been realized.

FACT SHEET

PROJECT

To create a unique institute of eminent scientists from the United States and abroad concentrating on basic research to attack the ills and problems of man by every means the natural sciences can provide.

DIRECTOR

Dr. Jonas E. Salk, developer of the first effective vaccine against paralytic polio, currently commonwealth professor of experimental medicine at the University of Pittsburgh.

PERSONNEL

The institute will offer complete study and research facilities to scientists from many specialized fields who will be associated with the project in the following categories:

1. Permanent members of the institute.
2. Visiting members from this and other countries who would spend varying amounts of time at the institute.
3. Young scientists spending a period of time at the start of their careers as fellows of the institute.

LOCATION

The institute will be located near La Jolla, Calif., on Torrey Pines Mesa approximately 12 miles northwest of San Diego on a 70-acre tract offered cost-free by the city of San Diego. The institute will be adjacent to, but not part of, the new University of California community now in the planning stage. In the same general area are located the University Graduate School of Science and Engineering, the Scripps Institution of Oceanography, as well as other important scientific installations. Conveyance of the land for the institute must be approved by the people of San Diego in a referendum to be held June 7.

BUILDINGS AND PHYSICAL DETAILS

The location and architecture of the buildings will be planned to conform with and enhance the terrain and atmosphere of the oceanside site. One major building will house the administrative and nonscientific facilities of the institute. Other buildings will be designed to meet the unique demands of the specific scientific projects to be carried out within them. Louis I. Kahn, Philadelphia, is consulting architect for the project. Mr. Kahn, a former professor of architecture at Yale University who now holds a similar post at the University of Pennsylvania, has designed the Yale University Art Gallery; the Medical Research Laboratories—biology building, zoology building, and service laboratory at the University of Pennsylvania—and was architect for the Mill Creek area redevelopment plan of Philadelphia.

CONSTRUCTION SCHEDULE

If land conveyance is approved by the voters June 7, work is expected to begin immediately with the anticipated opening date of the institute set for September 1, 1961.

FOUNDING AND SUPPORT

The national foundation, which is supported by the March of Dimes, has agreed to provide a minimum of \$1 million annually, for an indefinite period, and to contribute additionally toward an endowment fund at least \$1 million per year until the national foundation's contribution to this fund reaches \$10 million. Additional financial aid, primarily for construction of buildings, from sources to be announced later will be forthcoming. These other sources also will contribute to activities as well as the annual capital and endowment funds.

PURPOSE

Dr. Salk envisions the institute as: "A non-profit facility devoted to the advancement of knowledge, relevant to the health and well-being of man, by research—including research in fundamental biology—in the cause, prevention, and cure of disease and in the conditions conducive to the fulfillment of man's potential." Those working at the institute will not be restricted to any one field or disease. But from their broad studies will flow information bearing on such specific problems as birth defects, arthritis, polio and virus diseases—the current targets of the national foundation—as well as others like cancer, immunological disorders, genetic problems, and mental illness.

Imagination Needed To Meet Housing Needs

EXTENSION OF REMARKS

OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. MOORHEAD. Mr. Speaker, ACTION, an organization which seeks to use private capital and private initiative in the fight against urban decay, is one of the groups working most effectively for a better urban America. At a recent meeting in Pittsburgh, Mr. Andrew Heiskell, chairman of the executive committee of ACTION, Inc., called for more initiative in meeting housing needs. Here, under leave heretofore granted to extend my remarks, I include Mr. Heiskell's comments:

GOOD HOUSING IN GOOD NEIGHBORHOODS—OPPORTUNITY AND CHALLENGE FOR INNOVATION—THE NATIONAL DIMENSION

(Opening remarks by Andrew Heiskell, chairman, executive committee, ACTION, Inc., before ACTION's point-of-decision conference on innovations to achieve good housing in good neighborhoods)

Last year, the Nation set an all-time record in spending money to build new private housing. Some \$22 billion, according to the Census Bureau, went into the construction of new homes and apartments. These added up to 1,370,000 new housing units—not quite a record but the second biggest total in American history, second only to the all-time peak in 1950.

Even so, almost nobody seems to be satisfied with housing's performance. For too many people are still living in slums. Instead of the third of a Nation that Franklin Roosevelt complained of a generation ago

as ill housed, it is about a quarter of the Nation that is ill housed today. Most of this improvement seems to be recent. And it is still going on.

Yet dissatisfaction with our progress against blight is growing. Currently, we have the spectacle of local and Federal officials pointing accusatory fingers at each other. Local officials complain of Federal redtape which they say is slowing down their efforts at urban renewal. And Federal officials cry that local officials plan too long and build too little, and pay too little attention to keeping the good housing they already have in good shape. Some big redevelopers now say they fear "urban renewal is in danger of being killed by its friends."

Whoever is to blame, the record speaks for itself. In 10 years only \$225 million has been spent of the \$1.3 billion authorized for federally aided urban renewal. Only 26 projects are completed.

So much for the sick record of urban renewal so far. Of course, housing and its problems are not merely urban renewal and its problems. Any good new housing built in and around metropolitan areas where decayed housing should be demolished helps. But housing, like agriculture, is becoming more and more a creature of government. And we are working with a set of housing aids that began as an improvisation and have been patched and remodeled so many times since that not even the experts can remember what all the rules are. How many of you know what section 314 is and does? How many of you know the differences between FHA sections 220 and 221? All three of these are designed to help solve various facets of problems arising from efforts to get rid of slums, and none of them are being used anywhere near their potential. Take section 221 as an example. It is the program that was just made the subject of a booklet called "221: The Program Nobody Knows—What Is It?" In 1954 the Eisenhower administration conceived section 221 as one of the sharp new tools needed to hitch private lenders and builders to urban renewal. Section 221 offers something close to giveaway financing to displaced families who will buy an inexpensive house, new or used.

Well, 5½ years later, the program is still trying to get to first base. More than 1,000 cities have workable programs—prerequisite to participating in urban renewal, including 221. But only 120 have any housing built and financed with 221 loans.

Let's take a look at the other Federal housing aids. FHA—the Federal Housing Administration—was born of a depression and designed for an economy that no longer exists. When FHA was born, the problem was a depression freezeup of the first mortgage market all over the Nation. Bankers were afraid to lend. The private mortgage guarantee companies had gone broke. Some people couldn't even get a 30-percent loan renewed. The farmers of the FHA mutual mortgage insurance plan were trying to find an outlet for money. German refugee money was flowing into the United States. The Nation's economy was stagnant. Factories were not even using their amortization allowances to build new plants. There were no foreign loans. The big job was to find an outlet for savings.

Today, the situation is absolutely reversed on every count. We have a net flow of capital abroad, an expanding population, industry anxious to expand and plowing back depreciation plus additional borrowings. So the experts say if people don't save, we can't build. But fear of inflation is driving more and more people into the stock market instead of savings deposits. On top of that, the Government has been forced to become a competitor for savings. As lenders know only too well, last fall it clobbered many savings banks with its celebrated issue of "magic 5s"—the 5-percent bonds that led many

small savers to take their money out of the bank and put it into Government bonds. This was money much of which would otherwise have been used to finance homes.

So we have this setup: FHA, built on a 1934 situation and its basic tools are still the basic Federal aids to housing. And they are basically unchanged. They are almost the only ones that do not cost the taxpayer any money and thus command enormous popular support. But they reflect, as ACTION's researchers have pointed out, an absolute loyalty to the idea that houses will continue to be assembled at the site by skilled craftsmen directed by local contractors who buy from local distributors and put a myriad of little pieces together according to drawings and detailed specifications.

For 25 years, thus, the effect of Federal aids to housing credit has been to palliate housing problems such as high costs instead of getting at the real troubles like code waste, restrictive work rules and local technical standards that prevent industrial production. Federal programs have muffled big chances to raise housing standards and improve the industry's efficiency. Instead they lull us into inaction about the real problems. How much too much does housing cost? Well, between 1915 and 1957, according to the BLS index of residential construction costs, the price of building new housing rose 394 percent. By comparison, the BLS wholesale price index rose only 160 percent during the same timespan. The BLS consumer price index went up only 177 percent.

Of course, FHA has achieved some remarkable progress, just the same. Its mortgage insurance has turned out to be the big first step to create for the first time a truly national market for mortgages. But FHA has made only a modest contribution to the cost problem—by letting merchant builders operate on a large scale. Government has failed to get rid of the obsolete practices ossified in building codes. And it has done nothing at all to attack the problem of the high cost of land which is beginning to hamper them seriously, many builders say, at putting up the kind of one-family houses people expect and still keep them priced for the average pocketbook. What Government has done is to soften the impact of high costs by reducing downpayments and outlays for debt service by stretching out amortization. So, thriving on easy terms, the housing industry has had little incentive up to now to strive for technological advance and develop better marketing techniques.

On top of this, we are now entering an era when apparently we are going to have a chronically credit-short economy. To state it another way, there is serious doubt that there will be enough long-term funds available to do everything we have in mind.

This means that no matter how successful FHA (and VA) programs were at improving U.S. housing standards immediately after World War II they cannot be now.

There is no possibility of getting enough money out of Washington—in the midst of a cold war—to cope with slum problems our rising expectations say can and must be coped with. Neither, if we want to preserve our heritage of freedom, can we afford to abandon the traditional framework of powers divided between National and State Governments.

But the point here is not to debate the pros and cons of Federal housing and renewal laws. The point is what businessmen and other local citizens can do to make things move faster in their own backyards.

One thing businessmen might well do is consider some of the problems their very success as businessmen tends to create. Prosperity means jobs. Jobs mean people. And new people nowadays—in most big

cities—mean rural laborers and semi-skilled craftsmen who, because they are at the bottom of the economic ladder, tend to coagulate in the worst housing and often make it worse. In short, prosperity is spurring the growth of city slums instead of preventing their spread. Increasing migration from the South is causing many slums to spill out into once respectable neighborhoods as the middle-class packs up and moves into suburbia. Few knowledgeable people argue that slum-formation is a matter of race. It is a matter of the impoverished rural background of the immigrants. And it is, of course, absurd to expect such families with a long background of deprivation to develop middle-class standards of behavior overnight. Race is only a convenient tag that serves to obscure the real problem. Perhaps the real problem can be stated this way: Are businessmen shirking their responsibility by turning their backs on the housing conditions of their low-paid labor?

Progressive companies—more and more of them—do not ignore the housing problems of skilled, scarce, and talented help. IBM, for example, when it shifts engineers from plant to plant, not only pays moving expenses but pays the 5-percent realty commission on the sale of the old house and closing costs on the new house. And if the employee cannot find a buyer for his old house right away, the company helps him make temporary double-financing arrangements on two homes.

Why do companies do all this? One reason is that it is getting harder and harder to recruit scarce and talented help when they may have to live in housing so bad its bad environment has infected not just a few blocks, but whole areas of a city. The converse is easy to see. One reason such a magnificent complex of electronics industry has sprung up on the San Mateo Peninsula just south of San Francisco is that it is a delightful place to live. The ingredients? Some of them are: Clean cities, lots of trees, parks, graft-free local governments, good schools.

So businessmen have a personal stake in housing and urban renewal. Not only does the good environment that good housing creates make it easier to hire better employees, but as the biggest taxpayers in the locality, they have a financial interest in getting rid of the drain on municipal revenues that slums create.

I believe housing problems are largely going to be licked where they arise: in big cities. Or they won't be licked at all. The Federal Government can help, but it cannot do the whole job.

Yet, it is also clear that if the expectation of better housing is not met by private action in concert with local government, there will be attempts to meet it by Federal action. There is too much vote potential for politicians to ignore the problem.

The big danger in housing is that businessmen—ignoring civic responsibility and baffled by housing's complexity—will continue to turn their backs on the problem. Only when businessmen understand that this is their problem, as well as city hall's, and then go to work with city hall, will the city have a chance of becoming a desirable place to live in. From now on the businessman's future is tied to the health of his community. The greatest shortage in the sixties will be manpower which will flow to the communities that have the most to offer.

Finally, the most hopeful step forward will take place when businessmen in the housing industry bring to housing the initiative, managerial skills and production techniques that characterize the American economy. This is what you in Pittsburgh can do for our country. We at ACTION, and all of our guests, appreciate today's opportunity to learn of the pioneering experience of ACTION-Housing, Inc.

What Kind of President Do You Want?

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. PROXMIRE. Mr. President, few commentators on our National Government go so directly to the heart of our national problems as the head of the Washington bureau of the New York Times, Mr. James Reston.

In this morning's New York Times, Mr. Reston discusses the big question that confronts American citizens in the next 6 months: "What Kind of President Do You Want?"

Mr. President, I found this an exceedingly provocative and enlightening discussion of how the conscientious American citizen might organize his thoughts in deciding how to vote in 1960. I ask unanimous consent, Mr. President, that this excellent commentary be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT KIND OF PRESIDENT DO YOU WANT?

(By James Reston)

WASHINGTON, March 17.—President Eisenhower's remarks yesterday about the lunch-counter controversy in the South tell a lot about his concept of the Presidency.

More important, they provide a specific incident by which the Nation can help decide the major political question of the day—namely, what qualities are needed in President Eisenhower's successor.

The President put a sharp limitation on what he regarded as his right to intervene to help the Negroes achieve equal status at the lunch counters in the South.

He dealt with the legalities of the problem but not the moralities. He supported the Negro's right of peaceful demonstration for equal rights. He deplored any use of violence on either side. He implied that the Negro had a constitutional right to eat alongside whites in public places operating under public charter, but not in privately owned establishments.

In sum, he gave his "understanding" of what was legal but not what he thought was right, and this raises some interesting questions for the future:

THE BASIC QUESTIONS

Is the President's obligation fulfilled when he meets the legal duty to "take care that the laws" are "faithfully executed," or is there also a moral obligation to speak out for the equality of all the people?

Which of the two historic conceptions of the Presidency do we need: a Presidency "active and reformist" or a Presidency protective of the established order?

What are the requirements of the sixties: for an assertive "reformist" President like Jackson, Wilson, and the two Roosevelts, or for the weaker Presidents of 1809-29 and 1865-85, or for something in between?

President Eisenhower has usually acted to protect the established order, as an honest conservative usually does, but he has not always refrained from taking the lead against powerful opposition. He led the debate against inflation, and swung his sickle in that "dread field" of foreign aid. But he has shied away from the moralities of the civil rights debate.

He landed the troops in Little Rock to meet what he regarded as his legal obliga-

tion, to enforce the Supreme Court's public school integration decision, but he has not said yet that he thinks the Court's decision was right. Why?

He said yesterday that he did not want to make any judgment about the lunch-counter demonstrations "because I'm not in a position to." Why isn't he?

"I know about these (lunch-counter demonstrations) as they come briefly to my attention," he added. Why briefly?

The reasons for these attitudes are not hard to find. President Eisenhower believes with great sincerity that the "active, reformist" concept of the Presidency has gone too far. As he told the reporters yesterday morning: "I am one of those who believe there is too much interference (by the Federal Government) in our private affairs. * * * I would like to diminish rather than increase it."

THE CONSEQUENCES

For this reason, he would leave the question of eating in private establishments in the South to the local authorities; he would leave the allocation of the Nation's resources primarily to private choice, rather than increase the flow of funds into education, hospitals and defense.

He would leave the development of Latin America primarily to private venture capital (which takes one look at Castro and flees) and avoid any direction of television, no matter what commercial television does to debase the national taste.

He believes in the noble theory which Jefferson proclaimed (and didn't always follow)—but will it work in the sixties? Will the local communities really make peace at the lunch counters, or vote the funds to provide the education necessary in this kind of world? Will private capital voluntarily develop the underdeveloped countries in freedom, or give us educational television?

There are a lot of people here who honestly think the answer to these questions is "No." They understand the conservative limitation of Presidential power in a period of consolidation. But they think the President, 100 years after Appomattox, ought to be willing to say at least a word for the Negro trying to eat a hamburger next to a white man in Atlanta, and they insist that the next President, whoever he is, will need to use all his powers to meet the problems of the sixties.

Dependable Railroads

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. DAGUE. Mr. Speaker, the last few weeks of atrocious weather have served one useful purpose; namely, that of pointing up the vulnerability of air and highway travel when roads and runways are under a mantle of snow.

As a consistent patron of the trains—I never fly—I have become used to being crowded out of my seat by the myriad of "snow birds" who descend upon the railroads when the skyways and byways are out of service. And the railroads, while hard put to come up quickly with the additional cars that are needed, have never failed them, whether it be commuter service or a transcontinental run.

What worries me—and should concern everyone who depends on the railroads—is what we will do when the subsidized

mediums of transportation have put the one dependable, year round, mode of travel out of business. Something certainly will have to be done and quickly if we are not to suffer the irreparable loss of a nationwide system for moving goods and people to those other types of travel that simply cannot cope with the vagaries of the weather, to say nothing of the unpredictable demands that would come with wartime.

This following is taken from a current paid advertisement and lends emphasis to my arguments in behalf of strengthening our railway system by emphasizing the part these carriers play in getting the mails through while their competitors are digging out:

HERE COMES YOUR AIRMAIL (AND YOUR HIGHWAY MAIL) TOO

Every year, the railroads are being squeezed out of more and more of the mail-carrying business. Mail once hauled by rail is being diverted, instead, to highway trucks and to the airlines.

But what happens when the weather gets ornery—when trucks bog down on snow-covered highways and planes are grounded?

You guessed it. Back to the railroads it comes in a veritable flood. Then the railroads get the mail—and get it through, too. All of it. Until the sun shines again.

The proven ability of the railroads to carry the mail under any conditions and in all kinds of weather didn't just happen. Railroad transportation is dependable transportation. And in their mail-handling equipment and facilities, railroads have an investment of about a billion dollars.

During the recent series of bad storms throughout the South, railroads were called upon many times and in many places to help carry on the postal tradition that the mails must go through—and it did.

But if diversions to other carriers continue, the day may come when railroads will not be able to move all mail at the drop of a snowflake. And if this ever happens, all America will be the loser.

American Legion Celebrates 41st Birthday

**EXTENSION OF REMARKS
OF**

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. WILEY. Mr. President, today, I rise to pay tribute to the American Legion and its members in recognition of its 41st birthday.

Established in 1919, the Legion has grown tremendously. Comprised of veterans of three wars, the Legion today has 17,000 community posts. Too, it has outposts in every land outside the Iron and Bamboo Curtains. In addition, it has now 14,000 auxiliary units.

During its 41-year lifetime, the Legion has had a significant impact on American life.

As a "voice of the veteran," the American Legion—along with other fine organizations in the field—has a notable record of supporting legislation, drives, and causes, not only in the interest of

the veterans, themselves, but also of the national interest.

Recently, the La Crosse (Wis.) Tribune published an enlightening article on its growth, progress, and work entitled "American Legion To Mark 41st Birthday." I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN LEGION TO MARK 41ST BIRTHDAY

The American Legion, world's largest veteran organization, celebrates the 41st anniversary of its birth Tuesday to Thursday.

Members of La Crosse's Roy L. Vingers Post 52 also are marking their 41st birthday.

The Legion was born at a caucus in Paris March 15 to 17, 1919, held by members of the first American Expeditionary Force. The meeting was in the Cirque de Paris, a building long ago torn down. A bronze plaque now marks the site.

The 1,000 delegates to the Paris caucus reached agreement on forming an organization of American veterans of World War I. They set up a committee of 100 to push plans for enrollment overseas and at home.

They left the completion of the new organization to a second caucus that was held in St. Louis May 8 to 10, 1919. That St. Louis caucus adopted a constitution and bylaws and selected Minneapolis for the first national convention of the American Legion November 10 to 12, 1919.

Historian Richard Seelye Jones wrote of the founding Paris caucus:

"The American Expeditionary Force dissolved. It left its dead in France. It left its record for history. It bequeathed the perpetuation of its memories, comradeships, and service ideals to the American Legion."

Today, its ranks are mostly filled by a younger generation of American veterans. The Legion is today a three-war organization. It has 17,000 community posts. It has outposts in every land outside the Iron and Bamboo Curtains. It has an auxiliary with 14,000 community units.

The American Legion has had an impact on the American scene during the first 41 years of its life. This impact was registered through its major basic programs.

Through its fathering of the GI bill of rights for World War II veterans and its subsequent Korean GI bill, the American Legion has contributed to the raising of the educational level of the entire Nation. The same legislation also gave a tremendous boost to homeownership in the United States.

GI bill educated or trained veterans have a 15-percent greater earning power than non-veterans of the same age brackets, a complete reversal of the situation 13 years ago.

The American Legion has aided in bringing about modern concepts of child welfare and for streamlining laws, court procedures, and public services having to do with the care and protection of all American children. Adoption and probation laws have been brought up to date, uniform State laws on desertion have been enacted and juvenile court procedures have been revamped. These changes came about partly through American Legion sponsorship.

Since 1925 the Legion has spent more than \$148 million in emergency financial aid to children in need. Most of this money has gone for food, clothing, shelter, and medical treatments.

The Legion is financing, through grants from its National Child Welfare Foundation, research studies and surveys aimed at improved training and services for mentally retarded children, at helping partly blind youngsters, and at training police officers for careers in working with juveniles who have become delinquent.

National Teacher of the Year

**EXTENSION OF REMARKS
OF**

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mrs. KEE. Mr. Speaker, all West Virginians can be proud of the selection of the beautiful and talented Mrs. Hazel Davenport of Beckley as national teacher of the year.

It is particularly gratifying to me that this honor should be bestowed upon a West Virginia teacher at a time when our State has been the recipient of so much unfair publicity. The selection of Mrs. Davenport as the teacher of the year will serve to remind the rest of the Nation that West Virginia has many outstanding assets, one of the most important of which is our young people who are now being trained as future leaders.

I am delighted that the National Education Association is honoring a classroom teacher each year.

Mrs. Davenport, and the previous winners, are typical of the thousands of men and women throughout the Nation who have dedicated their lives to teaching.

The teacher is one of the most important persons in our democratic society. Unfortunately, all of us have a tendency to take them for granted. It usually takes a crisis of some sort to force the public to earnestly concern itself with public education and with the men and women who operate our schools and teach our children.

It takes a tremendous amount of money to operate our schools. Many local areas are making real financial sacrifices to provide their children with the best possible education. Other areas find they simply do not have sufficient financial resources to build and maintain the type of school system which they need.

Because education is so important to a democratic society, I have long supported efforts in Congress to make financial assistance available to local school systems. At the same time I have insisted that any Federal assistance leave the sole responsibility of operating schools to local communities.

Federal control of the educational system would be abhorrent to our concepts of government. I firmly believe that our system of government is flexible enough to permit the Federal Government to help the States and localities with their educational problems without assuming control of education.

One other thing appears clear to me. No amount of Federal funds can insure a good educational program in every community. The primary responsibility rests with the local people. They have to determine what the schools should teach and how it is taught. They have to attract and hold good teachers.

Added revenue in the form of Federal assistance will enable many school districts to improve their school facilities, but unless the local people demonstrate

a deep and continuing interest in local school problems, they will never have the type of system to which the community is entitled.

In the final analysis, the Nation's school problems extend down to the local level where they must be solved.

Local people, working with dedicated teachers such as Mrs. Davenport, will, I am sure, provide the Nation with a school system that is capable of meeting any challenge.

Billboard Control Helps Hawaiian Economy

EXTENSION OF REMARKS OF

HON. OREN E. LONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. LONG of Hawaii. Mr. President, my State of Hawaii has found that regulating billboards is good business.

Outside Honolulu, there are no roadside billboards in Hawaii. Tourists like the idea. Our scenic splendor is not marred by signs. The people of Hawaii are proud of their foresight in preventing the blighting of a lovely landscape by billboards. Businessmen find no reason to complain about the absence of such roadside advertising. Many believe highway posters would probably hurt more business than they would attract.

My departed friend, Senator Richard Neuberger, who championed the cause of billboard control, often noted that States where the tourist trade is important have a vital stake in regulation of signboards along their highways. In his own State of Oregon the tourist trade ranks third among all industries, bringing in an income of over \$175 million each year. He would point to Department of Commerce figures showing that if a community can attract a couple of dozen tourists a day throughout the year, it would be economically comparable to acquiring a new manufacturing industry with an annual payroll of \$100,000.

Recently, there appeared in the Memphis Press-Scimitar an article by Milton Britten headed "Hawaiians Have Enjoyed Billboard Ban 33 Years and Profited By It," and quoting the comments of my colleague [Mr. Fong] and myself on billboard control.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAWAIIANS HAVE ENJOYED BILLBOARD BAN 33 YEARS, AND PROFITED BY IT
(By Milton Britten)

WASHINGTON.—It has been nearly 2 years since the Federal billboard control law was passed.

Yet not a single State has come forward to accept the bonus offered for agreeing to abide by national standards for regulating signboards along the 41,000-mile interstate highway network.

This is a matter of bipartisan bafflement to Senators from our newest State, Hawaii, where strict controls have been on the books for 33 years and have proved both pleasant and profitable.

Says Democrat OREN LONG, former Governor of Hawaii: "If you drove from Honolulu all around the island of Oahu and back again, you wouldn't see a single billboard. This is widely discussed by tourists and a matter of pride among our people."

"Our territorial legislature back in 1927 passed a law restricting billboards to a closely defined area within the business district of Honolulu. Outside of this small area there just aren't any billboards to mar the beauties of our landscape."

"This not only pleases our own people, who enjoy their scenery, but is good for our tourist business. There have been a few feeble efforts to relax controls. But so far as I know our great business organization, the chamber of commerce, has never even slightly intimated they favored such efforts."

"The likelihood is that just as many products of any given make are sold in Hawaii as there would be if we had our roads cluttered with billboards."

GOOD BUSINESS

Republican HIRAM FONG, attorney and big businessman, agrees: "It's good business for Hawaii to control signboards. Their absence lends a lot of enchantment to our scenery, which tourists enjoy."

"Last year about a quarter million tourists came to Hawaii and spent \$90 million. By 1965 it is estimated we'll attract a million tourists, and by 1975 2½ million. By 1970, we estimate that our income from tourism will exceed the aggregate of our income from our sugar and pineapple industries."

"It would be a very good thing if billboards could be eliminated from highways all over our Nation. They distract motorists. How much better off America would be if every billboard could be taken down and a tree planted in its stead."

Both described as jarring to Hawaiians the contrast between billboard-cluttered mainland highways and their own unmarred scenic roadways.

Senator LONG says he thinks "the time will come when more careful consideration will be given" to applying on a national scale the strict controls Hawaii has enjoyed. He says he doubts this should be tried, however, until the present law has had a trial.

Latest Bureau of Public Roads survey indicates only three States—Connecticut, Wisconsin, and North Dakota—have already passed laws that would enable them to participate in the Federal program. Adequacy of a recent Maryland law is in dispute.

DEADLINE JUNE 30, 1961

A number of other States have tried or are trying to write enabling legislation. Deadline for signing up for the Federal bonus offer is June 30, 1961.

One reason for delay thus far has been the activity of the billboard lobby, which pressured Congress into watering down the Federal law and has since been working against it within the State legislatures.

The law provides that the Federal Government will contribute one-half of 1 percent more than its 90 percent share of interstate highway costs to States that agree to abide by minimum national standards of billboard control.

Communications Workers of America Support Forand Bill

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter from J. A. Beirne, president of the Communications Workers of America:

COMMUNICATIONS WORKERS OF AMERICA,
Washington, D.C., March 17, 1960.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D.C.

MY DEAR MR. LANE: The purpose of this letter is to support the Forand bill (H.R. 4700) and other proposed legislation designed to furnish hospital, surgical, and medical benefits to those eligible for other social security benefits. The Communications Workers of America speaks for over 360,000 active members and about 22,000 retired persons. We believe that legislation of this kind is one of the most important matters before the Congress today.

The cost of supplying these benefits would require only a small increase in the social security tax structure. We are sure our members and all other American workers would be more than willing to pay a higher rate and to raise the annual earnings ceiling subject to social security tax in order to provide these most essential benefits for those now retired and for their own security and peace of mind at the time of retirement.

Private commercial health insurance is either too expensive or when provided within the limits of the ability to pay, the benefits are too inadequate to meet the needs.

Public assistance to the poverty stricken is necessary and worthy. It should be improved and extended. But public assistance is public relief. For it to be available in many States you must sell your possessions, exhaust your savings, and in fact, take a pauper's oath.

Some have said that children and grandchildren should step in and pay the hospital and doctor bills when the old folks are faced with costs beyond their ability to pay. No doubt millions of emergencies are solved this way. But a medical catastrophe to the parents is in most cases beyond the means of willing children. At best, such help is a sorry reward for pensioners who have earned their independence.

In America, it should not be necessary, after years of work, raising and educating a family and helping to build America and in fact, the world, to be faced with any of these alternatives.

We believe that the solution to this problem can be found in expansion and improvement of our social security system through the provisions of the proposed Forand bill.

After all the data are evaluated, one paramount consideration remains—this bill directly concerns a group of human beings who constitute a most valuable segment of our population; confronted upon retirement by drastically reduced income on one hand and higher costs of medical care on the other—after a lifetime of useful labor. These facts are the basic reason why the Communications Workers of America vigorously endorses this much needed and long overdue legislation.

Our first concern as a trade union is the welfare of people. This concern is not confined to representing our members while employed by the companies with whom we bargain, but encompasses also those who retire. We feel an equal concern for all of our elder citizens. No amount of statistics or argument, impressive as they are, so eloquently express the urgent need for this legislation as do the statements of pensioners themselves—contained in the many letters received urging our continued support of this bill.

Comments such as "Social security deduction of \$2.50 and Blue Cross and Shield \$8.95 left me with a Bell pension check of \$57.99 prior to April 1. My social security pension check for this month was in the amount of \$70.47, an increase of \$12.48. One reason why I am able to carry hospitalization so far—I have been able to work part time jobs." Or: "I have read for and against the bill (Forand bill). It would be a blessing for retired people, also take a heavy burden from the welfare departments as for expenses in help to lift the morale of those in need. At present there are two I know who are being cared for by the welfare department. Both have hospital and Blue Cross benefits which are not adequate for 65 plus. What a blessing the Forand bill would be if it were now a law for I am sure there are many more in the same condition."

These letters and many others, some poorly written, all attest to the tremendous need which exists for an expansion of our social security program—so as to provide health insurance benefits for those who, because of retirement, have limited incomes and are unable to secure adequate health insurance coverage from private sources.

The Communications Workers of America urges you to do everything within your power to secure the speedy consideration and enactment of this legislation. The tangible results of this legislation will be in providing adequate medical care and treatment for our older citizens. The intangible results are peace of mind; freedom from the nagging fear of disastrous economic consequences of illness. These intangibles will be even more rewarding to those benefited as well as a source of real satisfaction to you who are fortunate enough to be in a position to enact this kind of legislation.

Sincerely,

J. A. BEARNE, President.

Congress Disposes

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent editorial from the Woodruff (S.C.) News of March 16, 1960, entitled "Congress Disposes." The editorial is very brief, but it makes a very important point about Government spending and socialism.

The Woodruff News, which always carries a good editorial page, is ably edited by Mr. Charles E. Smith.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONGRESS DISPOSES

The President has proposed a budget for the coming fiscal year which, he estimates, will result in a surplus of more than \$4 billion. It will be unfortunate indeed, however, if we assume that this will occur almost automatically.

To paraphrase the old saying, the President proposes but Congress disposes. And the Council of State Chambers of Commerce points out, "is already threatened with extinction." Reason: The strong inclination in Congress to boost expenditures substantially with new large spending measures covering Federal aid to education, housing, aid to depressed areas, readjustment benefits for peacetime veterans, and a depression-type youth work program.

In sum, if the let-the-Government-do-everything groups have their way, we'll have another deficit instead of a surplus. Then we'll have more inflation, more debt—and, in all probability, ultimately higher taxes. That grim prospect can be prevented only if the voting public lets Congress know that it wants economy wherever economy is possible—and that we can't afford any more welfare statism.

Equalization of Freight Rates at North Atlantic Ports

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. DOOLEY. Mr. Speaker, under unanimous consent I include in the Appendix of the CONGRESSIONAL RECORD the following memorandum from Mr. Louis J. Lefkowitz, attorney general of the State of New York, concerning the equalization of freight rates at North Atlantic ports.

Mr. Lefkowitz points out with clarity the impact which unequal freight rates have on New York City, the Port of New York Authority, New York railroads, and other interested parties.

The Interstate Commerce Commission examiner's recommendations, if sustained, would prejudice the welfare of New York citizens, and would have a depressing effect on the business, industry and commerce of that city.

The memorandum follows:

MEMORANDUM—EQUALIZATION OF FREIGHT RATES AT NORTH ATLANTIC PORTS FACTUAL BACKGROUND

In 1877 the railroads serving the North Atlantic ports (Baltimore to Portland, Maine) executed a voluntary agreement setting the rail rates to those ports. The ocean rates from Europe, principally England, to ports in the United States differed according to the port, the New York and Boston ocean freight rates being lower because they were closer than the southern ports. The agreement setting the rail rates was intended to adjust the combination of rail and ocean rates, so that the combination rate would be identical between inland cities and any one of the North Atlantic ports, to prevent rate wars, and to assure all railroads, and for that matter, all ports, an equal share of the import-export traffic. This rate schedule was adopted by the Interstate Commerce Commission.

About 1920, the ocean rates were adjusted so that they were identical as between all of the Atlantic ports. Therefore, the port of New York, having a higher rail rate than the southern ports, came under a handicap.

PENDING MATTERS

The New York railroads and other northern railroads serving New York and Boston filed new tariff schedules with the Interstate Commerce Commission to equalize the northern line rates with those of the southern railroad lines serving Baltimore, Philadelphia, and Hampton Roads. The southern railroads objected to such new schedules. Hearings were held by an examiner of the Interstate Commerce Commission who, after the hearings, disapproved of the new tariff schedules as proposed by the New York railroads. Exceptions were taken to the decision of the hearing examiner by the New York railroads, the Port of New York Authority, the State of New York, the city of New York, and other interested parties.

The matter is now pending before the Interstate Commerce Commission. No date has been set yet for an argument.

The State of New York deems it necessary to emphasize that the adoption of the examiner's recommendations by the Commission would prejudice the welfare of its citizens and would impair its business, industry, and commerce. The financial stability of the railroads operating within this State is a matter directly affecting the State's economy. Their future existence actually would be jeopardized by the Commission's adoption of the recommendations which would continue outmoded and discriminatory rate differentials, differentials that seriously impair the ability of the northern tier railroads to compete fairly with the southern tier railroads in the field of import-export freight traffic—a result that cannot be supported by reason or authority. The vital concern of this State is manifest by its participation in these proceedings and is expressed in the concurrent resolution adopted by its legislature on March 26, 1958, entitled "Concurrent resolution expressing the sense and desire of the legislature that the railroad differential rate system on export-import rail freight, now handicapping the trade and commerce of the port of New York and jeopardizing the economic well-being of the port of New York and the railroads serving it, be eliminated." The singular importance of this matter to the State of New York is evidenced by the fact that it is the only State of all those in the affected area which has participated in these proceedings.

The Late Senator Richard L. Neuberger

EXTENSION OF REMARKS

OF

HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. GRUENING. Mr. President, tributes to our late beloved colleague, Richard L. Neuberger, multiply on every hand. Alaskans are particularly appreciative of the services he rendered.

I ask unanimous consent that an editorial from the Fairbanks News-Miner, entitled "We've Lost a Friend," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE'VE LOST A FRIEND

Alaska lost a staunch and capable friend early this morning with the death of U.S. Senator Richard L. Neuberger of Oregon.

Just completing his first 6-year term as U.S. Senator, the young 47-year-old Democratic Senator from Oregon had earned the admiration and respect of his constituents of both major political parties since his election in 1954. Senator Neuberger's integrity and sincere devotion to public service was recognized by his colleagues in our Nation's highest legislative chambers, who liked and respected Dick Neuberger the man, and Senator Neuberger, a statesman in the finest tradition of our country.

Intrigued by Alaska when he was aide-de-camp to Gen. James A. O'Connor, construction chief of the Alaska Highway during World War II, Senator Neuberger was a true friend to both the territory and State of Alaska during his career as U.S. Senator. He fought hard and effectively in our behalf to give Alaskans full privileges of American citizenship. It was fitting that Senator Neuberger was presiding in the Senate chambers at 8 p.m. on June 30, 1958, when the Senate granted statehood to Alaska. We remember his look of satisfaction when he smilingly admonished the packed galleries to maintain order as spontaneous applause erupted with Senator Neuberger's announcement of the final vote.

Oregon has lost a fine U.S. Senator, our country has lost a great statesman, and Alaska has lost a true friend today.

Help for Cities

EXTENSION OF REMARKS
OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. WALLHAUSER. Mr. Speaker, in my judgment, it is important that the urban renewal program not be considered a temporary project, and I believe that it should be a continuing one until our great cities have been assisted to recover from urban blight and decay.

The editorial appearing in the New York, N.Y., Evening News of Wednesday, March 16, is pertinent to this point and I hope that my colleagues will take the time to read it:

HELP FOR CITIES

Congress and the President have always seemed to regard urban renewal as though it were not a permanent policy, but a sort of WPA project left over from the depression. Getting sufficient funds involves an annual struggle and uncertainty has discouraged many cities from undertaking the long-range planning they should be doing.

The National Housing Conference would change this attitude. It advocates the creation of a Housing and Urban Renewal Department of Cabinet rank and the adoption of a 10-year program that would provide \$6 billion in Federal aid. Then every city would have a better idea about what it could do.

As to where the money is coming from, Representative JOHN V. LINDSAY, New York Republican, offers what might be a clue. He says that agricultural representation in the Cabinet has produced imbalance between what the Federal Government does for farm dwellers and what it does for city dwellers.

"We spend more money to provide and maintain storage accommodations for wheat than we can't use than our housing accommodations for our city families," says Mr. LINDSAY.

It is a sound theory that city and State action in meeting local needs is the best and cheapest, but since the theory is not being applied to agriculture, urban areas can advance a strong claim for comparable consideration.

A reasonable farm program, aimed at helping family farms and curtailing the millions now paid out to big farm corporations, might produce more than enough savings to finance the housing conference's 10-year program.

Facts on the Race for Space

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. KEATING. Mr. President, so many people have said so much about various aspects of our space programs that the facts tend to be obscured. Paul Martin, chief of the Washington bureau of the Gannett News Service, in a recent interview with Dr. T. Keith Glennan, Director of the National Aeronautics and Space Administration, made clear exactly where we stand in this important area of national progress.

This article is an excellent answer to those who are trying to make us believe we are so far behind that we may never get ahead of the Soviets in outer space. The actual situation, as I understand it, is that they are ahead only in the power of their space vehicles. Even in this one area, it becomes increasingly apparent that the Russians will not maintain their superiority for long if we continue to build up our capability.

So that a wide readership will be able to have a fuller understanding of the manner in which we are moving steadily ahead in the race for space, I ask unanimous consent to have Mr. Martin's fine article, which appeared in the Rochester Democrat & Chronicle on March 6, 1960, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES ISN'T BEHIND IN SPACE CONTEST
(By Paul Martin)

WASHINGTON, March 5.—The Director of the new Federal space agency declared today, "We are really not behind the Russians in exploration of outer space."

He is Dr. T. Keith Glennan, former president of Case Institute of Technology at Cleveland. He previously served 2 years on the Atomic Energy Commission in 1950-52.

Glennan is a stocky, dynamic, straight-talking man who inspires confidence. He is a 54-year-old scientist and engineer.

Although the Soviets have made some spectacular space shots with bigger payloads, Glennan claims the U.S. has learned more about the environment of outer space.

"By making more shots with smaller payloads, we have been able to turn up a tremendous amount of information about the phenomena we are studying," he said.

"We are judged by the scientific community of the world to have discovered more information. At least, we have released more than the Russians."

REAL PAYOFF

The real payoff from the space business in the future, he contends, is going to come from methodical pursuit of knowledge through scientific exploration, not spectacular shots for propaganda purposes.

"Hitting the moon will be nothing," he said. "We are laying on the line the brains and money and effort to make something out of this. We are not trying space shots to be spectacular, with no other real effort behind it."

The greatest danger today, Glennan believes, is in the Soviets' propaganda effort to capitalize on their space program, not the realities of the U.S. position versus Russia in rockets and missiles.

Khrushchev is telling neutral and uncommitted nations that because the Russians hit the moon, it proves the Soviets are the world's greatest military power, and that communism is a superior system.

THE REAL HARM

"That's the real harm," Glennan said. "The Soviets have used their achievements in space to impress uninformed persons."

He is afraid some Americans may be falling for this line, while politicians, who spread the notion, are helping the Communists at their own game.

"We're making ourselves believe that we really are a second class power," Glennan said. "We don't seem to have faith in the capabilities of this Nation, which are tremendous and far superior to any other country in the world."

"I am proud of what our Nation has done in a relatively short period of time. That does not wash away the necessity for achieving the kind of rocket power necessary to lift payloads or make deep space probes."

Glennan pointed out that scientific space exploration and development of military missiles for national defense are two entirely different programs.

BOTH USE ROCKETS

They are related only because they both use rockets as propulsion units, and may use the same launching pads or similar guidance and control systems.

He emphasized that the Soviets are ahead of the United States in only one aspect of rocketry—the amount of thrust needed to propel large vehicles into outer space. He called it a weight-lifting problem.

"Our less powerful rockets when used as military missiles are just as effective in achieving their purpose as are the larger, more powerful rockets of the Soviet Union," he said. "In fact, it is probable that their rockets are more powerful than they now need for military weapons."

Does this mean that the Soviets have better scientists and engineers, or that their industry is superior?

"Not at all," Glennan replied. "The Russians have no superiority across the board. It probably indicates that they have concentrated a larger share of their resources on this particular job for a longer period of time."

TO STAY IN THE LEAD

Furthermore, Glennan believes that the Soviets will continue to lead in the rocket propulsion for the next 5 years, if they keep up their efforts. This view is shared by Dr. Herbert F. York, of Rochester, Director of Research for the Defense Department.

The reason is that the Soviets were laying the groundwork for space propulsion between 1945 and 1953, while the United States was relying on manned bombers as a delivery system for nuclear weapons.

Americans must be prepared to understand and accept it if the Russians make more

spectacular space shots during the 1960 political campaign, such as sending rockets to Mars or Venus.

Meanwhile, Glennan said, the United States will be pursuing an aggressive and versatile space program of its own. These are the kinds of things we might accomplish:

1. "We expect to be successful in a manned space flight from Cape Canaveral about 125 miles high and 200 miles downrange," Glennan said. "This probably will be as significant as anything which will be done in the space field this year, here or in Russia."

2. "We may attempt to put a payload into orbit around the moon. That is a really difficult task. The Russians have hit the moon, bypassed it, and sent a rocket halfway around the moon to get a partial picture on the far side. But they have never succeeded in putting a space vehicle into orbit around the moon. We have never tried to hit the moon."

Glennan claims that the United States has not fully exploited the amount of thrust which could be achieved from base boosters presently available for space shots or missiles.

"Within the next 12 to 18 months, we should begin launching rocket vehicle systems that will allow us to match and outmatch what the Soviet Union has done to date," he said.

This will result from better utilization of thrust from existing base boosters through properly designed upper stages.

At the same time, the space agency will be seeking to develop new base boosters in the million-pound thrust class, or approximately triple what the Soviets now have.

Labor Reform Legislation of 1959 and Its Implications

EXTENSION OF REMARKS

OF

HON. JOHN A. LAFORE, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. LAFORE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech delivered by my distinguished colleague from Pennsylvania, the Honorable CARROLL D. KEARNS, before the Delaware Valley Industrial Editors Association, March 16, 1960, at which time Representative KEARNS received the Delaware Valley Industrial Editors annual communications award for distinguished service in establishing more effective communications in the areas of his public interest. The 1958 recipient of this award was Gen. Alfred Gruenther and the 1959 recipient—Mayor Richardson Dilworth.

The speech follows:

LABOR REFORM LEGISLATION OF 1959 AND ITS IMPLICATIONS

Last year I had the opportunity to address the national convention of the American Association of Industrial Editors in Syracuse, N.Y. Your invitation this evening prompted me to review the remarks prepared at that time. It does not seem possible that so much has happened in the labor-management field in the 11 months since your Syracuse meeting.

My trip to Syracuse was a hurried one because the House Committee on Education and Labor, of which I am ranking minority member, was holding hearings on labor re-

form legislation. Similar hearings had been completed in the Senate but that body had not yet acted on any bill. It was generally accepted that only the weakest kind of a labor reform bill would pass—something which was completely acceptable to the union leaders.

The principle of a bill of rights for union members had been included in several measures introduced in the Congress but the likelihood of its being enacted into law seemed remote. The curtain had barely risen on the drama of the battle for the bill of rights and the swell of public opinion which gave rise to House approval of the Landrum-Griffin bill. The conference between the House and the Senate, the climactic scene, where the compromise which is the Labor Reform Act was hammered out, seemed too far in the future to be of any interest.

When I look back on the Syracuse meeting and think of the questions which you raised, I must admit to some sense of gratification for the events during the following months. At Syracuse we talked about the necessity for better performance by unions, by management, and by the government in carrying out their duties and responsibilities in the labor-management area. We talked about the importance of protecting individual workmen in their fundamental rights and I suggested that the law must cover the following points if a definite goal was to be accomplished:

1. True democracy within unions must be assured.
2. Honesty in union affairs must be guaranteed.
3. "Sweetheart" arrangements between dishonest employees and union officials must be eliminated.
4. Criminal elements must be eradicated from the union movement.
5. Innocent workmen and small employers must be protected against coercive picketing and secondary boycotts.

I am proud to say that the new Labor Reform Act is a tremendous stride forward in accomplishing every one of these goals. Its bill of rights and election provisions go a long way toward assuring democracy within unions and returning control of labor organizations to their members. Its reporting, disclosure, bonding, and fiduciary relationship provisions, together with the restrictions on trusteeships, should be of substantial help in meeting the problem of dishonesty within unions. Sound provisions for the elimination of "sweetheart" contracts and for the ousting of criminal elements from the union movement are included. And finally, important limitations on organizational and recognition picketing, on secondary boycotts, and on hot cargo contracts, provide immeasurable protection to employees, and small employers.

The Labor Reform Act is not perfect. It is impossible to write perfect legislation in a field as controversial as labor-management relations. Particularly when a legislative body is "loaded" in favor of unions, as is our present Congress, and a substantial part of its membership was doing its best to kill all needed reform legislation. But, regardless of its faults, we can be proud of the act which was finally passed and be grateful that the working men and women of our country will benefit from its added protection.

Because a major battle was won last fall, we cannot rest on our laurels. Already a serious attempt is being made to weaken these protections by authorizing secondary boycotts in the construction industry. I have said on many occasions that I believe the peculiar problems in that industry necessitate some special legislation. In fact, one such provision was included in the Labor Reform Act. But the bill which is presently before the committee, H.R. 9070, confuses rather than resolves the problem.

After listening to testimony on H.R. 9070, it is clear to me that there is sharp dis-

agreement as to its meaning. The Labor Reform Act is a technical, complicated law.

Passage of another amendment at this time, before the NLRB and the courts have had a chance to interpret what has already been done, will accomplish nothing. Not even its strongest supporters are sure what it means, and Congress would be derelict in its duty if it should foist such an ambiguous statute on the public.

A more fundamental battle than any attempt to pass weakening amendments is shaping up outside the halls of Congress, however. It presents, in my opinion, one of the most serious threats to our fundamental rights as free citizens that I have witnessed in many years. I refer to the brazen attempt of Jimmy Hoffa to dictate to the American people whom we are going to send to Congress.

Shortly after the labor reform law was enacted, Hoffa announced a list of 56 Members of Congress whom he has decreed must be purged. My name, with that of Congressman WILLIAM AYRES of Ohio, was placed at the top of the list. Hoffa has said openly that the full weight of the Teamsters Union, with its millions of dollars in financial backing, will be used to make certain we do not return to Congress.

You may well ask, "Is not Jimmy Hoffa entitled to take sides in political contests and support the men of his choice?" If that were the issue, the answer must, of course, be "Yes". He, too, is an American with freedom of choice as to his elected officials and if the members of the Teamsters Union want him as their president that is their affair. Under the new law I firmly believe they can get rid of him if they want to.

But the issue is not Hoffa's freedom of choice. He has carefully picked 56 Congressmen who come from evenly divided districts where the voting is always close. His plan is to use the teamster organization to concentrate on defeating the incumbents, whether they are Republican or Democrats. A ready-made organization with virtually unlimited funds is a tremendous factor in any political campaign.

Hoffa will take personal credit for defeating any of the 56 who fail to be reelected. Their opponents will obviously be hand-picked by Hoffa but the key point is his plan is successful will be his claim to have the power to defeat any Congressman of whom he disapproves.

Think for a moment what this means. Because of Hoffa, the Teamsters Union has been expelled from the AFL-CIO. If anything, expulsion has strengthened rather than weakened the Teamsters. Hoffa is slowly making behind-the-scenes deals or working arrangements with other unions. The one thing which stands in the way of Hoffa's ambition to take over the labor movement in this country is the 1959 Labor Reform Act. If Hoffa can take personal credit for defeating any Congressmen who oppose him, this act will have a short and discouraging life.

I am positive the American people do not want any special interest group to take over their Congress, particularly if the group is controlled by a man like Hoffa. But we cannot afford to sit back and hope it will not happen. Hoffa has the organization and he has the funds to carry out his threats. Men and women like yourselves, regardless of whether you have been active in politics, must share the burden of defeating Hoffa. We cannot afford to sit back and hope someone else will do the job for us.

To offset the Teamsters organization, a Committee To Reelect Hoffa-Threatened Congressmen has been formed. I asked Mr. Kenneth C. McGuinness, the national chairman of the committee, to accompany me this evening and tell you something about its activities.

I cannot emphasize too strongly the threat with which we are faced. I implore you to give it your serious consideration and to do your best to see that the voters rather than any union official select our Representatives.

Namesake Towns Association

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. JAVITS. Mr. President, the Namesake Towns Association is a volunteer organization devoted to the encouragement of cultural exchange visits and affiliation projects between towns and communities in different parts of the world usually, though not always, of identical names. This group is accredited to the United Nations as a nongovernmental organization, and its international president, Mrs. George Spencer of New York City, is a member of President Eisenhower's civic committee.

I am a strong advocate of vastly increased programs of international cultural exchange as a means of promoting understanding and world peace. Tourism and travel; exchanges in the fields of music, art, and drama; radio and television programs; sports and motion pictures; reciprocal visits of trade missions and other delegations—all these are vital and call for development. To meet the massive Soviet competition in the economic and cultural fields we must mount an effort commensurate with our objects and resources. We need to exploit every responsible project that helps to integrate the free world.

Recently Namesake Towns initiated an affiliation program between New York and Japan, and by a coincidence several weeks later a member of our Armed Forces stationed in Japan wrote to me indicating the reaction in Tokyo and offering his cooperation.

I ask unanimous consent that the description of Namesake Towns Association and an excerpt from the letter from Capt. David Heritch, of the U.S. Air Force, be printed in the Appendix of the RECORD.

There being no objection, the description and excerpt were ordered to be printed in the RECORD, as follows:

NAMESAKE TOWNS ASSOCIATION, NEW YORK CITY, N.Y.

It is perhaps now, more important than ever before for the peoples of the world to get to know and understand one another even better. The NTA performs a very valuable service in helping promote international goodwill and understanding. As the work has expanded to many different countries, some towns who have no namesakes are co-operating as well.

Has your town done anything in connection with your sister city? If you haven't, now is a good time to start a project. If your town is already active, why not expand your program? In either case we will be delighted to help.

How the NTA operates: In the town the initiative is usually taken by the mayor. When a project is decided upon, it is ad-

visable to contact the NTA so that all efforts in the towns can be coordinated, and the initial contacts made. Official exchange of greetings usually start the program, the mayor is honorary chairman of the local committee on which are representatives from all groups, clubs, newspapers, radio, and TV, schools, etc., so that a real cross-section of the community is represented. Each town selects the type of project best suited to its own needs keeping the NTA informed of their activities. The NTA will cooperate fully and will suggest speakers, films, etc., and makes overseas contacts.

Projects: We have found the following ideas helpful in town-to-town projects. Art exchange exhibitions are arranged of paintings and photographs from the sister city. These can also be exhibited in their own town prior to departure, contests are arranged to choose material. Children's art work is always of great interest.

Chambers of commerce: Their interest and cooperation is invaluable in arranging for participation of businessmen and industrialists. Special shop displays can be planned; fairs and exhibitions arranged. A Namesake Town Week can be planned.

Churches: With the cooperation of the clergy simultaneous services can be given once a year, with perhaps a guest preacher from overseas. The date chosen can be a mutually satisfactory day. United Nations Day is one which we have found to be very popular. Children's Christmas services are a great success and a collection of toys can be made to be sent to children's wards in hospitals.

Garden clubs and horticultural societies: They find that exchange of seeds and information are of great value in promoting interest in local flower shows and conservation projects.

Historical societies: They are invaluable in helping to promote interest in historical events, setting up celebrations, and giving out information, arranging historic tours, and so forth.

Hospitals: Hospitals exchange of scrap-books and letters between long-term patients have been found to be of real value. Doctors and nurses also enjoy and profit by the exchange of medical information.

Magazines and books: They are always very much appreciated. A regular exchange with the sister city can be of great mutual interest.

Press: Reciprocal exchange of news is of great interest to both communities. Local papers can exchange feature stories at regular intervals; competitions can be arranged.

Schools: Our program is of great value to schools. Correspondence and exchange of scrap books have been found very popular. Real and lasting friendships are formed through pen pals. The preparation of a scrap book can be a class project. Much is learned in preparing the material as well as in reading the book received.

Service clubs: So many have international interests so that their cooperation is of enormous value, and a program on their sister city can be a great contribution. Worthwhile projects can be helped in both communities.

Tape recordings: These are fascinating and should be done as often as possible.

Youth organization: Their contribution can be most helpful and they can also have fun exchanging records, etc.

Special events: Namesake Town Day, we suggest that 1 day a year be set aside for a special exchange of greetings with your namesake town, during this day there could be special ceremonies at the town hall, special radio and TV programs, shop displays, etc. United Nations Day has been found a very good day to focus attention on the town to town project as well as to bring to the notice of all, the vital contribution to the cause of world peace made by the U.N.

Meetings: International and regional meetings are planned so that all will be given the opportunity to participate in valuable exchange of views and discuss future plans.

Namesake Town News: This newsletter can only be as interesting as the information it contains. For this information we rely on you, so please send us details of your communities activities, not only in connection with your sister city, but also items of topical or historical interest which other towns would like to know about.

What you can do: Find out what your community is doing. If there is no town affiliation program, try and get one started, and contact us. If your town is already active, find out if there are ways in which you could be of help; maybe the activities could be expanded; get more schools and service clubs interested, i.e., Rotary Clubs and women's organizations; see if there are possibilities for exchange students, teachers, clergy. In all these projects we could help you. Keep in touch with us at all times.

Travel Service: From so many lands come invitations to the citizens of their sister cities to visit them. Through these visits come greater understanding and friendship between the namesake towns.

This is a project we have always encouraged and we are delighted to cooperate in any way to help facilitate travel arrangements between namesake towns in all parts of the world and to make these visits as interesting as possible for official high ranking dignitaries as well as for the private tourist. Coordination of arrangements is essential for maximum benefit to all. A special travel department has been set up, and we are in a position to make all travel arrangements for you at no extra cost. Group travel has many financial and other benefits, and a charter flight can be arranged at a very low cost. All those taking part in the latter must be members of the NTA to qualify with the regulations. If you are interested in receiving further particulars would you kindly fill in and return the following questionnaire.

TO: NAMESAKE TOWNS ASSOCIATION
91 Central Park West,
New York City 23, N.Y.

I (we) are interested in visiting our sister city in ----- I will form a group in my town ----- We wish to leave on ----- by air/ship/returning on ----- visiting the following countries ----- We are interested in ----- As members of the NTA we would like to take advantage of the charter flight. From our town there should be ----- Should you be interested, prior to your trip, we can make available to you a film presentation of the country you wish to visit. This might be the opportunity for calling a meeting in your community.

(In the United Kingdom, please send travel inquiries to Miss Erna Low, 47 Old Brompton Road, London SW 7, England.)

MARCH 8, 1960.

Hon. Senator JACOB JAVITS,
Washington, D.C.

DEAR SENATOR JAVITS: Much talk is going on here in Japan about New York City becoming the sister city of Tokyo, Japan.

If I am out of order please do not hesitate and throw this missive in file 13.

I have lived all my life in New York City until called to service in 1941. My voting address 602 W. 188th Street, N.Y. County Serial No. C74206, in the 56 ED, 15 AD, and I have a paid up dues card.

This is my third tour in this part of the world. I first arrived in 1945 and became a member of the occupation forces, assigned to SCAP, ESS, after recall in 1950, sent to Clark AFB, Philippines, in 1956 returned to Japan and presently stationed at Tachikawa Air Force Base.

With your permission sir; if I can be of some small assistance to the program of the sister city program please do not hesitate and call on me. If you or our Honorable Mayor Wagner feel that I am out of order, I do understand.

Thank you for your time and interest.
Respectfully,

DAVID HERITICH,
Captain, U.S. Air Force.

Family Farm Income Act

SPEECH

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. BERRY. Mr. Speaker, I am glad to have an opportunity to add my comments to the remarks of the gentleman from Illinois [Mr. MICHELL] on the so-called Family Farm Income Act of 1960 because I believe this bill is in direct contradiction to the thinking of a majority of the farm operators in my part of South Dakota and, I believe, of the Nation generally.

I am just in the throes of completing the tabulations on a questionnaire which I sent out to all boxholders in my district a month ago. I have not had an opportunity to check this proposition percentage-wise, but I believe, from having gone over each returned questionnaire and having read the comments which were made, that 75 percent of the farmers and the farmer-ranchers have told me that the farm program should be junked. They have told me over and over again that the present support program has simply made the large farmers larger and the small farmers smaller.

You can imagine my interest, Mr. Chairman, in studying the so-called farm bill introduced in the House by some 20 of my colleagues, most of whom are inclined to lean just a little toward the idea of regulating and controlling the lives of the American people. This bill would completely regulate, completely control, and completely place into a straitjacket all of agriculture. As it has been described on the floor of this House, the family farm income bills offer the farmers of this country only payments, permits, and peasantry.

The present farm program has more or less control over some 21 crops; this proposed farm bill would add regulations, permits, and controls to some 250 farm products, including cattle, hogs, sheep, chickens, turkeys, eggs, and everything else. In fact, everything that is produced on the farm will come under strict regulation and control. Someone in Washington will decide how many head of beef may be placed on the market each year, and then the distribution will be handed down from here to the States, to the counties, to the farmer, and he will be given an allotment. If he has been running 300 cattle, he will be allowed to run 250. If he has been raising 10, he will be cut to 7½ head.

This is not bad. On his croplands, he must give up 10 percent without any

compensation and then, in addition, he can give up another 30 percent for which he will receive payment in kind.

Now, Mr. Speaker, let us remember this: We can take 10 or 30 percent from the large operator and we have not hurt him much, but take 10 or 30 percent from the small operator without any compensation and he is forced out of business. This is not a small farmer bill—it is a big farmer bill. It freezes a man's operations and then reduces that operation by from 10 to 40 percent.

Young farmers write to me constantly and demand the repeal of the present law which freezes the acreage of wheat. They tell me that the big operator overplants, pays his penalty, and soon obtains additional acreage allotment, while the small operator cannot afford this route. He is forced to operate the small acreage he is allowed and must turn to production of some other product in order to increase his income, to meet rising costs resulting from New Deal spending inflation. A young man cannot start now—what would it be like if everything his area produces is frozen into a production straitjacket?

This bill is intended to simply further regiment the farmer. As I have said so many times before, there is no farm problem. The problem is one of foreign policy—the problem is one of foreign imports. What we are doing is importing the food that goes onto our tables and the fiber which goes onto our backs, and the production of the acreage supplanted by these imports must go somewhere, so we call upon the Federal Government to purchase this production. This production is not surplus to American needs, it is simply supplemental. Supplemental, that is, to these agricultural imports.

Last year we imported more than two million head of beef. Across the Nation generally it requires the annual production of an average of 20 acres to produce a beef. It also requires an average of 2 years to put that beef on the market. The beef imports last year alone supplanted the production of more than 80 million acres. These 80 million acres had to be used for some other purpose, and the production is branded by this Congress and the Nation as surplus.

This production is not surplus, Mr. Speaker, it is supplanted.

This so-called Family Farm Income Act of 1960 makes no pretense of getting at the root of the evil. The evil is imports. Agricultural imports is the cancer that is eating away the life of the great agricultural industry in America. This so-called farm bill is not a farm bill—it is simply another import subsidy bill. It is just another patch, if you please, placed upon the open sore where the import cancer is draining.

If Congress is interested in doing something for agriculture, it will operate and remove the cancer. Covering the sores where the cancer is draining is only a subterfuge. It is only admitting that Congress does not have sufficient intestinal fortitude to go to the root of the evil, which evil is agricultural imports.

Instead of trying to stop the evil, this Congress passed a law reducing tariffs, and beef, lamb, mutton, pork, feed grains, sugar, wool, and processed woolen

goods, and everything else that domestic agriculture should be producing comes rolling across our borders in ever-increasing amounts, and the American farmer is asked to reduce his acreage and his production to make room for it.

Mr. Speaker, we have no farm problem—we are blighted with only an import problem. All that these so-called farm bills do is to further put the farmer out of business, force him to cut down his production in order to make room for more imports, and to further shackle him with regulations, controls, payments, permits, and peasantry.

My suggestion for a Family Farm Income Act of 1960, Mr. Speaker, is to pass the Bailey-Mason bill, which would return the regulation and control of tariffs and quotas to the Tariff Commission, an arm of the Congress, which would limit these agricultural imports. Then we should freeze all of the so-called surpluses, taking them off the market completely and then remove all regulations, controls, and shackles from agriculture and put it completely on a free-enterprise, supply-and-demand basis.

If this were done today, Mr. Speaker, the Tariff Commission would find that it would be necessary to allow substantial imports to come into this country, as we do not have sufficient acres in this country to produce the food and fiber needed by the people of this Nation.

Remove the cancer. Let the patient get well. Give the youth of America an opportunity to live on the farm, expand and grow according to his own ability. Prove to the world that America is still the land of the free and the home of unshackled free enterprise.

The choice, Mr. Speaker, is between that and payments, permits, and peasantry.

Commemorative Stamp for Poland's Paderewski

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. WILEY. Mr. President, over the years, the Post Office, through issuance of special stamps, has depicted, in miniature, the Nation's famous men and women; great events in history; and outstanding organizations, industries, and national wonders.

In a special "champions of liberty" series, too, we have honored leaders and fighters for freedom of foreign lands.

As we know, November 6, 1960, marks the 100th anniversary of Ignace Paderewski's birth—Poland's famous musical artist, statesman, soldier, and freedom fighter.

Among the great men of foreign lands—who have staunchly fought for freedom—Paderewski ranks high in the esteem of his countrymen, and freedom-loving people throughout the world.

In recognition of his outstanding contribution as an artist, soldier and states-

man, I believe that the issuance of a special commemorative stamp in the "champion of liberty" series honoring his life and work is indeed merited.

Overall, I believe it would accomplish two objectives:

First, pay just tribute to the life and deeds of a great man who made an outstanding contribution to his beloved homeland, Poland, and to the world in the fields of music, politics, and as a relentless fighter for freedom in peace and war; and

Second, by so honoring Paderewski, to pay homage to the many "sons of Poland" who keep alive the fires of liberty in their own Communist-subjugated land, as well as contribute constructively as strong creative citizens of many lands to progress and peace in the world.

Believing that the inclusion of Paderewski in the "champion of liberty" series is merited, I have contacted the Postmaster General to urge that this be done as soon as possible.

Recently, I was pleased to receive from Mr. Charles Burke, Washington representative of the Polish American Congress, a fine letter in support of the idea of issuing a commemorative stamp honoring Paderewski. I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

POLISH AMERICAN CONGRESS, INC.,
Washington, D.C., March 8, 1960.

HON. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

MR. DEAR SENATOR WILEY: The U.S. Post Office Department is now issuing special stamps in the "champion of liberty" series honoring heroes and great men of other lands who have worked and fought for the freedom of man.

It seems to us that such a stamp honoring Ignace J. Paderewski on the 100th anniversary of his birth (Nov. 6, 1860) should be issued by our Post Office Department.

Ignace J. Paderewski was in a true sense a champion of liberty. He was not only a great artist and humanitarian but also a statesman who throughout his life worked, fought, and pleaded for the freedom of man.

During the First World War he interrupted his artistic career and worked for the independence of Poland. He was instrumental in organizing an independent Polish army in France recruited in 1917-18 in the United States, Canada, South America, and Western Europe. This army fought at the side of the allies on the Western front.

He was chairman of the Polish delegation to the peace conference in Versailles and on behalf of Poland signed the peace treaty by which Poland regained her independence.

He assisted in organizing the Polish Republic in 1918 and 1919, and was the first Polish delegate to the Council of Ambassadors at the League of Nations in 1920.

When the Second World War broke out and Poland was overrun by Soviet Russia and Germany, Paderewski, for the second time in his life, interrupted his career and set himself the task of laboring for the liberation of his native Poland.

He was instrumental in forming the Polish Government in Exile in 1939 and was Chairman of the National Council of the Republic of Poland functioning in France and later in England.

In 1940 on his 80th birthday, aged and weary but spiritually valiant, Paderewski arrived in the United States to work for the

independence of his distressed homeland. He died in New York on June 29, 1941, and by special authorization of President Franklin D. Roosevelt is buried in Arlington National Cemetery.

It seems to us that a stamp honoring this great man, this true champion of liberty, Ignace J. Paderewski, should be issued by our Post Office Department in the series of stamps honoring "champions of liberty" of other lands.

This matter is now under consideration by the Postmaster General who advises us that the name of Ignace J. Paderewski is still being considered. Your intervention with the Postmaster General would be greatly helpful and deeply appreciated.

Respectfully yours,

CHARLES BURKE,
Washington Representative, Polish
American Congress.

Final Plans for the 1960 Census

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. LESINSKI. Mr. Speaker, as chairman of the Subcommittee on Census and Government Statistics of the House Post Office and Civil Service Committee, I would like to inform my colleagues that the Director of the Bureau of the Census has made a final report regarding the taking of the 1960 census. Dr. Robert W. Burgess, Director of the Bureau of the Census, testified at the hearing before our subcommittee this morning. He was accompanied by his able staff, Dr. A. Ross Eckler, Deputy Director; Dr. Henry Sheldon, Chief, Demographic Statistics Branch; Mr. Morris H. Hansen, Assistant Director, Statistical Standards; and Mr. Walter Kehres, Assistant Director for Administration.

Dr. Burgess' remarks were directed primarily to a number of questions which I submitted to the Bureau of the Census in advance of the hearing.

In view of the widespread interest in the taking of the 1960 census, both in the House and on the part of the public generally, I am pleased to insert in the RECORD the entire text of Dr. Burgess' statement.

In submitting this material for the RECORD, I want to state that I was most favorably impressed by the way the Bureau of the Census has prepared for this great undertaking. The statement follows:

STATEMENT OF ROBERT W. BURGESS, DIRECTOR, BUREAU OF THE CENSUS, BEFORE THE SUBCOMMITTEE ON CENSUS AND GOVERNMENT STATISTICS OF THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, ON MARCH 18, 1960

I am pleased to appear before this subcommittee for a further review of the Census Bureau's plans for the taking of the 1960 census. Thanks to the establishment of this subcommittee, we have had the benefit of the active interest of more Members of the Congress than is usual during the period of planning a major census. It was distinctly beneficial to the morale of our organization that a number of the members of this subcommittee visited our operation some months

ago in order to review our plans and examine some of the equipment being put into final shape for the 1960 census operations.

I will now turn, Mr. Chairman, to consideration of the specific questions included in your letter of March 1, 1960. Naturally, my colleagues and I are prepared to discuss any of the questions in greater detail if the comparatively brief answers furnished are not sufficient for your needs.

1. What significant changes in the 1960 census plans have occurred since you reported to us on April 8, 1959?

The significant changes in our plans since our previous hearing are relatively few, since "dress rehearsal" had already been conducted at that time. Five points may have enough special interest, however, to warrant their being mentioned:

(a) The question on mother tongue, which was discussed (point 6) at our previous hearing, has definitely been included on the final questionnaire, where it will apply to all the foreign born. After a careful canvass of the items that might be excluded to make way for this, we decided that the elimination of citizenship would involve the smallest loss, since the annual registration of aliens provides a substantial amount of information on noncitizens and since our current population survey makes it possible for us to measure their characteristics at relatively small cost. However, citizenship information is secured in New York State at its expense to meet requirements of that State for legislative apportionment.

(b) On the housing questionnaire, three items carried as sample inquiries in the North Carolina test census (water supply, bath and flush toilet) have been changed to 100 percent inquiries.

(c) The decision has been reached to attempt to get information on all Americans living outside the United States and its outlying areas. In previous censuses enumeration of persons overseas had been confined to members of the Armed Forces and employees of Government agencies, but in 1960 we are attempting to cover other Americans working abroad, as well as those outside the country for other reasons.

(d) We have firmed up the extent of use of the single stage (or traditional) method of enumeration. This procedure will be followed in areas characterized by relatively low density of population and less prevalence of all weather roads. Included in such areas are most of the mountain and western plains States, the north woods areas of Minnesota, Wisconsin, Michigan and Maine and extensive rural areas in Southern States. About 18 percent of the population will be enumerated by this method.

(e) In addition, two personnel changes of some significance have been made in the field organization. These include the establishment of a technical officer for most of our district offices and of a field reviewer for most crew leader districts. The technical officers, practically all of whom had four years or more of college training, will have the task of training the crew leaders and supervising the quality control operations of the field and office reviewers. The field reviewers will assist the crew leaders in the inspection of the early returns prepared by each enumerator and the operation of the quality control procedures, on the basis of which unsatisfactory enumerators will either be retrained or replaced.

2. Do you foresee any particular difficulties in carrying out your plans?

The major difficulties anticipated in connection with the decennial census involve the supply of workers in certain geographic locations or with certain key skills. Specifically, it is anticipated that it may be difficult to get enough enumerators in a number of the large cities. With the possible exception noted under question 3 below we expect to be able to carry out our present plans.

Special steps are being taken, however, particularly in New York, Chicago, and Los Angeles, to meet the possibility that an insufficient number of applicants may be referred through normal channels.

A second problem relates to the supply of programmers for our electronic equipment which was inspected by a number of the members of this committee a few months ago. Advertisements in Washington papers have called attention to the opportunities offered in California and elsewhere for persons trained in programming for our specific type of electronic equipment. Even though the tasks for which the persons are being recruited are often in connection with Federal programs, the salaries offered are substantially above our own, since the work is being done on a contract basis, freeing the agencies involved of the specific regulations under which we must operate. As a result, we have lost a number of persons after a year or two of training and we must adopt the costly procedure of training new people at a late date for work for which we thought we had already made adequate provision.

3. What is the anticipated cost of the census? How does it compare with the cost of the 1950 census?

The anticipated cost of the 18th decennial census, including agriculture, population and housing, is still \$118 million, as discussed in answer to question 3 in the April 8, 1959, hearing record. The appropriation for the 1950 census was \$90,618,000. To repeat the 1950 census in 1960, taking into account the growth in population and the increases in all costs since 1950, would cost approximately \$131 million.

While plans have been made on the basis of \$118 million, it is only fair to note that the heavy expenses of field collection are affected by such factors as weather, our ability to recruit field personnel in time, and the ability to retain personnel at the rates we have set. The field costs, which occur in April, May, and June of this year, are such a large part of the total costs of the census that we shall not know exactly where we stand overall until that work has been completed. A small percentage error here can increase the overall cost of the census by several million dollars. Should the experience with the field collection of the schedules be less favorable than expected it may be necessary to request supplemental funds or delay the completion of the census. However, if conditions are favorable, our estimated total should permit us to complete the job. The field collection for the census of agriculture was done within the budget that had been established for that work.

4. What is the prospective timing of the major phases of the census? How will the timing be improved over past censuses?

In areas where the two-stage approach of enumeration is used (as described in previous hearings before the subcommittee) we believe that the initial canvass of the population will be virtually complete in about 2 weeks. The remaining canvass, involving the collection of the sample information from one household in four, will take another 4 weeks. In the other areas of the country where all the items are collected in the course of a single visit, it is estimated that the bulk of the work will be completed in 4 to 6 weeks. It is to be noted, however, that in both the single-stage and two-stage areas there will be a number of small places where unusual delays occur, and the clean-up work may not be completed until more than 2 months after the starting date of the census.

The prospective timing of the tabulations and publications is about as indicated in the April hearings, namely, the determination and issuance of State population figures in November 1960 and completion of all planned tabulations by December 1962. On the whole, results will be forthcoming 12 to 18 months

earlier than the dates of corresponding parts of the 1950 Census. The great speedup is, of course, due to a combination of factors, including the greater use of sampling and of electronic equipment.

5. What steps are you taking to improve the quality of the census results?

Steps to improve the quality of the census results include:

(a) More effective quality control procedures in the data collection operations in the field will be carried out through a formal statistical quality control procedure involving a careful review of enumerators' work on a sample basis.

(b) As we stated in our earlier hearings, we are separating the census into two stages (for about four-fifths of the population) so that fuller attention can be given to obtaining adequate coverage of the population in the first stage of the census, and fuller attention can be given to obtaining acceptable responses to the various questions asked of sample households in the second stage of the census.

(c) More effective training of crew leaders and enumerators, and supervising their work, made possible by the personnel changes described in 1(e) above. The improvement here results in part from concentration on one stage of the canvass at a time.

(d) As previously reported, provision is made, for the first time, to leave questionnaires to be filled out by the respondents. This allows respondents more time for joint consideration of answers among family members, and for checking with records.

(e) Separation of the canvass for the census of agriculture from the canvass for the censuses of population and housing. This makes it possible to collect the agriculture census information in the fall near the end of the crop year and before tenant farmers have moved. It should improve the censuses of population and housing by simplifying the highly complex operations that the enumerator was supposed to understand and carry out when all censuses were taken simultaneously.

6. What is being done to keep the burden on respondents to a minimum? How long will it take, on the average, for a household to fill out the advance forms and to be interviewed?

The considerable extension in the use of sampling is the major feature of the Bureau's program to reduce the burden on the average respondent. In the case of the great bulk of the questions for individuals and for housing units, the reporting requirements have been eliminated for three families out of four.

It is estimated that a household would need on the average not more than 10 minutes to fill out the advance census report, and not more than 4 or 5 minutes to do its share in discussing the report with the enumerator. In addition, the one household in four that will be asked to fill out a sample household schedule and mail it to the local census office normally would not require more than 20 to 30 minutes for this. Because of the use of sampling, this additional time will not be required of three-fourths of the households.

7. What are the numbers and kinds of personnel to be employed in taking and processing the census?

The number of people who will be employed in taking the census will be about 160,000 enumerators, about 10,000 crew leaders, 405 district supervisors, and several thousand technical assistants, field reviewers, and temporary editing and control clerks. In processing the census, that is to say, carrying through subsequent operations, some 3,000 employees will be required, most of them for periods varying from 3 to 18 months.

8. How is the Post Office Department cooperating in the census procedures?

The Post Office Department is cooperating very effectively with the Census Bureau in distributing the Advance Forms to all households, in assigning geographic locations to reallocated forms of persons enumerated away from home, in handling the mail return of the sample household questionnaires, and in forwarding promptly all mailing matter from and to census offices.

9. Has the public been effectively informed of the character and importance of the forthcoming census?

The public information program for the 1960 census of population and housing will be in its 1,000th day when this census opens on Friday, April 1. The purpose of this information campaign has been to pass the word on to as many of the 180 million persons in the United States as might be reached by press, radio, television, and word of mouth. Without the helpful participation of every household in the United States, the big census job could not be done.

The 1960 census is one of the big news stories of the year. This is evidenced by the fact that each day's mail brings to the Census Bureau's Public Information Office hundreds of clippings from newspapers all over the country. These clippings, as well as the large number of local radio and TV presentations, have been based very largely upon local releases from our regional and district offices. This week's issue of the Saturday Evening Post contains an article about "The Big Count." The February Reader's Digest presented a fine digest of an excellent article which the National Geographic magazine published last November. "The Things They Tell the Census Taker" was presented in the March issue of Family Circle magazine. Scores of other magazines have carried similar stories.

One of the most helpful aids to the census public information program is the work done by the advertising council. With the Cleveland advertising firm of Meldrum and Fewsmith serving as volunteer agency, kits were prepared for distribution to newspapers, radio stations, and television stations. The returns from the Advertising Council's program literally have been overwhelming.

The National Association of Radio and Television Broadcasters and the staff organization of American Women in Radio and Television have given excellent support to the informational program.

As a public service project, the Remington-Rand Corp. produced a 15-minute film called "Census 60." We obtained 400 copies of this film for distribution to television stations through our census district offices. From all over the country the census district offices report that the film is being used extensively.

The National Educational Television and Radio Center produced nine 30-minute shows dealing with various phases of the census and the use of census statistics which are being presented in weekly series over all educational television stations of the country. The Georgetown University Forum produced a 30-minute radio tape for presentation over the 150 stations affiliated with this program and copies have gone to all our 400 regional and district supervisors for offering to other radio stations.

Because we know that most of those who will supply the answers when the census takers call will be housewives, we have directed special efforts to get the word to them. We have sent special kits of information for study and discussion programs to 125,000 women's clubs throughout the country. With these kits went letters from the heads of their respective national organizations pointing up the importance of cooperation in the census. Incidentally, we expect that the great majority of the census takers will be women and many of these will come from the ranks of those who have already studied the subject of the 1960 census.

Through the cooperation of the Scholastic Magazines Corp. in New York and the American Education Publications of Wesleyan University at Middletown, Conn., the word about the 1960 census has been passed into the schools all over the country.

Many Members of Congress have helped by discussing the census in their newsletters and in radio and television reports to their constituents.

10. What are the most important new questions to be included in the 1960 census?

The most important new questions included in the 1960 census are those calling for place of work and method of transportation to work and for additional housing equipment items, including home food freezers, washing machines and dryers, air conditioning units, fuel for water heating, number of bathrooms and number of passenger automobiles, and concerning source of water and facilities for sewerage disposal outside cities of 50,000. In addition, some of the questions previously used have additional subdivisions in 1960. Thus, the report on school attendance will distinguish those attending private and public schools and the report on housing condition will show three categories (sound, deteriorating, and dilapidated) rather than two.

11. What are the likely changes in congressional apportionment resulting from the 1960 census?

The census leaflet of March 26, 1959, presented changes in congressional apportionment which would result from 1960 State populations as then estimated. It showed that 5 States were expected to gain and 13 States to lose Representatives. I should like to repeat the warning against placing too much dependence upon the specific gains or losses shown for individual States in these preliminary estimates. While this release is serviceable as giving a general pattern of the kinds of changes to be expected it is not a dependable guide to the precise States which will be affected nor to their exact number of seats after reapportionment.

12. What are some of the other important population and housing developments the census will measure?

The census will provide data on such subjects as:

(a) The population and number of housing units in every community, township, county and State.

(b) The characteristics of the population and housing of each area, including the population of congressional districts.

(c) The relative growth of cities and metropolitan areas in comparison with rural and other areas.

(d) Changes in the educational level.

(e) Changes in the number of households and in the size of households.

(f) Changes in the numbers of owned and rented homes, and in the condition of homes.

(g) The numbers and proportions of households with relatively low and those with relatively high incomes.

(h) The occupations in which people in different parts of the country are engaged.

(i) The number and proportion of housing units that are below accepted standards.

(j) The distribution of various ethnic and racial groups in our population.

(k) The distribution of some of the conveniences of modern life, such as television, air conditioning, home food freezers, etc.

(l) The numbers of persons who travel into or out of specified counties to go to work and the means of transportation they use.

(m) The characteristics of part-time and full-time workers.

(n) The occupations being followed by persons in the older age groups.

(o) The continued migration from rural to urban areas.

13. In the past, the census of agriculture was taken together with population and

housing. This time, you have split it off and conducted it during the fall of 1959. Does it appear that this separation will make your operations more efficient?

The separation of the census of agriculture from the census of population and housing has several advantages, some of which were noted in the answer to question 5:

(a) The reports on the production of each farm are secured from the operators who were on those farms during the preceding year, since they were collected before many of them had moved.

(b) The enumeration for Population and Housing in rural areas is speeded up since enumerators are not required to fill in a census of agriculture form at the same time.

(c) By reducing the burden on the enumerator and the respondent, a more effective job will be done in each of the censuses.

**Prize-Winning Essay by Donald Owens,
Winner Over 3,500 Entries in Los Angeles Examiner's Bill of Rights Essay Contest, Resident of the Great 23d District, California**

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am please to present to you and all the other Members of this distinguished body the first prize winning essay in the recent Los Angeles Examiner's Bill of Rights contest. There were over 3,500 entries in this very appropriate and significant and timely contest sponsored by this great metropolitan newspaper. I am very proud that one of my young congressional constituents: to wit, Donald Owens of 12827 Clovis Avenue, Los Angeles, Calif., took the first prize. Miss Elizabeth Bryan, whom I have had the pleasure of personally knowing, is his very able English teacher, and Mr. Sam Zackheim, whom I also personally know, is the principal of the very splendid high school attended by Donald Owens: to wit, Centennial Senior High School, Compton, Calif.

Donald won a \$200 savings bond and recently there was a very appropriate dinner honoring the winners held at the Ambassador Hotel, Los Angeles, Calif., at which time the parents and teachers of the winners were in attendance, and former Los Angeles school superintendent, Dr. Vierling Kersey, was master of ceremonies.

I am also naturally very proud to relate that the winner of the second prize and recipient of a \$100 savings bond was Miss Margaret Campbell, 7527 East 4th Place, Downey, Calif. She being one of the student leaders in the Downey North Junior High School, said school also being in the great 23d Congressional District of my native State of California.

Mr. Speaker, I am sure that you and all the others who read this significant essay join with me in congratulations to the winner, and to the other winners for

the reason that they are important young American citizens.

PRIZE-WINNING ESSAY

The Bill of Rights is the first violin of that great orchestra whose music is the symphony of American life. It produces perfect harmony, for its makers—Washington, Franklin, Adams, Jefferson, and Madison—carved this instrument out of the desires and needs of their countrymen. This harmony of right and privileges established by the Bill of Rights inspires us in our daily lives.

The making of this perfect instrument was not accomplished in a day. Its creators had to make sure they had constructed a strong instrument that would last through the ages to come. They had to pick the strongest woods, tough like the fibers of bravery and industry found in the hearts and souls of our American ancestors. This newly constructed instrument had to undergo strenuous test. On December 15, in the year 1791, it had passed the final test. Many States had found it good and had ratified it.

Like the master's violin, the four strings established these basic tones: The right to freedom of religion, speech, press, and assembly. If one of these strings breaks the violin can no longer produce perfect harmony. An appreciation of the first ten amendments should sing in the hearts of every American, in order to keep the song of America growing greater and more harmonious.

At times in our country's history the melody had almost been broken, through wars and depression. Now we are threatened by a complete muting of America's song by communistic ideologies which threaten us. Because of this ever-present threat, we, the players, must learn how important each one of us is to the entire orchestra. Each one of us—you, I, and every American—must keep his own instrument in tune.

Tribute to Late Senator Neuberger

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 18, 1960

Mr. JAVITS. Mr. President, I have received this week a letter from Mr. Morris Biller, president of the Postal Union of Manhattan-Bronx Clerks, one of the largest and most progressive unions of postal employees in the country. The postal union is most anxious to join in the many tributes which have been paid to Senator Neuberger by his friends all over the Nation. I ask unanimous consent that Mr. Biller's letter be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

POSTAL UNION OF MANHATTAN-BRONX CLERKS,
New York, March 14, 1960.

Senator JACOB K. JAVITS,
Senate Office Building, Washington, D.C.

DEAR SIR: On behalf of the 9,000 members of this local I wish to pay tribute to the late Senator Richard L. Neuberger of Oregon, for his friendship toward postal employees and his tireless efforts in their behalf.

He will be especially remembered as the author of the Health Benefits Act which is a milestone in Federal Employee legislation

in giving health benefits coverage to all Federal employees.

He will be greatly missed by all of us.

Sincerely,

MORRIS BILLER,
President.

AMVETS' 1960 Legislative Program

EXTENSION OF REMARKS OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. TEAGUE of Texas. Mr. Speaker, Mr. Harold T. Berc, national commander, AMVETS, presented the 1960 legislative program of that organization to our committee on March 10. It is a highly interesting program and unusually well developed. Under unanimous consent I commend it to my colleagues:

STATEMENT OF HAROLD T. BERG, NATIONAL COMMANDER, AMVETS, BEFORE THE COMMITTEE ON VETERANS' AFFAIRS, U.S. HOUSE OF REPRESENTATIVES, ON AMVETS' 1960 LEGISLATIVE PROGRAM, MARCH 10, 1960

Mr. Chairman and members of the committee, I am deeply appreciative of this opportunity to present for your consideration and information the highlights of AMVETS' 1960 legislative program. The constructive efforts of this committee under the guidance of its distinguished chairman, the Honorable OLIN E. TEAGUE, to perfect a sound structure of benefits for the Nation's veterans have earned the approbation of all Americans.

We of AMVETS are especially grateful for your successful action in providing a realistic non-service connected pension law for veterans of all wars. Thousands of World War II and Korean widows and children can now qualify for pension as the result of your efforts during the first session of this 86th Congress. To express AMVETS' sincere thanks, I have been commissioned to bring the following resolution, unanimously adopted by the most recent AMVETS National Convention, to your attention.

Whereas the Congress of the United States passed and the President approved Public Law 86-211, a bill to modify the pension programs for veterans of World Wars I and II and the Korean conflict and their widows and children, and

Whereas AMVETS has long advocated the philosophy contained in this law—that of more realistically relating the amount of monthly pension payments to the degree of financial need that exists, and

Whereas this measure eliminates a long-standing inequity by making World War II and Korean conflict widows and children eligible for pension on the same basis as the survivors of World War I veterans: Now therefore be it

Resolved, That the Committee on Veterans' Affairs and its distinguished chairman, the Honorable OLIN E. TEAGUE, be highly commended for introducing and causing to be enacted into law the sound and equitable pension program contained in Public Law 86-211.

I should like to add my personal thanks for this outstanding contribution to the benefit structure.

AMVETS, as you know, is an organization made up exclusively of World War II and Korean conflict veterans. We were organized in 1944 and granted a congressional charter in 1947. During our brief existence, we have attempted to pursue a sensible and reason-

able course in our legislative objectives. We have practiced and will continue to advocate the philosophy that the benefit program for veterans must necessarily merit the respect and approval of the American people. AMVETS have never been reluctant to oppose those benefits that were not in the best interests of the Nation. By the same token, we have defended and will continue to defend the hard core of legitimate veterans benefits.

Basically, the program should include (1) adequate compensation payments for men disabled in service and the survivors of those who died as the result of service-connected disabilities, (2) hospitalization and medical treatment for service-connected disabilities, (3) adequate opportunity for readjustment to civil life following military service, (4) hospitalization for the treatment of non-service-connected disabilities when financial need is apparent and a bed is available, (5) non-service-connected pensions with need, unemployment and disability as the fundamental tests to be met and (6) special assistance, including existing priorities and preferences, in obtaining suitable, gainful employment. Within this general framework, there are certain specifics that require further attention.

COMPENSATION

We of AMVETS believe that much remains to be accomplished in the area of service-connected compensation. Our primary concern is for the special needs of the seriously disabled. The Congress has on occasion recognized these needs by passing appropriate legislation. H.R. 268 and H.R. 283, passed by the House of Representatives and awaiting action by the Senate Finance Committee, are prime examples. H.R. 268 authorizes a statutory award of \$47 monthly for bilateral deafness. H.R. 283 would grant to a veteran who has lost an eye as well as an arm or leg a \$47 statutory allowance for each such loss. The present law limits payment to one monthly statutory award of \$47 for this combination of disabilities.

Further recognition of the seriously disabled veterans' special needs have been given by this committee in reporting H.R. 7211 in the first session of this Congress. This measure establishes a new statutory rate of compensation of \$265 monthly for those who are totally disabled and are "permanently housebound" as the result of the service-connected disabilities. The proposal recognizes that there are differing degrees of incapacity even among the totally disabled.

Now, these bills that I have mentioned certainly represent steps in the right direction and we hope this committee will continue its efforts to obtain favorable action on them. In relation to the overall problem, however, they merely scratch the surface.

There is a great need for more information of the effect of specific disabling conditions upon life expectancy. Can the veteran rated at 60 percent for diabetes expect to live as long as the veteran rated at 60 percent for a stomach ulcer? If not, should he be compensated for the loss of life expectancy? Do extra expenses occasioned by the needs of certain disabilities, such as special diets, merit extra compensation? Is the industrial handicap of some disabling conditions such as epilepsy, greater than that of other disabilities that are similarly compensated? These are but a few of the questions that can be answered by a survey of the special needs of the seriously disabled.

A resolution adopted by the most recent AMVETS national convention in August 1959, urges the Congress to undertake a study and investigation of this nature with a view to improving the system of compensation for disabled veterans. It is our understanding that both this committee and the Veterans' Administration are now conducting such a study. I have directed my staff to cooperate

with this committee and the Veterans' Administration in finding the solution to this weighty problem.

DEPENDENCY ALLOWANCE

In 1948, the 80th Congress passed legislation granting an allowance for dependents to those veterans whose service-connected disabilities were rated 60 percent or more. In 1949, the 60-percent requirement was lowered to 50 percent where it has remained since. It is the view of AMVETS that this arbitrary line for entitlement to dependency allowance creates inequities not contemplated by the Congress. It is difficult to say that an individual rated at 40 percent is better able to pursue full-time employment and support his family than the person rated at 50 percent. Many disabilities rated at less than 50 percent produce a decided impairment in earning power. In the interests of equity, we urge that the 50-percent requirement be eliminated in determining entitlement to dependency allowance.

JUDICIAL REVIEW

A matter of great interest to AMVETS is the creation of an independent court or board outside the jurisdiction of the Veterans' Administration for the review of decisions of the Administrator of Veterans' Affairs with respect to service-connected disability and death-compensation claims. Under the present system of adjudication, the Board of Veterans' Appeals, acting for the Administrator of Veterans' Affairs, renders a decision that is final in all respects and not subject to review by the judiciary.

This situation gives cause for just criticism by veterans whose claims have been denied. It is the opinion of AMVETS that an agency completely independent of the agency that makes the original decision should be established.

VETERANS' ADMINISTRATION HOSPITALS

AMVETS views on the Veterans' Administration hospital system have already been presented to your subcommittee on hospitals. I should like to comment briefly, however, on several matters of import to AMVETS. Medical care for our aging population is a matter of increasing concern to the Federal Government. Other committees of the Congress are now considering this problem as it relates to the entire population. Our primary concern, of course, is the veteran.

At the present time, the VA hospital system operates under a ceiling of 125,000 beds. This appears to be adequate to meet present needs. The average age of World War I veterans, however, is 65 years. The World War II veteran's average age is 40. As the veteran population ages, and their medical needs grow, there will be increasing demands for hospital beds in Veterans' Administration facilities.

A particular problem in accommodating the aged veteran is the great need for facilities to provide intermediate or long-term care for chronic disabilities. Persons in this category usually do not require the same degree of active medical care given the more acute cases, and yet they do not meet the requirements for domiciliary care. In short, the need for special facilities to accommodate the chronic, long-term patient will increase.

Unless legislation is enacted to create special facilities for this rapidly growing class of patient, hospital facilities presently designed for active medical care will be greatly overtaxed. AMVETS, recognizing the problem eventually facing us, adopted a resolution at the most recent national convention urging the Congress and the Veterans' Administration to immediately convert any unused facilities to the care and treatment of the long-term chronic patient, and further, to develop long-range plans to permit the Veterans' Administration to more adequately

discharge its responsibility to this class of veteran.

Hospital construction

Undoubtedly, the Veterans' Administration hospital and medical program represents the greatest single medical project undertaken by any government in the world. It has often been referred to as a "second to none" medical program. To continue enjoying that fine reputation, however, it is necessary that adequate funds be provided each year. This is particularly true in the case of the continuing program of replacement, repair, and modernization. Hospitals that are outmoded or badly in need of repair or renovation cannot be operated economically or without unnecessary cost. We are pleased to note that the 1961 Veterans' Administration budget request contains funds to permit the launching of a 12-year hospital construction and revitalization program. Much of the credit for the increase in the tempo of this program rightfully belongs to this committee. We urge that you continue your vigilance and make every effort to see that sufficient funds are appropriated to complete this commendable program in even less time than the proposed 12-year span.

Outpatient treatment

Considerable discussion in recent years has centered upon the subject of hospitalization for the treatment of non-service-connected disabilities. Those who oppose non-service-connected hospitalization point to abuses in the program by those seeking admission to a VA hospital when they can well afford to pay for the treatment. AMVETS subscribe wholeheartedly to the theory that veterans should be treated in Veterans' Administration hospitals for non-service-connected disabilities provided they cannot assume the cost of hospitalization and a bed is available. Notwithstanding our support of non-service-connected hospitalization, however, I wish to make it clear that AMVETS will not condone abuses in this program. If a veteran can afford to pay for his non-service-connected hospitalization, he should not occupy a bed at the Federal Government's expense. We believe that abuses of this nature have been held to a minimum in recent years.

Insurance

We of AMVETS were pleased to learn that the insurance subcommittee of this committee will soon hold hearings on bills relating to Government life insurance now pending before this committee. A longstanding resolution of AMVETS that was reaffirmed at the last national convention recommends that veterans of World War II and the Korean conflict be given the right to purchase National Service Life Insurance for 2 years. The act of April 25, 1951, which terminated the right to purchase National Service Life Insurance was effective immediately upon its enactment. Thus, many veterans who had planned to purchase this insurance at a future date had no opportunity to do so. Reopening the door to the possibility of purchasing this insurance will help the many veterans who are now clamoring for low-cost insurance coverage.

LOAN GUARANTEE

Although the Veterans' Administration guaranteed loan program has been in effect since 1944, veterans of World War II, in recent years, have had little opportunity to avail themselves of this benefit. The lack of mortgage capital for the World War II loan guarantee program during many of these years has interfered with the home-buying plans of veterans. During this period we have supported all reasonable proposals designed to increase the availability of mortgage financing.

The program for World War II veterans is scheduled to expire July 25, 1960. In the hope that more World War II veterans will have a better opportunity to purchase homes

in the foreseeable future, AMVETS recommend a 2-year extension of the loan guarantee program for World War II veterans. We are aware that this committee has already favorably reported H.R. 7903 which will extend the World War II program to July 25, 1962. We respectfully urge that you lend your support to obtaining approval by the House of Representatives of this measure.

Additionally, AMVETS have adopted a resolution asking that the Administrator of Veterans' Affairs be given the same authority with respect to VA loans as that given the FHA Commissioner on the establishing of interest rates for FHA loans. This would permit the Veterans' Administration to establish an interest rate on GI loans that is competitive in today's market. We are hopeful that this action will attract mortgage capital into the VA loan program at a fair rate of interest.

EDUCATIONAL BENEFITS

I have noted that your committee is nearing the end of several weeks of consideration of measures to provide benefits to veterans who served after January 31, 1955. Representatives of AMVETS testified last week in support of H.R. 2259. This measure will provide a program of education and training with benefits based upon the formula of 1 day of education for each day of military service as well as a program of vocational rehabilitation for persons with service-connected disabilities.

We have no vested interest in this legislation as our membership is not eligible for benefits contained in this bill. We have always taken great pride in the fact that we have been both reasonable and sensible in our legislative objectives. Our primary interest in a program of this nature is its value to the Nation. More than 25 percent of the World War II veterans who studied in colleges and universities under the GI bill became scientists and engineers. There is every reason to believe that the same ratio will prevail under the new program. The resultant addition to our trained manpower potential plus the increased income taxes that will be realized from the higher salaries of recipients of this benefit, will far outweigh the costs of the measure. As you deliberate this question in executive session, we hope that you will keep these considerations in mind and report a bill providing both educational benefits and vocational rehabilitation for the post-Korean veteran.

APPROPRIATIONS

On behalf of AMVETS I want to express our appreciation for the manner in which this committee has interested itself in assuring the appropriation of adequate funds to operate the veterans program administered by the Veterans' Administration. We have always maintained that the best rehabilitation or readjustment to civil life following military service is incomplete unless it includes productive, gainful employment. To facilitate this readjustment, it is essential that agencies responsible for the employment security of veterans be provided adequate funds to carry out this important function. While it is not within the jurisdiction of this committee, the appropriations bills for agencies administering these programs will soon be on the floor of the House of Representatives. We respectfully suggest that you individually support the appropriation of sufficient funds to permit the several agencies so charged to continue rendering their valuable services to veterans.

CONCLUSION

Mr. Chairman, these are the highlights of our recommendations in the field of veterans affairs. With your permission, sir, I wish to submit a digest of the resolutions adopted in August 1959, by the 15th annual national convention of AMVETS. In closing, I want to convey to you my sincere thanks for the

many courtesies you and the committee and its fine staff have extended to representatives of AMVETS during the year. Like this committee, AMVETS are dedicated to promoting the welfare of the veteran and his dependents. We pledge to you our cooperation and objective thinking in arriving at our mutual objectives.

Thank you.

A Decade of Destiny—The 1960's

EXTENSION OF REMARKS OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. WILLIAMS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am privileged to include excerpts from a sermon delivered recently at the morning worship service at the First Baptist Church, Jackson, Miss., by Dr. W. Douglas Hudgins, pastor. Dr. Hudgins' sermon is in my opinion outstanding, and indeed presents a challenge for the 1960's:

A DECADE OF DESTINY—THE 1960's

(By W. Douglas Hudgins)

(A sermon preached at the morning worship service at the First Baptist Church, Jackson, Miss., Jan. 24, 1960.)

Time's newest decade is just beginning to dawn. Humanity at this moment is beginning to see the first gray streaks in history's eastern sky as a new and dazzling decade is at hand. The 1960's are here. The soaring sixties, someone has said. In God's provident gift of time to His creatures the calendar has turned all too silently to a new 10-year cycle in human existence. The 1960's, a decade of destiny.

What is achieved, or not achieved, by the people of God in this 10-year period immediately ahead of us will determine, in my judgment, the continuation of our Christian witness to a needy world, or the deterioration and decay of our citizenship as a Nation. Christians, in and out of their churches; on Sunday, but especially on the 6 other days of the week; in their habits of worship and in their everyday walks of life; in their prayers and in their pleasures; in their confessions and in their characters; have resting upon them in this decade the most solemn responsibilities any generation has faced. Some trends must be stopped, some directions reversed. New departures must be made, new ventures must be launched. Apathy and indifference must be shelved; courage and conviction must return to life. Comfortable respectability in a casually Christian community that winks at idolatry and evil must give way to a Christian concept of moral integrity that not only sets the individual soul in harmonious fellowship with a redeeming God but also becomes the leavening force that provides the solution to our rapidly increasing economic, political, and social problems. If we believe, as we profess, that sin is a heinous reality and men are lost because of it, there must be a more urgent note in our preaching and a more constant effort in our witnessing day by day. For 30 years our Lord's churches have had time to think, to consider, to evaluate, to plan; now it is time to act.

What are some of the problems facing the thinking Christian as this decade begins?

What are some of the weaknesses in our present social structure? If there are signs of crumbling in the foundation of our Nation what are they? If there are significant indications that a malignancy is suspected in our national body where shall we look for them? Well might we look for such signs, for great nations and civilizations of the past have fallen—not because of attack from without—but because of decay and disintegration within. The rule of Rome; the triumph of the Turk; the splendor of Spain; the supremacy of the Czars; the despotism of the dictator countries; where are they now? Fallen, crumbled, defeated, forgotten. Not so much because of the military might that defeated them in battle, but because they rotted away at the heart. When this Nation of ours became a reality in 1789 less than 3 million God-fearing, hard-working, freedom-loving men and women began to transform the thinking of an entire world. Nation after nation began to emulate this infant country in a gradual discard of rule by king for the exercise of individual choice. And, mind you, without great force of arms, advertisement, or a program of financial aid to the "have-nots" of the earth. Faith in God, sacrificial hard work, and a passionate desire for individual freedom changed the face of the whole world. What have we accumulated in these succeeding years that have caused us to lose our place of leadership in the world and made us to be suspect of most of the peoples of the earth? Have we time simply to mention some of our problems?

It would seem indisputable that we might classify our plethora of confusion under seven categories—population, politics, economics, education, morality, science, and religion.

The problem of population is the problem of people. Just people! Have you ever realized the problem of the world's people? Staggering, isn't it, to realize that the world's population increases 68,000 every day. Here in our own Nation our population increases by 2½ million every year. Each 12 months, enough additional people in these United States to make up the population of a State the size of Oklahoma. By 1970, we are told, we will have a minimum of 210 million citizens of this country. Most of these are gravitating toward the great cities. Areas as large as 300 miles in length give evidence of being linked into one continuous metropolis. The unusually large number of babies born in the war years of 1944-46 will, in this decade, reach marriageable age and will make their own new homes. The age span is lengthening. People are growing older. Retirement age is dropping. How will the new adults make a living? How will the older citizens live out their days? Immigrants of all cultures and colors cast their lot upon these shores as possibilities arise. Living conditions are undergoing vast change and peaceful communities of cooperative citizenship are beginning to feel the manipulative pressures of a kind of socialistic idealism that would subvert all personal choice and force a mass pattern of mere existence. People! People in this Nation and throughout the world—souls without a knowledge of God and possessed with no vestige of the Divine estimate of human personality. People—lost people—and we take our Christianity calmly.

Politics. This is a political year—a year of national elections—but it is not about that narrow view that we are concerned. It is our manner of government. Our way of ruling ourselves. No one but a moron could fail to see the insidious trend in the last 30 years toward a continuous centralization of government. Powers gradually have been taken from the people, the States, and the courts. We have unconsciously allowed ourselves to shrink from many of the harsh problems of individual, community, and State life and turn expectantly to the

Federal Government for help. To provide such help—aid for the farmer; aid for the unemployed; aid for the dependent; aid for the aged; aid for communication, transportation, and power; insurance from sickness and security for retirement—to say nothing of a free education or a subsidy for our business—government has grown to gigantic proportion. Fear of war, or the necessity of preserving our armed might that the world might be kept in peace, takes more than half our national expenditure, and our politicians seem constantly to be fussing over that. Communism infiltrates our national fabric and he who warns against it or seeks to repel it is besmirched and ridiculed as one who deprecates and violates the privileges of personal freedom. Long established and deeply cherished convictions as to the absolute necessity of the separation of the church and the state are weakening and there are those who say they cherish a free government and at the same time profess to believe that there is no danger in electing to office individuals who admittedly acknowledge allegiance to an institution or a power outside of and differing in kind to our beloved country. The sad and sorry spectacle of legislative maneuvering and sidestepping so evident in some quarters in recent times gives the thoughtful citizen the feeling that political expediency has taken precedence over statesmanship and recent events in the world of business and economics demonstrate the lengths to which wisdom and fair-dealing can be sacrificed to political force or personal ambition. Minority groups—and there are many of them—with shrewd planning and political pressure, thrust their wills upon the great majority and those of us who do not wish so to be manipulated are maligned, caricatured, and despised. The will and welfare of the mass of Americans seem to be forgotten by the Powercrats on the Potomac because the wild and socialistic fanaticism of a frantic few holds out the promise of being the margin of victory for a little group of ambitious politicians. Politically we are in danger—and we go about our daily lives without concern.

Our economic situation cannot be ignored. Inflation continues to harass us and there seems to be no cessation in the demands of many for continued deficit spending. The President anticipates a slight surplus in a fiscal year and instead of applying it on our staggering debt, liberals of all kinds clamor for more Federal subsidies. Business was not allowed to hold the line in the recent steel strike and the spiral continues on its upward way. Some wages have kept pace, but the middle class, so-called white collar employee and small businessman, keeps being squeezed because his income has not increased proportionately. Gold pours out of the country; demand for luxury goods climbs; agricultural subsidies add to our taxes and the farmer is not better off; business and Government battle each other; competition and lower prices from foreign competition which our money and machinery have created take away much of our business; labor drums for a shorter work week; Government relief and welfare grow uncontrolled and the total tax load borne by the average citizen has increased to such proportion that it is almost unbearable. Our entire economic philosophy seems to reflect the feeling on the part of the individual that the Nation owes him a living whether he is willing to work or not. In this atmosphere of economy Christianity lives, and now is struggling for its breath.

Educationally, the picture of this decade is fulsome and foreboding. Where a high school education was sufficient 30 years ago, a college degree is commonplace now. By 1970 the number of college students will increase from the present 3.4 million to 5.8 million. Religious overtones to edu-

cation are rapidly disappearing and those church-related institutions that seek to impart the Christian element in learning face almost insurmountable financial problems. Educators are tempted to turn to the Federal Government for assistance without seeming to realize the dangers involved. The demand for scientists and technicians seems to have outweighed the necessity for developing the social and spiritual sides of life, and an innocuous spirit of secularization fills the average classroom or laboratory. Even schools of religious education and theological seminaries have a difficult task in superseding the pervading spirit of materialism in the average student's quest for knowledge. The Christian community of our decade knows the value of a trained mind—but not all of us are conscious of the necessity of a fixed soul. Education, somehow, must feel again the impact of the One Great Teacher who put paramount importance on the soul. Morally, alarm fills many a heart. Teenage gangsterism, adult and juvenile delinquency quiz show scandals, payola, cheating on examinations, manifestations of perjury, shocking crimes, and blatant disregard for law reveal moral disease somewhere. Our jails are overcrowded; mental institutions cannot care for the emotionally wrecked; one out of less than four marriages ends in divorce; a million illegitimates born every year; 18,000 suicides in a 12-month period; more bar maids in America than college girls; more for bubble gum than many denominations give to missions; more money spent for dog food than for Christian education; plumbers making more money than school teachers, and some coaches making more than college presidents. Alcoholism has reached a staggering proportion; narcotic addiction and the use of barbiturates damn thousands of potentially useful lives; honesty is a word many think they have outgrown; standards of moral purity have been dragged in the mire of sexual promiscuity; much of the Nation has forgotten entirely the reverence of the Lord's Day; and millions of people appear to be jet-propelled on some quest for selfish pleasure. Drunkenness, profanity, gambling, and moral compromise characterize the routine existence of millions who enjoy a community respectability. Christians who hold convictions against such types of moral conduct appear to be growing fewer in number. Our churches, alas, are filled with members whose conduct from one worship service on Sunday to another is not devoid of compromising worldliness and blatant sin. Can America really be called Christian if this situation is not changed?

What about science? Is it a problem? Or is our lack of achievement in that realm our problem? I heard a prominent physician say publicly the other day, "Medicine has made more progress in the last 10 years than in the previous 500 years." I would not know—but we all are conscious of the fact that scientific discovery and achievement in the last quarter of a century have been phenomenal. And, if we can believe what we are told, we are just on the threshold of wonders and wizardry that are unbelievable. In what has developed to be our almost worshipful attitude toward materialistic accomplishment we have all but forgotten the declaration of some scientists themselves when, at the close of the Second World War, they stated plainly that unless we caught up spiritually, we faced inevitable doom. But, Christians occasionally remember the prophecy of the genius Steinmetz when he said, a short while before his death, "The greatest discoveries of the next generation will be spiritual." In all our materialistic triumphs and conquests we who call ourselves Christian must recognize the primacy of the spiritual.

In all this have we no religion? Do we start this decade spiritually orphans? Do

We not have great churches, great denominations, great programs? Indeed we do, thank God. Over a hundred million citizens of this Nation alone hold membership in some church or religious body. Our property runs into the billions, our activities are incessant. This condition, however, may be part of our problem. Religion has never been as popular as it is now. But, on the other hand, has it ever been as powerless? We are cursed, even in our relation to our churches with the spirit of convenience. Many join a particular church because it is the most convenient. Attendance upon services of worship is exercised by many only when it is convenient. Participation in a kingdom enterprise is given if it is convenient. Giving occurs only when it is convenient. Individuals exercise the privilege of prayer and devotion when it is convenient. Self-denial and sacrificial devotion have all but departed from the casual Christian. Half the average evangelical church membership seldom or never attend the services of its fellowship. A third of the average congregation give nothing regularly to the work and program of the church. Far less than half ever attend an evening service and less than 10 percent of the average church ever are present at a prayer meeting. Outside of the pastor, seldom more than 1 percent of the average evangelical church ever win another to personal faith in Jesus Christ, and no one ever does all he or she could do for the church's Lord.

Yes, Christians face a confusing situation as this new decade begins. The matter of making a mere living crowds out the possibility of developing a great life. Fear of time's end because of the imminence of nuclear catastrophe causes us to seek some way to protect our possessions—it is not sending us to our knees in confession and repentance saying, "Lord, what wilt Thou have me to do?" Much of America is actually pagan and hundreds of millions of the earth who have never heard of the deliverance that is imparted by our blessed Lord look and long for some sense of direction and deliverance. America must be Christian if the world in this decade is to know emancipation from sin's bondage and the power to live at peace—each man with his neighbor.

Let us return again to Amos. Thundering in severity were his denunciations and incisive, indeed, were his insights into the fabric of the culture of his day. His message was primarily to God's people. And, it was crystal clear in its conclusion—"Seek me and ye shall live, saith the God of hosts."

Limited indeed is the physician who can proffer a diagnosis but cannot prescribe a remedy. Little will it profit if we become aware of evils about us and have no solution to suggest. A number of things appear obvious as the Christian heart seeks wisdom in these determinative days.

In affairs civic and political Christian voters in this Nation of ours must place and keep men in office and positions of leadership who are men of character and integrity. Politics itself is not dirty—or even dusty. Sordid men and women—selfish and scheming manipulators, make politics grimy. Mere expediency must be supplanted with statesmanship; and vote-swapping puppets, more interested in popularity and power than in the common good, must be replaced with men who can stand on their own convictions of moral right no matter what the odds. Industry, thrift, and some sense of financial wisdom must be compelled and individual demands for economic security from the cradle to the grave must be replaced by a dedication to the old-fashioned custom of hard work and self-denial.

A new concept of education must appear in all phases of our quest for knowledge. A positive Christianity must, in some way, dissipate the impression that for one to be

scholarly and mentally equipped one must be materialistic and utterly devoid of any simplicity of faith in things divine. Basic standards of honesty, truthfulness, integrity, and fair dealing must return to our everyday activities of life. Our standard of morals must be lifted; our social conduct must be elevated. Spiritual values in life must regain their rightful place and everyday living must be regarded as a God-given stewardship of responsibility. Pompous "piousities" must be discarded and individuals must act and live in line with the Christian professions we so loudly proclaim. Christianity must become vital, not casual; aggressive, not apologetic; dynamic, not apathetic.

If our assertion is correct—if ours is a decade of destiny—the responsibility rests upon those of us who are Christians—members of our Lord's churches. Only, as we assert a stupendous Christian faith and exert an unprecedented effort in Christian living will we see the tide of paganized materialism checked and a new and different concept of living emerge. To us, then, as children of God through the Lord Jesus Christ, is given this "date with destiny."

How shall this be accomplished? It seems to me that there must be a genuine and unprecedented proclamation of the Gospel of Jesus Christ as the remedy for man's ills and assurance for the future. Passion and power must return to the pew as it descends on the pulpit. Without exhortation, but without favor, sinning man must be made aware of the peril and penalty of evil. Sin must be set forth for what it is. Man must be made aware of his temporal and spiritual peril as the reality of evil is exposed and its paralysis delineated. Men must be admonished to look to God for salvation—not to philosophy, education, science, or culture.

A new concept of God must arise in men's hearts. His provident control over the universe, His holiness, His justice, His righteousness, His sovereignty, His concern, and His redemptive purpose must again fill men's hearts. A redeeming Christ, who, as a suffering savior, died on a cross, must find acceptance in human hearts as God's only means of soul security and spiritual hope. Life must be transformed by His regenerative grace and under the guidance of His Holy Spirit must we walk together as brethren in accomplishment of His will for mankind.

This is a decade of destiny, and in it perhaps our last full chance to merit God's bestowal of opportunity to point the Nation and the world to a way up and out. If we fail what can keep us from rotting and crumbling into discard and decay? God help us to be aware of our responsibilities in the 1960's.

Birthday of the Merit System

EXTENSION OF REMARKS OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. REES of Kansas. Mr. Speaker, under permission granted by the House, I am including a speech delivered by the Honorable Sumner G. Whittier, Administrator of the Veterans' Administration, at a dinner meeting of the American Federation of Government Employees commemorating the 77th anniversary of civil service. The meeting was held at the Willard Hotel on January 16, 1960.

Mr. Whittier is one of the highly respected and capable administrators in our Government. I am sure Members of Congress, as well as others, will be interested in reading his statement:

SPEECH BY MR. WHITTIER, AMERICAN FEDERATION OF GOVERNMENT EMPLOYEES, 77TH ANNIVERSARY OF CIVIL SERVICE, WASHINGTON, D.C., JANUARY 16, 1960

It happened nearly 80 years ago, here in the city of Washington.

The sharp crack of a pistol shot raised ugly echoes in the city's railroad station. A man fell fatally wounded. Two months later he died of his wounds. He was no ordinary American. He was James Garfield, President of the United States.

The embittered, unbalanced man who shot President Garfield was a disappointed job hunter. He had helped a great deal—or so he thought—to win the election for Garfield. He felt he was entitled to a good job in the new government. Was he competent? Who cared? Everybody knew that "to the victor belongs the spoils." That was reason enough for poor crack-brained Charles Guiteau.

But James Garfield, newly elected President of the United States, did not believe in the cynical system of party spoils. He had taken a strong stand against it.

To the spoils system he said "no". And it cost him his life.

It is fair to call President James Garfield one of the patron saints of the Civil Service. Less than three years after his senseless murder, an aroused American people forced the adoption of the Civil Service Act of January 16, 1883.

That was exactly 77 years ago. Today, you and I are helping to celebrate one of the happiest birthdays in the entire history of our American Government. The birthday of the merit system—two words of tremendous import to the proper running of the business of this Nation.

Looking back over the span of 77 years, some of us might be tempted to believe that the efficient civil service system, as we know it today, just came naturally.

It did not. It had to be hammered into shape, and molded, and remolded and refined. The ship of state, back before the turn of the century, was well encrusted with barnacles.

It took years to shape the fine system we know today. It took enlightened management policies. It took bold imagination, merely to break loose from the shackles of "this is the way we've always done it, and this is the way we're always going to do it." Above all, it took thousands upon thousands of dedicated men and women.

And let us not overlook the fact that it took as well the unions—the American Federation of Government Employees—on the scene for more than a quarter of a century.

I have had more than a little experience with civil service and with the part unions have been playing to keep the merit system strong.

For 10 years in the Massachusetts State Senate, I was chairman of a joint senate and house committee on civil service. I was a member of many special commissions to improve and strengthen the civil service of my Bay State.

I don't have to tell you that my Commonwealth of Massachusetts is heavily industrialized and heavily unionized. My home city of Everett is a community of working men and women—less than 3 square miles in area, but including General Electric, Standard Oil, and many another union plant.

Most of the members of my family and my wife's family are union members. My brother was not only a member of a local, but legislative agent as well.

When I first came to Washington, and dignified and jolly Colonel Franke came around with an application blank, I was pleased to

become a member of the AFGE. It was one of the first things I did in this city. I attended meetings and was made a member of the executive committee.

Later I was promoted to administrator. Some fine telegrams came from your union to the President—and for that support, I thank you. However, there is a belief that if you are administrator, you represent management. But I am still a card-carrying member of this union. I am not sure whether that's honorary or not. I do know they still come around to collect my dues.

It was only natural, then, that when I became administrator, I wanted VA's record of employee-management relations to be the best in Government—second to none.

The emphasis on human dignity; upon the importance of each individual. These were our goals; these were the ideals of the Civil Service Commission; what's more, these were the marching orders from the President of the United States, in the statement of policy sent to all heads of Government agencies by the White House.

"The economical and efficient operation of the Federal Government depends upon the quality of its employees, their interest and their devotion to their work, their working environment and the effectiveness of their leadership.

"Agency personnel policies (must) provide for the solicitation and consideration of the views of supervisors and employees—including employee organizations—in the formulation and adjustment of personnel policy.

"Protecting the rights of employees to organize, join, or refrain from joining lawful organizations of their choice, and cooperation with employee groups whose interests are identifiable with those of the agency."

There were many other parts to that now-familiar order signed by Rocco Siciliano when he was Special Assistant to the President, for Personnel Management, and carried out so admirably now by his successor Eugene Lyons.

But he said something more:

"Practical machinery exists generally, but unless there is a genuine and positive interest by the highest authority in a Government agency . . . the machinery can become a vehicle for obstruction. If the head of the agency is known for his interest in a good labor-management relationship, this attitude permeates throughout the organization, and the machinery becomes a vital, meaningful instrument."

When VA received that order, we did not file it under W for White House or P for personnel policies. VA reproduced it and sent it out to all levels of management throughout the agency.

A year later, we had a birthday party of our own. On the first anniversary of that order, we sent another memo to all VA supervisors, reminding them of the White House order, and urging once again that they live up not only to its letter but to the spirit as well. And we are still following up. That order will never collect dust in VA files.

Only this month I sent a memo to all supervisors, as another reminder. Listen to these highlights:

"Every supervisor should give thought and take time—

"To give wide credit to superior work accomplishments of employees in his unit.

"To help employees make careers in the VA, to develop their skills, their experience, their knowledge of the VA's mission and their part in it.

"To listen to their views on matters that affect them, and to encourage their participation in employee meetings and other organizational activity."

This is not lipservice. This a way of life at the VA. Emphasis on human dignity; the importance of each individual—these

are motivating forces at VA, from the top on down.

We turned the generalities into important specifics. For example, the attitude survey VA conducted some months ago, and also our survey of secretaries' likes and dislikes about their bosses and their jobs. Our associates are participants in the VA, not merely employees.

We wanted their views, not just out of curiosity, but so that we could spot our weak points and correct them. And so we have acted on the basis of our findings. Our blueprint is the voice of the employee. For example, we instituted after-hours college courses right in the VA building; we began to post job vacancies on our bulletin boards; we started a training program for our supervisors; we began holding general employee meetings to give our people a clearer picture of the VA.

When we decided to change our working hours at the VA, it was because we polled our employees. "What working hours would you prefer?" we asked them. And we have abided by the wishes of the majority.

I have tried to visit as many members of the VA family at their desks as I possibly could. And so have all of my top staff members—Brad Morse, Bob Lamphere, Al Monk, and others. Recently we returned their hospitality. Every member of the VA family in the Washington area—and there are 3,700 of them—has been to my office. We chatted. We exchanged views. We asked questions of one another.

Our people met all department heads and deputies, received a full explanation of our chart room and other reporting devices used to understand VA's vast and diverse programs.

Somebody called it Operation Handshake, and I think the title fitted.

But we have done more in the area of communications. We hold welcome parties for all new employees, to give them the feeling of belonging when they come aboard; to let them know that VA is a good and friendly place to work; to impart to them some idea of our precious mission. Union representatives speak at these indoctrination receptions.

When someone retires, we make much of it. After all, if a man or woman has worked for VA for 30 or 40 years, isn't that the least we can do? Our retirees have formed an alumni group to carry on VA's fine tradition.

Somehow, this Christmas when I saw the Christmas decorations that our people had put up outside the building, I thought that it expressed truly the warmth of the VA.

Yes, we have tried to keep communications open from top to bottom.

If we have to close an office, our people should know that it is for a sound reason. They should know what is going to happen to them and their families.

The VA has its problems. We are no different from any other agency. For example, automation is coming to VA—as it is all over the Nation, in government and in private industry.

In the VA we are determined that we shall worship no machine. We know that the electronic computer is no different from the typewriter or the automobile or the adding machine—bigger and more complex, yes; but only a way, in the long run, to make the job easier.

We know that just as the carriage makers had to be displaced to make way for the automobile with its wider job horizons, in the long run men and women will have more jobs, more pay, more leisure.

But we are keenly aware that any such change affects people, people to whom the VA has an obligation.

We began these changes with a letter to all VA department and staff heads: "I consider it essential that special attention be

given to the human factors that will be involved in the conversion to electronic data processing equipment."

Every level of management was directed to show "maximum consideration for and use of all VA employees" in converting to ADP.

Training programs were set up to prepare people whose jobs might be affected for other jobs needed to operate ADP, as well as for other jobs in the agency.

Whenever better positions came about through ADP, our present people were to be given first consideration.

Any reassignment actions were to take place far enough in advance so that nobody, but nobody would be caught short without plenty of opportunity to be placed elsewhere.

A number of other steps were outlined as well—all designed to protect the individual; to place the needs of the individual first, ahead of any machine.

Every VA employee was kept up to date on the progress of ADP. One letter reminded them: "The successful conversion to our new equipment will depend on you, the employees who will be needed to support the operation of that equipment."

Remember Carl Sandburg's poem, "The People, Yes?" Ours is "The People First."

When there is a problem affecting our people, we tell them just as quickly as management arrives at a decision. We tell them before they read it in the newspapers; or before the rumor mill has distorted the story.

Why shouldn't they know first? They are members of the VA family. It is their lives that are affected.

We believe we must be frank and honest with our people. If we are not, they would not believe us twice.

We believe that the best way to lick the wild rumor, the uncertainty, is to inform the people affected, promptly and fully.

We believe our people should know why management makes a decision.

We do all this, but there is another side of the coin. Union heads must be responsible, must be willing to understand management's problems, must be willing to work with us and confer with us to hammer out solutions and agreements in a climate of mutual respect and understanding. Effective communication requires responsible management; but it also requires responsible union leadership and mutual respect.

Jim Campbell comes to lunch occasionally. And so do the members of the local, Bernard Kurcias, John Cronkite, and the other officials.

In the VA, we are rather proud of Jim Campbell, who claims our agency as his alma mater. Placement officer in one of our regional offices, Chief of the Vocational Rehabilitation and Education Division, Assistant Manager—an outstanding performer in all jobs, so it is only natural that he makes an outstanding AFGE president.

Gracious Esther Johnson has been everywhere. I still prize a photograph that she and I had taken together.

VA has 76 active AFGE lodges, with representation at all levels. In Philadelphia, the largest local of all, I was there when President Campbell presented an award to the VA manager for human relations. And I read with great interest the report in your fine paper, the Standard, of the activities of the Philadelphia regional office manager, Gordon Elliott.

I am pleased that the VA is strongly represented here tonight, and that it is strongly represented at AFGE conventions, as it was a year ago in San Diego. Ed Silberman spoke there at your invitation, and meetings were held with union delegates from VA lodges all over the Nation. Discussions were candid and open, and recommendations for local improvements were acted upon promptly.

So you see, we do work closely together. We do give serious consideration to your recommendations and suggestions. And we shall continue to do so, in a climate of mutual regard.

For we in VA believe firmly in the rights of our people to organize without restraint, without interference.

We in VA believe firmly in the rights of the union to be informed promptly of any changes in personnel policies or regulations which might affect employees.

We in VA believe firmly in the rights of the union to consult freely with top representatives of VA management, and to make constructive suggestions for improvements.

We in VA believe firmly in management's responsibility to listen to you carefully, to give serious weight to your words.

I believe firmly in the policy of the "open door." From top to bottom, the doors at the VA are open to you, and will remain wide open.

Underlying it all is my belief—and yours, too—in the sacred rights of the individual, his innate human dignity. In his freedom to act and think like an individual. He is man, and you cannot trample upon man.

What are we in government but public servants of our fellow man? How can we serve his needs as an individual if we, in our personnel practice, negate our own individuality? How could we in the VA serve the veterans of America, their widows and orphans, if human dignity were lacking?

Last summer a veteran died. His name was John Burke; his age, 71.

John Burke was a native of Ireland. He had come to America and had become a naturalized citizen. When World War I broke out, John Burke fought under the Stars and Stripes.

But time keeps marching on. John Burke grew old. He had to enter a VA hospital. He spent 2 long years in the hospital. And last summer he died. Before he died, he took the time to make his will. This is what John Burke said in his last will and testament:

"Being an ex-serviceman and grateful for the medical treatment I have received from the veterans hospital, I will and bequeath all my property to the United States of America."

I do not know whether John Burke left an estate of \$5 or \$5,000. But I do know this:

VA employees—civil service workers—many, no doubt, union members—did something so fine, so warm, so human, that it made that sick and aged veteran want to bequeath all he had to the United States of America.

This desire to serve is the end product of a policy of human dignity. We emphasize the individual because he is right, because it is Christian, because it helps us serve America—to serve still better the individual American like John Burke.

Deductibility of Educational Expenses

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. KING of California. Mr. Speaker, 2 years ago the Internal Revenue Service issued TD 6291 to clarify the deductibility of educational expenses for teachers and other professionals. At the time, there were assurances that my

bill H.R. 4662—and a number of companion bills then pending before the Congress—would not be necessary and that teachers would enjoy more equitable treatment on the deductibility of educational expenses incurred by them.

It was my pleasure to work with the National Education Association to seek to relieve this unfortunate situation and all of us were happy to note that a good deal of progress resulted from it.

On March 14 of this year, the Internal Revenue Service issued further clarification to TD 6291; these clarifications are known as revenue ruling 60-97, published in the Internal Revenue bulletin 1960-11, March 14, 1960.

Members of the staff of the National Education Association were consulted in the preparation of this new ruling and it is my understanding that a list of key questions to be used in determining the deductibility of educational expenses should be helpful to teachers. Similarly, there are 10 examples specifically applicable to teachers. With the thought that these examples will be most helpful if they achieve widespread dissemination, I insert, Mr. Speaker, in the CONGRESSIONAL RECORD, the text of revenue ruling 60-97:

[From Sec. 162, Trade or Business Expenses, 26 CFR 1.62-5, Expenses for education, Rev. Rul. 60-97]

GUIDES CONCERNING THE FEDERAL INCOME TAX TREATMENT OF EXPENSES INCURRED BY TAXPAYERS FOR EDUCATION

Advice has been requested concerning the Federal income tax treatment of expenses incurred by taxpayers for education.

The provisions of the Internal Revenue Code of 1954 here pertinent are found in section 162(a) which states that in computing taxable income, there shall be allowed as a deduction "all the ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business." Among the items representing business expenses are "traveling expenses (including the entire amount expended for meals and lodging) while away from home in the pursuit of a trade or business."

Section 262 of the Code provides, however, with exceptions not here material, that no deduction shall be allowed for personal, living, or family expenses.

Regulations (sec. 1.162-5) were promulgated under section 162 of the Code in order to differentiate between expenditures for education which constitute ordinary and necessary expenses paid or incurred in carrying on a business activity and those which are personal in nature. The regulations also removed the uncertainties as to the deductibility of educational expenses by employees as distinguished from self-employed persons. They make it clear that both employees and self-employed individuals can deduct educational expenses which qualify as ordinary and necessary business expenses.

The regulations provide that expenditures made by a taxpayer for his education are deductible if they are for education undertaken primarily for the purposes of (1) maintaining or improving skills required by the taxpayer in his employment or other trade or business, or (2) meeting the express requirements of a taxpayer's employer, or the requirements of applicable law or regulations, imposed as a condition to the retention by the taxpayer of his salary, status or employment. Taxpayers are entitled to deductions only if they are engaged in a trade or business (whether self-employed or engaged in the performance of services as an employee) and have met at least the mini-

mum requirements for qualification or establishment in that trade or business. In determining what the minimum requirements of a taxpayer's trade or business are, consideration must be given to such factors as the requirements of the taxpayer's employer (either present or prospective), the laws and regulations of the particular jurisdiction, and the standards of professional, trade and business groups.

A taxpayer who is not currently employed or is not otherwise actively engaged in a trade or business is not entitled to a deduction for the expenses of any education undertaken during such period of unemployment or inactivity. Therefore, if a taxpayer who has ceased to engage in employment or other business subsequently undertakes education or training preparatory to resuming engagement in such employment or other business, the cost of such education is not deductible. A taxpayer will not be considered to have ceased to engage in his employment or other business during an off-duty season, when he is on vacation, or when he is on temporary leave of absence. Thus, a teacher will not be considered to have ceased to engage in his employment during the period between one school term in which he was employed and the next consecutive school term regardless of whether he was under a contract of employment during such intervening period.

Whether expenditures are for education undertaken primarily for the purpose of "maintaining or improving skills" required by the taxpayer in his employment or other trade or business must be determined upon the basis of all the facts involved. The tests of the regulations are framed to fit a wide variety of situations. In order to satisfy any of these tests, if called upon to do so in connection with the audit of a return or claim for refund, it is not enough to assert or deny the purpose of the taxpayer in general terms. Rather, it is necessary that the taxpayer show his purpose through specific facts. In this connection it will be necessary for him to establish that the education does maintain or improve skills required in his employment or other business. The skills "required" by the taxpayer in his employment or other trade or business are those which are appropriate, helpful, or needed.

If it is customary for other established members of the taxpayer's trade or business occupying positions similar to that of the taxpayer to undertake education of the type pursued by the taxpayer, the taxpayer will be considered to have undertaken such education for the purpose of maintaining or improving skills. The further and overriding rule which must be applied in every case is that even if the education maintains or improves skills required by the taxpayer in his trade or business, the cost thereof will not be deductible if the education is required of the taxpayer in order to meet the minimum requirements for qualification or establishment in his intended trade or business or specialty therein. The expense of such education is not deductible because it is personal in nature.

Once a taxpayer has met minimum requirements for establishment in his intended trade or business, the cost of education undertaken primarily for meeting the express requirements of a taxpayer's employer (or the requirements of applicable law or regulations) imposed as a condition to retention of the taxpayer's salary, status or employment is deductible. Generally, this is true even though a new position, a substantial advancement, or qualification in a new field may result. (See, however, the subdivision of this Revenue Ruling entitled, "Complete course of study leading to qualification or establishment," beginning on p. 14.) However, the deduction of expenses incurred for this purpose is limited to expenses for the minimum education re-

quired as a condition to the retention of the taxpayer's salary, status, or employment. Expenses for education in excess of that necessary to retain the taxpayer's salary, status, or employment may be deducted only if such excess education is undertaken primarily for the purpose of maintaining or improving skills required in the taxpayer's employment or other trade or business.

The regulations prohibit the deduction of expenditures made by a taxpayer for his education if they are for education undertaken primarily for the purpose of obtaining a new position or substantial advancement in position, or primarily for the purpose of fulfilling the general educational aspirations or other personal purposes of the taxpayer. The fact that the education undertaken meets express requirements for the new position or substantial advancement in position is an important factor indicating that the education is undertaken primarily for those purposes. If education is not necessary to retention of position and it meets express requirements for a new position or substantial advancement in position, the taxpayer must show that his primary purpose in acquiring the education is to maintain or improve skills required in his present employment or other business. The taxpayer will be considered to have made such showing if it is customary for other established members of the taxpayer's trade or business occupying positions similar to that of the taxpayer to undertake such education.

Summarizing, therefore, it may be said that expenses voluntarily undertaken primarily for the purpose of maintaining or improving skills required by a taxpayer in his employment or other trade or business are deductible as well as those incurred primarily because required as a condition to retention of his salary, status or employment; that expenses incurred primarily for either of these two purposes are deductible whether the taxpayer is self-employed or is engaged in the performance of services as an employee; and the fact that academic credit, a degree, a new job, or advancement may result does not preclude a deduction so long as the education is primarily undertaken for one of the two purposes specified in the regulations as causing the expenses to qualify for deduction.

MINIMUM REQUIREMENTS FOR QUALIFICATION OR ESTABLISHMENT

Section 1.162-5(b) of the regulations specifically provides that "if education is required of the taxpayer in order to meet the minimum requirements for qualification or establishment in his intended trade or business or specialty therein, the expense of such education is personal in nature and therefore is not deductible." It therefore is necessary to determine in every case whether a taxpayer has met these minimum requirements.

The following is a description of the application of this minimum requirement rule to teachers and school administrators. These taxpayers must meet both local and State requirements.

The State's minimum requirements for qualification or establishment in his intended position have been met by a teacher or school administrator when he has acquired the education necessary to hold a continuing certificate in that position. For the purposes of this Revenue ruling, a continuing certificate is one which need not be renewed, is renewable or convertible on the basis of experience only, or is renewable indefinitely by acquiring education which is not directed toward required conversion to another type of certificate. In other words, a teacher has met the State's minimum requirements when he is eligible for a certificate and is not required to take additional education showing progress toward the attainment of another type of certificate. The

name or term applied to a certificate is not controlling.

If a teacher who has a continuing certificate is required by his employer, whether local board, district or school (public or private), to meet other educational requirements for employment in his position, he must meet these requirements before he will be considered to be qualified or established in his position. A change of employers, therefore, may require teachers as well as other taxpayers to meet different minimum requirements. (See the subdivision of this Revenue ruling entitled "Increased Requirements—Changed Duties," beginning on p. 13.)

Whether university and college faculty members have met the minimum requirements for qualification or establishment in their intended positions must be determined in the light of the governing regulations of the various institutions. A university or college faculty member has met the minimum requirements for establishment in his position when higher educational attainments are not required of him as a condition of continuing with the institution as a faculty member. (See discussion below, however, relative to increased requirements.) If such a faculty member undertakes additional education which he is not required to take in order to remain on the faculty, he will be entitled to deductions provided the education was undertaken for the purpose of maintaining or improving skills required by the taxpayer in his position.

The regulations of universities and colleges often require faculty members to attain certain levels of education either prior to appointment or within a specified period of time after appointment. If an individual is employed with the understanding that he must obtain certain additional education within a specified period of time in order to remain on the staff, expenses incurred for such education represent expenses incurred in meeting minimum requirements for establishment in the taxpayer's intended position and are not deductible. Thus, for example, if an individual is appointed as an instructor in a college having a policy that within 5 years he must acquire a master's degree and thus qualify as an assistant professor in order to remain on the faculty of the institution, the expenses incurred in earning the master's degree represent expenses incurred in acquiring the minimum qualifications for establishment in his intended position and are not deductible.

SUBSTANTIAL ADVANCEMENT

The regulations provide that expenditures made by a taxpayer for his education are not deductible if they are for education undertaken primarily for the purpose of obtaining a substantial advancement in position. Example (6) contained in section 1.162-5(e) of the regulations makes it clear that in the case of teachers an in-grade increase in salary pursuant to a salary schedule does not constitute a substantial advancement in position. A teacher who incurs expenses for education which are otherwise deductible and, as a result, receives an in-grade increase in salary need not show that the education was not undertaken primarily for the purpose of obtaining the in-grade increase. An "in grade" increase is an automatic step in a salary schedule for a specified level of education. A shift from one step in a salary schedule for a specified level of education (such as a bachelor's degree) to the corresponding, or next higher step, in a salary schedule for the next higher level of education (i.e. a master's degree) will be treated as an in-grade increase in salary and will not constitute a substantial advancement in position.

INCREASED REQUIREMENTS—CHANGED DUTIES

Once a taxpayer has met the minimum requirements for establishment in his in-

tended position, expenses incurred in meeting increased requirements thereafter established for that position are deductible, provided the increased requirements are imposed primarily for a bona fide business purpose of the employer. See the next subdivision of this Revenue ruling for an application of this rule.

Also, in the case of an established taxpayer, expenses of additional education necessitated by a change of duties with the same employer (whether at the request of the taxpayer or his employer) are deductible provided the new duties do not constitute a new position and the cost of the education otherwise qualifies for deduction under the regulations. For example, if the new duties do not constitute a new position and the taxpayer receives a substantial increase in salary as a result of taking the additional education, the cost of such education will be deductible provided the taxpayer can show his primary purpose was to retain his position or improve required skills. In the case of an established teacher, a change of duties with the same school district or other employer will not constitute a new position if the duties involve the same general type of work (for example, teaching as distinguished from administrative duties) and if the teacher is not required to obtain a different type of certificate (such as a change from an elementary certificate to a secondary certificate).

COMPLETE COURSE OF STUDY LEADING TO QUALIFICATION OR ESTABLISHMENT

The regulations provide that if education is required of the taxpayer in order to meet the minimum requirements for qualification or establishment in his intended trade or business or specialty therein, the expense of such education is personal in nature and therefore is not deductible. If a taxpayer who is established in his position undertakes education which is a part of a complete course of study that the taxpayer intends to pursue, such as that required to obtain a bachelor of laws degree, and such complete course of study will lead to qualifying the taxpayer in a new trade or business or specialty therein, it will be considered, for purposes of this Revenue ruling, that such education was undertaken to qualify the taxpayer in such new trade or business or specialty. Accordingly, the cost of such education will not be deductible. See example 10 below. However, a taxpayer may deduct the cost of courses in a new field or specialty if they meet the tests of deductibility provided in the regulations and provided they are not intended to be combined with other courses so as to lead to qualification in that field or specialty.

Except as provided in the next sentence, if an employee is established in his position and thereafter he is required by his employer, for a bona fide business purpose, to undertake additional education in order to retain his position, the cost of such education will be deductible. However, if the education required by the employer represents a complete course of study which will lead to qualifying the taxpayer in a new trade or business or specialty therein, it will be considered, for purposes of this Revenue ruling, that the requirement was imposed primarily for the benefit of the employee and not primarily for a bona fide business reason of the employer and, accordingly, the cost of such education will not be deductible.

KEY QUESTIONS

The following is the suggested order in which questions should be resolved in determining the deductibility of expenses incurred for education:

Has the taxpayer met the minimum requirements for qualification or establishment in his intended position?

If "no," no deductions are allowable.

If "yes," is education undertaken primarily to meet employer requirements to retain taxpayer's position?

If "yes," the taxpayer is entitled to deductions unless (1) the education leads to qualifying the taxpayer in his intended trade or business and taxpayer knew of this employer requirement before assuming his position with his employer, or (2) the employer's requirement is imposed primarily for the benefit of the taxpayer and not primarily for a bona fide business purpose.

If "no," is it customary for other established members of taxpayer's trade or business occupying positions similar to that of the taxpayer to undertake education of the type pursued by the taxpayer?

If "yes," the taxpayer is considered to have undertaken education for the purpose of maintaining or improving needed skills and is entitled to deductions.

If "no," the taxpayer must show by other means that his primary purpose was to maintain or improve needed skills. If the education undertaken meets express requirements for a new position or substantial advancement, the taxpayer must show that the education was not undertaken primarily for the purpose of meeting those requirements.

WHERE DEDUCTION IS REPORTED ON RETURN

The rules applicable to the deduction of business expenses in general apply to expenses for education which qualify as business expenses.

Under section 62 of the Code, expenses incurred by a self-employed taxpayer for education are deductible on page 1 of Form 1040, U.S. Individual Income Tax Return, in computing his adjusted gross income, if they meet the tests set forth above.

In the case of an employee, however, the nature of such expenses will determine whether they are deductible on page 1 or page 2 of Form 1040. An employee's traveling expenses (including the cost of meals and lodging) while away from home overnight, and transportation expenses (excluding the cost of meals and lodging) not involving overnight travel, incurred in pursuing educational activities, the expenses of which are deductible, may be claimed on page 1 of Form 1040 in computing adjusted gross income. An employee's expenses for tuition, books, laboratory fees, and similar items incurred in pursuing similar education activities are likewise deductible in computing his adjusted gross income to the extent his employer reimburses him for such expenses and provided he reflects the amount of such reimbursement in his gross income. See section 1.162-17 of the Income Tax Regulations relating to the reporting and substantiation of employees' expenses. His unreimbursed expenditures for such tuition, books, laboratory fees, and similar items are deductible on page 2 of the return, provided, of course, the standard deduction is not claimed and the optional tax table is not used.

TRAVEL AND TRANSPORTATION EXPENSES

The following are the general rules for the deductibility of travel and transportation expenses: (1) Commuting from a taxpayer's place of abode to any business post situated within the area which constitutes his principal or regular business location constitutes a personal expense; (2) expenses of transportation incurred between business posts within the same area or incurred in daily round trips between the general area which constitutes his principal or regular business location and a minor or temporary post of duty situated beyond that general area are deductible; and (3) overnight traveling expenses (including the cost of meals and lodging) necessarily incurred while carrying on a business activity at a minor or temporary post of duty in a more distant location where it is reasonably or economically impractical to live at "home" constitute

deductible traveling expenses. Rev. Rul. 190, C.B. 1953-2, 303; Rev. Rel. 55-109, C.B. 1955-1, 261.

In determining the deductibility of traveling and transportation expenses incurred in connection with acquiring education at an educational institution, the taxpayer may select the institution which best serves his needs and he will not be denied a deduction solely because attendance at the institution of his choice resulted in greater expenditures than he would have made if he had attended another institution. This is true whether foreign or local universities are attended. A factual determination must be made as to whether the travel away from home was primarily to obtain education the expenses of which are deductible or whether the travel was primarily for personal reasons. See section 1.162-5(d) of the Income Tax Regulations. If the relative amount of time devoted to personal activities or some other factor suggests a trip is made primarily for personal purposes, the taxpayer must be able to show that, notwithstanding this fact, the travel was primarily to obtain the education.

A taxpayer undertaking education during an off-duty period or temporary leave of absence may deduct his expenses of travel, meals and lodging in addition to tuition costs, fees, cost of books, etc., if the expenses otherwise qualify for deduction and if there is a firm understanding or obligation that the taxpayer will return to his employment at the end of the off-duty period or the temporary leave of absence.

In this connection, anticipated or actual presence for more than a year at a particular location strongly tends to indicate "indefinite" as distinguished from "temporary" presence there. In the event a taxpayer undertakes education requiring absence from his duties and business post for an indefinite period, he will not be considered as traveling away from "home" so as to be entitled to deduct expenses incurred for travel, meals and lodging. However, tuition fees, costs of books, and other necessary items may be deductible, provided the education is of the type giving rise to deductions.

The following examples demonstrate the application of the rules contained in this Revenue ruling:

Example 1: A fifth-grade teacher has had 4 years of college study which for many years has been the minimum State requirement for a continuing certificate for such teachers. The State changes its requirements for such certificate. New fifth-grade teachers are required to have 5 years of college study when hired and fifth-grade teachers already employed are given 5 years within which to acquire the fifth year of college study. Fifth-grade teachers already employed who had previously met the requirements for a continuing certificate are entitled to deductions for expenses incurred in meeting the increased requirements.

Example 2: Mr. B is a teacher in the seventh grade of a school system organized on the 8-4 plan (8 years elementary and 4 years high school). He has a continuing elementary certificate. The system is reorganized to the 6-3-3 plan (6 years elementary, 3 years junior high, and 3 years senior high school). Mrs. B is to continue to teach seventh-grade pupils who will now be attending junior high school in the reorganized system, but he must obtain a secondary certificate. He must obtain additional courses to qualify for such certificate. Mr. B's expenses incurred in obtaining this additional education are deductible even though he obtains a different type of certificate, because he is merely meeting increased educational requirements imposed by his employer for the same position.

Example 3: Miss D, a first-grade teacher in school district X wishes to become a sixth-grade teacher in the same school district.

This school district requires all elementary school teachers to have a certain number of college credits and an elementary certificate. A sixth-grade teacher must have certain courses not required of a first-grade teacher. Miss D takes the three additional courses specifically required to qualify her as a sixth-grade teacher and is transferred. No new certificate is involved. Since Miss D has the same employer, her duties involve the same general type of work, and no new type of certificate is involved, she is entitled to deduct the cost of the additional courses.

Example 4: A taxpayer engaged in teaching second grade does not possess a degree but has a teacher's certificate which, under State law, is renewable indefinitely by periodic acquisition of a specified number of academic credits without progressing toward the attainment of another type of certificate. Such a certificate is a continuing certificate and indicates for purposes of this revenue ruling that the taxpayer has met the State's minimum requirements for qualification in his position. No further local requirements are imposed on the taxpayer. In addition to undertaking study required for renewal of his certificate, the taxpayer, primarily for maintaining or improving needed skills, pursues study which leads to a degree. The taxpayer is entitled to deduct the cost of the voluntary education—which leads to a degree—as well as that required to renew his certificate.

Example 5: A high school teacher of mathematics who has a continuing high school certificate is advised by his employer that he must transfer to fill a vacancy in the science department and that this transfer will necessitate his taking two specified courses in science. The teacher takes these two courses and receives another continuing high school certificate reflecting this fact (or his certificate is endorsed to show this fact). This case represents a change of duties in the same position and does not represent qualifying for a new position. Therefore, the expenses for the two courses are deductible. In the case of such a transfer at the request of the teacher, the expenses are, for the same reasons also deductible.

Example 6: School District A in State Y requires that seventh-grade teachers have at least a bachelor's degree. Miss S, with a bachelor's degree, is employed by this school district. She accepts employment as a seventh-grade teacher in the same State but in School District C which requires its seventh-grade teachers to have at least a master's degree. Miss S is given 2 years within which to acquire a master's degree. In undertaking the required education, Miss S is meeting minimum requirements for qualification in a new position. The expenses of such education are, accordingly, not deductible.

Example 7: A fourth-grade teacher in school district W undertakes education which maintains and improves his skills as a fourth-grade teacher and also meets the express educational requirements to qualify him as a principal in that school district. The education is not required as a condition to the retention of his salary, status or employment and is not of a type customarily undertaken by other established fourth-grade teachers. Since the education meets the express requirements for a new position, the taxpayer will be entitled to a deduction only if he can show that the education was undertaken primarily for the purpose of maintaining or improving skills required in his position and not primarily to secure the new position.

Example 8: A fifth-grade teacher holding a continuing certificate in State Y accepts employment as a fifth-grade teacher in State Z. State Z requires fifth-grade teachers to have a fifth year of college study in order to be eligible for a continuing certificate whereas State Y required only 4 years of college

study for such a certificate. Since the teacher has only 4 years of college study, she is given a certificate by State Z which is renewable annually for 5 years, at the end of which time she must be eligible for the continuing certificate. She undertakes a fifth year of college work. Expenses incurred in acquiring the education necessary for the continuing certificate in State Z are incurred in meeting the minimum requirements for qualification in a new position and are not deductible.

Example 9: Mr. G is employed as an instructor in a college where instructors and assistant professors are appointed annually or for a specified period not to exceed 3 years. A person is not permitted to be retained by the college at the rank of instructor for more than 5 years. An individual may continue as a faculty member without progressing beyond the rank of assistant professor. Mr. G undertakes education which will enable him to qualify as an assistant professor. The expenses of such education are incurred in meeting minimum requirements for establishment in his intended position and are, accordingly, not deductible.

Example 10: A trust officer in a bank undertakes to study law. The knowledge of the law will be helpful in discharging his duties. His employer does not require him to engage in such studies. He registers for the entire regular curriculum leading to a bachelor of laws degree. Since the taxpayer is pursuing a complete course of education in law which will lead toward qualifying him in that field, in which he has not previously qualified, his expenses for such education are considered to have been incurred for the purpose of qualifying in that new field and are, therefore, not deductible. Also, if the bank imposes upon the taxpayer, as a condition to the continued retention of his position with it, the requirement that he pursue a complete law course, the cost of such education is not deductible because the requirement is considered to be imposed primarily for the employee's benefit and not primarily for a bona fide business purpose of the employer.

Example 11: A teacher who lives in city R teaches school in city T. During the summer he undertakes in city R education the expenses of which qualify for deduction. The teacher regularly spends his summers at his residence and would be there regardless of whether he attends school. His expenditures for meals or lodging are not deductible because they constitute personal living expenses. His expenses incurred for transportation between his residence and the school attended are in the nature of commuting expenses and also are not deductible. Expenditures for tuition, books, fees, etc., are deductible as education expenses to the extent provided in the regulations.

in a time of nuclear advances, missiles, urban blight and automation it is by no means an anachronism to speak of ancient forests. Our remaining wilderness is becoming an increasingly important resource for America's expanding population.

The so-called wilderness bill, S. 1123, would help save America's remaining wilderness for future generations by placing under statutory protection a portion of this wilderness land.

As one deeply interested in broad conservation measures, I support this bill.

An editorial appearing recently in the Pittsburgh Sun-Telegraph and other Hearst newspapers caught the spirit of the bill very well. Here, under leave heretofore granted to extend my remarks in the Appendix of the Record, I include the editorial which, in a few succinct paragraphs, states the need perhaps as Thoreau would have stated it were he to write again today:

THE WILDERNESS BILL

More than 100 years ago, Henry David Thoreau wrote from his sylvan sanctuary at Walden Pond: "I have my horizon bounded by woods * * * I have as it were my own sun and moon and stars, and a little world all to myself."

The unspoiled places were life itself to Thoreau, never ceasing to enchant him.

But America's wilderness areas began giving way to the Nation's explosive growth. Encroachment was inevitable, and it is fortunate that some of the untrammelled lands were spared, largely due to the vision of the men who founded the national park system.

The predatory lumberman has all but disappeared, replaced by a responsible breed dedicated to restorative planting and cutting. But the pressures are heavy to exploit, for various purposes, what few wild areas remain in our country.

They must be preserved soon, or be lost to us and the millions who are added to our population each year.

The wilderness bill, S. 1123, is before the Senate Committee on Interior Areas, supported by conservationists everywhere, as it has been in the past. It gives clear statutory protection from exploitation to 55 million acres (2.2 percent of the Nation's area), much of it already included in federally controlled lands.

This Congress should enact it as a work of statesmanship in behalf of future generations. There has been enough costly delay.

ing legislation relating to the deduction of expenditures for legislative purposes and in connection with measures submitted to the electorate.

One of the pending bills which is the subject of the reports is H.R. 7123 which I introduced. In view of the general interest in this subject and for the assistance of members who have inquired about it, I include at this point the press release and accompanying reports of the Treasury Department and the Department of Commerce:

CHAIRMAN WILBUR D. MILLS, DEMOCRAT, OF ARKANSAS, COMMITTEE ON WAYS AND MEANS, RELEASES DEPARTMENTAL COMMENTS ON PENDING LEGISLATION RELATING TO THE DEDUCTION OF EXPENDITURES FOR LEGISLATIVE PURPOSES AND IN CONNECTION WITH MEASURES SUBMITTED TO THE ELECTORATE

Chairman WILBUR D. MILLS, Democrat, of Arkansas, Committee on Ways and Means, U.S. House of Representatives, today released the report of the Treasury Department on H.R. 5193 (Mr. FORAND), H.R. 5251 (Mr. KING of California), H.R. 5579 (Mr. KARSTEN), and H.R. 6376 (Mr. PELL), identical bills which would amend section 162 of the Internal Revenue Code of 1954 (relating to trade or business expenses) by providing that certain expenditures incurred in connection with measures submitted to the electorate shall be allowed as business deductions, and the reports of the Commerce and Treasury Departments on H.R. 7123 (Mr. Boggs), which would amend the Internal Revenue Code of 1954 so as to provide that lawful expenditures for legislative purposes shall be allowed as deductions from gross income. This legislation relates to deductions for so-called lobbying activities expenditures.

Chairman MILLS stated that due to the interest in this legislation, he deemed it advisable to release for the information of the public the comments of the Commerce and Treasury Departments on the legislation. He pointed out that the committee, due to the fact that its presently established agenda will run some time into the future, had not yet determined whether or when consideration will be given to this legislation.

The reports follow:

UNDER SECRETARY OF THE TREASURY,
Washington, February 26, 1960.

HON. WILBUR D. MILLS,
Chairman, Committee on Ways and Means,
House of Representatives,
New House Office Building,
Washington, D.C.

MY DEAR MR. CHAIRMAN: This is in response to a request for the views of this Department on H.R. 5193, H.R. 5251, and H.R. 5579, identical bills, introduced by Mr. FORAND, Mr. KING, and Mr. KARSTEN, respectively, "To amend section 162 of the Internal Revenue Code of 1954 to provide that certain expenditures incurred in connection with measures submitted to the electorate shall be allowed as business deductions."

1. EXPLANATION OF THE BILLS

The bills would amend section 162 of the 1954 Code relating to trade or business expenses to provide that an expenditure which otherwise qualifies as an ordinary and necessary business expense shall not be disallowed as a deduction because incurred in opposing or advocating measures duly submitted to an electorate upon any issue affecting the business of the taxpayer. Although phrased negatively, the bills would have the positive intent to allow such expenses as business deductions. The practical effect of the bills would be to reverse the recent holding of the Supreme Court in the Cammarano and Strauss cases that expenditures by businessmen aimed at defeating proposed initiative or referendum measures are

The Wilderness Bill

EXTENSION OF REMARKS OF

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. MOORHEAD. Mr. Speaker, often in this Chamber we hear stressed the importance of preserving our heritage from an earlier America, that heritage or legacy which is composed of ideas as well as that part which is composed of more material things.

The remaining American wilderness is surely part of our physical legacy. Even

Treasury and Commerce Departments Reports on H.R. 7123

EXTENSION OF REMARKS OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the Appendix, I include for the information of the interested public a press release which was issued by our distinguished colleague, the chairman of the Committee on Ways and Means, the Honorable WILBUR D. MILLS, in which he released the departmental comments on pend-

not deductible. The bills contain no specific provision with respect to the effective date.

2. SIMILAR BILLS

H.R. 6376, introduced by Mr. Pelly, is an identical bill. Mr. Boggs has introduced H.R. 7123, a bill much broader in scope, which would permit the deduction of expenses lawfully incurred in supporting, opposing, or otherwise influencing legislation in a legislative body, or in any submission of proposed legislation to the voters.

3. PRESENT LAW AND ITS BACKGROUND

The established rule under present law is that ordinary and necessary business expenses are deductible unless they "frustrate sharply defined national or State policies." This doctrine was set forth in some detail by the Supreme Court in 1952 in *Lilly v. Commissioner* (343 U.S. 90), and has been reaffirmed by the Court several times within the past 2 years.

While there can be no question that the legislative process often directly affects both business and labor, the law is well settled that expenditures to influence legislation are not deductible under section 162 of the Internal Revenue Code as an ordinary and necessary business expense. For more than 40 years Treasury regulations have barred the deduction as a business expense of "sums of money expended for lobbying purposes, the promotion or defeat of legislation, the exploitation of propaganda, including advertising other than trade advertising * * *". The validity of these regulations has been sustained on many occasions by the Tax Court and the courts of appeals and by two decisions of the Supreme Court.

In 1941 in *Textile Mills Securities Corp. v. Commissioner* (314 U.S. 326), the so-called lobbying expense regulation was directly challenged in a case involving publicity activities designed to affect the passage of legislation. In upholding the regulation, the Supreme Court stated in *Textile Mills*:

"The words 'ordinary and necessary' are not so clear and unambiguous in their meaning and application as to leave no room for an interpretative regulation. * * * Nor has the administrative agency usurped the legislative function by carrying out this special group of expenses and making them nondeductible. We fail to find any indication that such a course contravened any congressional policy. Contracts to spread such insidious influences through legislative halls have long been condemned. *Trist v. Child* (21 Wall. 441, 22 L. Ed. 623); *Hazell v. Scheckels* (202 U.S. 71, 26 S. Ct. 567, 50 L. Ed. 939, 6 Ann. Cas. 217). Whether the precise arrangement here in question would violate the rule of those cases is not material. The point is that the general policy indicated by those cases need not be disregarded by the rule-making authority in its segregation of nondeductible expenses. There is no reason why, in absence of clear congressional action to the contrary, the rule-making authority cannot employ that general policy in drawing a line between legitimate business expenses and those arising from that family of contracts to which the law has given no sanction. The exclusion of the latter from 'ordinary and necessary' expenses certainly does no violence to the statutory language. The general policy being clear it is not for us to say that the line was too strictly drawn."

Last year the regulatory provisions relating to the "promotion or defeat of legislation" were again before the Supreme Court in *Cammarano et al. v. United States*, and *F. Strauss & Sons, Inc. v. Commissioner* (358 U.S. 498). There the question was whether the regulations rendered nondeductible amounts paid by the taxpayers to organizations which expended them in extensive publicity programs designed to persuade the voters to cast their ballots against State initiative measures where passage of such measures

would have seriously affected or destroyed the taxpayers' businesses. In sustaining both the validity of the regulations and their applicability to the taxpayers' expenditures, the Supreme Court, referring to the repeated reenactment by Congress of the provisions of the Internal Revenue Code which underlie the regulations, stated "we think that the regulations have acquired the force of law." The Court went on to say:

"This is not a case where the Government seeks to cloak an interpretative regulation with immunity from judicial examination as to conformity with the statute on which it is based simply because Congress has for some period failed affirmatively to act to change the interpretation which the regulation gives to an otherwise unambiguous statute. Cf. *Jones v. Liberty Glass Co.* (332 U.S. 524). Nor is it a case where no reliable inference as to Congress' intent can be drawn from reenactment of a statute because of a conflict between administrative and judicial interpretation of the statute at the time of its reenactment. Cf. *Commissioner v. Glen-shaw Glass Co.* (348 U.S. 426, 431). Here we have unambiguous regulatory language, adopted by the Commissioner in the early days of Federal income tax legislation, in continuous existence since that time, and consistently construed and applied by the courts on many occasions to deny deduction of sums expended in efforts to persuade the electorate, even when a clear business motive for the expenditure has been demonstrated."

In its concluding remarks, the Supreme Court in the *Cammarano* case observed that the taxpayers "are simply being required to pay for those activities entirely out of their own pockets, as everyone else engaging in similar activities is required to do under the provisions of the Internal Revenue Code."

It should be noted that the Treasury regulations which have been repeatedly applied by the courts forbid without qualification the deduction of all expenditures to influence legislation. This rule applied whether the expenditures may be characterized as "good" or "bad" and without regard to whether the activities involved relate to direct dealings with legislators or to publicity or grassroots pressure campaigns designed to create a climate of public opinion to influence the legislators. In *Cammarano*, for example, the Supreme Court said, "We cannot accept petitioner's argument that *Textile Mills* should be read as limiting [the regulatory] provisions to direct dealings with legislators, insidious or otherwise." Thus, under lobbying regulations expenditures for the following purposes have been disallowed: Legal fees incurred in connection with appearances before the House Ways and Means Committee, *Delaware Steeplechase and Race Association* (9 TCM 893 (1950)); the cost of assembling facts and arguments for presentation to the legislature, *Mary E. Beldengrath* (46 BTA 89); expenditures for publicity designed to influence the opinions of the general public in connection with legislation pending before Congress, *Textile Mills*, supra; expenses incurred for publicity in combating initiative measures, *Cammarano* and *Strauss*, supra.

4. REGULATIONS AND CONGRESSIONAL POLICY

In sustaining the lobbying expense regulations in *Textile Mills*, the Supreme Court found that the regulations contravened no congressional policy, and that they represented a valid exercise of rulemaking power because of well-established public policy. In reaffirming the validity of the regulations in *Cammarano* and *Strauss* the Supreme Court stated that the regulations themselves "constitute an expression of a sharply defined national policy * * *".

This policy, according to the Court, is that those engaging in political pressure activities to influence legislation "are * * * required to pay for those activities entirely out of

their own pockets * * *". Such a policy, the Court found, is "further evidenced by the treatment given by Congress to the tax status of organizations otherwise qualified for exemption as organized exclusively for 'religious, charitable, scientific, literary, or educational purposes,' which engage in activities designed to promote or defeat legislation."

The conclusion of the Court as to the existence of an established congressional policy in the lobbying expense area is aptly summed up by the Court in the closing sentence of Justice Harlan's opinion in *Cammarano* and *Strauss* as follows: " * * * it [the regulation] appears to us to express a determination by Congress that since purchased publicity can influence the fate of legislation which will affect, directly or indirectly, all of the community, everyone in the community should stand on the same footing as regards its purchase so far as the Treasury of the United States is concerned."

5. NEW REGULATIONS

New lobbying expense regulations were promulgated by the Treasury on December 28, 1959.

The old regulations which were in effect for some 40 years and which have just been superseded, provide as follows:

"Sums of money expended for lobbying purposes, the promotion or defeat of legislation, the exploitation of propaganda, including advertising other than trade advertising, and contributions for campaign expenses, are not deductible from gross income."

The new regulations, which are somewhat more complete and definitive than the old regulations, are reproduced in the appendix to this report.

The new regulations, while in proposed form, were subjected to severe criticism by trade associations, labor unions, Congressmen, and others, with some objecting that the regulations were far too liberal from the standpoint of taxpayers, and others taking the position that they were both punitive and unfair to taxpayers. Essentially, the major objections voiced were:

(a) Lobbying activities, for which deduction is to be denied, should be limited to direct dealings with legislators, i.e., to that type of lobbying covered by the Federal Regulation of Lobbying Act;

(b) Expenses incurred in attempting to promote or defeat initiative and referendum proposals should be deductible;

(c) Expenses connected with the preparation and presentation of testimony before, or communications to, committees of Congress or other legislative bodies should not be treated as lobbying;

(d) Dues paid to trade associations, labor unions, and similar organizations should be deductible unless the primary purpose of the organization is influencing legislation; and

(e) The rules involving institutional advertising should be liberalized to permit the deduction of expenditures in this area without regard to whether the advertising is aimed at influencing legislation. In the alternative, the rules should be tightened to bar the deduction of expenditures for advertising which presents views on economic, financial, social or other subjects of a general nature which are of current public concern. Each of the above comments, while ostensibly directed to the new regulations, actually relates to the long-established rules in the lobbying expense area which have "acquired the force of law." It is believed that material changes in this area, which may well be appropriate, should be based on congressional action.

6. COMMENTS ON THE BILLS

(a) Taxpayers affected

The bills would potentially affect all corporate and unincorporated business income

taxpayers. Since initiative and referendum procedures of consequence to at least some business taxpayers occur every year, there would be a considerable but varying number of businesses to which the bills would extend additional income-tax deductions. Since these items have not been allowed in the past, there are no available data from income-tax returns on their frequency or amounts.

(b) Revenue effects

The revenue impact of legislation in this area depends on its scope. Legislation limited to initiatives and referendums may have immediately modest impact but could result in more far-reaching effect either by encouraging resort to such methods in light of more favorable tax treatment or as precedent for general legislation. General reversal of policy relating to the deductibility of legislative activities could result in considerable decreases in revenues, but estimates are necessarily tempered by difficult appraisal of the extent of hidden deductions in advertising, promotional, legal, and like expenditures which may incorporate lobbying activities. In the posture of existing law and generally broad accounting practices, the difficulties of isolating so-called lobbying activities from generally accepted business expenditures are formidable, not only from the point of view of generally acceptable principles of morality but also from the standpoint of efficient and uniform tax administration.

(c) Policy considerations

The bills to reverse the Cammarano and Strauss decisions (H.R. 5193, H.R. 5251, and H.R. 5579), as well as the broader measure (H.R. 7123) to permit the deduction of all lobbying expenses which are not illegal and which otherwise qualify as ordinary and necessary business expenses, raise this question: To what extent, if at all, should expenditures to influence legislation be deductible as a business expense?

With the growing impact of Government at all levels upon individuals and upon all segments of our society, businessmen, and organizations representing their interests, farm groups, labor organizations, and the like, have often found it necessary or desirable to make large expenditures for the purpose of influencing legislation. The proper treatment of such expenditures is important to the equity and fairness of the income tax. Their tax treatment in turn is relevant to sound governmental policy in a modern democracy.

With the needs of an informed public and legislature in mind, it is sometimes urged that lobbying of the direct and open variety should be encouraged. Moreover, it is held that if the public and legislatures know what interests are lending financial support to educational or propaganda campaigns, this in itself gives better perspective to users of such information and helps lobbying to serve its legitimate purposes. These considerations suggest that if legitimate lobbying expenditures are given status as tax deductions consideration should be given to making clear identification of the source of the expenditures a condition for their deductibility.

Your committee is aware, I am sure, of other problems of definition if an attempt is to be made to distinguish the good from the bad in the lobbying area. The limitation of the proposed deduction to expenses incurred in connection with initiatives and referendums would not in itself necessarily draw an appropriate line in this difficult area. Indeed, it may be contended that since publicity on initiative and referendum measures would, in large part, be directed to the voting public, it might tend to take the form of a one-sided presentation of the issues and make the presentation more deceptive than informative.

Such an approach would leave unresolved some of the most difficult and pressing questions in the whole area of lobbying expenses. It is not clear that there is greater justification for more liberal tax treatment of lobbying expenditures in the case of initiative and referendum procedures than in the case of other forms of expenses incurred in persuading the public and the legislatures. All accomplish basically the same ends and should presumably be governed by similar rules.

Particular attention has been given to expenses incurred in connection with direct appearances before legislative bodies. It has been argued persuasively that reasonable expenditures for this purpose not only provide invaluable assistance to the Congress and other legislatures but do not differ materially from those involved in presenting legal and economic arguments to courts or administrative agencies which are now ordinarily deductible. The American Bar Association, for example, has specifically recommended that an exception be made to the present lobbying expense rules in the area of appearances before legislative bodies, such as your committee. The proposed bills dealing only with referendum and initiative measures would do nothing about this type of expenditure, which has high priority in any reexamination of the treatment of lobbying expenses.

In modifying the present lobbying expense rule, a basic question is raised whether the allowance of deductions in this area would create an unequal situation as between different types of taxpayers or as between business taxpayers and other members of the public. It is frequently said that the present blanket nondeductibility of lobbying expenses is meritorious because it treats all citizens and pressure groups alike when they attempt to influence legislation. Under the existing rule, all such expenses must be paid out of after-tax income.

On the other hand, many assert that the theory that there now exists a uniform rule denying deductions for all persons and interested groups breaks down in practice because of special tax provisions applicable to certain organizations which in many cases are able to carry on lobbying activities free of possible tax considerations. Fully taxable entities point out that they are at a distinct disadvantage as compared with such organizations.¹

Liberalizing legislation in the lobbying expense area should not be adopted without careful consideration of the need for proper safeguards. Such safeguards are not automatically provided by merely limiting the deduction to initiative or referendum measures. Safeguards which the Congress might want to consider would include definitions of the type of expenditures which would be deductible, possible limitation on the amount of the deduction based on the taxpayer's income or other appropriate standard, and possible requirements as to disclosure.

(d) Administrative aspects

Legislative reappraisal of the present law and the proposed legislation will necessarily take account both of the practical admin-

istrative problems which now exist in this area as well as those which might develop under the proposed modification. Present law, particularly as it relates to the dues paid to trade associations, institutional advertising, and the grass roots type of lobbying expenditure, is difficult for the Internal Revenue Service to administer. It is difficult, if not impossible, for the Internal Revenue Service, with its present manpower, to censor or monitor lobbying of the advertising or grass roots variety. Indeed, it has been the general position of the Internal Revenue Service that it is not only impracticable but undesirable to attempt to substitute the judgment of the tax collector for that of the businessman in determining the character of the advertising appropriate for the business as long as it may reasonably be expected to increase the patronage of the business.

It is only realistic to recognize that many of the expenditures in these areas which have passed the permissible borderline under the existing regulations have doubtless escaped detection in the audit of tax returns. Unless the Internal Revenue Service were to devote disproportionate manpower from its basic collection function to policing this difficult and controversial area, it would seem that uniform enforcement would be an unattainable goal. If there were to be a modification or relaxation of the existing rules, therefore, it would appear to be a desirable objective that it should help reduce rather than aggravate the practical administrative problems which are inherent in this area, and at the same time reduce to a minimum whatever inequalities among some taxpayers result from unavoidable imperfections in the administration of the law.

The specific bills, H.R. 5193, H.R. 5251, and H.R. 5579, would, if enacted in their present form, create definite administrative problems. A question immediately arises as to when a measure is "duly submitted to an electorate." Are expenses incurred prior to submission of the measure to the electorate to be considered nondeductible? Does the reference to measures "submitted to the electorate" limit the proposal to initiative or referendum measures submitted directly to the people on State or Federal ballots, or would it embrace still other procedures or campaigns? Until such questions were fully resolved, either by a statutory redefinition or judicial clarification, it would seem that the proposed legislation would result in a new range of administrative problems and controversies.

7. POSITION OF THE TREASURY DEPARTMENT

The proposed legislation and the broader question to which it is addressed merit consideration by your committee. Existing law as developed has frozen concepts relating to expenditures in the area of legislative process which are quite distinct from generally accepted attitudes in regard to expenditures related to fields of administrative and judicial processes. It appears to many anomalous that no expenditures involving legislation, without regard to their character, are deductible, while similar activities before administrative and judicial bodies are clearly deductible if they otherwise constitute ordinary and necessary business expenses.

The present rules have created problems of enforcement since it is difficult to police advertising campaigns and expenditures by unions or trade associations in an effort to identify degrees of attempts to influence legislation and, with respect to taxpayers generally, it is difficult to make certain that expenditures definitely in the lobbying area are not in fact deducted in the guise of legal expenses, advertising, or the like.

Alternative proposals seeking to deal with this problem have been advanced by responsible business and professional organizations.

¹ Such organizations either enjoy special treatment under the tax law which results in little or no tax liability or are exempt or partially exempt from taxation under sec. 501(c) and other sections of the code, not including sec. 501(c)(3). Sec. 501(c)(3) deals with charitable, religious, and educational organizations and contains an express requirement for exempt status that no substantial part of the activities is carrying on propaganda, or otherwise attempting to influence legislation. Lobbying activities do not ordinarily affect the status of other exempt organizations but may affect the deductibility of members' dues.

The proposed legislation in H.R. 5193, H.R. 5251, and H.R. 5579 deals with initiatives and referendums. H.R. 7123 would permit the deduction of "expenses lawfully incurred in supporting or opposing or otherwise influencing legislation in the Congress or in a State legislature or in the legislative body of a county or other local governmental agency or in any submission of proposed legislation to the voters."

The American Bar Association recommended in the general revenue revision hearings before the Committee on Ways and Means in February of 1958 that reasonable expenses incurred by a taxpayer in connection with appearances before, or submission of statements to, the committees of Congress or of any legislative body of a State, a territory, or a possession of the United States, or any political subdivision of any of the foregoing, or of the District of Columbia, shall be deductible from gross income if the expenditures for such purposes otherwise qualify as deductions under either section 162 or section 212.

A reasonable approach which should not lend itself to abuse would be the allowance of deduction of reasonable expenses directly connected with appearances and submissions at public hearing before committees of Congress or of any other comparable legislative body if such expenses otherwise satisfy the requirements of deductibility in the code. Broader legislation may well be indicated but should be examined in light of the policy considerations outlined in this report and in the light of possible need for safeguards or limitations. The Treasury recommends early consideration by the Congress of the various proposals designed to modify the bar to deductibility of expenditures in connection with the legislative process.

The Bureau of the Budget has advised the Treasury Department that there is no objection to the presentation of this report.

Sincerely yours,

FRED C. SCRIBNER, JR.,
Under Secretary of the Treasury.

APPENDIX

(Regulations under sec. 162 of the Internal Revenue Code of 1954, relating to lobbying expenditures)

"(c)(1) Expenditures for lobbying purposes, for the promotion or defeat of legislation, for political campaign purposes (including the support of or opposition to any candidate for public office), or for carrying on propaganda (including advertising) related to any of the foregoing purposes are not deductible from gross income. For example, the cost of advertising to promote or defeat legislation or to influence the public with respect to the desirability or undesirability of proposed legislation is not deductible as a business expense, even though the legislation may directly affect the taxpayer's business. On the other hand, expenditures for institutional or goodwill advertising which keeps the taxpayer's name before the public are generally deductible as ordinary and necessary business expenses provided the expenditures are related to the patronage the taxpayer might reasonably expect in the future. For example, a deduction will ordinarily be allowed for the cost of advertising which keeps the taxpayer's name before the public in connection with encouraging contributions to such organizations as the Red Cross, the purchase of U.S. savings bonds, or participation in similar causes. In like fashion, expenditures for advertising which present views on economic, financial, social, or other subjects of a general nature but which do not involve any of the activities specified in the first sentence of this subparagraph are deductible if they otherwise meet the requirements of the regulations under section 162.

"(2) Dues and other payments to an organization, such as a labor union or a trade association, which otherwise meet the requirements of the regulations under section 162, are deductible in full unless a substantial part of the organization's activities consists of one or more of those specified in the first sentence of subparagraph (1) of this paragraph. If a substantial part of the activities of the organization consists of one or more of those so specified, deduction will be allowed only for such portion of such dues and other payments as the taxpayer can clearly establish is attributable to activities other than those so specified. The determination as to whether such specified activities constitute a substantial part of an organization's activities shall be based on all the facts and circumstances. In no event shall special assessments or similar payments (including an increase in dues) made to any organization for any such specified purposes be deductible.

"(3) Expenditures for the promotion or the defeat of legislation include, but shall not be limited to, expenditures for the purpose of attempting to—

"(i) Influence members of a legislative body directly or indirectly, by urging or encouraging the public to contact such members for the purpose of proposing, supporting, or opposing legislation, or

"(ii) Influence the public to approve or reject a measure in a referendum, initiative, vote on a constitutional amendment, or similar procedure."

THE SECRETARY OF COMMERCE,
Washington, D.C., February 25, 1960.

HON. WILBUR D. MILLS,
Chairman, Committee on Ways and Means,
House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This is in reply to your request of February 1, 1960, with respect to H.R. 7123, a bill "to amend the Internal Revenue Code of 1954 so as to provide that lawful expenditures for legislative purposes shall be allowed as deductions from gross income."

The Department of Commerce recommends enactment of this legislation or enactment of legislation which would accomplish the same general objectives.

For many years the Treasury Department has disallowed deductions from gross income of expenditures made for the purpose of influencing legislation. This rule was first upheld by the Supreme Court in *Textile Mills v. Commissioner* (314 U.S. 326 (1941)). Early last year the Supreme Court again considered the question in *Cammarano v. United States* (358 U.S. 489 (1959)), and again upheld the Treasury Department position. In *Cammarano* the Court relied on the continuous existence of the rule over a 40-year period, its consistent construction and application by the courts to attempts to persuade the electorate, and repeated reenactment by Congress of the statutory section which the regulation interpreted.

The provision of the Internal Revenue Code involved (sec. 162) states that there shall be allowed as a deduction all the ordinary and necessary expenses paid or incurred during the taxable year in carrying on any trade or business. As illustrations of deductible items the section lists compensation for personal services, traveling expenses and rental payments. The Treasury Department has amplified deductible and nondeductible items in detailed regulations.

On September 19, 1959, the Treasury Department published a notice of proposed rule-making dealing with so-called lobbying expenditures. These proposed rules were considered during public hearings held in November and became effective in the latter part of 1959 (24 F.R. 10901, Dec. 29, 1959). The newly issued regulation (sec. 1.162-15(c)

(1)) provides that expenditures for lobbying purposes, for the promotion or defeat of legislation, for political campaign purposes, or for carrying on propaganda related to any of the foregoing are not deductible from gross income. The regulation further provides that dues or other payments to an organization, such as a labor union or a trade association, are deductible unless a substantial part of the organization's activities consist of one or more of those for which deductions from gross income are not allowed. In passing, it might be noted that the term "a substantial part" creates serious problems of interpretation.

Considerable concern has been expressed, both at the November hearings and since promulgation of the new regulation, by businessmen, labor organizations and trade associations over its possible impairment of necessary, useful and legitimate expressions of opinion. It appears to be completely unrealistic, for example, to disallow under the statutory "ordinary and necessary" test expenditures by a business enterprise whose very existence may be threatened by the passage of a proposed bill.

Legislative bodies need openly expressed opinions in order to properly carry out their functions. Frequently these expressions are made by the business community at the request of legislatures.

It is our view that lawful expenditures by business enterprises to support or oppose legislation at all levels of government, when involving the interests of their particular businesses, should be deductible as ordinary and necessary expenses. The impact of government has become so pervasive that businessmen and the organizations which represent their interests often find it necessary to convey to legislative bodies and to the public their views regarding existing or proposed legislation. Freedom of expression is an essential element of a free economy.

It appears that a realistic solution to the problem will be found only in appropriate legislative changes. We feel that the sound policy would be to permit full deduction for all lawful expenditures that are related to the business of the taxpayer. H.R. 7123 is designed to accomplish this objective and we favor its enactment or the enactment of similar remedial legislation.

The Bureau of the Budget has advised that it would interpose no objection to the submission of this report to your committee.

Sincerely yours,

F. A. MUELLER,
Secretary of Commerce.

Hudson County Recognized

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

MR. GALLAGHER. Mr. Speaker, I would like to call to the attention of this House an editorial which appeared in the *Jersey Journal of Jersey City, N.J.*, March 15, 1960. It cites the recognition by the President of the United States of the great work that has been accomplished with our youth by William Flanagan, the sheriff of Hudson County, N.J.

Sheriff Flanagan is a modest gentleman of exceptional ability who has brought a new dimension into preparing our youth to meet tomorrow's challenges

of citizenship. In Hudson County, the initials J.D. do not stand for juvenile delinquency, they stand for junior deputy.

Sheriff Flanagan has emphasized the meaning of law and order through good citizenship upon thousands of our county's youth who he has sworn in as a junior deputy. I believe it to be of immense interest to the rest of our country.

I add my congratulations and join with President Eisenhower in recommending this type of approach to the White House Conference on Children and Youth. We can make no better investment in our future than that of creating an awareness of citizenship and patriotism in our youth. For they are the real answer to the challenge of communism in the days to come. I congratulate Sheriff Flanagan for bringing great honor to our State and commend President Eisenhower for wanting the country to hear more about the junior deputy program through his White House Conference on Children and Youth.

I am including the aforementioned editorial as part of my remarks:

HUDSON RECOGNIZED

Hudson County's preventive fight against juvenile delinquency is beginning to win national attention. President Eisenhower has invited Sheriff William Flanagan to participate in the annual White House Conference on Children and Youth.

To Flanagan, the initials J.D. stand for "junior deputy," not juvenile delinquency.

The junior deputy program consists of inviting Hudson County boys and girls to the administration building and courthouse, instructing them on the dangers of handling weapons, giving them tips on detection of criminals, showing them the routine a criminal goes through and what jail is like compared to the youngster's home. Then they are inducted as junior deputy sheriffs. The program is a continuous one in that each of the youngsters is put on the mailing list for the junior deputy, the publication which continually reminds them of their status and responsibilities as young citizens.

This program and the equally worthy ones sponsored by churches, Scouts, Y's and boys clubs, are preventive: They do not wait for juvenile delinquency to occur and then try to root it out; rather, they offer activities and ideas which healthfully fill a youngster's life. It is the absence of such things that creates a vacuum filled by juvenile delinquency.

Hudson County has had notable success with these programs. Maybe Sheriff Flanagan's participation in the White House Conference will help to spread their use to other communities.

One Million Philadelphians Sign Petitions Delivered to Speaker Rayburn Urging Tighter Laws Against Pornography

EXTENSION OF REMARKS

OF

HON. KATHRYN E. GRANAHAH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mrs. GRANAHAH. Mr. Speaker, I want to express my personal appreciation for your graciousness and encouragement in the drive against pornogra-

phy demonstrated on Tuesday of this week when you accepted and commented so forcefully upon petitions signed by 1 million Philadelphians directed against pornography in the mails and in other means of communication.

Under the sponsorship of the Catholic War Veterans of Philadelphia County, these petitions were devised to enlist widespread support for legislation already passed by the House to deal with the scourge of pornography.

YOUNGSTERS PRESENT PETITIONS TO SPEAKER

Miss Rosemary Hess, 13, of 8042 Elberon Avenue, and Daniel O'Leary, 14, of Darby, who helped in having the petitions signed in a door-to-door canvass, made impressive talks in presenting the petitions to the Speaker. They did beautifully in stating the reasons to Speaker RAYBURN for a youth's concern over this problem.

Miss Hess stated:

Mr. Speaker, I am here today to deliver these petitions to you and to ask you to do all in your power to help abolish the immoral and obscene motion pictures, photographs, and magazines which are crowding the newsstands of our country today.

It is discouraging to see the many teenagers who purchase just this type of literature which contributes so much to the high rate of crime and juvenile delinquency in our country today.

In behalf of the citizens of the United States, and especially in the best interest of my fellow teenagers, I ask that you do all that you can to promote a bill that would curtail the obscene literature and indecent motion pictures. I am confident that this is the only way to remedy this evil and thus make better citizens of today's youth.

Daniel O'Leary then stated:

Mr. Speaker, I am honored and privileged as a youth to present to you and this august body of adult lawmakers these petitions signed by the adults of eastern Pennsylvania, numbering 1 million signatures collected by the boys of the seventh and eighth grades of the parochial schools of the archdiocese of Philadelphia.

We call on you, our adult representatives, this day to pass into law legislation that will prohibit the sale and the distribution of all indecent and immoral literature, magazines, photographs, and any other form of pornographic material that will tend to corrupt the morals of our generation and the generations who will follow us.

We respectfully remind you of your responsibility not only to the present voting citizen but to us the future citizens and possible defenders of this great Nation of ours.

We point out to you a most important fact: In the past our Armed Forces comprised men and women who were physically and morally fit to defend our land. How can we, or those to follow us, be expected to defend this land if you, our adults, permit the youthful minds to be subjected to such a vile menace that will eventually destroy us physically and morally?

Gentlemen, there is nothing more important to America than the protection of its youth. Please make this demand for strong legislation your chief concern. Thank you, and may God enlighten your minds to the danger facing our youth.

ARTICLE BY NICHOLAS GREGORY IN
PHILADELPHIA INQUIRER

Mr. Speaker, excellent news report on the presentation of the petitions was written for the Philadelphia Inquirer of

Wednesday, March 16, by Washington Correspondent Nicholas P. Gregory which I submit at this point for inclusion in the CONGRESSIONAL RECORD:

CATHOLIC WAR VETS ENLIST RAYBURN IN BATTLE ON MAIL FILTH

(By Nicholas P. Gregory)

House Speaker SAM RAYBURN pledged his support Tuesday in Washington to the Catholic War Veterans of Philadelphia County in their drive to ban salacious material from the mails.

RAYBURN spoke in a ceremony in his office off the House floor at which the Philadelphia veterans and Representative KATHRYN E. GRANAHAH, Democrat, Pennsylvania, showed the Texan two small truckloads of 1 million signatures gathered by Catholic schoolchildren in Philadelphia protesting filth that moves through the mails.

"We want the youth of the country to read clean literature," he said in the televised ceremony. "I want to congratulate the supporters of this drive and their efforts."

BILL FAILS IN SENATE

"We must do everything to help Mrs. GRANAHAH stop the flow of filth," he said.

Rosemary Hess, 13, of 8042 Elberon Avenue, and Daniel O'Leary, 14, of Darby, who helped get the signatures, both urged the Speaker to back legislation for stiffer postal laws to bar salacious materials from the mails.

It is now estimated that distributors of obscene motion pictures, books, and comics are doing \$500 million in business yearly. A bill offered by Mrs. GRANAHAH to strengthen the postal laws was approved by the House last year, but failed to get approval in the Senate.

The veterans and other Catholics in the archdiocese of Philadelphia participated with the seventh and eighth grade students in the signature drive.

ACTION ON BILL DUE

The veterans were led by Francis Lamlein, of 123 Fern Street, Darby, adjutant. Others were Jerry Clauss, of 113 Stanwood Street, and William Sheridan, of 7108 Greenwood Avenue, Upper Darby.

The Reverend William C. Strahan, pastor of the church of the Blessed Sacrament, spiritual adviser to the 9,000 Catholic veterans in the Philadelphia archdiocese, was also present.

A drive to pass the Granahan bill is expected to get underway after the civil rights legislation is adopted. Hearings on the measure have been held. Objections raised by some Senators regarding the possibility of censorship sidetracked the Granahan bill.

An Old Hand's Views on Latin American Aid

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. UDALL. Mr. Speaker, last week I received a letter from a constituent who in recent years has served abroad both in Europe and Latin America with the ICA. I am reliably informed that this man made major contributions to America's foreign-aid program during his service, and I know that he has unusual insight into the problems faced by

the people of the underdeveloped countries.

His perceptive letter contains many frank comments regarding our aid program, and singles out some of the serious shortcomings in present foreign-aid programs. For obvious reasons, I have withheld the name of my constituent. His letter follows:

DEAR CONGRESSMAN UDALL: You may be interested in my opinions regarding the Latin American portion of America's foreign aid program. The way things are going distresses me.

To understand this one must have lived down there, and have lived close to not only the whites or blancos, but also the mestizos and the Indians. He should know something of historical Spanish land policy, and something of the philosophy of people generally in power in these countries.

In the Spanish New World the conquistador came and conquered, and the Spanish court gave great areas of land to them and to friends of the court. The Indians were enslaved. In some areas, virtual slavery still exists—as in the *colono* system in Peru.

The Spanish system developed a landed gentry at the top and a slave or peon group at the bottom, with little or no middle class. In contrast, our own system of homestead laws developed a great middle class of farmers operating their own lands—a middle class wherein lies much of the strength of America.

The Latin American peons, often hungry and sick and illiterate, want food for themselves and their families, better health, and education for their children. They are ready to follow the leader who promises a better deal.

Their aspirations have been opposed in many cases by dictators quite well supplied with American arms furnished in the name of hemispheric defense. In those cases where these peons rise up and win, after seeing many of their people killed by weapons from this country, they have a reason to hate us.

We are reaping the harvest of providing arms to these nations. I heard a wise old South American hand say one night, after the revolution of April 9 in Bolivia, something like this:

"We make a great mistake when we send modern arms to these people. They could fight revolutions with sticks and stones and bows and arrows, and accomplish the same results with a lot fewer casualties."

I have no doubt but what there are organized Communists in every country of Latin America. Communists thrive on disorder, and they sell their theory best to illiterate people who are cold and hungry and sick and uneducated. They attach themselves to such revolutions and if the revolution is successful they try to get positions where they can influence policy.

In Bolivia the party that won the revolution was the MNR, or Movimiento Nacional Revolucionario. It was made up, to a certain extent, of minor splinter parties. One of these was the PIR, or Partido Izquierda Revolucionario. I think that the Communists actually made up a small part of this minor splinter party.

I recently read that there were 600,000 rural families in Cuba, of which only a few thousand over 100,000 had land. Many of those landless people are struggling for just a little interest in Cuba, and they are following Castro. We should not forget that they are where they are because of the original Spanish land policy that I have mentioned.

Castro has moved too fast with land reform. Wise policy would have dictated that he appoint a land reform commission, and that the commission study the land reform decrees of Guatemala, Bolivia, Mexico, and other countries. That would have given

everyone a breathing spell and certainly would have strengthened Castro's hand.

Such revolutions as the Bolivian revolution, or the Castro revolution, originate among the exilados, or people of the other side exiled by the government in power. If we had been on the ball we would have had people who had worked themselves into positions of trust when these revolutionary groups were perfecting their organization and plans. Such might be called an extra-curricular Embassy activity, or perhaps it is something for CIA to handle in cooperation with the Department of State. It wouldn't be hard to do.

In Cuba we have a situation where our Ambassador can't even get an appointment with Castro. If it had been handled right—if we had propped up the roof before it fell on us, we would have people that could talk to Castro, and perhaps give him some of the facts of life.

I wasn't there, of course, but I can wager that practically 100 percent of the Cubans who were invited to American Embassy parties before the flight of Batista are now exiles, in jail, or expecting to be put in jail almost any minute. If we are to build a cooperative spirit of mutual friendliness and relationship now I would ask—with whom do we start?

I have mentioned that the *colono* system, where Indians still give 3 free days work a week to the landlord, still exists in the highlands of Peru. Those colonos have struck, and the strikes have been put down by the military. Sometime, and not in the too distant future, a leader, perhaps a Castro, will unite the peons of the coast, the poor of the cities, and the colonos of the highlands, and overthrow the Peruvian Government.

When that comes, will we have established friendly contacts among the leadership of the revolutionary movement—contacts which may help to direct the new movement in the direction of these principles of democracy which we hold so dear? Or will our then Ambassador find it impossible to even get an appointment with the new leadership?

We should be doing a lot of thinking about this.

President Eisenhower has asked for around \$4 billion in foreign aid. I, of course, am no specialist in military aid, and no doubt quite a large part of this sum is necessary. But I do say that military aid is not necessary, in my judgment, any place in Latin America.

Certain amounts of economic aid are necessary as a step to military objectives. I don't know just where such funds can be best used, but I do know that such aid to Latin American countries should require careful accounting and a sense of responsibility on the part of their governments.

I would expand technical aid, and staff it with dedicated men and women willing to go out into the country and help people to help themselves. I want to emphasize that—help people to help themselves. If a technician can't or won't do that kind of a job he or she should be eliminated. I would, if you please, have a staff of "ugly Americans" in the field. And I would replace cocktail diplomacy with grassroots diplomacy.

If you read the "Ugly American" you remember that he got out into the villages and met the folks, and he learned their language. He looked about for a simple problem that concerned most people, and he found it. Their staff of life was rice, and during the dry season it suffered from drought even though next to most plantings were waterways. He found that most people had bicycles, and he developed a frame to hold the bicycle, from which was removed the back tire. He then developed a simple pump driven by belt with manpower sitting on the bicycle, powering a pump which irri-

gated the rice and carried it through the droughty period.

The ugly American started with the bicycle which almost everyone had. The USOM Bolivia started with a paid American engineering firm which as I recall received \$10,000 for their report.

The ugly American helped a native mechanic develop a little factory to make the bicycle-driven pumps. When the Bolivian project was curtailed after partial completion, roughly \$400,000 worth of pumps, generators, and other machinery and equipment was on hand, some of it installed in concrete. One piece of heavy equipment, valued at over \$47,000, had been idle for several years. Other equipment was missing.

Isn't there something we can learn from this comparison?

Through technical aid I saw little farmers grow enough food so they and their families could have a breakfast instead of half a breakfast. I saw illiterate people with their own hands build schools at practically no cost other than their labor, and I saw a small technical aid group helping in the training of hundreds of teachers to go out and teach in those schools. And I saw clinics with personnel in part trained by doctors, sanitarians, and nurses of our mission ministering to people who otherwise would have had no medical attention whatsoever.

Such technical aid must at times be strengthened with economic aid. It does little good to demonstrate to a farmer how to use DDT to kill thrip on his onions, if he cannot go into the market and buy DDT and put into practice that which he has learned. Such products may be imported, duty free by agreement, and sold at a price something below cost. We can hope, as demand is built, that private capital will cause to be built factories which will manufacture the product on a basis of local labor and other costs.

Such programs can reach not hundreds or thousands but hundreds of thousands and even millions of people. If we do our job well, when these people strike aside their feudal lords or dictators, the people with whom we have worked will remember us as friends, and it will take a lot of fast talk by Communists to make them believe that we are Yanqui Imperialists intent on sacking their country of its riches.

We can even hope that when that change comes they will turn our way in the great struggle between communism and freedom.

Sincerely,

(Name withheld.)

The Puerto Rican People Censure President Eisenhower for Mixing in Local Politics—Pablo Casals Says Victory of the Democratic Party Is in the Interest of Peace

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES
Friday, March 18, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, the Puerto Rican Senate has joined the House of Representatives in a resolution censuring President Eisenhower for his expression of support for the Republican candidate for Governor of Puerto Rico.

The freedom-loving people of Puerto Rico are deeply interested in democracy

and have consistently set an example which has given encouragement to all of the peoples of the Americas and of the world.

Pablo Casals, writing in the letters column of the New York Times, says truly that "the free peoples of the world, and those who aspire for freedom, have pinned their hopes on the victory of the Democratic Party of the United States. For that victory will strengthen world confidence in the expectation that there shall be no more vacillations and delays in the attainment of peace supported upon the immovable pillars of liberty and the solidarity of man."

I include as part of my remarks an article from the Washington (D.C.) Post of March 18, 1960:

PUERTO RICO SENATE JOINS SLAP AT IKE

SAN JUAN, March 17.—The Puerto Rican Senate today joined the House of Representatives in a resolution censuring President Eisenhower's expression of support for the Republican candidate for Governor of the Island Commonwealth.

The senate voted 18 to 9 in favor of the resolution after a 16½-hour debate. The house adopted the resolution 47 to 17 yesterday. Both houses are dominated by Gov. Luis Muñoz-Marín's Popular Democratic Party, which are independent of the mainland Democrats.

Mr. Eisenhower on his way back from his South American tour took Luis Ferré, the island's Republican leader, to Washington with him.

White House Press Secretary James C. Hagerty predicted at the time that Mr. Eisenhower would back Ferré against Muñoz-Marín in the November election.

Ferré advocates statehood for Puerto Rico, a hot local issue. Muñoz-Marín contends the island should remain a Commonwealth.

A Message to Government Officials

EXTENSION OF REMARKS

HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. BUDGE. Mr. Speaker, the following was addressed to me by Mary Smith, a fine citizen and distinguished lawyer, residing at Rexburg, Idaho.

It relates my successful efforts on behalf of the dependents of an American serviceman stationed abroad.

I join with the author of the letter in the sincere hope that the message it contains will reach a substantial number of those people in the Government who are in close daily contact with our citizens, and whose only reason for being in the Government is to serve our citizens, in order that the welfare of the individual citizen of this great country may always be paramount.

The letter follows:

REXBURG, IDAHO, March 16, 1960.

HON. HAMER BUDGE,
Congressman from Idaho,
House of Representatives,
Washington, D.C.

DEAR HAMER: You made Faye Hendricks Gilman and her family so happy that they cried for joy, and I mean real tears. She called me from Hill Field and said that they

had arranged to have her attended by a lady and three men who devoted almost their entire time in her behalf to see that she got off on the plane. At Travis Air Force Base she received the same consideration. Her mother also called me and was crying for joy.

I know, HAMER, that you appreciate the whole situation and you appreciate, too, that the redtape of our Government and the inefficiency and inhumanity is causing the people to lose confidence in their own Government. Imagine, this man serving his country in Japan and having the trouble that we have had to get his family to him. Where do you think Americans would be if we didn't have a Congressman like you to plead for us?

I wish you could get it over to some of the bureaus in some fashion that they are destroying America and the respect the people should have for their country through not using some commonsense. This isn't the only case where you have had to intervene and get some commonsense. These bureaus think they are the Government and you have to approach them on bended knees before they will speak to you unless you have a Congressman or Senator to back you up. If they put some of these bureaucrats over in Japan like this boy, serving their country, maybe they would be a little more human.

I do appreciate the work that you are doing as our Congressman. The people should return you and keep you in Congress as long as you live. You have demonstrated you have not lost the common touch and the human feelings of our people. It must be a pleasure for you to look back on the many acts that you have performed to protect the people against destruction by their own Government.

I am sending an extra copy of this letter and you might send it to the proper branch of the Government. I would also suggest that it be published in the Record. If it is published in the Record there may be someone in the bureaus who is human enough to read it. I am sounding the warning and unless it is heeded, this dictatorship of bureaus will destroy our country. If you do put it in the Record, I would appreciate it if you would let me have a copy.

I would be happy to circulate your petition again this year.

Best regards.

MARY SMITH.

Edward J. Cassell Recipient of National Good Citizenship Award

EXTENSION OF REMARKS

OF

HON. RICHARD E. LANKFORD

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. LANKFORD. Mr. Speaker, I am happy to bring to the attention of my colleagues the fact that Mr. Edward J. Cassell, of Glen Burnie, Md., has received a National Good Citizenship Award from the National Association of Food Chains for his outstanding record of service to his community, which is described in the following manner by Food Fair Stores, Inc.:

Edward J. Cassell, 106 South Meadow Drive, Glen Burnie, Md., has won a National Good Citizenship Award from the National Association of Food Chains for his outstanding record of service to his community.

Mr. Cassell, manager of the Food Fair supermarket in the Harundale Mall, Glen Burnie, Md., is one of seven national winners, and the only winner from the State of Maryland. The winners were selected from among 6,000 supermarket managers, who took part in the nationwide competition.

A look at some of Mr. Cassell's activities will give an indication as to why he won the national award.

He takes an active and sincere interest in the activities of his church; has instituted measures and supported others to alleviate traffic and parking problems; has assisted local police in providing emergency assistance (food, etc.) for the needy of the area; is active in numerous charity drives, civil defense, parent-teachers' groups, Boy Scouts, and little leagues. He is an honorary citizen of Father Flanagan's Boys' Town, an honor awarded him for his work in fund raising.

While the civic work for which Mr. Cassell is being honored includes a wide range of organizations and activities, he feels the most gratifying are his efforts on behalf of the young people of his community. He has been a leader in the Marley Area Little League since its inception in 1956, not only obtaining the sponsorship of his own company for a team, but assisting in selling the idea to other businesses. His supermarket is used as a classroom for many youth groups and he is known for his willingness to make store display space available to worthy charity organizations.

As the father of four children, Mr. Cassell firmly believes that "providing normal healthy outlets for youthful energy is one of the most effective deterrents to juvenile delinquency."

Mr. Cassell will receive his award at a special banquet in Washington on March 21. Plans already are underway in Glen Burnie for community recognition following the award presentation.

Nationwide Renown for Independent Newspaper

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, it is my rare privilege to have in my district an independent daily newspaper, the Chicago Daily Calumet, which is unique in two ways. First, it is the only daily community newspaper in the country, and second, it is gaining nationwide renown for the vigor of its editorial policy.

I would like to submit for the RECORD two recent editorials, which follow:

[From the Chicago Daily Calumet, Mar. 9, 1960]

FAT-HEADED EGGSHEADS

We commend the East Side Lions Club and many other local individuals and groups who have rallied against the attempt by eggheaded Congressmen to repeal the Connally reservation that gives the United States the final say-so on jurisdiction of the World Court.

Led by Senator HUMPHREY, Minnesota's screwball candidate for the Democratic Presidential nomination, this faction of fatheaded eggheads would turn over to the Communist world the power to handle domestic cases of the United States.

The only apparent reason given for this obvious sell-out of America's sovereignty by

our State Department is that "there is no difference between domestic and foreign affairs."

Unless the people of the Midwest who have their feet on the ground and their heads on their shoulders make themselves heard in our Nation's Capital, there's a strong chance the liberal international set will succeed in selling out our Nation.

We strongly recommend our readers and civic groups to join the fight to retain the Connally reservation. Letters of protest against its repeal should be addressed to your Congressmen in Washington.

Remember, this is not a political issue. The fact is that the Communist bloc dominates the World Court. Yet no Communist nation is willing to jeopardize its national sovereignty by giving the Court jurisdiction over its internal affairs. Only we are stupid enough to make this mistake—and make it we will unless the people rise up and prevent it.

[From the Chicago Daily Calumet, Mar. 12, 1960]

— IDEOLOGICAL WARFARE

Many persons in this country fear the destruction that world war III will bring. Falling bombs, guided missiles from Russia and her satellites, and radiation fallout are easy for them to comprehend. And while these people clamor for our officials to speed up our war program, the enemy is outsmarting us and is not using the weapons we expect him to use.

Instead he is using the most deadly tool of all to defeat us. He is waging an ideological war against us. The Communists don't intend to destroy our civilization and our wealth unless they have to. So far, they feel they are doing all right without sending atom bombs to blast us.

It is the spirit of God-fearing men they would first try to undermine and destroy. A nation without the will or moral fiber—the deep spiritual fortitude to stand firmly in defense of what is right—is doomed to see its freedoms lost.

The Communists know that without the spirit there is no will. The corrupt man is a defenseless man whom the enemy knows how to corrupt, how to poison, and how to defile. He has done it to 900 million already. The Communists know that we Americans will resist violence with violence. That is why they are so busy fighting an ideological war.

The Communist ideology stems from a conviction that wrong is right and that hate is stronger than love. It is a code that condones treachery, terror, immorality, cruelty, and untruth as legitimate means to an illegitimate end.

You can only fight an ideology with another ideology. The only ideology diametrically opposed to communism, whose effectiveness is so strongly feared by the Communists is moral rearmament.

MRA (moral rearmament) is rooted in the conviction that absolute honesty, morality, unselfishness, and love are the eternal verities. MRA rejects all compromise with evil. MRA believes that God's pattern for the perfect life cannot be distorted or destroyed if men will be guided by God's will. This is the ideology of MRA.

At Mackinac Island, Mich., a group of dedicated men from many countries of the world are building a program and strategy to combat communism with their ideology. Let us hope and pray that the millions of men and dollars needed will find their way to MRA to make the battle successful.

Needed Continuation of Air Service Between the Pacific Northwest and Hawaii

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PELLY. Mr. Speaker, the progressive State of Washington, as befits a growing community and one mindful of its tourism potentialities, is concerning itself with attracting more frequent visits of Hawaiians to its shores. It has long been recognized that the Hawaiian Islands are a vacation mecca to the would-be traveler and each year thousands leave the Northwest for the beautiful sun-drenched Pacific Isles. Hawaii does not hold priority on beauty however, and many an islander has expressed a desire to see the rugged mountain grandeur, the lush green forests, along with the sweeping grainfields and powerful rivers, of the diverse Northwest. Those who have seen it have been delighted and it is our wish to open further the gates of welcome to our island neighbors so that many, many more may visit us to enjoy our friendship and hospitality.

It seems incongruous then, that at the exact time when we are striving hardest to strengthen our bond with these island neighbors and stimulate travel which will familiarize these people with our bountiful land, a CAB examiner should recommend that one of the two airlines operating between Hawaii and the Northwest should cease to service the area.

For several months now, Mr. Speaker, hearings have been conducted before the CAB to determine whether the examiner's notion, that one airline should be allowed to monopolize the route and that Pan American should no longer fly, is valid. Pan American, which operates the only jet aircraft on the route, has flown the route for 10 years and is showing its faith in further growth of air traffic along this route by continuing to add more jet aircraft and increasing schedules, all of which means cutting in half the flight time formerly required by piston aircraft.

As pointed out in a recent editorial in the Argus, a Seattle periodical dated March 11, 1960, Washington State has a long way to go before it can compare with the transportation advantages enjoyed by our neighbors in California. We wish to advance forward, not backward. I strongly urge the CAB to closely consider the hardships that would be involved in discontinuing this valuable service.

Under unanimous consent I include this editorial in the RECORD:

[From the Argus, Mar. 11, 1960]

Washington State sends many tourists to Hawaii, but only a trickle of visitors comes from the 50th State to the Pacific Northwest. Currently about 12,000 persons from

Washington visit Hawaii every year, spending some \$8 million on lodging, food, clothing, gifts, and personal services. This is a substantial sum of money that our citizens leave in Hawaii.

Figures are unavailable as to how many Hawaiians come to the Northwest, but it is estimated that the number is less than 1,000 a year. Why can't we attract more to Seattle and the Northwest?

There are several reasons, most of which might be overcome. In the first place, many people in the islands know little about the Northwest, so the area needs more promotion by the various agencies involved. Secondly, Hawaiians should be advised to visit the Northwest in the summer months, preferably July and August. Living as they do in a most equitable climate, they cannot imagine how disagreeable our weather can be, particularly to those acclimated to nearly continual sunshine. Too many of them have come to the Pacific Northwest in the late fall or very early spring, and have returned to tell tales of rain, clouds, fog, and snow which have chilled the enthusiasm of anyone who might have been contemplating a trip to see our mountains and water. However, Hawaiians like the cooler, clear weather we have in summer, and they should be frankly advised to come during that season.

A third disadvantage we must overcome is transportation. Hawaii is served from California by many fast direct jet airliners. This month there will be 41 jet flights to Los Angeles and San Francisco, as compared with 16 between Seattle and the islands. Seattle jet flights must still stop in Portland, which is time consuming and irritating to today's traveler. California also offers frequent luxury-liner service to Hawaii, a service Seattle completely lacks.

The increase in two-way tourist traffic between Washington and Hawaii should be our long-range program. Many more Washingtonians will want to visit the islands, but we should lend every encouragement for Hawaiians to return our calls.

By attracting more visitors to the Pacific Northwest, we could anticipate more business from the islands, as today most pleasure trips are combined with business excursions. We will secure double benefits from a well thought out promotional program.

Mrs. Martha A. Lyons

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. ADDONIZIO. Mr. Speaker, it gives me great pleasure to insert in the RECORD a moving tribute to Mrs. Martha A. Lyons, editor and publisher of the Spotlight, that appeared in the Jersey Parade of March 11, written by Mr. M. Martin Turpanjian, the editor.

Mrs. Lyons, who has been associated with Spotlight, the picture news weekly published in Newark, for 26 years, is chairman of the board of directors of the New Jersey League of Weekly Newspapers, Inc., of which Mr. Turpanjian is the president. The league is composed of over 500 weekly newspapers in the State. Its selection of Mrs. Lyons as the Magazine Editor of the Year is a fitting recognition of her outstanding record.

Mr. Turpanjian's tribute follows:

I take great pride in announcing that Mrs. Arthur A. Lyons, of Asbury Park, editor and publisher of *Spotlight*, America's picture news weekly, of 116 Market Street, Newark, N.J., has been proclaimed by the New Jersey League of Weekly Newspapers, Inc., as the "Magazine Editor of the Year."

Perhaps no other woman in New Jersey is better known to the masses and the classes than Mrs. Lyons and she knows more people in New Jersey than any other man or woman of the Garden State. This is no exaggeration but true fact.

American womanhood had a noble origin. It was conceived and nurtured in the very cradle of adventure and opportunity. The vast continent of North America in its 18th century period was alive with the magic atmosphere of prospecting and all manners of prospectors and settlers had the entire expanse of 48 States to explore, prospect, and establish desirable settlements.

And the women of America met this tremendous challenge. They did not falter. They did not hesitate with senseless timidity and idle fear. They braved the perils of the American Indians. They rode the old covered wagons and with their husbands, sons, and daughters established their settlements as well as their colonies and laid the solid foundations for the great American empire that was to be the United States of America.

So when we consider the marvelous achievements of Mrs. Lyons, affectionately known as "Conrad" Lyons to millions of people, as editor, publisher, and a veritable mental giantess of knowledge, we can understand and fully appraise her enormous intellectual ability in this historic challenging background of the courageous female pioneers of our early self-sacrificing strenuous civilization.

Mrs. Lyons embodies in her radiant, personality all the outstanding characteristics of the true American rugged individualism. She is indeed an individualist who has the philosophical star of the first magnitude. She is no dreamy visionary obsessed with utopian delusions of grandeur. She has no impractical inflexible ideas molden in the cast of orthodoxy. She is fearless and courageous, possessing that rare sense of mental audaciousness to back up her ideal with her articulate convictions.

The literary style of Mrs. Lyons' writing is unique in its captivating crystalline clarity and verbal coherence. She does not tire her readers with a long protracted prolix verbosity of empty theoretical phrases. She is direct and her logic is so clear and objective that it could be understood at once by the most elementary mind. She does not write to confuse. She does not write to befuddle or bewilder the magazine-reading devotee. Her primary objective is to inspire, elevate and unconsciously educate the readers for in the last analysis the purpose of her editorial commentaries is not to display a sense of pontifical knowledge but to elevate and enrich the mental status of the many subscribers of her progressive militant magazine by being simply understood.

As a matter of fact it would not be in reality a rhetoric figure of speech to call Mrs. Lyons an animated walking encyclopedia or one of the world's modern seven wonders and yet with all these intellectual faculties operating with high-powered efficiency, she has a serene sense of modesty and a humility of spirit that permeates her personality incessantly. It is this friendly affable social democratic approach that creates in her character a sense of fragrant magnetism. It can be said with a sense of perfect serenity and positive composure that Mrs. Lyons has glorified and elevated the status of American womanhood. Her life has been so consistently in tune with the infinite divine law of ethical righteousness that she has become a living example of the

Golden Rule of the eternal moralist she has dramatized into drama of everyday living the ethical concepts of the ideals of cooperation, good will and understanding.

This is the monumental achievement of Mrs. Lyons. This is her contribution to great American way of life. This is her precious gift to society:

OUR MRS. SPOTLIGHT

(Dedicated to "Conrad" Lyons By M. Martin Turpanjian)

This is Mrs. Lyons' life,
Far above all the strife,
With vision always keen,
With a heart radiantly clean.
And her smiles always blend,
To create a new friend;
Always giving good hope,
To those who daily grope;
In the darkness seeking light,
Her master mind guides them right;
And to those bent in sorrow,
She shows the better tomorrow;
And with the light of her soul
She can speak with courage bold.
Of the supreme divine Truth above
That can only come from love.
"Conrad" Lyons' deeds always impart
Genuine illumination in human heart
And so live on and on, great and noble soul
And let thy Goodwill message unfold
To the aged and the youth,
Thy admonitions of Eternal Truth.

Proposal To Amend Social Security Act To Provide Medical Care for the Aged

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. METCALF. Mr. Speaker, among the proposals to amend the Social Security Act, being considered in executive session of the Committee on Ways and Means, is that of our colleague from Rhode Island [Mr. FORAND], who would add a medical and hospital section.

That our physicians are also concerned with the problem of medical care for those who cannot afford it is demonstrated in an article in the March 7, 1960, issue of the *AMA News*, published by the American Medical Association.

Some Montana physicians share this concern. With unusual frankness, one of them sat down on March 5, 1960, and wrote me a letter in opposition to the Forand bill. I call your attention to paragraph No. 3 of his letter below.

The article follows:

[From the *AMA News*, Mar. 7, 1960]

M.D.'s GUARANTEE SERVICE TO AGED UNABLE TO PAY

No person, regardless of age, needs to forgo a physician's service because of inability to pay. Dr. Louis M. Orr, president of the American Medical Association, said today.

In a strongly worded statement, the Orlando, Fla., urologist asserted that "backers of the Forand bill, which proposes Federal purchase of certain health care services for social security beneficiaries, would lead us to believe there are many Americans who are denied medical care because they cannot afford to pay for it."

"As a practicing physician who has traveled throughout the Nation as an officer

of the AMA, I am convinced this generally is not true."

PRIME CONCERN

Dr. Orr emphasized that "the prime concern of the medical profession is, and always has been, to serve humanity regardless of reward or financial gain."

Since time immemorial, he said, physicians have given their services to the indigent without compensation.

He added that as early as 1934, the judicial council of the AMA stated:

"One of the strongest holds of the profession on public approbation and support has been the age-old professional ideal of medical service to all, whether able to pay or not. That ideal is basic in our ethics."

FREE TREATMENT

Every year, Dr. Orr said, physicians have given free millions of dollars worth of medical treatment to the indigent.

"Many county medical societies have even publicized through paid advertisements in newspapers their programs 'guaranteeing the services of a physician to all who need him,'" Dr. Orr declared. "I am certain that every other county medical society also will answer the need for a physician."

The AMA president further stated that "if there are isolated cases of persons with a legitimate need for a doctor's services who are not receiving those services, they have not explored the facilities available to them."

"As physicians, our greatest concern is the best possible quality of health care for all the people. That is why the medical profession is opposed to the Forand bill or any other type of Federal compulsory health insurance."

"We oppose any control of medicine by Government because we are convinced that any such control would endanger the continued high quality of care we can provide."

SERVING THE AGED

Dr. Orr said the interests of the aged could best be served by encouraging further development of voluntary health insurance; by replacing compulsory retirement and age discrimination in employment with more realistic and flexible systems; by curbing inflation; by encouraging construction of nursing homes and other facilities designed to care for the long-term patient efficiently and economically, and by increasing reimbursement of hospitals by local and State governments for care of the needy of any age.

The letter referred to above follows:

MARCH 5, 1960.

HON. LEE METCALF,
House Office Building,
Washington, D.C.

HONORABLE SIR: I am strongly opposed to the Forand bill (H.R. 4700) for the following reasons:

1. We must halt further socialism and socialization. Unless we do our Nation is a "has been great."

2. Once more we must teach our younger generation to care for their oldsters on a family basis. "Grassroots" family unity is the main strength of any great nation.

3. As a physician I must admit that I give less than wholehearted care to patients who are "clinic" or "charity" cases. Forand recipients would be charity cases in my opinion. Thus, good care of our aging, which is the prime target, would be entirely a lost cause under socialism such as Forand type of provisions.

4. Once more let us place freedom to be generous and charitable to patients just where it belongs—in the hands of "the physician on the case." Physicians, just as anyone else, hate to be told where they must be generous. Hence, the doctor's "generosity" becomes a grudging and hateful thing when forced upon him.

I appeal to you, honorable sir, to do all in your power to defeat H.R. 4700 and any similar type of bill.

Respectfully yours,

_____, M.D.

Three Winning Student Essays on the Vital Subject "Jobs for the Handicapped" Contest in the Great 23d District, Los Angeles County, Calif.

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of the three winning essays in the recent annually held essay contest sponsored by the legislative committee of the Disabled American Veterans' Auxiliary in the great 23d District, Los Angeles County, Calif. It has been my pleasure on several occasions to be present at the annual award dinner when winners of this significant essay contest were presented their awards; this year, however, I was unable to have the pleasure of attending the annual dinner.

This significant contest has entries therein from various high schools in the southeastern district of Los Angeles County. The texts of these essays were furnished me by a distinguished veteran of the Disabled American Veterans Auxiliary, Mrs. Lillian M. Karnes.

The award dinner was held February 19, 1960, at Compton, Calif. The judges of the contest were as follows: Del Clawson, mayor of Compton; Jack Cleland, managing editor of the Compton Herald American; Guy Warner, manager, California department of employment, Compton; Wayne Bowen, chairman, of the veterans' employment committee; Mrs. Lillian Karnes, chairman of the local employ the physically handicapped committee. The winners were Carol Martin, Paramount Senior High School, for the first place award of a \$50 bond; entry of Velda Kurtze of the Dominguez High School, second place winner of a \$25 bond; entry of Emma R. Smith, Centennial High School, third place winner of a \$25 bond.

Mr. Speaker, in and about this geographical area commonly known as the great 23d district I am pleased to state that through the cooperative efforts of the Veterans Employment Committee and Employ the Physically Handicapped Committee of the southeast district of that area various and many important manufacturers have specifically cooperated with the high purposes of these committees and have employed physically handicapped persons. On several occasions when I have been personally present at these annual dinners manufacturers have also been personally present and have publicly stated at the banquet table their great satisfaction and pleas-

ure with their employment of these distinguished veterans who were termed "physically handicapped." And, it has been my pleasure for many years to actively cooperate to the desirable end that employable, worthy handicapped persons should find dignified, available employment.

Mr. Speaker, I am sure that you and all the other Members of this distinguished legislative body join with me in complimenting the committee which sponsors this annual contest. Also that you join with me in complimenting the winner and also the dozens of those who made honest, able endeavor in the contest but did not happen to be an award winner. They too should be complimented. Likewise, I know you join with me in complimenting the several and busy, prosperous manufacturing groups who have had the satisfaction of employing the physically handicapped fellow citizens. It is important for us to know the thinking of our successors in citizenship duties.

Following, then, are the text of the first-, second-, and third-place winners' essays.

"Jobs for the Handicapped—A Passport to Dignity" by Carol Martin, 11373 Pennsylvania, Hollywood, Calif., age 16, Paramount High School; teacher, Mr. John Myres:

"I cried because I had no shoes, until I met a man who had no feet." So very often this quotation has been repeated verbally, or in some form or another, mentally. The human race ejects sympathy for persons who have encountered physically handicapping misfortunes. People discuss and debate disabling accidents which have occurred. Charities and other financial relief organizations have been formed to aid these people. Yet, how many individuals actually assist these people in regaining their dignity and normalcy? What percentage of our population today can befriend and trust and enjoy the companionship of someone lacking an arm, a hand, or both? How many employers are willing to accept recommendations from rehabilitation offices? Who are the people that can ignore handicaps, and socialize with, as well as work with, these people?

A magazine article was once written by a woman who described herself as "a cripple with a misshapen body." This woman had wanted to enter the teaching field but was discouraged by associates. She was told that physical appearance greatly influences the success or failure of the teaching profession. Realizing the extent of her physical attractiveness, she commenced work in an office. After a short time, she began to feel subconscious tendencies in others to suspect her of potential breakdown and chronic inefficiency. She became overconscientious about overtime and the "small details that keep an office running smoothly." This led to decreased production in her work, and, eventually, dismissal. The mental attitude of this woman's friends was a stumble block in her road to happiness.

Disabled individuals often feel more social rejection than actually exists. They inflate the size of their disfigurement. This necessitates increased understanding and tolerance by family and friends as can be seen in the case of a man returning from World War I. He had received severe facial disfigurement while serving his country and, upon resuming life with his wife, rejected any social contacts other than family. He claimed that he couldn't stand the expression of distance and pity in the eyes of peo-

ple to whom he talked. The few friends that were permitted to enter the house stated that his misfortune was hardly noticeable after once being subjected to his warm and wonderful personality. Fortunately, he was a scholar at heart and he found pleasure in working in his library. This decreased his need for extensive social life.

The problem of employment is one that all physically handicapped persons encounter. Quite often they no longer feel that they are suited to any particular branch of work, or they become discouraged after repeated employment rejections.

In 1918 the veteran's bill was passed to provide for the vocational rehabilitation of wounded servicemen, under the direction of the Veterans' Bureau.

Between 1918 and 1920, 12 States passed laws for work concerning disabled civilians. In 1920 a Federal law was passed which set up an agency under the Federal Board for Vocational Education to promote civilian rehabilitation throughout the country. It also provided funds for the 12 States already possessing rehabilitation laws, and tentative funds for all other States meeting the necessary requirements.

The veterans' bill ceased in the late twenties upon the end of work by the Veterans' Bureau. From then until 1943 State offices carried on rehabilitation work with Federal supervision and financial assistance.

The civilian's bill was placed under laws of respective States in cooperation with the Federal Board for Vocational Education.

The first rehabilitation laws in the United States were passed in 1935. Although these measures aided many people financially and morally, they were somewhat inadequate. Though we realized our definite responsibilities for physically disabled fairly early, we still lagged behind Great Britain, Germany, and other industrially progressive countries.

Today, employment isn't the threat that it was. "The Operation Manual for Placement of Physically Handicapped" issued by the U.S. Civil Service Commission, lists over 2,000 jobs in accordance with particular handicaps.

Vocational guidance tests are available to anyone desiring them. They are helpful in that they reveal the true interests of an individual. They are evaluated by a competent outsider who gives the results to a guidance counselor. This person, in turn, seeks the suggested type of work.

Some people fail to use their rehabilitation offices. They search for work, only to find employers hesitant to hire handicapped workers.

Discouraged, they begin falling, as did Mr. B. Mr. B. returned from war with a nerve condition, which eventually paralyzed his legs quite badly. Work was not available for him. His marriage failed. Finally, he found work as a machinist. The paralysis in his legs seemed to spur the efficiency and craftsmanship of his hands. Life was looking brighter, and brighter yet after the beginning of a new and wonderful marriage. Then came the depression. He was relieved of his job because of his ability to get a pension. He and his wife moved to a lower cost area. The addition of two members to the family made relief a necessity. The war brought need of skilled men and Mr. B. was asked by the personnel department to come to work. Not only did he begin working full time, but soon they wanted everyone to work 12 hours a day. Fatigue decreased Mr. B's production and efficiency. He was excused after war supplies decreased in demand.

Unfortunately, many employers use examples like this to prove handicapped people incompetent. Also they refuse to hire disabled persons because of the possibilities of injury.

Statistics show that disabled people are quite often better workers than physically

fit persons. A survey made by the Western Electric Co. showed that 7 percent more physically fit workers were absent from work through illness than handicapped people. The accident rate of handicapped workers is generally less than that of coworkers.

Statistics prove that disabled persons are quite adaptable and responsible. Why, then, should their activities and opportunities be any less than those of unhandicapped individuals? God endowed all men with the same amount of self-respect and dignity. Never were these meant to decline or to be placed on levels according to physical fitness. If employers would aid these people through job opportunities, they would truly be giving them a passport to dignity.

"Jobs for the Handicapped—Passports to Dignity," by Valda Kurtze, 1226 South Washington, Compton, Calif., Dominguez High School; teacher, Clarice M. Green:

Twelve hours a day, seven days a week, months in and years out, life brings happiness for most people. And why not? We have homes, families, and good-paying jobs. This is what we, the American citizens of today are bathing in, under God's sun we shower in happiness.

Our lives are exceptionally easy. We all have problems; the problems of keeping our homes and families together and the problem of keeping a good job.

To us, a job is more than a provider, more than just a trade. A job is our living, our life. How could life be without jobs?

Did you ever think to yourself that we are depriving thousands of people of an American right, the right to have a good job. Those whom you might think are not fit for that certain job or for that matter, any certain job. Those that I'm speaking of are the handicapped.

Just exactly what is the difference between them and you? Is it because you have both legs or your eyesight is better? Well this is a minor detail. Of course you're saying to yourself there is a difference especially in jobs. A job requires many talents, but does it necessarily require physical perfection such as arms, legs, sight, or hearing. A mind, a good clear pathway of thinking, any ideas are the essential parts of a job. Many gifted people are not working.

Why aren't these people working? Why aren't we giving them opportunities to make themselves useful?

Have you ever lain in bed with a cold? Don't you feel rather helpless or is it laziness?

I'll assure you right now that the handicapped are far from helpless or lazy. They are hard workers, you've got to try, and this is what they do. They put into their work everything they have; and because of their handicap they try even harder.

These people are good craftsmen, great mechanics, and intelligent, yes—even tricky executives. For an example, let's take an executive, a great man who suffered the loss of his legs. He was a great man who inspired all by his superior actions in time of war and peace. This man will long live in the hearts of Americans from generations to generations. It seems to have slipped our minds that Mr. Franklin D. Roosevelt also had a handicap. He pulled through and so have many like him.

So why should we discriminate against those who must endure great hardship. We should admire them for their strength to carry on, yes to carry on with a heavier burden than most. Let us always lend a helping hand to these people, let us look up to them and remember to never turn away.

The handicapped must live the same as you and I. They also have families to take care of. There is no difference between us. It is a fact that most people don't realize what they're doing to these people. They are turning these people away; away from life and the rights of an American.

A job is important to us and is equally important to them. They are as qualified to serve on a job as others.

Why not help those who have had misfortune. Let's make the rest of their lives happy, successful, and thankful. But most of all let's make them feel wanted, that they, too are needed in this great country. God, in His wisdom, has placed a burden upon these people. They have learned forbearance which becomes a fountain of strength flowing over us when we need inspiration.

"Jobs for the Handicapped—Passports to Dignity," by Emma Ruth Smith, 14020 South Hillford Avenue, Compton, Calif., age, 16, Centennial Senior High School, Compton, Calif.; teacher, Elizabeth J. Bryan:

How would I feel if I were handicapped? What would I need as a handicapped person? My answer: Understanding. We can't put ourselves in the place of the handicapped, but we can understand their life and wants.

In this modern age, we may become a cripple at any time because of the hazards in our society. We may become crippled doing a job, walking across a street, or being engaged in a war. The majority of the cripples today are the results of World Wars I and II.

History shows us how humanitarians have interested themselves in men less fortunate than they. Men like Carden proved that ideas could be transferred to a deaf or mute person by written characters. Juan Bonet published a book on the "Education of the Deaf," which was later published in English by Bulwer. Organized groups were now taking an interest in these brave warriors fighting to overcome their handicaps. A school for the blind was built in Paris in 1784. Braille invented a system of reading and writing for the blind thus overcoming the most dreaded of all handicaps. The U.S. Government has set up under the Library of Congress a series of libraries for the blind where not only braille but talking books may also be borrowed. This gives them a new hope for leading a normal life. Senator Thomas Gore and poet John Milton are recognized throughout the world for their outstanding contributions to humanity in different centuries and different fields.

Helen Keller was deprived of her sight and hearing and soon became dumb within 2 years after her birth. Her eagerness to learn drew the attention of Miss Anne Sullivan who was formerly blind but was partially cured. Under Miss Sullivan's teaching, Helen struggled to master her handicapped situation. Her victory is shown through her work. She became world famous as an author, lecturer, and welfare worker. She organized the Helen Keller Foundation that started people toward helping the needy as well as the handicapped. Her courage and faith led her from a handicapped position into dignity.

We can't put ourselves in the position of the handicapped persons, but we are doing all we can to lessen the strain. We must realize that they are eager and willing to learn all they can. Their dignity is greater than ours because they know the value of life. A small girl unable to see her beautiful doll she received for Christmas must imagine and feel the doll's face and small body. A boy playing with his electric train, deaf to the sound of the whistle, will never know that world of sound of which he has been deprived. Eyes that can bring forth tears of joy and sorrow, but ones closed to the sight of their family and friends, must dream about their appearance.

Dignity is with the handicapped from the moment they achieve independence. Handicapped people have a bridge to cross. When they realize they are helpless the other side of the bridge begins to offer in abundance the life they wish they had. The outcome of

their struggle will be success or failure. At this point, a doctor can't help them. They must rely upon their strength and belief in themselves to cross the bridge whether it appears to be long or short. Many fall because their time of living is shortened too soon. Others have succeeded and are happy, living a normal life. Those who are on the bridge are the people we must help. We should give to them the passport to dignity.

Their family gives them in abundance love and patience with their eagerness to learn and accomplish things. When they take their first real step or see a flicker of light they can tell of their progress to their family. That one step gives them more encouragement than the pity they might receive from being handicapped.

At school they are continuously happy. Why? Simply because they themselves feel a part of a class discussion or a classroom situation. They are as good as their schoolmates, asking questions, knowing the answers, calling their friends on the telephone to check their answers, and attending the dances and sports—all part of the thrill of being in school and they are glad to be included. The number of handicapped boys and girls who attend public schools are limited. Many times they must seek private schools.

I am proud to say that we have organizations in our country to help these people. An outstanding source of help is the Department of Employment for the State of California. They help the handicapped organize telephone answering services and magazine subscription agencies as well as placing the unemployed in a variety of jobs. There are over 3,000 unemployed handicapped people in Los Angeles County; one-half of these handicapped people are employed. The Goodwill Industries is known for accepting a portion of these handicapped people yearly into their employment.

Handicapped people devote themselves to their jobs. They are prompt, efficient, alert, and correct in whatever they do. Employment agencies find jobs and schools of trade for them to enter. Some employers request the handicapped above other people. The employer is getting the best because the handicapped are giving their best. The ability to earn a living for themselves is the goal for which they have been reaching.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

Appendix

National Defense

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

Mr. WILEY. Mr. President, recently I delivered over Wisconsin radio stations an address in which I stated that our country has adequate anti-Communist deterrent power. I also outlined the defense timetable for the future, and said that our country will need a space academy; and I announced that publication of an updated internal security manual. I ask unanimous consent that my remarks be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR WILEY—UNITED STATES HAS ADEQUATE ANTI-COMMUNIST DETERRENT POWER; OUTLINES DEFENSE TIMETABLE FOR FUTURE; SAYS UNITED STATES WILL NEED SPACE ACADEMY; ANNOUNCES PUBLICATION OF UPDATED INTERNAL SECURITY MANUAL

Friends, I would like to discuss with you briefly a matter which is of deepest concern to all of us, namely, the challenge of providing adequate security—internal and external—for our country.

Today, the major threat to our security—communism—is real and formidable. Overall, the Communist strategy encompasses military, political, economic, psychological, and nearly all other fields of human endeavor.

To combat this multipronged effort by the Communists to extend their influence and control, we need to be constantly on the alert, ready and willing to dedicate the necessary manpower and resources to thwart their aims of world conquest.

WILEY SAYS: "PRESENT DEFENSE IS STRONG DETERRENT"

Question. Senator WILEY, in reviewing our defense posture, let me ask you point blank: Do you feel that our defense program is presently adequate to meet the challenge of communism?

Answer. Yes. Fortunately, the testimony before the joint hearings of the Space and Preparedness Committee found our experts in almost unanimous agreement that we have an adequate defense for the present.

According to Secretary of Defense Thomas Gates, for example, we have nuclear weapons that exceed those of the U.S.S.R. by several times in destructive power; and long-range means of delivering that exceed theirs by several times in total carrying capacity.

In combination, these are considered by our experts able to bring destruction to anyone who would be so foolish to attack us.

Question. Are there any other deterrents?

Answer. Very definitely.

First, the nations allied with us in efforts of freedom to combat communism—economically, militarily, and morally—represent a tremendous force.

Second, we must not forget the nearly 1 billion people behind the Iron and Bamboo Curtains. As human beings, a vast majority of them, I believe, would like—as much as we do—to have freedom and a voice in their government. Actually, only about 2 percent of the people in China, and 6 percent in the Soviet Union are hard-core members of the Communist Party.

Third, the so-called neutral or uncommitted nations in the world represent a tremendous economic, psychological and moral force that will eventually—I am confident—align themselves, for the most part, on the side of freedom.

NEEDED: "ON GUARD" INTERNAL SECURITY PROGRAM

Question. Now, Senator WILEY, what about the home front?

Answer. While we need to carry on effective programs to combat communism abroad, we must not "go to sleep" at home.

Instead, we need to be constantly "on guard" to strengthen our internal security programs. As a matter of fact, I believe that we need to take a "new look" at our laws to see if these can be further strengthened to prevent subversion, and if discovered, punish perpetrators of anti-U.S. activities.

PRESENT ARSENAL OF DEFENSE

Question. Now, to get down to specifics, Senator WILEY, let's take a look at our military deterrent. Would you outline what you feel is the adequacy of our defense program?

Answer. Yes. First of all, I want to stress that our military strength lies in a widely diversified striking power—that is, we have not put all our "eggs in one basket."

Overall, our military strength includes: long-range striking forces, deployed land, sea, and air forces, air defense forces, and our capability to support and maintain these forces as well as to mobilize quickly additional military power.

It also includes our technological and industrial capacity; the strength and resolution of our Allies; and by no means least, our moral and psychological capacity to resist and defeat any would-be aggressor. All of these capabilities collectively—and perhaps most important of all the knowledge on the part of the leaders of the Communist bloc that they do exist—constitute our defense strength.

Question. What are the major weapons in our deterrent arsenal, Senator?

Answer. Our present strategic retaliatory capability encompasses the following:

(1) Approximately 2,000 long-range strategic bombers. This force is highly trained, completely equipped and ready and maintained in varying stages of alert, down to a 15-minute ground alert. From its various bases in the continental United States and overseas areas, it is capable of delivering nuclear strikes into any part of the Communist bloc. Our long-range strategic bombers greatly outnumber Soviet bloc aircraft of comparable capability. This force is complemented by the Bomber Command of the British Royal Air Force, which also has extensive nuclear strike capability.

(2) Fourteen attack aircraft carriers. This force of floating airbases is also highly trained, fully equipped, and ready. From seas around the Communist periphery, the planes from our carriers can deliver nuclear strikes into almost any area of the Communist bloc. The aircraft in these carriers

alone outnumber the heavy bombers in the Soviet Union and their weapons are many times more powerful than the atomic bombs used in World War II.

(3) We also have an operational ICBM squadron equipped with Atlas missiles—a tested, effective, and accurate weapon. This force is trained, equipped, and in position ready to launch its missiles. It is capable of delivering, from bases in the continental United States, nuclear strikes on targets within all but a small area of the Communist bloc.

(4) An operational missile squadron is equipped with Snark long-range guided missiles. The Snark is an operational 5,500-mile, air missile with a very large payload capacity. It is capable of delivering from bases in the continental United States nuclear strikes against targets within all but a very small area of the Communist bloc.

(5) Hound Dog, air-to-surface missiles, also are capable of carrying nuclear warheads. These missiles greatly expand the flexibility and striking power of our long-range strategic bombers.

(6) Regulus I, surface-to-surface, ship-based missiles capable of carrying nuclear warheads, are operational. At the present time, two cruisers and five submarines are equipped with this mobile missile firepower.

(7) Four operational missile squadrons are equipped with a mix of Matador and Mace missiles. The Matador is a surface-to-surface missile capable of carrying nuclear warheads. The Mace is a similar type weapon with greatly improved capabilities in range, accuracy, and reliability. The Mace is being phased-in to replace the Matador.

(8) Three IRBM squadrons equipped with Thor missiles are in the hands of allied forces in the United Kingdom. These forces are fully trained, equipped, and ready to launch their missiles. The Thor is a tested and effective weapon. From bases in the United Kingdom, it is capable of delivering nuclear strikes on targets within the Communist bloc.

TIMETABLE OF DEFENSE PLANS FOR FUTURE

Question. Senator WILEY, this is a most impressive picture of our defense forces. Now, you recall that there have been differing views on our future needs for defense. For example, what is the timetable of defense plans for meeting the growing missile-nuclear power of the Communist bloc?

Answer. As you know, the military threat to the security of the United States posed by the Communist bloc extends across the entire spectrum of warfare—including general war, limited war, and the cold war. Our military power must be capable of dealing with all aspects of this threat. Thus, our defense plans and programs are designed to provide for continual across-the-board improvements.

Now, with specific regard to the missile-nuclear developments, our timetable of future defense plans encompasses the following:

Introduction of forces equipped with the B-58 supersonic bomber in 1960 with a progressive buildup to three wings in the succeeding years.

A progressive expansion of forces equipped with Atlas ICBMs to a total of 13 squadrons by 1963.

Introduction of forces equipped with the Titan ICBM in 1961, with a progressive build-up to 14 squadrons after 1963.

Introduction of forces equipped with the Minuteman ICBM in 1963 and a progressive expansion of this force on into the foreseeable future.

Four additional IREM squadrons equipped with Jupiter and Thor in the hands of allied forces in the United Kingdom, Italy and Turkey in the near future. The Jupiter, like the Thor, is a tested, effective missile. From these advanced locations these missiles are capable of delivering nuclear strikes on targets within the Communist bloc.

In addition to these new weapons systems for which we have an actual operational target date and progressive expansion program, a wide range of other weapons systems which will greatly enhance our strategic retaliatory capability are under research and development.

SPACE ACADEMY NEEDED FOR FUTURE

Question. In this rapidly advancing, scientific, technological age, we realize, of course, that there will be new discoveries that will affect not only our defense, but also our peaceful progress.

This is particularly true in the exploration of space. As a new frontier, we can expect the coming years to unveil more and more of the "mysteries and unknowns" of outer space. How can we best prepare for advances in this field, Senator?

Answer. In the light of this new challenge, we will need an ever-increasing number of engineers, scientists, and other technologists to man and carry forward our programs.

In addition, the United States will, I believe, ultimately need a space academy—similar to our present Army, Navy, Air Force, Coast Guard, and Merchant Marine Academies. Presently, there is, of course, only need for a very limited number of astronauts. We recall that Donald Slayton, of Sparta, Wis., is one of the seven young men being trained for space flight.

However, the promise of a wide variety of space activities—including travel—in the future will require a program for training individuals to cope with the unique problems in this field. Consequently, we will need an effective program to provide the large number of astronauts needed for the future.

STRONGER INTERNAL SECURITY PROGRAM

Question. Senator Wiley, you mentioned earlier, the need for a stronger internal security program. Would you elaborate on this?

Answer. Yes. We recognize, of course, that internal—as well as external—security continues to be a major challenge.

The oft-quoted adage "the price of liberty is eternal vigilance" is as meaningful—if not more so—in 1960 as in any other time in our history.

On the domestic front, communism—the deadly enemy of freedom—attempts to carry on clandestine activities behind many masks, including seemingly harmless and sometimes meritorious organizations, drives, and other movements. Not exclusively a military effort of kill off freedom, the anti-freedom activities include such fields as industry, agriculture, atomic energy, educational and cultural activities, and other areas to undermine our progress, spread the cancerous Communist ideology, and generally weaken our free way of life.

By designing a system of laws, regulations, and Federal orders, the United States attempted to prevent such actions, and, if discovered, punish the culprits.

You may recall that, in 1953, I sponsored the publication of an Internal Security Manual—an extremely valuable compendium of Federal statutes, executive orders, and congressional resolutions relating to the Inter-

nal Security of the United States. Over the years, it has been utilized by Government agencies, business firms, attorneys, teachers, writers, and many others concerned with the challenge of internal security.

Recognizing the need for an up-to-date book on laws and regulations of internal security, I requested the American Law Division of the Library of Congress to revise this handy, useful manual. The revision is now complete. Consequently, I plan to introduce a resolution in Congress authorizing the publication of 5,000 copies of the revised edition.

The availability of up-to-date manuals—for which there is a constant demand, even though the previous printings have long been exhausted—will, I believe, serve the overall public interest.

In conclusion, friends, I want to express my appreciation to you folks for the opportunity to discuss these internal and external security problems with you.

Thank you for listening.

Doctors Support Forand Bill

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. RABAUT. Mr. Speaker, in the face of the concerted opposition of the American Medical Association to the much-discussed Forand bill, it is noteworthy that many members of the medical profession are in favor of the bill. Inasmuch as the doctors of this country are so closely connected with the health of our elderly citizens, we should take due note of the opinions of those members of the medical profession who feel that the health needs of aged Americans cannot be adequately covered by voluntary insurance or prepayment plans. In the newspaper, *Government Standard*, dated today, March 18, 1960, there appears an article in this connection and I should like at this time to insert it in the *RECORD* for the information and perhaps inspiration of all those who are interested in the care of our elderly:

FORAND BILL BACKED BY MEDICAL EXPERTS

The drive for enactment of the Forand bill moved into high gear, picking up major support from within the medical profession as the House Ways and Means Committee neared a vote on the AFL-CIO-backed measure to provide medical care for the Nation's older citizens.

As committee action neared, Dr. Basil C. MacLean, former president of the National Blue Cross Association—largest group of voluntary nonprofit plans in the field—gave unqualified endorsement to the bill despite organized opposition mounted by the American Medical Association and the commercial insurance industry.

MacLean bluntly said that "the costs of care of the aged cannot be met, unaided, by the mechanism of insurance or prepayment." He added that financing health benefits for the aged by means of social security payroll deductions, as called for in the Forand bill, "provides a way of dealing with the question with dignity and effectiveness."

"The good sense of this measure," the former Blue Cross head said in a letter to the bill's sponsor, Representative AIME J. FORAND, Democrat of Rhode Island, "and the urgent

need that created it, recommend its passage without delay."

Joining in enthusiastic endorsement of the bill was Dr. E. M. Bluestone, professor of hospital administration at Columbia and New York Universities, who declared the sheer humanity of the bill far outweighs what he termed the misguided and ill-advised opposition of the AMA and the insurance industry. He charged that opponents were "motivated largely by professional self-protection."

The letters were made public by FORAND in a speech on the House floor. He said it was significant that "in the face of the usual closed-mind opposition of the AMA, two distinguished doctors closely acquainted with the problem" support the health insurance measure.

The two letters, the Rhode Island Democrat said, indicate that "corporate medicine, as represented by the AMA, does not speak for doctors who really know the problem."

The Case for 27½ Percent Depletion

EXTENSION OF REMARKS

OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, February 22, 1960

Mr. MCGEE. Mr. President, I have received an interesting article from a friend and former student of mine, Mr. Phil Flanagan, of Riverton, Wyo., entitled "The Case for 27½ Percent Depletion," which I ask unanimous consent to have a portion of it printed in the Appendix of the *RECORD*.

There being no objection, the article was ordered to be printed in the *RECORD*, as follows:

THE CASE FOR 27½ PERCENT DEPLETION

Critics of the oil industry love to paint it as a fat man grown unduly rich through special tax privileges.

The greatest privilege, they say, is the depletion allowance. They argue: Eliminate or reduce it and you put petroleum on a fair footing with other industries.

This year Congress will consider two bills, introduced into both Houses, each calling for a reduction in percentage depletion on oil and gas.

It is no moderate reduction they seek. It is a slash, from 27½ percent to 15 percent.

Again and again in the past 33 years Congress has carefully reviewed its own laws on percentage depletion. It has always found them equitable, workable, and, above all, practical from the standpoint of national welfare.

But the issue is raised again. The present 27½ percent provision is needed today as never before. In fact, any tampering with his long-established pattern would create a serious threat to our national security.

Why? Because we have become almost completely dependent upon petroleum. An energetic, healthy oil industry is recognized as a critical factor in this Nation's military strength and in our present standard of living.

A cut in percentage depletion can only reduce our ability to find more oil and gas to replace that which we consume every day. And an inadequate search for new oil would lead to a domestic shortage, crippling our ability to fight a global war. It would drain the strength we must have to avoid a defensive war. It goes almost without saying that it would depress our standard of living, in peace or war.

These things the Journal believes. We also believe that most of the opposition to 27½ percent depletion stems from a lack of understanding of its objectives and its workings.

WHY THE ISSUE IS IMPORTANT

Oil is critically important to us today because our entire economy has become based on an extremely high use of energy.

One hundred years ago we depended almost completely on the muscles of men and animals. Today we see the picture reversed. We depend almost completely on the energy of machines, powered primarily by oil and gas.

This is an age of mobile engines fueled and lubricated by oil—in cars and trucks, in locomotives and aircraft, in sports boats and ships at sea. It is the age of convenience—of kitchen appliances and home workshops—and as we trace back to the original fuels that generate their energy, we find oil and gas dominating the scene.

Coal and water power also contribute to this energy system which gives every American the equivalent of 50 servants. But there is one basic difference between petroleum and these other sources.

Oil is the one form of energy that is irreplaceable by any other for many vital uses. There is no available substitute today for gasoline, or diesel fuel, or jet fuel. We cannot do without these commodities and maintain our way of life. From a military standpoint our dependence is even greater.

We do have today an excess of capacity for producing petroleum. But this excess exists only because we are importing oil. In the event of war, we would undoubtedly be cut off from all of these imports which originate outside our continent.

In past periods of international tension, our potential foes were "have-not" nations with respect to oil. But today our major differences are with a nation which not only has enough oil to energize a war machine but which is increasing its reserves each year.

Our military needs have grown by leaps and bounds. Jet planes consume roughly three times as much fuel as gasoline-powered craft. While we are entering an atomic age which will see some replacement of petroleum fuels, we are still far from independence. During World War II, two out of every three tons of supplies used in our military effort represented petroleum products. This ratio could well reach three out of four tons in any conflict in the next several years.

WHY PERCENTAGE DEPLETION?

What bearing does such a thing as percentage depletion have on national security? What is it and how has it worked?

In tax language, depletion is a deduction from operating income, provided by law to return to the owner the capital consumed in operating a mine, a quarry, or an oil or gas well.

The Constitution empowers Congress to tax income from capital, but not capital itself. In all cases where a business involves the use of capital, that capital is either worn out or depleted in producing income. So, the total returns it produces include some income and some capital.

Our tax laws take this into consideration with several types of tax-exempt deductions which can be subtracted from total returns. Some of them are depreciation, capital gains, cost depletion, and percentage depletion.

Depreciation allows the tax-free return of the cost of a piece of equipment, as that equipment is worn out in producing income. Each year its cost divided by its estimated life is "depreciated" as returned capital. By the time the equipment is worn out, the owner has been able to set aside its original cost tax-free so that the money can be reinvested in more equipment to produce more income.

In some cases, capital itself is sold outright either all at once or little by little. When the seller gets more than he paid for it in a single sale, the profit is subject to a special tax limited to 25 percent. This is known as capital gains.

Oil, gas, coal, and other minerals are considered to be capital in their original state in the ground. Sometimes these deposits are sold outright. In such cases the purchaser who may pay \$1.25 per barrel for the oil in place is entitled to deduct that amount tax-free from each barrel's income as it is brought to the surface and sold. This form of deduction is termed "cost depletion." During the life of the deposit, as his capital is sold little by little, the operator is returned the amount of his original capital investment, to permit him to reinvest the money in more oil reserves.

In all these cases a value has been set on the capital items involved. The value is based on what someone is willing to pay for it. That is, value is determined directly by cost.

But when a new reserve or deposit of oil or coal or metal is discovered in the first place, it has a value which is not necessarily related to the cost of finding it. When you are searching for oil, you are not assured of finding X dollars' worth of oil by spending X dollars looking for it. Sometimes you discover oil worth more than you spent, sometimes less. More often than not, you spend your money and find nothing.

WHAT OF OIL'S FUTURE?

The statistics of finding new oil, even under the present workable program, might appear to paint a grim picture of tomorrow's supply. 27½ percent depletion notwithstanding. But we are not running out of oil. And under a continuation of the historic incentive set up by Congress, we can look forward to a sufficient domestic supply for many years to come.

Geologists across the land are firm in the belief that as much oil remains to be discovered between depths of 5,000 and 10,000 feet as has already been found above 5,000 feet. By a wide margin, most of our oil today is produced from depths shallower than 5,000 feet. Our exploratory wells are being drilled deeper each year. Yet, the average depth of all such wildcats has still not reached 5,000 feet.

The deepest well in the world was drilled last year in Pecos County, Tex. It reached 25,340 feet and was a major milestone in oil history. Its cost has been estimated at more than \$2½ million.

This deeper drilling outlook emphasizes a cost structure peculiar to the oil industry. As drilling goes deeper, costs per foot balloon, and the rate of increase grows with each foot. Bigger equipment, more expensive supplies and materials, and extra services are needed.

Thus a 10,000-foot hole costs much more than twice as much as a 5,000-foot one. And a 20,000-foot hole may cost 10 times that of a 10,000-foot well.

Therefore, to achieve a 10,000-foot average drilling depth for exploration, the wildcatter must be given more incentive—even under present depletion provisions. Prices must rise or the increased costs of drilling—aside from inflation—will discourage his risking capital on a not-too-attractive venture.

To remove even part of his present incentive might prove disastrous. It could send this country galloping down the road to a "have-not" position in this vital energy source.

Given this assurance, the oil industry stands ready to deliver, as it has in the past. Oil finders are moving into virgin areas which show promise of oil and gas.

Billions of barrels undoubtedly lie waiting in stratigraphic traps which cannot now be found by any surface-exploration method.

But we may be on the threshold of a breakthrough on this important front. Given a technique to indicate the presence of these potentially prolific oil deposits, we could re-explore the entire Nation with renewed possibilities of discovery.

We have not yet explored all of our geographical area with the tools we now have. Obviously, we have looked first in the areas which are least costly to explore. But the waters of the gulf coast and the far reaches of Alaska serve as good examples of new oil provinces of considerable promise.

We need also to look deeper in our established oil provinces. The industry maintains an aggressive research program aimed at reaching these more remote sources of petroleum.

Our prospects for finding more oil here at home were summed up recently by Morgan J. Davis, president of Humble Oil & Refining Co. Here are some of his points:

"The United States is not poor in petroleum reserves or resources.

"Reserves are at an all-time high and we have an adequate working inventory for current needs.

"Our present reserve producing capacity of 3 million barrels per day can be sustained for many years if the industry continues its aggressive exploration and development program.

"We have sound basis for believing that discoveries and reserves of petroleum can keep pace with increasing domestic requirements for a long period.

"In the next 20 years, with little allowance for increased recovery due to improved techniques, we can add at least 70 billion barrels of supply to the 30 billion we now have.

"The industry can maintain the reasonable cost of domestic oil and gas compared with other energy sources, so long as it continues its technological progress and is assisted by regulatory agencies to be as efficient as it knows how to be."

He saves his biggest point for his last:

"The prospects for the domestic petroleum industry could be changed drastically, however, by unwise actions by State regulatory agencies, the Federal Government, or the industry itself, on such matters as conservation, percentage depletion, and import policy. It has taken a long time to build the present vigor of the domestic petroleum industry, and such vigor, once impaired, cannot quickly be restored."

The 19 and the 1,368

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks, I would like to submit the following editorial from the Chattanooga News-Free Press of January 29, 1960, so that it will be more widely read:

THE 19 AND THE 1,368

There has been a lot of publicity recently about protests against the provision of the Federal law that requires students who want to finance their personal education with taxpayers' money in the name of national defense to pledge allegiance to the United States and declare they have no connection with any group advocating overthrow of the Federal Government by force.

The protesting colleges particularly don't like the required disclaimer of advocacy of violent overthrow of the Government. Its effect would be this: If someone obtained tax money by swearing falsely, as Communists might, he could be charged with perjury. It should be remembered that Alger Hiss was punished for his treason only on a perjury charge.

But the important sidelight is this: Loud though the protests have been against the loyalty provisions, only 19 schools, most of them in the Ivy League, have rejected the Federal program. Meanwhile, 1,368 other colleges and universities have accepted it.

We should not let the noisy 19 force a change in law which would be a concession to the Communist left.

Cuban Relations and Cessation of High Altitude Flights Over Berlin Corridor

EXTENSION OF REMARKS

OF

HON. VANCE HARTKE

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

Mr. HARTKE. Mr. President, the Indianapolis Star of March 13, 1960, carried a front-page editorial discussing the administration's position with respect to Cuba and the cessation of high altitude flights over the Berlin corridor.

In view of the return of our Ambassador to Cuba, I believe that this editorial is particularly pertinent. Just how much truth is there to the charge that Castro's government is Communist dominated? Are we appeasing Castro? We know that Castro has permitted Cuba to enter into a trade agreement with Russia. We know he expects to receive arms and munitions from Russia. This poses a grave threat to the peace of this hemisphere, and I believe that the President should carefully evaluate his position with respect to the United States' relations with Castro.

The recent cessation of high altitude flights over the Berlin corridor has also raised questions in the minds of many as to whether or not we are appeasing Russia. The editorial says "Whether officials in Washington call it 'peaceful coexistence,' or 'relaxation of tensions,' or 'working for a better international climate,' this policy is producing the same results—concessions to Soviet viewpoints, retreats of U.S. diplomacy under Soviet pressure, surrender of important American political and ideological positions."

Mr. President, I ask unanimous consent to have the editorial entitled "What Goes On Here?" printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT GOES ON HERE?

What's happened to American foreign policy? Have we completely lost our self-respect, our political judgment, our diplomatic skill? Have we thrown overboard our vigilant guard against the Communist menace? Where is the policy of "peaceful coexistence" with Moscow really leading us?

Are we going back to the World War II United States-Russian alliance, which brought us on the brink of national disaster?

These are important and disturbing questions which the American people have the right to ask especially in view of two very regrettable foreign-policy decisions made by the Eisenhower administration during the last few days. The first is sickening appeasement to the Communist-dominated Castro regime in Cuba, revealed in President Eisenhower's TV and radio speech on Latin America. The second is the cowardly retreat, announced by Secretary of State Christian Herter, on the question of American high-altitude flights over the Berlin corridor.

Castro's government, as it is known, has been mistreating American citizens and confiscating American property with a systematic brutality hardly seen since the days, some 12 years ago, when the Chinese Reds descended on the peaceful American communities on the Chinese mainland. Yet the United States proposes to do nothing about Castro. The United States even will go on paying the Castro regime a handsome sugar subsidy, as well as substantial military aid and other economic assistance. In his TV and radio speech, President Eisenhower, who didn't even dare mention Castro by name, only suggested that the Organization of American States might, perhaps in some distant future, deal collectively with the Cuban situation. This, of course, amounts to giving Castro the green light, and letting him know, officially, that he can go on indefinitely with his anti-American policy. For Castro is as afraid of the collective action of the Organization of American States as Russia's Nikita Khrushchev was afraid of the collective action of the United Nations during the 1956 Hungarian national revolution.

Instead of talking about the theoretical possibilities of future collective actions, President Eisenhower should have invoked the Monroe Doctrine under which the United States—and not any non-effective collective group of states—gives notice to all non-American powers not to intervene in any way in the internal affairs of the American continent. The Monroe Doctrine was effective for more than a hundred years because the world knew that the power of the United States stood behind it. In the face of Communist provocations in Cuba, the United States is more than justified to take steps, under the Monroe Doctrine, to defend its national interests.

Equally shocking is the case of the Berlin flights. The United States stopped its high-level flights through the Berlin corridor about a year ago, on Soviet demand. But the United States, Britain, and France, insisted that they could and would resume the flights any time they felt it necessary. This happened 2 weeks ago and United States officially served notice that it was resuming the flights. The Soviets immediately staged a hue-and-cry campaign, and accused the United States of aggressive intentions, etc. The West German Government of Chancellor Konrad Adenauer sent several urgent pleas to Washington warning that the Soviet protests should be ignored. But Secretary of State Herter announced that, after all, the allies had decided against the flights. He added that this has been a technical decision, not connected with the coming summit conference.

This is, of course, pure nonsense. To say the least, Secretary Herter is guilty not only of making a shamefully wrong foreign-policy decision, he is also guilty of telling untruths about it to the American people. The truth is that the Berlin flights are not to be resumed in deference to those Western foreign policy advisers—in London and Washington—who believe that the Red dictators should not be displeased in any way before

the summit conference. For the same reason the United States joined Britain a few weeks ago in vetoing a sensible German-Spanish military cooperation agreement. For the same reason U.S. delegates at the East-West disarmament conference, which starts in Geneva tomorrow have been instructed to show cool indifference toward the positions of the French delegation, which takes a sensible anti-Soviet stand.

In short, U.S. foreign policy is at present conducted under the guiding principle of appeasement to communism. Whether officials in Washington call it peaceful coexistence, or relaxation of tensions, or working for a better international climate, this policy is producing the same results—concessions to Soviet viewpoints, retreats of U.S. diplomacy under Soviet pressure, surrender of important American political and ideological positions. There is also no doubt that President Eisenhower is personally responsible for this situation. Since the tragic death of John Foster Dulles, Mr. Eisenhower has been his own Secretary of State and has conducted the foreign policy of the United States on the basis of his personal-diplomacy approach. Unfortunately, President Eisenhower's ardent ambition to prove himself the world's greatest peacemaker has blinded his political vision to such an extent that he doesn't see he might become the world's greatest appeaser of communism.

Regulation of the Price of Gas at the Wellhead

EXTENSION OF REMARKS

OF

HON. PAGE BELCHER

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following letters.

Realizing the importance of the gas industry to our State and realizing the confusion that has existed in regard to the regulation of the price of gas at the wellhead by the Federal Power Commission, I wrote a letter to the President urging him to send a message to Congress concerning the gas situation. I herewith include as part of my remarks a copy of the letter which I wrote to the President and a copy of the letter the President sent to me.

FEBRUARY 5, 1960.

The Honorable DWIGHT D. EISENHOWER,
President of the United States,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: You will recall that at the time you vetoed the gas bill that was passed by the Congress, I vigorously urged you to sign it, and it was a severe disappointment to a lot of my constituents when you vetoed it.

I have defended your veto on the ground that at the time that you were compelled to either sign or veto the bill, there were a lot of rumors floating around Washington as to bribes having been offered to other Members of the Senate. It developed that these rumors were unfounded. However, if you had signed the gas bill after the information that you had concerning Senator CASE and then a scandal had developed you would have been severely criticized. My people have accepted this defense. However, many

of them keep saying, "If the President is for a gas bill, why hasn't he said something about it since the veto?"

Therefore, I sincerely hope that you will see fit to send some kind of a message to the Congress advocating the passage of a gas bill during this session. I am thoroughly convinced that justice demands a bill which removes the power from the Federal Power Commission to establish the price of gas at the wellhead. The only occasion for establishing the price of any commodity is that there is a monopoly granted to some industry, such as public utilities. There is no monopoly in the production of gas. There are over 8,000 producers competing with each other for the market. To say that these 8,000 have a monopoly at the same time that we say that 4 or 5 automobile companies that make all the automobiles don't have a monopoly is asinine.

There is not a commodity that doesn't deserve price fixing just as much as gas at the wellhead. Therefore until the time that we have complete price controls in this country, we shouldn't control the price of one commodity except on the basis of a monopoly.

I certainly hope that you will give this serious consideration.

With best wishes, I am,

Sincerely yours,

PAGE BELCHER,
Member of Congress.

THE WHITE HOUSE,
Washington, March 17, 1960.

HON. PAGE BELCHER,
House of Representatives,
Washington, D.C.

DEAR PAGE: Your recent letter expressed the hope that I would send a message to Congress during this session advocating once again the passage of a gas bill. I feel sure that everyone clearly understands my position on this matter. I have strongly favored the elimination of public utility-type regulation of producers of natural gas. Both before and since the veto of the gas bill in 1956 I have advocated legislation to this end. I still favor such legislation.

In existing circumstances, however, a mere reiteration of my viewpoint on this matter would probably serve no useful purpose. I am ready and willing to support this legislation in this session with full vigor if those in control of Congress give some indication that they will join in this effort.

With warm regard,

Sincerely,

DWIGHT D. EISENHOWER.

Tight Money Versus Homes

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

Mr. PROXMIRE. Mr. President, the steady drumbeat of signals that the economy can ill afford a further rise in interest rates continues. In the Washington Star of March 19 the real estate editor, Robert J. Lewis, writes:

Whatever merits the administration's tight-money policy may have, there is no denial that this policy is:

1. Having a severely adverse effect on the rate of home production.
2. Imposing an implicit downward pressure on the value of existing homes.
3. Making it impossible for many thousands of families to buy homes that they need.

On Thursday, March 17, the senior Senator from Pennsylvania demonstrated that the Treasury is perfectly well able to market its long-term obligations because prevailing yields on bonds are far enough below the 4 1/4-percent ceiling to make new issues attractive to investors.

At the present time approximately 4 million men and women, or 4.8 percent of the labor force, seasonally adjusted, continue to be unemployed. The number of new starts in house building continues to scrape along at low levels, compared with previous years. The number of new starts in the month of February was 288,000 below the corresponding period a year ago. In spite of the great growth of our country in the past 10 years, the fact is that we have not yet attained the level of housing starts we reached in 1950.

These facts point to the immense underemployment of the Nation's productive capacity. The tight-money high-interest-rate policy is restraining the growth of our economy at a time when growth is badly needed, not just to meet pressing needs in the fields of education, health, housing, and transportation, to name just a few, but also to make effective use of idle machinery and unemployed workers.

In his article Mr. Lewis describes the emergency home ownership bill recently reported favorably by the House Banking Committee. He draws on that committee's report to provide a firm underpinning to the undeniable conclusion that "there is ample evidence everywhere that the administration's tight-money policy has completely removed from the market a sizable group of prospective buyers." I ask unanimous consent that Mr. Lewis's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TIGHT MONEY VERSUS HOMES—DEFLATIONARY IMPACT HITS HOUSING

(By Robert J. Lewis)

Whatever merits the administration's tight-money policy may have, there is no denial that this policy is:

1. Having a severely adverse effect on the rate of home production.
2. Imposing an implicit downward pressure on the value of existing homes.
3. Making it impossible for many thousands of families to buy homes that they need.

FAR BELOW YEAR AGO

Ever since October, there has been a month-to-month decline below year-ago levels in the seasonally adjusted rate of homes put under construction for private ownership.

The 5-month record of decline from the corresponding months of the previous year appears to be serious. Each month's drop in the number of homes started is as follows:

October—123,000.
November—217,000.
December—122,000.
January—154,000.
February—288,000.

If the rate of decline continues—and there is little to indicate, at the moment, that a reversal of the tight-money policy is contemplated—yearly production may soon dip to recession levels, observers believe.

PRESSURE EFFECTIVE

In any deflationary period, the value of things declines in relation to the dollar, and homes are no exception. While it would be difficult to measure the exact effect, so far, upon existing homes, there is no question that the downward pressure does exist and that it is effective, even though not upon all homes equally.

As for hampering sales of new and existing homes, there is ample evidence everywhere that the administration's tight-money policy has completely removed from the market a sizable group of prospective buyers.

Application of restrictive credit policies by the Federal Reserve Board has pushed mortgage interest rates to their highest level since the twenties. In this economic climate, lenders have become selective. The result is that many families needing homes have discovered that the income they have is now insufficient to qualify them for homes for which they easily would have been eligible before the latest episode transpired in the administration's long-term tight-money program.

REPORT FAVORABLE

With this background of evidence of a rapidly declining home-production rate, of downward pressure on the value of existing homes, and of neutralization of a sizable part of the potential demand, the House Banking Committee's favorable report this week of the emergency home ownership bill came as a welcome event for homebuilders.

The bill would provide an additional \$1 billion in mortgage-purchase authorization for the Federal National Mortgage Association and make other changes designed to support housing production.

Among changes are provisions that would:

1. Allow FHA to insure home loans made by individuals as well as by institutional lenders.

2. Permit FHA to reduce its mortgage insurance premium from one-half of 1 percent to one-quarter of 1 percent.

3. Authorize FNMA to "aid in stabilization of the mortgage market" and thus exclude as a requirement that the agency lower the prices of the mortgages it sells to keep them "within the range of market prices."

4. Require FNMA to buy any FHA or VA mortgage offered to it, with certain exceptions, and to desist from refusing to buy on the basis that certain mortgages would not be marketable.

NO MORE EXCHANGES

5. Require FNMA to sell mortgages only for cash and at prices not less than FNMA originally paid. This would, as one of its effects, prevent repetition of the agency's action in exchanging mortgages for outstanding Government bonds.

6. Require anyone selling a mortgage to FNMA to buy only 1 percent of the agency's stock, instead of 2 percent as at present.

7. Authorize FNMA to purchase \$50 million in mortgages on new low-cost homes in outlying areas as a means of encouraging such construction.

8. Make changes designed to encourage construction of off-base defense housing, allow acquisition of housing at permanent military installations, and supply needed housing for certain employees of the National Aeronautics and Space Administration.

The report has some harsh words to say about the tight-money policy as it has affected home production, interest rates, and financing methods.

POLICY HELD BALKED

It charges that the shortage of mortgage credit "has caused a costly upward spiral of interest rates, unconscionable discounts on FHA and VA mortgages, increased use of unsound and costly financing devices in the conventional loan sector, and a serious decline in home building."

The report continues:

"This has frustrated our national policy of improving housing conditions and encouraging home ownership on a sound basis. Moreover, the drop in residential construction which has taken place over the past year has resulted in a loss of more than half a million jobs.

"The experience of the 1957-58 recession proved that a downtrend in home building activity, if allowed to continue unchecked, can undermine the entire economy."

The report, which was submitted by Chairman Spence, was based on hearings held by the Housing Subcommittee headed by Chairman Rains, who introduced the bill.

The report made clear the committee was "convinced that the drop-off in new home construction, in the face of strong demand for housing, is the direct result of the restrictive monetary policies pursued by the monetary and fiscal authorities."

"The hearings held on this bill established conclusively that this tight-money policy has a particularly severe impact on residential construction," it said.

Referring to the present status of mortgage loan availability, the committee termed it "an artificially created credit shortage." The decline in homes put under construction, the report said, "could well" fall to a "dangerously low" level soon.

Occurrence of Unexpected Concurrence

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. GEORGE. Mr. Speaker, for the first time in my memory, the distinguished editor of the Iola Register, Angelo Scott, finds himself in agreement with me. The issue: my resolution, House Joint Resolution 601, which calls for a constitutional amendment to provide a 4-year term on a staggered basis for Members of the U.S. House of Representatives.

I am happy indeed, Mr. Speaker, that Mr. Scott, who is of the opposite political persuasion, also feels that a staggered 4-year term in the House would be of benefit to the country in the long run. I doubt, Mr. Speaker, that had this proposal been in effect during the past half century, many of the men who served with you in the House would have chosen to run for the Senate. Because of the important functions of the House, where revenue-raising and appropriation measures originate, it is of the utmost importance that more competent and experienced Representatives choose to remain in this body.

I request, Mr. Speaker, that Mr. Scott's editorial be included in the extension of my remarks:

FOUR-YEAR TERMS

NEWELL GEORGE has introduced in Congress a joint resolution proposing amendment of the Constitution to provide a 4-year term on a staggered basis for Members of the House.

He frankly admits that "there is no probability that such an amendment could be adopted during my tenure in Congress." Maybe he did it just to give himself something to write home about in his letter to constituents. Nevertheless, it's a good idea.

The original purpose in electing House Members every 2 years was to bring to the Congress from the people a fresh viewpoint. And that's still a valid purpose.

But it doesn't need to be that fresh.

If half the Congressmen were elected each 2 years, the purpose would still be served. And the benefits of 4-year terms would be considerable—half as many political campaigns, twice as long, to be a statesman before having to become a campaigning politician again.

Actually, with Government and public affairs as complicated as they are these days, 2 years is scarcely long enough to get acquainted with congressional procedures, let alone influence them.

A freshman Congressman with only 2 years to go is a pretty poor thing except for his one lone vote. He is scarcely noticed by his conferees until he has proved that he can get reelected at least once.

They would have to notice him if he had 4 years to go from the very beginning. It would add a lot to the overall dignity and usefulness of the office.

Enhancement of Fishing Resources on Sacramento River

EXTENSION OF REMARKS

OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

Mr. KUCHEL. Mr. President, one of the unheralded benefits of the Central Valley project which the Federal Bureau of Reclamation has built and is operating in California is an enhancement of the fishery resources of the Sacramento River.

The Sacramento has become the major spawning stream in the State for salmon as the result of cold water releases from the depths of Lake Shasta through the turbines of the Shasta and Keswick hydroelectric plants.

A recent story in the Redding Record Searchlight relates another way in which operations at Lake Shasta, in the State from which I come, have protected the fish by diluting and flushing out the toxic pollution from old mine tailings in the Spring Creek watershed.

I ask unanimous consent to have this article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Redding Record Searchlight, Feb. 4, 1960]

KESWICK RELEASES DOUBLED TO SAVE FISH FROM POLLUTION

Water from Lake Shasta poured through the gates of Keswick Dam this week at a temporarily doubled rate of flow.

Bureau of Reclamation officials released the water in an effort to save fish in the Sacramento River from the polluted waters of Spring Creek.

Results have been good, because "We have not had a dead fish so far," says Felix Dashen, chief of operations at Shasta Dam.

But the Bureau may decide to stop releasing water, on the basis that future dilution of poisons washed into the river won't be necessary.

Tomorrow Bureau officials at regional headquarters in Sacramento will decide

whether it will be necessary to continue the dilution during the rest of the winter and spring. State and Federal fish and game representatives may also attend the meeting.

"The agreement may be changed," says Dashen. "We believe the first rains are what wash the poisons into the water. After that, a normal flow is enough to offset pollution."

"The less we release, the better off we are," he says. "They're getting more water down river now, and we should conserve water here for summer needs. Whatever is released at Keswick must be compensated by a release at Shasta."

Heavy rains flowing from the highly polluted Spring Creek watershed have increased the toxicity of the waters. Old mine tailings in the Spring Creek watershed cause the pollution.

By increasing the flow of water from Keswick Dam, officials hope to dilute the poisons from Spring Creek. Recent rains have given the Bureau the first good chance to test the plan since an agreement to release water was made last year by the State fish and game department, U.S. Fish and Wildlife Service and the Bureau.

Dilution began last November when the Spring Creek flow increased. The Bureau watches the flow, and when it hits dangerous toxicity, water from Keswick is released.

The antidote from Shasta's waters reached a flow Monday at Keswick of 8,100 cubic feet per second. Today it was 4,200 cubic feet per second. Normal flow is 3,500 cubic feet per second.

"It's the first year we've tried the plan," says James Stokes, State fish and game regional manager, "and we'll see how it affects pollution."

High waters in Spring Creek not only leach poison from the mine tailings, but build a delta of poison carried down river to be further washed into the Sacramento.

Another safeguard against pollution, Stokes says, is the reclamation plant at the active copper mine at Iron Mountain.

The mine was directed by the State water pollution control board to reclaim its copper tailings in a system of pipes and settling ponds. Two things are accomplished by this: marketable copper is saved and fish-killing toxicants are kept out of the river.

Communist Infiltration in American Churches

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution from the Republican Committee of One Hundred, Inc., New York, N.Y., March 8, 1960:

Whereas the Air Force manual describing Communist infiltration in certain American churches has been brought to the public's attention; and

Whereas the facts contained in this manual have been definitely established through findings of the House Un-American Activities Committee; and

Whereas reference has been made to frivolous material in the manuals undoubtedly publicized to divert attention from the true significance of the revealing statements in those manuals and to shield those very forces which should be exposed; and

Whereas it is of vital importance that servicemen be equipped to detect, understand, and counteract the forces of communism wherever they may be found; and

Whereas it is hoped that the majority of American churchmen are unalterably opposed to protecting such subversion: Be it therefore

Resolved, That the Legislative Committee of the Republican Committee of One Hundred on March 8, 1960, express commendation to the Honorable FRANCIS E. WALTER, and the members of the House Committee on Un-American Activities for their important findings thus far in regard to the National Council of Churches and for their forthright stand in support of these findings; and be it further

Resolved, That Congressman WALTER be urged to continue these necessary investigations and to make these further findings available to the public.

Respectfully submitted.

ELIZABETH S. COWLES,
Chairman of Legislation.

Both Races in San Antonio Hail Integration of Stores

EXTENSION OF REMARKS

OF

HON. GALE W. MCGEE

OF WYOMING

IN THE SENATE OF THE UNITED STATES
Monday, March 21, 1960

Mr. MCGEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very stimulating article that appeared in the New York Times of March 20, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOTH RACES IN SAN ANTONIO HAIL INTEGRATION OF STORES—BANQUET IS HIGH POINT IN WEEK OF PEACEFUL GAINS BY NEGROES

SAN ANTONIO, TEX., March 19.—An interracial, interfaith banquet last night was the high point of an eventful week in San Antonio, during which five downtown stores opened their lunch counters to all persons, regardless of color.

The banquet was scheduled 4 months ago by the Second Baptist Church and the St. Paul Methodist Church, both for Negroes. It is hoped that it will become an annual event, bringing to San Antonio national and international figures for a cultural event.

Negro leaders said the timing of the banquet was fortuitous in that it took place Friday night right after the peaceful integration of the downtown lunch counters.

San Antonians of all races have accepted the integration of the lunch counters. This is not surprising in view of the fact that public schools began integrating here in 1955 and a year later the city's recreational facilities, including golf courses and swimming pools, were integrated, all without incident.

HOW IT HAPPENED

About 4 weeks ago, as Negroes in the South began demonstrations for desegregated lunch counters, the Rev. C. Don Baugh, executive director of the San Antonio Council of Churches, began conferences aimed at opening the lunch counters to all.

Mr. Baugh, who is white, talked with pastors of all faiths and businessmen and leaders of the San Antonio Chamber of Commerce.

Meanwhile, on March 7 Mary Lillian Andrews, 17-year-old freshman at Our Lady of the Lake College here and president of the

San Antonio Youth Group of the National Association for the Advancement of Colored People, began sending letters to downtown stores.

She pointed out that youth of all races in San Antonio went to school, rode the buses and enjoyed municipal recreation facilities together, "but they cannot sit down and eat together."

In her letters she asked the stores to abide by the principles of the Bible and the U.S. Constitution and to "abolish this discriminatory practice in your store."

FIVE STORES AGREE

Although Miss Andrews gave no deadline for compliance in her letter, San Antonio Negroes held a meeting last Monday night. Mr. Baugh called an emergency meeting for last Tuesday of those he had been conferring with and told them that the Negroes had set a Thursday deadline for an answer.

It was feared that demonstrations might be staged at lunch counters here as they had at other places in the South.

Five of six downtown stores agreed to open their lunch counters. The sixth store, Joske's of Texas, said it had not had ample time to study the matter and requested 30 days to make its decision.

The stores that agreed to desegregate their lunch counters were Nelsens, F. W. Woolworth, S. H. Kress, H. L. Green, and McCrory's.

Few Negroes appeared at the lunch counters Wednesday. But as they requested service there was no incident. Whites accepted the new situation calmly.

Thursday night Negroes held a meeting at Mount Pleasant Baptist Church to hear their leaders discuss how they should conduct themselves in the desegregation.

LET'S BE NORMAL

Their youth leader, Miss Andrews, told them:

"You now have the privilege. Take it and use it, but don't be unusual. Let's be normal."

At Thursday night's meeting of the Negroes, Harry V. Burns, State youth director of the NAACP, read a letter prepared by a Negro elementary-school principal, Mrs. Balmer T. Oliver, and sent home to parents with the schoolchildren.

In her letter Mrs. Oliver cautioned Negro parents "to go in places calmly, to speak softly, avoid pushing, to await your turn, accept service graciously, to pay the posted price of food courteously, to use good manners at all times, to be neat in appearance, to avoid loud laughter and giggling, and to use the words 'thank you' and 'please' because they are valuable."

Referring to the meeting of church and business leaders that set up lunch-counter desegregation, the Reverend S. H. James, pastor of the Second Baptist Church, told the group Thursday night:

"This was a meeting in good faith. Everybody demonstrated good faith."

"There was a feeling that after the 30 days we would have something like an open city. He made it plain this was just an opening wedge. We felt we should move into everything—hotels, motels, restaurants, privately operated amusement parks."

"We want facilities available when we need them. We don't want overt demonstrations."

"We are proud of all the people of San Antonio, for we have here an oasis of privilege in a desert of racial unrest in the South."

ROBINSON PRAISES CITY

In a speech at the banquet Friday night, Jackie Robinson, the former baseball star, said San Antonians were setting examples for the whole Nation.

"It is a story that should be told around the world," he declared.

Comparing San Antonio's decision to integrate lunch counters with his own entry into major-league baseball, Mr. Robinson

said, "People have more fears than actual problems."

"We are not interested," he said, "in interracial marriage. It's not important. Of course, we are not opposed, but we know that love will conquer all, be the participants white, Mexican, or Negro."

White and Negro leaders in San Antonio believe that most lunch counters and restaurants here will be desegregated in another month.

A stranger in this city would not know that any unusual event had taken place here in the last week.

Police Chief George Bichsel has labeled the burning of a cross in a downtown park last Wednesday night as the work of cranks. This has been the only sign of disagreement with lunch-counter desegregation in San Antonio.

H.R. 9303, To Provide Crop Price Support Commodity Loans of Not More Than \$50,000

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. AVERY. Mr. Speaker, the information on loans made under the 1959 crop price-support programs by the Commodity Stabilization Service of the Department of Agriculture just released vividly points up the importance of my bill, H.R. 9303, to amend the Commodity Credit Corporation Charter Act to provide that not more than \$50,000 price support shall be extended to any person in a year. The bill is pending before the House Banking and Currency Committee.

The present law permits loans over \$50,000 but requires all such loans be repaid in money with interest. This limitation came about as an amendment to the Agriculture appropriation bill and as a result it will expire at the end of this year, or December 31, 1960.

Without enactment of legislation of the nature I propose, it is reasonable to assume the Federal Government will be making similar gigantic loans again next year at a loss to the taxpayer. Without legislation, any size loan can be made and repayment is not required in money. It will be possible to make repayment by commodity, resulting in a loss of millions of dollars to the Commodity Credit Corporation.

As I said on the floor many times last year, the \$50,000 limitation is higher than desirable. In my opinion, it should be reduced to \$25,000 or less. However, in view of the formidable opposition to any limitation on the Democratic side of the aisle, the \$50,000 limitation is probably the most realistic limitation that can be enacted. The most important thing is that some limitation is enacted and thereby not increasing the cost of operation of the Commodity Credit Corporation by a continued Government subsidy to the big corporation farms. The legislative history of the Commodity Credit Corporation authorization does not suggest that such a subsidy was foreseen or anticipated by the Congress,

The following is the 1959 crop price support commodity loans of \$50,000 or more, by producer. This report covers only those commodities for which the loan-making period terminated on January 31, 1960; and the amounts shown represent loans made, without regard to whether the loans have been repaid or will be repaid before maturity:

A Patriotic Group

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Monday, March 21, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Sumter Daily Item of March 16, 1960, entitled "A Patriotic Group." This editorial pays tribute to a great organization which has always fostered and promoted the principles of Americanism, the National Daughters of the American Revolution. I commend the DAR on its resolutions which are cited in this editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A PATRIOTIC GROUP

There is no more patriotic group in America than the National Daughters of the American Revolution. This group seeks to preserve this as the same sort of America that our Founding Fathers fought to establish and they oppose with all their might nearly all of the ideas advanced by liberals and modernists which would tend to change the complexion of our Government.

To give you some idea of the stand which this organization takes on current issues at its last continental congress it adopted some very strong affirmative resolutions on matters of great moment to the American people.

The resolutions adopted included the following:

For the Constitution of the United States, which is the expression of the faith of our fathers in the God-given rights of the individual citizen as opposed to any form of world government, socialism, totalitarianism or the welfare state.

For legislation to counteract the effect of decisions by the Supreme Court which have expanded the power of the Federal Government to the consequent limitation of the right conferred on both the Congress and the States, thus altering the intent of the Constitution by means of court decisions instead of by amendment.

For legislation to check inflation, curtail spending, balance the budget, reduce taxes, curtail foreign aid and enable Congress to recover its supervision over spending programs, since our freedom is dependent upon the financial solvency of this Nation.

For a more comprehensive loyalty program for all areas of government service with particular emphasis on those having to do with national security, and expressing our confidence in the integrity and effectiveness of the Federal Bureau of Investigation, the House Un-American Activities Committee, and the Senate Internal Security Committee and their respective leaders.

For the support, preservation intact, and effective enforcement of the Immigration and Nationality Act.

For the preservation of the existing safeguard against intervention by the World Court in the domestic affairs of this Nation and for support of the principles of the Bricker amendment.

For urging our Government to continue its strong support of the defense of Quemoy and Matsu, and to regard this defense of equal importance with Berlin.

For opposition to Federal aid to education, such as grants-in-aid to schools, to States for educational TV channels, to libraries, and Federal scholarships, because State and local governments have the ability to know and meet their needs without Federal assistance.

For a study and analysis of UNICEF contributions, its program designed to promote the welfare state, and the selling of their Christmas cards devoid of the spirit of Christmas.

For legislation authorizing and directing the withholding of passports to U.S. citizens whose proposed international travel, in the judgment of the Department of State, would be detrimental to the best interests of the United States.

These resolutions deserve the study of all good Americans.

We need more militant American organizations like the Daughters of the American Revolution.

The Dunn Survey

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. MASON. Mr. Speaker, Rogers C. Dunn of McLean, Va., has spent a great deal of his time and effort in analyzing, summarizing, and explaining the results of national elections. In this field Dunn is an analyst par excellence. He has been "a voice crying in the wilderness" of political and partisan politics for many years. It is past time for the Members of Congress on both sides of the aisle to pay attention to his voice and heed his warnings.

For this reason I include in my remarks the latest warning of Rogers Dunn, entitled "The Popular Greed and Feed Line Versus the American People":

THE DUNN SURVEY—THE POPULAR GREED AND FEED LINE VERSUS THE AMERICAN PEOPLE

This Nation is founded on popular acceptance of the belief that its citizens have the character, the ability, and the desire, for self-government. The Constitution and the institutions of government were designed to serve this belief.

This belief is the foundation of all that inspired the human, spiritual, and material achievements which made America a cherished land.

Destroy this belief and government necessarily becomes the supreme power, and the Constitution loses its position of bulwark for the people to become a tool of government.

Destroy this belief and no law, old or new, and no educational or political program, can "save America."

These are basic realities which few men have even considered.

DISCREDITED FOR 20 YEARS

For the past 20 years, virtually all leaders and organizations concerned with National Government, liberal, conservative, Republican, Democratic, have incessantly drummed into the public mind the view that great bodies of men and women no longer have the character, ability, or desire for self-government.

Farmers, workers, businessmen, and others have been portrayed to the Nation as organized groups of greedy and/or ignorant men determined to feed from the Government trough of money and special privilege regardless of vital harm to the Nation. Vast numbers of men have been pictured as desirous of being provided for by a welfare state. The vote of each group has been pictured as going to the bidder offering the most Government money or special privilege.

These representations have been accepted and parroted by a great part of the people.

This is destruction of the basic belief on which this Nation is founded, and on which rests the Constitution and its provisions for government and individual liberty.

With this breakdown of public respect for itself, even the more stalwart office seekers feel compelled to follow the greed and feed line, yield their beliefs, and bid higher for public support. Then comes the inevitable next round. Thus, there is now a snowballing action away from self-government into an all powerful state—call it socialism, welfare-state communism, or what you will.

Nothing can stop this movement from continuing as long as the people are led to

feel that their fellow citizens are incapable of, or unwilling to, exercise the qualities necessary for self-government. This has been demonstrated by the failure of all educational and political efforts to do more than put a drag on the movement.

These are realities which few men have even considered.

THE PEOPLE WERE ONCE TAUGHT TO BELIEVE THE WORLD WAS FLAT

It has been the say-so of leaders which has created and promoted the belief that the votes of a great and growing number of men and women have been won by the bidder offering the most Government money or special privilege—farmers, labor, etc.

The public has failed to note that it has never been offered substantial and exacting election facts which supported and justified these representations, and the resulting reflections against the character, or desires, of the people.

There have been no such facts. It is possible that there are communities affording isolated exceptions, but we have not seen the contention supported by exacting facts. There is a great abundance of facts upon which the issue could be determined, and there has been for years.

Nevertheless, wittingly and/or unwittingly, both "liberal" and conservative leaders have misled the people into abandoning and discrediting the one belief upon which is dependent the Constitution and its provisions for government and individual liberty—the belief that the people have the character, the ability, and the desire, for self-government.

If Communists were recognized as doing the same thing, conservatives, most liberals, and the Nation, would rise in effective wrath. As it is, Communists need only follow behind the crumbling belief on which America is founded and offer socialism—communism as a replacement—now called infiltration.

TO BREAK THROUGH THE OCTOPUS GRIP

The fundamental task is to rebuild public acceptance of the belief that their fellow citizens have the character, the ability, and the desire, for self-government, to the fullest extent justified. This includes exposing and destroying false representations of the vote which discredit the character, or desires, of the people.

Progress toward relighting the belief which is the foundation of America would release and make operational many actions which now appear to be beyond recovery. For instance:

It would discredit the excuse of "votes" used to explain why the two national party organizations compete in offering more and more government money and special privilege—packaged with more government controls and power.

It would release and stimulate open competition, between the two parties, over different concepts of government—instead of competition based on fleeting personalities, "Madison Avenue," and how much more government money to offer for votes.

It would force into open debate and determination by the people the issues of the small but powerful intellectual group versus the traditional American concepts held by the Joe and Jane Doaks on the farm, in labor, in business, and throughout the Nation.

No American could ask for more. Few Americans would shrink from pressing this opportunity once they are aware that most of their fellow citizens hold and cherish the same basic concepts.

Do the facts exist which justify this perspective and the great opportunity it affords? Yes. This report is largely a product of years of study of the actual vote.

MARCH 1960.

One-Day Delivery of Mail in Wisconsin

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

Mr. WILEY. Mr. President, as we know, the Post Office Department has been inaugurating what is known as the metro plan of postal delivery.

The plan calls for one-day delivery from place to place within a State.

The objective of the metro plan is to provide better, more efficient service. We recognize, of course, that with the inauguration of any such new systems, serious problems may often arise. Currently, a number of these have appeared in relation to the metro plan.

However, the Post Office reports that it is making a real effort to deal with these problems as effectively as possible.

The American public, I believe, is entitled to fast, efficient mail delivery.

The Department is to be commended for its efforts to provide such service.

I would hope, however—and will continue to so urge—that the problems arising out of the changeover in systems of mail delivery can be quickly and equitably resolved.

Recently, a fine Wisconsin newspaper, the Appleton Post-Crescent, published an informative article, entitled, "One-Day Delivery of Mail in Wisconsin." Reflecting on the operation of the new metro system in Wisconsin. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE-DAY DELIVERY OF MAIL IN WISCONSIN

The Wisconsin metro plan, which the Post Office Department is planning to put into effect in Wisconsin "will be the greatest improvement of service in the State in years," Clarence Knudson, regional operations director for the U.S. Postal Service at Minneapolis, told the Wisconsin postmasters at a meeting in Madison last Sunday.

The plan calls for 1-day delivery of first-class mail to any point in Wisconsin. That is, a letter posted before 5 p.m. will be delivered to any destination within the State the following day.

To accomplish this it is proposed to set up sectional offices in 13 cities. They are Green Bay, Eau Claire, La Crosse, Madison, Marshfield, Milwaukee, New Lisbon, Oshkosh, Portage, Rhinelander, Sheboygan, Spooner, and Wausau. Only three trains will be used. They are a Soo Line train and a Milwaukee Road train running between Chicago and Minneapolis, and a Chicago & North Western train between Chicago and Green Bay. Most of the mail will be transported by chartered trucks on star routes and by highway post office mobile units connecting the sectional cities. The postal clerks aboard these units will work the mail en route just as it is worked in the mailcars on trains.

The plan calls for each sectional center to have its mail collected, including all letters dropped as late as 5 p.m., delivered to the center area and passed on to the appropriate outgoing trucks in time to reach their destination at about 4:45 a.m. to be de-

livered by the carriers that day. Success will depend upon careful scheduling of trucks and the handling of mail at the terminals to make certain that each letter is moved out on the right truck ready to be delivered to a connecting truckline or a post office.

However, the technicalities may safely be left to the Post Office Department. The plan was first used in New York beginning in 1958 but within about a year the Post Office Department set up 46 such area plans and the goal calls for 90 by August of 1960.

Mr. Knudson, the operations director for this area, says there probably will be no additional cost since, in Minneapolis, a similar plan actually resulted in a reduction in expenses. It is cheering news also that the metro plan is only a part of a nationwide mail speedup program that eventually will include air transportation of first-class mail between major cities. The Post Office Department has made some real progress in the handling of mail during the past few years. Under the direction of Postmaster General Arthur E. Summerfield, there has been an intelligent approach to the technical post office problems. Great progress has been made in spite of the opposition that has come from Congress.

Unfortunately it appears that too many Congressmen regard the Post Office Department as an important political instrument which can be used to help them get votes. If some magic means could be found to get Congress off the backs of the leaders of the Post Office Department tremendous progress would be possible to the great advantage of the people and probably at lower cost than the present service requires.

Would You Like To Do Something About World Peace?

EXTENSION OF REMARKS

OF

HON. GEORGE E. SHIPLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. SHIPLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter from F. O. Grissom, mayor of Kinmundy, Ill. His letter pertains to a project of the Kinmundy Woman's Club. The woman's club appeal for world peace is also attached to be included in the Record:

DEAR CONGRESSMAN SHIPLEY: I am enclosing a copy of a letter which is a project of the Kinmundy Woman's Club. This letter is now being sent to every club in the United States, and to other similar organizations. I think it a very worthy project and worth passing along.

Kinmundy is a town of a thousand. This local club has a membership of 50, and I am sure they have undertaken a big project.

Respectfully,

F. O. GRISSOM, Mayor.

KINMUNDY WOMAN'S CLUB,
Kinmundy, Ill.

Would you like to do something about world peace?

Our woman's club president, Mrs. Lloyd Bailey, brought out in Sunday school class discussion that prayer is such a potent force we should use it more. She suggested we all pray for peace at noon every day and we do. We asked her to carry the thought to woman's club, which she did. There the motion was made we all pray exactly at noon, this prayer—"God grant us peace among all nations."

This has been taken to other community organizations and we feel it is of supreme importance. If we could take this to all clubs, to all councils, to all organizations, to all towns, to all cities, and finally to all countries, such a mighty prayer rising simultaneously might usher in the millennium without Armageddon.

Won't you help us carry this supremely important project to all the world? It could be the most important project of the century.

Homebuilders Support President's Position on Interest Rates

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

Mr. KEATING. Mr. President, I am very pleased that the House Ways and Means Committee recently reported out a bill—H.R. 10590—which permits raising the interest rate on long-term Government bonds. President Eisenhower has for many months advocated the complete elimination of the existing arbitrary and unrealistic 4½-percent ceiling on these bonds. I agree fully with the President's position and have stated my views in this matter on a number of occasions.

Despite the fact that the bill reported out by the Ways and Means Committee does not remove this ceiling completely and does not go quite as far as many of us would like; it does represent real progress. I sincerely hope that it will be handled as expeditiously as possible in the House and that the Congress will enact legislation in this field in the very near future.

I want to call attention this morning to the very sensible position taken by the National Association of Homebuilders on this issue. The association has indicated its full support for the measure reported out by the Ways and Means Committee. Calling it, "a sincere, well-considered bipartisan effort," the homebuilders urge that this bill be enacted as soon as possible.

It is well known that the homebuilding industry is affected greatly by changes in interest rates. An advance of a few points often has a wide impact on the housing and mortgage markets. Nonetheless, the American housing industry is not buying the line of those who oppose removing the interest rate ceiling and who claim that such action means tighter money for America.

This simply is not true. The interest rate ceiling on long-term Government bonds simply means that the Treasury must rely far too heavily on short-term notes. The result is a disproportionate and unhealthy pressure on short-term interest rates.

The editors of the Washington Star, in an excellent editorial praising the position on interest rates taken by the National Association of Homebuilders, noted that the interest rate issue has been, and I quote, "ambushed by partisan

politics." They commend the homebuilders for seeing through this muddle and supporting the President's request that the interest rate ceiling be removed.

I ask unanimous consent that the above referred to editorial be printed in the Appendix of the Record.

Mr. President, I am pleased to announce the New York State chapter of the National Association of Homebuilders agrees with the position of their national association. I ask unanimous consent that a letter from Mr. Jack Friedland, president of the New York State Homebuilders Association, also be printed in the Appendix of the Record.

There being no objection, the editorial and letter were ordered to be printed in the Record, as follows:

[From the Washington Evening Star,
Mar. 19, 1960]

AN INDUSTRY SPEAKS UP

The Treasury Department has received a potentially powerful assist from the homebuilding industry in its fight to relax the 4.25 percent statutory interest rate ceiling on long-term Government financing. The National Association of Home Builders, representing a membership of approximately 43,000, has announced its vigorous support of legislation approved late last month by the House Ways and Means Committee. The association, closing ranks with others that are dominant and representative in the related building and mortgage fields, describes the legislation as "a sincere, well-considered bipartisan effort" and urges congressional enactment "at the earliest possible date."

In brief, the bill as approved by the committee would help in two respects to free the Treasury from being confined to costly and inflationary short-term (less than 5-year) financing of the gigantic public debt. It would, for example, permit the yearly marketing of long-term securities, without any arbitrary interest ceiling, up to a total face value of 2 percent of the debt. Currently, this would make salable to long-term investors about \$5.8 billion in Treasury bonds. It would also allow the Treasury to exchange on a face-value basis new bonds of longer maturities and higher interest rates, up to 4.25 percent, for outstanding securities bearing lower interest rates and currently selling below their face value.

In taking its present position, the association presents a sound and persuasive case both for the overall national interest and for the special interest of its own industry. It accepts, for example, the argument and the evidence that even limited adjustments in the 42-year-old ceiling would give the Treasury more flexibility in managing the public debt, would on the whole permit greater economy in interest charges to the Government, would lessen the competition of Government financing with certain areas of private credit, and would cut down the inflationary effects of public borrowing. For the related building and mortgage industries, it acknowledges that locking the Treasury into short-term financing actually forces interest rates higher (to 5 percent or above) with the net effect of "draining money" out of savings banks and other institutions which normally supply mortgage credit. Defeat of the pending legislation, the association concludes, "could well mean tighter mortgage money and higher money rates."

The association's reasoning is logical and accurate. It recognizes, too, that this is an issue that has been ambushed in partisan politics. The health and welfare of the homebuilding industry have broad impact on the national economy. It should be helpful that its trade association, its principal mouthpiece, is supporting the Treas-

ury on a problem that should be resolved entirely outside of narrow partisan considerations.

NEW YORK STATE.
HOME BUILDERS ASSOCIATION, INC.,
Albany, N.Y., March 17, 1960.

DEAR SENATOR KEATING: This association of 3,000 members, representing the home-building industry in New York State, urgently requests your support of H.R. 10590.

This bill relates to interest rate restrictions on U.S. bonds and its failure to pass will force the Treasury to do its financing at the expense of the home mortgage market, thereby seriously affecting the production of housing.

Thank you for whatever assistance you may give to the passage of this bill.

Respectfully,

JACK FRIEDLAND,
President, New York State Home Builders Association, Inc.

The Challenge of the Sixties

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. SMITH of Kansas. Mr. Speaker, recently at Wichita, Kans., there was delivered an address that has so much merit I desire to place it in the RECORD for the benefit of my colleagues.

S. Keith Anderson, secretary of the Montana Taxpayers' Association, made this address before the Kansas Livestock Association. This address points out the necessity of a continuing campaign to try and point out to the taxpayers that "only people pay taxes."

This address merits close reading for many basic facts. Congress must assume its responsibility in the field of Federal taxation. As this address well points out—only Congress can balance the budget.

I commend this address most highly:

THE CHALLENGE OF THE SIXTIES

(Address of S. Keith Anderson, executive secretary, Montana Taxpayers' Association, before the Kansas Livestock Association, Wichita, Kans., March 11, 1960)

At this point I want to say that your Kansas Livestock Association is your No. 1 ace in the hole. If you are going to stay in business, and if you are going to make a profit, you must have a strong organization looking out for your interests. This is a double-bitted ax, because in order for the association to look after you, you must support fully, and be active in your association. I know how important this is. I run the Montana Taxpayers' Association, which is an organization supported by business in Montana. I am very pleased to tell you that we have real, fine support from the ranchers and farmers. We believe in the fundamental truth that every tax is first an expenditure. Real tax control can be achieved only by controlling expenditures. Therefore, much of our work is done at the local level with public officials. We work to keep our property taxes legal and our levies within reason as well as carrying on an aggressive program at the State level.

Government spending and taxing should concern each of us, because of their fast rate of growth in the past century and increas-

ingly large share of our dollar that is taken from us each year for public services. In the last 50 years, population in this Nation has increased 100 percent, while the gross national product or the physical volume of the Nation's output has increased 400 percent. However, in contrast to this, State and local government budgets have increased 2,000 percent and the Federal budget over 13,000 percent, in this last 50-year period. As a result, Government finances have exerted increasing influence on our economy and our individual businesses.

In 1940, the Federal Government had a tax income of \$4.9 billion and, in 1961, it is estimated that the tax income will be \$84 billion, an increase of 1,614 percent. We can well ask ourselves a question concerning this increase in Government income and spending. Taking defense into consideration, which, of course, is all important, what is the Government doing for me today that it did not do in 1940 that is worth this 1,614 percent increase in cost?

We see on the Federal, State, and local levels a persistent attempt to increase Government spending, irrespective of incoming revenue or normal economic state and national growth.

Chairman CANNON, of the House Appropriations Committee, a Democrat from Missouri, recently summed up the Federal situation in the following, unusually strong language. CANNON noted "that the Government has levied more taxes, has spent more money, has incurred the greatest national debt, has lost more gold, has incurred the greatest deficit, and is in the greatest financial distress than in any peacetime period in the history of the Nation. If there were any more records to break in reckless extravagance, we would break them."

Congressman CANNON continued, "although we are still levying war taxes in time of peace for the first time following any American war, and are enjoying the largest peacetime income ever received by any nation in any land, in any period of the world's history, we continue to spend more than we take in and are living so far above our income that today the national debt is billions and billions above the top of the debt of World War II."

The following quotation by one of our greatest living statesmen further exemplifies the distressing situation we are in at the Federal level.

"As I see it, the welfare state, about which we have been hearing so much in recent years, is that state of twilight in which the glow of democratic freedoms is fading beyond the horizon, leaving us to be swallowed in the blackness of socialism, or worse."

"In many Federal programs, we are chasing the mirage of easy money in the form of deficit dollars. Some of us have been duped into believing that the easy dollars handed down by the Federal Government are something for nothing, but, actually, these programs are adding to the public debt, are undermining the will of individuals, regimenting the production of agriculture and labor, controlling the practices of business, curtailing the solvency of the States, and destroying the self-determination privileges which are traditional in the local governments and domestic custom."

"Make no mistake; it is socialism which lies at the end of this rainbow and in this rainbow, the predominating color is the red of Federal deficit spending under which a whole new generation of Americans have grown and developed."

This statement, ladies and gentlemen, was made by Senator HARRY F. BYRD, Democrat, from Virginia. I don't know about Kansas, but this statement by the great Senator BYRD can be aptly applied to our own State of Montana, which for 9 of the last 10 years, has operated in the red.

The mortgage on our present and future

generations is almost beyond belief. Maurice H. Stans, Director, U.S. Bureau of the Budget, recently elaborated on our national obligations. He brought out that our present national debt of \$290 billion does not include Federal liability for past services. Already, accrued liability for military retirement is about \$30 billion. Our unfunded present accrual for retirement benefits for civilian employees is \$27.5 billion. On top of that, future pensions and compensation to veterans will cost about \$300 billion. Now the \$290 billion of public debt plus \$350 billion of future obligations for past services, plus \$98 billion of c.o.d.'s adds to the almost incredible total of about \$750 billion. That my friends, is the Federal Government's mortgage on America's future, beyond the regular annual cost of defense, welfare, and commerce. This \$750 billion figure would amount to \$15,480 for every family in the United States.

Budget Director Stans further points out the pressures for new spending programs that are increasing in intensity. In the last session of Congress alone, there were 20 major spending bills introduced in the House, along with 20 others in the Senate, for new programs, which altogether price out to more than \$326 billion over an average period of 5 years. If these bills were passed as their sponsors want them, they would add \$50 billion a year to our present spending level of around \$79 billion.

The second session of the 86th Congress has convened, and without any doubt, the overriding issue confronting our lawmakers in Washington, will be that of solvent government and sound money versus deficit spending and continuing inflation. The Federal budget for fiscal 1961 submitted to Congress by President Eisenhower amounts to \$79.8 billion. On the basis of Tax Foundation's allocation formula, you folks in Kansas will have an estimated burden of Federal budget receipts for fiscal 1961 of \$831.6 million. According to the U.S. Census Bureau, and a report from your Tax Commission, \$443.7 million in property and other taxes was levied in this State in 1958-59. In other words, the Federal Government will take away from Kansas nearly twice the amount of money that Kansas will collect to run its State and local governments.

It is encouraging to note from the President's budget message, that there is an estimated surplus of \$4.2 billion at the end of the next fiscal year. The President very wisely recommended that this be applied to debt reduction. However, this conservative approach in handling the surplus, holds little appeal for many Senators and Congressmen, particularly in this election year. With the Federal Treasury pictured as literally brimming over with \$4 billion of unexpended funds, the real and present danger is that there will be so many helpers in spending this surplus, that it will be spent two or three times over.

Those of us who believe in the free-enterprise system should be concerned and alarmed with the attitudes of many of our public officials, and as a matter of fact our neighbors, who seem to believe that government spending and government authority is a solution for all of our problems on the local, State, Federal, and personal level.

We have a competitive market economy, where the Government is supposed to play a minor role. Employees, ranchers and businessmen are supposed to make their own decisions about how they want to live and work. We have always relied upon competition and incentives to direct our efforts toward useful and productive goals. In our society, the Government is supposed to do two things: first, it sets the rules of the game and sees that everyone competes fairly and respects others. Second, it furnishes services that cannot be provided by the private areas of our economy. National de-

fense, roads, postal services and veteran's benefits fall under this broad area of Government activity. Over the years however, the trend toward Government services has sharply increased. Back in the 1920's, Government services were limited and Government spending was no great problem. In 1929, taxes from all levels of Government came to less than 10 percent of our national output. Since 1945, this has risen to over 25 percent.

Now what has happened in the last 30 years, to create this spending and taxing problem? Perhaps the key reason is our desire to make Government responsive to people's demands without worrying about its ultimate responsibility. Let me explain what I mean by this. All this started in the 1930's when the Federal Government abandoned its traditional idea of limited government because of the depression. Then, a war came and of course made matters worse. As a result, many people soon discovered that the Federal Government developed great power to reward some groups at the expense of the general population. The trouble is, that responsible government must be limited, if it is to be responsible government. The theoretical needs for government funds are unlimited, but our resources obviously are not unlimited.

As a result, you have headlines like those that appeared in *Business Week*, February 13, 1960, "Old Age Gets Into Politics." The article goes on to say, "with the elderly asserting growing power at polls and raising their demands, the issue of what to do for them is getting a congressional airing and a run in 1960 elections." Here is a good example of the politicians buying themselves votes with your money by promising a rainbow to one segment of our population, regardless whether they want it or whether they need it.

Another good example is the Federal aid to education controversy. In a news conference, the Secretary of Health, Education, and Welfare, Arthur S. Flemming was asked by Senator DIRKSEN the following question, "How many school districts in the country are in trouble?" Flemming hesitated and then answered: "About 200." DIRKSEN then asked: "And how many districts are there altogether in the whole country?" Even more reluctantly, Flemming had to reply, "About 40,000." It happens that one-half of 1 percent of the school districts in this Nation are in trouble according to Secretary of Welfare Flemming. So what happens? The National Education Association, their allied organizations and certain Members of Congress want to foist on this Nation of ours legislation which would provide Federal aid to education in every State in the Union, whether they need it or not. This is a good gimmick for buying votes. The politicians can promise Kansas or Montana millions of dollars in Federal funds. It just happens however, that these Federal funds must first come from your pocket and be sent to Washington, and there, a service charge deducted before the money is sent back to you. A selling point used for Federal aid in Montana—and I suppose the same logic is used here in Kansas—is that we are going to get back more money than is taken from us. If this is true, it is certainly nothing to be proud of, because this means that we cannot face and solve our own problems and must go crawling to some other State for assistance.

I have not had the opportunity to talk to many of you concerning your tax problems or the fiscal situation in your State. According to the U.S. Census Bureau statistics, your tax burden is roughly comparable to that in Montana and I can tell you this as a fact, in Montana, we don't like it. I will tell you further that I think the people of Montana are going to do something about it.

According to figures from the U.S. Census Bureau, and your State Tax Commission,

State and local taxes have increased nearly 110 percent during the last 10 years in Kansas. While taxes have been increasing at this rapid rate, personal income in the State has only increased 73 percent. Statistics show that in 1948-49, the burden index for Kansas or the percentage of personal income that was spent for State and local services was 8.8 percent, and this last year it had increased to 10.5 percent. The latest U.S. Census Bureau statistics place Montana seventh in the Nation in tax burden and these same statistics place Kansas 10th. That means that both Kansas and Montana are right at the top of the heap in tax burden. It means that we have less money in our pockets to do the things we want, than people in other States. It means that it takes us longer to save for a car, a trip, or mama's new dress. Taxes are a very personal thing, because every dollar that the Government takes away from you is a dollar that you cannot spend for your family.

In Montana, we have a very heavy property tax. In fact, we run neck and neck with you people here in Kansas. While Montana ranked fourth in property taxes on a per capita basis, Kansas ranked fifth. This places an excessive burden upon agriculture. In Montana, it is not unusual for a ranch to pay out from 10 to 20 percent of their gross income in property taxes. This situation is certainly not conducive for risk capital or proper development of our ranching enterprises.

I have been talking a lot about the cost of government and its resulting high taxes on the cattleman. You people in Kansas went through the same times we did back in Montana during the early thirties. In those days, agriculture was a prime financier of Government services, just as it is today. The chief difference was that many outfits couldn't and didn't pay their property taxes. As a result, the State took over a lot of land, mortgages were picked up by banks, and many ranches were sold for taxes.

When I am working with local problems, it isn't difficult for me to recall those days of the \$30 cow. It seems that many people, especially out of agriculture, have short memories. They don't seem to be concerned about the large budgets that are adopted or the big bond issues that are floated. They don't recall those years of high tax delinquency, when the school districts and counties were operating on registered warrants, instead of cash. They laugh at you when you tell them that it could happen again. Like I say, we have short memories—it may happen again.

In Montana, everything that's loose or nailed down, is taxed by the property tax. Mill levies are placed against cattle and horses, equipment, buildings and land. While considerable progress has been made in Montana in keeping the valuations of cattle more fairly in line with cattle prices, the cattlemen are still hit hard, because of our high mill levies and the large amount of property necessary for a ranch. As I mentioned, it is still not uncommon for a ranch to pay from 10 to 20 percent of its gross in property taxes.

We are engaged in a reclassification and reappraisal program, as are most States. The theory behind it is good. If your property is on the tax rolls, then your neighbors should have his property on the tax rolls, too. If your property is on the tax rolls at full value, then it certainly isn't right for a truck or an industrial plant to be on at half value. The thing that concerns us is the number of people who plug for reclassification and reassessment, as a method of raising additional revenue. What they want is more valuation on the books, so that they can raise more money by maximum mill levies. They don't care about tax equality. We would have a lot less objection to reassessment programs in this country if everyone would play the

game square, and not use it as a money-raising gimmick. Theoretically, when the valuation goes up, the mill levies should go down. Usually this doesn't happen, and as a result, there is considerable opposition throughout the West to reappraisal. This opposition will not be removed until everyone plays the game according to the rules. We should make every effort to tell the story to the man on the street and to our legislators, because most of them know little about the ranching business.

Now I believe that there are two sides to the coin of responsibility. I believe that we have a responsibility as citizens to provide adequate money for operation for our schools, our custodial institutions and our local, State and Federal Government.

However, I think also, that those in public service have a responsibility to keep their programs geared to the general economy of our States and Nation, so that the taxpayers, year after year, won't be asked to shell out an additional percentage of their income.

Our legislatures have the responsibility of keeping our States from running in the red, by keeping spending within income. Our Congressmen and Senators have the responsibility of not only reducing Federal expenditures, but reducing the national debt.

The various boards and offices and bureaus in our counties, cities and State government, have the responsibility to the citizens to conduct a minimum operation to get their jobs done. After all, they are using tax funds and every dollar must come out of the pocket of some wage earner.

Responsibility in government also includes the preservation by our elected and appointed officials of our basic democratic concepts. It is noticeable that in our legislatures, there are constant efforts to remove voting provisions on whether or not levies should be imposed on property. One of the soundest principles of Government we have is to keep taxation and financial matters as close to the people as possible. That is something the bureaucrats are not interested in. They want permissive spending so that their schemes can be jammed down the throats of the citizens with no recourse.

The moral that can be drawn from the plight in which we find ourselves today, and really it is our fault, is that the average citizen is going to have to take a greater interest in government and who represents him in government if he is going to remain free and solvent to carry on his business in the traditional American way. There is obviously just one thing to do—that is, to jump with both feet into the affairs of our school districts, our cities and towns, our counties, our State and our Federal Government.

We operate under a democratic form of government. This government, be it good or be it bad, be it liberal or be it conservative, reflects the people we elect to office.

It is my opinion, that if we are to save this Nation and our States from insolvency and the ravages of inflation, we are going to have to resell some basic fundamental ideas. These ideas should not only be sold to our public officials, but to our children and our neighbors.

One is that government cannot give the people anything it has not first taken from them.

We must be more interested in keeping our freedom than in seeking security. Security means governmental protection and governmental protection means a diminishing of our freedoms.

We need to remember that government cannot nor should it, guarantee us a price or give us anything without controls.

You cannot legislate the poor into freedom and wealth by legislating the rich out of it, and what one man receives and does not work for—another man must work for and not receive.

We must remember that taxation, because it is necessary and because it is taken under constraint, is the principle danger to the maintenance of individual liberty in America.

We must remember that government can never guarantee us a standard of living and that big government spending, accompanied by inflation and deficit financing, has the power to destroy the standard of living we now enjoy.

And finally, that the free-enterprise system and the profit motive have fostered the greatest progress in this Nation the world has ever seen, while the record of socialism and communism has been one of mediocrity, corruption, poverty and terrorism.

The burden of government, whether we like it or not, is on the shoulders of all of us. Politics cannot be left to the professional politician. That is why it is imperative that you stockmen jump into public life. You have the business know-how and the experience to guide us to solvency and financial well-being.

My grandfather came from Norway when he was just a boy, and he came to Montana with a packtrain. He didn't ask the Federal Government for help, he wanted to carve something out of the West for himself—and he did. You folks in Kansas have the same heritage as Montana, your history is much the same. Independent, courageous men carved out of Kansas a civilization just as they did in Montana and they spilt considerable blood doing it. They did not ask for Federal aid. They did not ask for protection. When they needed roads, they built them. When they needed schools they built them, and they took care of their own law and order. Obviously, we cannot exist on this basis today, but the spirit should still be within us to preserve this country for our children so that they, too, can have the same opportunity that we have had, so that they can choose their own way of life, select their own careers and live without a yoke of governmental oppression and taxation around their necks.

What you have to gain by taking a vital interest in public affairs is solvency, the right to run your own affairs, and the guarantee that your children and grandchildren will live under a democratic form of government. Failure to be alive to the problems facing us today will mean continued devaluation of the dollar, additional governmental domination, less money in your pocket, and finally, a socialistic nation. The challenge of the sixties is before us. My talk can best be described as "A Case for Citizen Action in Government."

Ladies and gentlemen, it is squarely up to you.

Thank you for the honor of being here.

Loyalty Oath—National Defense Education Act

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article on S. 2929, to rescind section 1001(f) (1)—the affidavit section—of the National Defense Education Act. This article, taken from the February 1960 issue of News and Cues, published by the

Chamber of Commerce of the United States, highlights the major justification for the elimination of the affidavit.

There being no objection, the article was ordered to be printed in the Record, as follows:

BILL INTRODUCED TO CONTINUE NDEA LOYALTY OATH BUT REPEAL NON-COMMUNIST AFFIDAVIT

In response to general disapproval of subsection 1001(f) of the National Defense Education Act of 1958, Senator JOHN F. KENNEDY has introduced a bill, S. 2929, to amend this section. At present, students who receive Federal loan funds under this act and teachers attending institutes must file a non-Communist affidavit with the U.S. Commissioner of Education and also take an oath of allegiance to the United States.

Sixty American colleges and universities and nine educational organizations have voiced opposition to the affidavit while approving the oath.

S. 2929 proposes to remove the requirement for filing a non-Communist affidavit (subsection 1001(f) (1)), but retain the requirement for the oath of allegiance (1001(f) (2)).

Another bill, H.R. 10182 (ASHLEY, Democrat of Ohio), has been introduced to strike out the entire subsection, both affidavit and oath.

PROVISIONS OF SECTION 1001(F) (1)

Section 1001(f) (1) states that no person shall receive funds under the act unless he has filed an affidavit certifying that he "has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods."

Section 1001(f) (2) is simply an oath of allegiance to the United States and requires that no person shall receive funds under the act unless he "has taken and subscribed to an oath or affirmation in the following form: 'I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic.'"

S. 2929 is cosponsored by Senator JOSEPH S. CLARK, Democrat of Pennsylvania, and, by Senator JACOB K. JAVITS, Republican of New York. It is endorsed by President Eisenhower and Secretary of Health, Education, and Welfare Arthur S. Flemming who testified for last session's version of the Kennedy bill.

AFFIDAVIT OPPOSED WITH CAUSE

The affidavit of disbelief is opposed because:

It is unnecessary. All beneficiaries still would be required to take a standard loyalty oath of allegiance to the Government.

It is ineffective. No convinced Communist would hesitate to take either the oath or the affidavit.

It is discriminatory. Other groups who receive Federal loans or grants are not required to file such a non-Communist affidavit.

It defeats the purpose of the act. As Senator KENNEDY said:

"While the disloyal person would not hesitate to take it, some intelligent conscientious young people, of the very kind the act is designed to help, have refused to participate in the defense education program because of this requirement. A number of the finest institutions of higher education in the country, in all regions, public and private, sectarian and nonsectarian, have refused to accept any funds because of section 1001(f) (1), and the list is growing."

It is unnecessarily costly. It is causing a vast expanse of files at the U.S. Office of Education. These files and the personnel to maintain them are a futile waste of taxpayers' money.

Angry Young Man of 71

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article which appeared in the New York Times of Saturday, March 19, 1960, with reference to the distinguished and beloved dean of the New York delegation, Hon. EMANUEL CELLER.

ANGRY YOUNG MAN OF 71—EMANUEL CELLER

MAN IN THE NEWS

EMANUEL CELLER's capacity for righteous indignation knows no bounds. He is forever at war against monopoly, invasion of civil liberties, bias in all forms. The vigor of his attacks against conditions that to him are undemocratic belies his 71 years. Yet it helps explain why his constituency in southern Brooklyn and Queens keeps sending him back to the House of Representatives with bigger and bigger majorities.

Mr. CELLER is now serving his 38th year in the House. This fall he will be seeking election to a 20th consecutive term. Usually a winner by margins of 4 or 5 to 1, he seems sure of attaining his ambition.

He has discouraged opposition to a point where one potential rival at the polls observed:

"I guess the only thing I can attack him on is spending too much time in Washington."

Mr. CELLER's seniority in the House is topped only by that of two Southern Democrats, Speaker SAM RAYBURN, of Texas; and CARL VINSON, of Georgia. His long tenure carried the Brooklyn Democrat to the chairmanship of the House Judiciary Committee in 1949.

LEADS RIGHTS BATTLE

It is as judiciary chairman that he is leading the floor fight in the House for the passage of a strong civil rights bill.

Never one to hide his views, Mr. CELLER has kept a mimeograph machine in his office busy for years grinding out statements keyed to major domestic and world news developments. He warned of the rise of nazism, espoused freedom for India, denounced immigration curbs and battled his good friend, Franklin D. Roosevelt, on court reform.

Excellent as was his news coverage, he early saw the value of radio and television for a man in public affairs. Since last fall, he has been a regular panelist on WNEW-TV program, "Metropolitan Probe." Only occasionally does he forget that he is the interrogator, not the guest.

His antitrust subcommittee has investigated industries as disparate as steel and newsprint, baseball and television. Among laws in this area that bear his name is one, passed a decade ago, to prevent mergers achieved by acquisition of assets that tend to lessen competition.

But for all the deadly earnestness with which he approaches public affairs, the Representative is a genial companion with an excellent sense of humor that he often turns on himself.

He tells the story, for example, of the Brooklyn woman who asked, after he had made a stem-winding, rather florid speech, whether the talk would be printed. He replied with a smile: "Possibly posthumously." And she, quite pleased, said she hoped that would be soon.

With children, Mr. Celler unbends even more. He turns linen napkins into white rabbits that jump, stuffs lighted cigarettes in his ear and has a host of other parlor tricks.

Born in Brooklyn on May 6, 1888, the Representative got his schooling at Boys High School, Columbia College and Columbia Law School. He was married in 1914 to Stella M. Baar. They have two daughters, Jane and Judith, and two grandchildren, daughters of Judith.

He is a member of the law firm of Weisman, Celler, Allen, Spett, and Sheinberg, but he is lucky to put in a day a week—usually Friday—at his New York office. Golf and tennis, too, have been put aside, but he continues to give much of his leisure time to reading and music. Biography, the classics, and opera are his favorites.

A supporter of New Deal and Fair Deal, Mr. Celler once again will be a delegate to the Democratic National Convention. But this time Senator STUART SYMINGTON of Missouri, and not Adlai E. Stevenson, will be the man he is backing for the presidential nomination.

"I'm being practical," he says. "Others may have more appeal, but this man has a record, ability, and can win."

Disarmament and Nuclear-Weapon Testing

EXTENSION OF REMARKS

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES
Monday, March 21, 1960

Mr. MORSE. Mr. President, as you know, I strongly endorsed Adlai Stevenson's call for a nuclear test ban in 1956, and I have sponsored test-ban resolutions since 1957.

Recently, on the floor of the Senate, I made clear that, in my opinion, the United States and Russia should be brought to judgment before the United Nations in regard to the frantic, immoral armament race they are forcing upon mankind. I strongly believe that the United Nations has not been given the opportunity to exercise the jurisdiction available to it under the charter; and, again, I urge that the forthcoming summit conferences be held under the canopy of the United Nations, with the Secretary General of the United Nations presiding.

Not long ago I received from the Committee on World Peace, of the Oregon Conference of the Methodist Church, a communication giving me their views of that conference on the subjects of disarmament and nuclear-weapons testing. I should like to bring to the attention of my colleagues and all the people of America the intelligent, Christian position of this fine organization; therefore, I ask unanimous consent that the letter be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the Record, as follows:

TRINITY METHODIST CHURCH,
Toledo, Oreg., February 16, 1960.

HON. WAYNE MORSE,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR MORSE: As secretary of the Committee on World Peace of the Oregon Conference of the Methodist Church I have been instructed by said committee to write you concerning the position of the Oregon Conference of the Methodist Church on the subjects of disarmament and nuclear-weapon testing. This committee felt that these views are relevant to a number of issues which are before our Nation at the present time.

These views as adopted by the Oregon conference in May of 1959 are as follows:

"4. Disarmament: The United States should assume greater initiative toward bringing national armaments under U.N. inspection and control in a process directed toward their consequent reduction, limitation, and eventual abolition.

"5. Nuclear power: We are totally opposed to the resumption of nuclear-weapon testing under any circumstances. We take this stand for the following reasons:

Nuclear testing can continue only if we accept the proposition that some genetic and somatic damage from radiation is socially tolerable. We believe that Christian love means that any damage to any persons is socially intolerable. Particularly is this true when it appears that much of this damage would occur in persons who are not citizens of the testing nations. The argument that damage may occur to a small percentage (0.01 percent to 0.04 percent) of world population is irrelevant. Such a percentage means 125,000 to 4 million people, many of whom will suffer 100 to 200 years from now. To continue testing is to perpetrate a folly in thoughtlessness and in irresponsibility. (Source of statistical information: The U.N. Scientific Committee on the Effects of Atomic Radiation quoted in Consumers Report, March 1959, vol. 24, No. 3.)

"We are gratified by progress that is being made in the development of nuclear energy for peaceful purposes and urge its further development."

Sincerely,

VERNON A. GROVES,
Secretary of Committee on World
Peace, Oregon Conference of the
Methodist Church.

Where Defense Is Weak

EXTENSION OF REMARKS

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Monday, March 21, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Washington Post of Sunday, March 13, 1960:

WHERE DEFENSE IS WEAK

The Army Chief of Staff, General Lemnitzer, has made a compelling case before a House Armed Services Subcommittee for an adequate troop airlift. The lack of enough available planes to transport even one of the Army's present 14 divisions to a trouble spot quickly is a major deficiency in the country's limited war preparedness. Gen. Maxwell

Taylor has developed the point ably in his book, "The Uncertain Trumpet".

There is no assurance that a future emergency would permit so leisurely an approach as that in Lebanon, where the assemblage of Army personnel and equipment for peaceful police duty required many days. Under present circumstances it would take 25 or 30 days to move a division with equipment to a remote part of the world. The diversion of part of the present civil air fleet would not provide a suitable answer. There would be other military demands upon such aircraft; and any large diversion would cripple essential civil traffic.

What the Army would like is enough airlift to transport one battle group a day with equipment, up to a division, to any part of the world. This would permit the assembly of a division-strength force of 12,000 men with logistic support within a week. With present types of transport aircraft perhaps 500 of all varieties would be required on a standby basis in the assumption that more than one round trip could be made within a week. The expense would be substantial, but the risk of unpreparedness also is substantial.

Nor are the Army's airlift and weapons needs the only limited war deficiencies. The Marine Corps wants additional airlift; and 25,000 additional men for the present 175,000-man force would add a great deal of reassurance about the country's ability to respond quickly in limited war situations. Naval carrier aircraft, being purchased at a rate of about 650 a year, are not sufficient to replace the 700 that wear out or are destroyed in accidents—let alone to maintain the 12- or 14-carrier force that the country ought to have to serve the psychological purpose of a policeman on patrol in the Far East and Mediterranean.

With all the discussion of the missile program there is a danger that this essential aspect of defense needs may receive inadequate attention. That is why the hearings and report of the Rivers Subcommittee of the House Armed Services Committee can perform such an important service. Defense needs all down the line have been shorted or neglected; but the neglect in the limited war area has been, if anything, relatively the more serious.

The strategic forces, of which missiles form an increasingly important part, obviously are the first line of defense. But if the deterrent actually deters and establishes a sort of balance of retaliatory power, limited war becomes the more probable threat. To be forced to fight it with massive weapons for want of sufficient limited war forces and the airlift to transport them would be to face the unappealing dilemma of declining to respond or of inviting nuclear holocaust.

Medical Care for Our Older Citizens

EXTENSION OF REMARKS

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES
Monday, March 21, 1960

Mr. KENNEDY. Mr. President, I recently received a letter from Dr. Allan M. Butler, professor of pediatrics at the Harvard Medical School and chief of the children's medical service of the Burnham Memorial Hospital for Children of the Massachusetts General Hospital, discussing the bill I offered to amend the Social Security Act to provide medical care for our older citizens. It covers an

aspect of the problem that merits consideration. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HARVARD MEDICAL SCHOOL,
MASSACHUSETTS GENERAL HOSPITAL,
Boston, Mass., March 17, 1960.

Senator JOHN F. KENNEDY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR KENNEDY: I have read with interest your bill amending the Social Security Act so as to include certain aspects of medical, hospital, and nursing home care among the benefits of persons eligible for old-age and survivors insurance benefits.

The provision of insurance against the costs of diagnosis, ambulatory or outpatient clinical hospital care properly corrects the overemphasis of the Forand bill on surgical care. I can appreciate that the insurance against the cost of doctors' professional services was omitted to lessen the American Medical Association's opposition to the bill. This opposition, however, is voiced by the successful and older doctors who represent the dominant forces within our State medical societies and the AMA. They can glibly make the generous proposal that doctors reduce their fees to the medical indigent, as they contribute little to the care of the indigent aged and so will lose little income or incur little burden by their proposal. On the other hand, the young doctors, who have had relatively little voice in this AMA proposal, are the ones who provide most of the medical care for the majority of the present 15 million aged, who, unable to pay for private doctor care, come to our urban public and private charity hospitals. These young doctors can least afford to carry such a financial burden; particularly as the financial burden will almost inevitably increase as better medical care prolongs the average life span. Hence, one wonders if it is quite fair to the younger doctors of the country to omit provision of insurance against professional services.

The AMA has also not infrequently suggested providing cash indemnity instead of medical services. Ample experience shows that this is not an effective way to meet the cost of medical care. Too high a percentage of the patients involved have become accustomed to our charity tradition of medicine. They, therefore, if short of money, spend the cash benefits to satisfy other needs and fail to remunerate the doctor or pay the full hospital charges. I trust, therefore, that the Congress will not make this compromise in order to satisfy AMA objection.

In any legislation permitting the public to insure against the cost of almost inevitable illness in old age, consideration should be given to the quality of care thus purchased. In this connection I would like to suggest that the word "accredited" be considered as a substitute for the word "licensed" in referring to hospitals in this bill. There is, as you know, an official accrediting organization composed of representatives of the American Medical Association, the American Hospital Association, the American College of Physicians, and the American College of Surgeons, whose accrediting of hospitals is generally recognized by both the public and the profession as a desirable designation of standard. The use of this standard throughout the bill would lessen the possibility that the public's money is expended on care of poor quality in hospitals that do not meet the standards required by the accrediting board.

Quality of care would also be strengthened by specifically charging the advisory council with the responsibility of protecting the

quality of medical care and wording the bill to strengthen the advisory council's role in this respect.

If, at any time, you feel I, as a person, who has devoted 30 years of professional endeavor to trying to improve the quality of medical care, can possibly be of any help in this respect regarding the legislation concerning medical care of the aged, I hope you will not hesitate to call on me.

Very sincerely,

ALLAN M. BUTLER, M.D.

Diversion of Water From the Great Lakes

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

MR. DULSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include two excellent editorials from leading newspapers in Buffalo, N.Y., concerning the diversion of water from the Great Lakes:

[From the Buffalo Courier Express, Mar. 15, 1960]

LAKE DIVERSION FOES BOLSTER CASE

The longstanding resistance of New York State to Chicago's proposal to increase its diversion of water from the Great Lakes for sanitary purposes fortunately has more weight than ever before because of the State's development of Niagara power. With the Illinois city increasing its pressures with some success to obtain authorization for the diversion, opposition in other States presumably will need new forceful arguments to defeat the proposition.

The State power authority's Niagara power development should bolster the case against the diversion at Chicago. It should be evident that any reduction of the flow at Niagara will be a detriment to the power project and it ought not to be difficult to demonstrate that rates based on the present flow will be adversely affected if Chicago is allowed to cut into the water supply at this end of the Great Lakes system.

It already has been stated over and over for the record that diversion would be disadvantageous for navigation and would lower water levels at Great Lakes ports. Yet Chicago continues year after year to press its case and has succeeded several times in getting congressional authorization for further diversion. Presidential vetoes were necessary to head it off.

The State power authority was given the opportunity to present its case before a special master appointed by the Supreme Court at a hearing in Niagara Falls. The evidence adduced should be convincing enough to put an end for all time to Chicago's perennial effort to gain further advantage over other Great Lakes cities by increasing its take from the common water supply.

[From the Buffalo Evening News, Mar. 16, 1960]

SAVE NIAGARA BEAUTY

Canada may seek a change in the 1950 Niagara treaty to permit a greater diversion of water from Niagara Falls for power purposes. Under that treaty no less than 100,000 cubic feet a second (about half the normal flow of the river) must go over the falls in daylight hours during the tourist season and no less than 50,000 cubic feet per second at other times. The proposal under study by Ontario

hydro officials would reduce the 100,000 cubic feet per second minimum to 80,000.

In the view of some Canadian officials, the additional diversion is feasible because of the great success of the \$12,500,000 remedial works built at the falls after the 1950 agreement. Those works, however, were designed to protect the scenic beauty of the falls from the diversion sanctioned by the original treaty, not to compensate in advance for any future diversions. Furthermore, the remedial works have done nothing for the lower river, between the cataracts and the point where the diverted water is returned to the river channel, near Lewiston.

It may be taken for granted that the power appetite on both sides of the river will continue to grow indefinitely. But the time has surely come to call a halt to any further diversions of Niagara water. Little enough water flows over the crests now. To reduce it again would only further impair the beauty and majesty of one of the world's great spectacles.

All agencies drawing water from the Great Lakes Basin are thankful for the blessings of this great body of water and have the courtesy to return the volume of water, after use, back into the same basin of water from which it was drawn.

Again I state that how well we care for the resources afforded us by the Great Lakes will depend the future happiness and prosperity of the people in the communities bordering these Great Lakes. The fresh water bodies of the Great Lakes are one of nature's generous gifts to America, and in no way can be considered as municipal in scope, to be exploited, polluted, or plundered, without due regard for the rights of everyone concerned.

The Food Additives Law

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 21, 1960

MR. MORSE. Mr. President, I hold in my hand an article, published in Business Week, which gives a helpful and interesting account of the progress being made in the application of the 1958 food additives law.

I particularly call attention to the part of the article headed "FDA Overload." The problems faced by the Food and Drug Administration in the policing and enforcement of this new law should be borne in mind by the Congress in considering appropriations for the Department of Health, Education, and Welfare. We must not let this statutory protection for consumers fall through lack of funds for enforcement.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THAT PESKY FOOD ADDITIVES LAW

The U.S. food industry entered a new era of regulation this week when a tough new food additives law went into effect.

Affected is the food industry itself plus those who supply it, including drug makers, fertilizer, and pesticide makers, the packaging industry, chemical producers—just about any industry whose products one way or another wind up directly in or next to food.

Actually, the changeover under the amendment to the Food, Drug, and Cosmetic Act that was passed in 1958 hasn't caused any wholesale withdrawal of food products or even the additives used as flavoring, preservatives, or in packaging material. Food industry spokesmen had feared that a number of the 2,000 food additives now in use might suddenly be banned once the March 6 deadline passed. Actually, none has been banned so far and probably only a handful will be.

Confusion: The new law still has the food industry and its suppliers scrambling to get themselves into a position that meets its technical requirements. And this has set off a raft of testing programs and a good deal of confusion in industry.

The reason is that under the act, the burden of proving that any chemical added, directly or indirectly, to a food product is harmless when eaten now falls on the food company—whether or not the additive has been used before. Previously, a company could use a new additive or packaging material and it was up to the Food and Drug Administration to prove it was harmful under the conditions used. Now any time FDA becomes fearful of the 100 percent safety of the use of a given product, it can ban the product from the market and it's up to the companies to prove they are innocent.

Actually, within the last several years a number of products have been pulled off the market by FDA under the old law. For instance, an antibrowning agent for frozen peaches, caught in the first shipment of goods, was found to be highly toxic. A preservative widely used in the 1940's was found to be toxic in continued doses and was banned. A flour-aging compound used for years was found to cause fits in dogs. Under the new regulation, these products would presumably never have gotten on the market because they would have had to be cleared in advance, with the company submitting the test data to FDA.

Six hundred exceptions: The industry has been saved the expense of testing some 600 additives commonly recognized as safe by scientists—things like salt and pepper. These are on an approved "white list." Another 200 have been given extensions of time for running tests. Petitions for clearance, with supporting test data, have been submitted to FDA for several hundred more. On these, FDA has told producers they can go ahead using them under a year's extension of time until the agency gets around to careful examination of the petition and either sets a tolerance for the chemical or disallows it.

FDA officials figure that probably no more than a half a dozen chemicals now in use will have to be banned. A substance used in some soft drinks looks questionable; so does an ingredient of certain salad oils. Carbon black (for jelly beans, drug coatings, etc.), ultramarine blue, and oil of wintergreen were taken off proposed lists of exemptions because they are not obviously safe, but will probably be given a tolerance in due time.

Carcinogens: More difficulty creeps in where a compound is found to be capable of causing cancer. The new law flatly bans a chemical that is a carcinogenic agent in any amount whatsoever. Actually, FDA has always forbidden such agents, but under the old law they could be on the market for months or years before they were discovered. And it is this cancer ban that gives industry its greatest concern.

Newly refined testing methods are turning up traces of carcinogens where they were not discovered before. Companies fear they might pour a million dollars into research on a product, only to discover that it contains an almost imperceptible amount of a cancer agent. Makers of agricultural chemicals are particularly concerned, because it is often difficult to tell how much of a new pesticide used on apples will end up in the applesauce. The pesticide industry claims a number of research products are already being abandoned for just that reason. The shadow of the cranberry incident still hangs over the industry—a case where a weedkiller was misused before tests showed it to be a cancer-causing agent.

I. INDUSTRY'S VIEW

Food companies themselves aren't saying much openly about what the law means to their products—an obvious protective device because of the effect on sales. The industry believes it does a terrific job in delivering good, safe food to the public. But now, since the cranberry scare, consumers are peering at labels. A seafood processor got letters from consumers saying they noticed some funny chemical additive on the label. It has always been there, and happens to be safe. But people are watching.

Privately, though, the industry isn't happy with the law. One big manufacturer said the law poses no problems for the big companies, but that smaller outfits are hit directly. They don't have the equipment or the money to hire outside laboratory tests. One spice company says: "If we have to clear 'em a lot of 'em are going off the market. It's cheaper than clearance."

Survey results: According to a confidential survey made shortly before the new law came into effect by Food Engineering, a McGraw-Hill publication, 80 percent of the companies represented by 40 leading food executives do not have formal clearance on all their additives. About two-thirds of these companies plan to use substitutes for the noncleared additives, but only a third think that substitutes will be entirely satisfactory. What's more, a third of the companies may have to stop production of at least one item. They see some reduction in sales as a result of changes in additives and packages, and more than half think costs will increase. A common complaint, too, is the cancer clause, which they think unworkable and which should be rewritten to set some sort of tolerances.

String of demands: What is happening now is a massive chain reaction and this, probably as much as anything, has the entire food industry and its suppliers in a tizzy.

Already, big supermarket chains are beginning to demand guarantees that food products comply with the new regulation. Food companies themselves are pushing the packaging industry for conforming warranties; the packagers in turn are asking suppliers of chemical products and paperboard and other materials for guarantees.

In fact, according to the Packaging Institute, the new law has thrown a monkey wrench for the time being into buyer-seller relationships—everybody wants a continuing guarantee of compliance from his supplier. If he can't get it, he is reluctant to use the product since it is no defense to say, "I don't make the chemical; I'm not responsible." You are responsible if you use the chemical, unless the supplier guarantees clearance.

II. IN THE BAG

It's in the packaging field where complications are causing the most confusion. The industry thinks FDA finally realized that packaging under the law is more involved than was anticipated and numerous extensions have been requested and presum-

ably will be granted. One of the big tonnage items, polyethylene, which had been under question, apparently will be cleared. The industry working with FDA developed new ways of making the plastic to overcome certain objections. Though not formally approved, FDA is ready to give the material clearance.

As a result the industry thinks it is in pretty good shape. Associations—those for adhesives, petroleum products, and the like—have mounted jointly financed testing programs.

Oil industry: The oil industry, which may seem far removed from a food and drug law, was one of the earliest to recognize the effect the law would have on its business. Wax, for instance, is a major product used in packaging and an important one to the oil industry. This is especially true since the widespread use of paper milk containers, but also applies to waxed paper for wrapping, say, soda crackers.

John Tuttle, Esso Standard Oil Co. specialist, says the industry has been sitting up nights with its customers helping them read the law. Customers in turn are having to learn just how their products are used.

Question of wax: The oil industry, through the American Petroleum Institute, early in the game sponsored a \$150,000 a year testing program for wax products at the Chicago Medical School. As a result, it has been able to submit to the FDA a petition covering two classes of wax—API type 1 and API type 2—each of which comes from a different source. Specifications have been written for them. On type 1, the oil industry wants FDA to certify the wax as harmless. On the other, it is asking for an extension to continue tests. Researchers are almost certain the type 2 wax is harmless, but there just wasn't sufficient time to run the tests to their ultimate conclusion. The tests involved the feeding of wax to rats—and it took some doing to get the rats to eat the wax to the extent required. Finely powdered wax did the trick. Tuttle adds that they have a lab full of healthy rats out in Chicago.

Meantime, though, wax producers are being asked by some users of paper containers to assure them that the wax is approved. The industry can tell them only that the API petition has been filed and acknowledged.

Collective tests: Adhesive manufacturers, too, have pooled resources to provide the needed data for FDA clearance. Working with their suppliers on the tests, they have submitted a list of 195 chemicals used in food packaging adhesives, 4 of which were officially removed by FDA. The industry presumably will get an extension for 190 other chemicals, 19 of which are compounds and will have to be broken down into 35 basic chemicals before FDA signs the extension order. Some of the adhesive chemicals are on other lists, such as the paper and paperboard chemicals which have already received clearance.

Kenneth Loomis of the Adhesive Manufacturing Association says, "There is still a lot of work to be done and the FDA needs the extra 12 months as much as we do."

It is certainly true, though, that a lot of packaging companies failed to take heed soon enough of the full implications of the law. But the pressure from buyers on them now that the law is effective has waked them up. As late as last week, a New Jersey plastic subsidiary of a big company was scurrying around trying to find out what the law was all about because, it told one expert, it had already received four letters from customers wanting a continuing warranty that its packaging material had clearance. He had made no attempt to get clearance.

III. FDA OVERLOAD

Meantime, the FDA is bearing down hard on the stack of several hundred applications for tolerance and clearance that were filed in the last few weeks before the food additives law deadline passed. So far, only a half dozen—a pesticide, two antioxidants for animal feed, some antibiotic preservatives—have gotten formal clearance. But officials feel few in the pile will have to be turned down.

Coming up soon again is the sticky problem of lipstick. The ban on lipstick colors has been confusing. Coal-tar colors (including many reds) were found recently to cause liver damage when used in large amounts, although they are safe in small amounts. For technical legal reasons, these colors are not included in the new food additive law which permits FDA to set tolerances (except on cancer agents). Therefore, the colors had to be banned entirely. Now Congress is nearing completion of a color additives bill which, if enacted, will create coal-tar colors the same as other additives. The industry hopes the bill goes through before the ban on such colors becomes effective.

Pensions for Veterans of World War I

EXTENSION OF REMARKS

OF

HON. GEORGE E. SHIPLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. SHIPLEY. Mr. Speaker, early this year I introduced H.R. 9466 which provides payment of pensions to veterans of World War I. A number of other Members of Congress have introduced such proposals and interest in growing in providing such pensions. Recently the national junior vice commander of the Veterans of World War I of the U.S.A., Inc., outlined the legislative objectives of this organization to the House Committee on Veterans' Affairs which included monthly pensions. The question is shall these veterans of World War I receive an across-the-board monthly pension of \$100.

The truth is that the veterans of World War I are indeed a special and unique group of veterans but only in the sense that as of now the discrimination has been against them and not for them. They have not been treated on a par, in terms of veterans' benefits, with the veterans of other wars. In other words there is a residual debt owing to the veterans of World War I based on the fact that the Congress and this Government has shown greater—and I may say—wiser largesse for the veterans of World War II and the Korean war. There was no GI bill of rights for the veterans of World War I as there was for the veterans of the other two recent wars. Those who complain that an across-the-board pension for veterans of World War I would create an unfortunate precedent that would mean a similar across-the-board pension for the other veterans, are thus in error. It would create no such precedent. The reason simply is that this proposed pension is not for the purpose of giving the World War I veterans what other vet-

erans did not not receive, so that to be fair other veterans should also be entitled to it.

On the contrary this pension is intended to make up to the World War I veteran for the difference in benefits between what he received and what the World War II and the Korean veterans received. It does not bring the pension idea out of joint so that it will have later to be corrected in favor of veterans subsequent to World War I. Rather it brings into a relationship of justice the overall gratitude of the country toward the World War I veteran so that the benefits he receives will—at long last—be brought up as equal as may be to the immense and intelligently conceived benefits that have been accorded the veterans of our subsequent two wars.

The veteran who went soldiering in World War I lost a fixed value—so to speak—out of his life and his career. This he was never permitted to retrieve as the other and subsequent veterans were permitted to retrieve it through the GI bill of rights. They got some benefits to be sure but nothing in proportion to what the country gave the others. This proposed pension of \$100 a month corrects that inequality. Since it corrects the inequality it does not create a precedent.

The very justice of the World War I veterans' case should make it publicly acceptable and I hold the people of the United States generally would approve it. Moreover the statistics from a fiduciary standpoint show that such a pension is sound arithmetically and far from a burden to the Federal budget in relation to the results it would produce. There are, as of December 1959, 2,724,000 World War I veterans. The cost of the program therefore in the first year would come to about \$1.9 billion. This would be gradually but consistently reduced since the average age of World War I veterans is now 65.7 years. For example some 9,000 World War I veterans died in the 1 month preceding December 1959. For the second year the program would come, according to estimates from the Veterans' Bureau, to something less than \$1.780 billion. The third year it would be less even than \$1.7, and so on. The sum is formidable to be sure. But it is not by any means an insurmountable problem in a Nation with a gross national product now rapidly climbing to \$500 billion annually. The pension is acceptable to the American people not only because it is financially feasible but because it is morally right and corrects an injustice that cries to high heaven for judgment.

That Camel Again

EXTENSION OF REMARKS

OF

HON. PRINCE H. PRESTON

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. PRESTON. Mr. Speaker, under leave to extend my remarks in the Ap-

pendix of the RECORD, I include the following editorial which was published in the Lyons Progress of Lyons, Ga., on March 3. The editorial clearly points out the dangers inherent in the enactment of the so-called Forand bill:

THAT CAMEL AGAIN

Some years ago a proposed bill which would have fastened compulsory Government health insurance on the people of this country was in the headlines. The bill got nowhere for the plain reason that a majority of the American people didn't want it and were opposed to socialized medicine, Government-blessed medicine, and political medicine.

That particular bill is dead. But a relative is very much alive. It is found in the proposal to provide the 16 million people who are eligible for social security benefits with Government-paid medical, hospital and nursing home care.

On the surface, this has a humanitarian appeal. But the inescapable fact is that it would establish socialized medicine for a large segment of the population—and that, if history tells us anything, it would be limited only temporarily to that segment. The next inevitable step, once the precedent were established, would be to lower the age limit and broaden the field of coverage. It would be the old story of the camel which got its nose in the tent and moved on until it occupied the whole tent.

The cost would be enormous—\$2 billion a year to begin with, according to the estimates, and much more as time wore on. The expense would send the social security tax—already scheduled to reach 9 percent of the Nation's payroll—to outer-space limits.

Worst of all, medical authorities are convinced the bill would result in poorer, not better, health care for the American people. Medical care is not susceptible to production-line techniques—the kind of techniques that Government would certainly impose once it took over and started using the public's money to pay the bills.

Kennedy and Nixon

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. GEORGE. Mr. Speaker, the decisive vote in New Hampshire on Tuesday, March 8, seems to be an important step in indicating the identity of the presidential nominees of the major political parties. The tremendous vote accorded each indicates the high esteem in which Senator KENNEDY and the Vice President are held by members of their respective political parties.

The vote-getting ability of these two men was recognized in a recent editorial by Angelo Scott, editor and publisher of the Iola Register, and an astute political observer. Angelo Scott speaks frankly of the results of the New Hampshire presidential primary.

Mr. Speaker, by previous consent I include the editorial as part of my remarks:

[From the Iola (Kans.) Register]

PREVIEW

One swallow does not make a spring. (Don't we know that in Kansas this year.)

Neither does one primary make a nomination for president. But you just can't deny the impressive showing made by JOHN KENNEDY in New Hampshire this week.

It is true that he had only nominal opposition. But the number of votes he got is all the more impressive on that account.

More than twice as many people as had ever voted for a Democratic presidential candidate before took the trouble to cast their ballots for KENNEDY just as an expression of encouragement and good will. And that is a record you can't laugh off.

It means that the Democrats of New Hampshire, at least, are not concerned over the fact that KENNEDY is a Catholic, too young, too liberal or anything else. They like him and gave him a whopping endorsement. They proved what KENNEDY has always contended that if the people are given a chance, they will vote for him.

They will have another chance April 5 when the Wisconsin primaries are held and when KENNEDY and HUMPHREY will meet head on in a test of strength. And if they go for KENNEDY as enthusiastically there as they did in New Hampshire, that young man is going to be mighty hard to stop.

Incidentally, RICHARD NIXON made almost as impressive a showing in New Hampshire as KENNEDY did.

He had no opposition whatever, yet he pulled almost 10,000 votes more than the previous record high, established in 1956 by President Eisenhower.

You can't laugh off that kind of endorsement either. It certainly ought to put an end to the last remnants of the "Nixon can't win" talk. He obviously is as popular with New Hampshire Republicans as KENNEDY is with New Hampshire Democrats.

In fact, you may well have seen a preview this week of the two principals who will put on the big show next November.

Postal Facts

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial which involves a timely issue of a postal rate increase that appeared in the Boston Daily Record on March 21, 1960:

Postal Facts

President Eisenhower's special message to Congress urging another postal rate increase presents one of those seemingly plausible arguments which is easily demolished by facts. Let's consider the facts.

In essence, the President says the Post Office is losing a lot of money. Therefore, mail rates should be raised to wipe out the loss, or at least come close.

This position, which apparently came to the President special delivery from Postmaster General Summerfield, is based on a fallacy.

It is the error of assuming the Post Office is a business. In reality, in historical precedent, and in everyday fact, it is a public service. It cannot possibly be conducted as both.

It is true it costs taxpayers money to run the Post Office Department. It also costs taxpayers money to run the White House, the Commerce Department, the Federal judi-

ciary system, the FBI—almost every Federal activity.

The costs of such public services are taken for granted. But the costs of the postal service are labeled "deficit" and become issue.

Why? The answer is that the Post Office takes in a great deal of money, about \$2½ billion a year. No other Government department produces anywhere near as much revenue. But because the postal establishment costs more to operate than it takes in, and because a law requires annual reports comparing receipts with costs, the Post Office is singled out and charged with operating at a deficit.

Postal rates actually are a form of taxes. The Post Office does not keep the money it gets for selling stamps, but turns it into the Treasury. Thus, in urging a postal rate increase the administration is seeking an indirect tax increase.

Finally, the theory that the Post Office is a business doesn't make sense. Would a business charge the same fee to deliver a message across the street as it does to handle a letter from Florida to Alaska? Would a business operate branch office in every hamlet in the Nation, most of them losing money because of slight patronage? Would a business take on sideline jobs without remuneration, like selling duck stamps or registering aliens?

The Post Office is an essential public service, worth what it costs to operate.

We suggest Mr. Summerfield ought to stop proclaiming (and complaining) how much his Department has lost and concentrate on getting the mails delivered as speedily and economically as possible.

And Congress ought to ignore the request for another boost in rates.

Communist Infiltration in Certain American Churches

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NEW YORK CITY COLONY,
NATIONAL SOCIETY OF
NEW ENGLAND WOMEN,
New York, N.Y., March 10, 1960.

Hon. FRANCIS E. WALTER,
Chairman, House Un-American Activities
Committee, House of Representatives
Building, Washington, D.C.

DEAR CONGRESSMAN WALTER: On behalf of the New York City Colony of the National Society of New England Women, I wish to commend you for your forthright stand with respect to the criticism that has arisen about the inclusion in an Air Force manual reference to Communist infiltration in certain of the American churches.

Unimpeachable evidence has been presented establishing the truth of such infiltration. This would only leave, therefore, as the only legitimate basis for criticism the question as to the relevancy and utility of the inclusion of this fact in a manual intended to alert servicemen to the realities of the Communist threat and the tactics of the Communist apparatus. In turn, then, the question is raised as to whether any of the thousands of servicemen will be better equipped to detect, understand and counteract the forces of communism as a result of

their knowledge of the insidious manner in which these forces reach into and subvert even the highly respected and trusted American pulpit.

The knowledge may be of considerable value to the servicemen, particularly, but not exclusively, those who are in direct contact with their churches. Without such knowledge it must be apparent that the subverted churchmen (whose humanitarian motives need not be dissected) may have an overwhelming influence on the unsuspecting serviceman.

Therefore there is but one question to be decided on this issue and that is whether or not the information is truthful and well-founded. The voluble attacks and all efforts made to distort the real significance of this question by reference to frivolous material which has apparently crept into certain manuals should be regarded as inimical to the real interests and efficiency of our services and are calculated to serve as a shield for forces which should be definitely exposed.

It would be hoped that the great majority of the American churchmen recognize the cancer which has developed in their own profession and are more anxious than other citizens to have the defections brought into the open.

Please investigate the situation immediately and thoroughly and make your findings available to the public.

Sincerely yours,

ELIZABETH S. COWLES,
Chairman, National Defense.

Defying Commonsense

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. REECE of Tennessee. Mr. Speaker, of the many comments regarding President Eisenhower's 1960 farm message to the Congress, I find one of the most thoughtful and thought-provoking editorials appeared in the February 10 edition of the Knoxville, Tenn., News-Sentinel.

Because I believe this editorial aptly summarizes the problem facing wheat farmers and agriculture in general today, let alone the Members of Congress, I include it in the Appendix of the RECORD.

The editorial follows:

DEFYING COMMONSENSE

Surplus crops are the farm problem. The price-support program built this overabundance. It continues as a strong financial incentive to produce more and more. This, says President Eisenhower, is a situation which "defies commonsense." That's stating it mildly.

In his special message to Congress yesterday, the President indicated his general preferences on reform but expressed a willingness to go along with anything within reason which Congress may suggest. Solemn regard for the Nation's welfare should prompt a comparable cooperative spirit among the lawmakers.

The wheat surplus properly was emphasized in the message. Wheat provides only 6 percent of the farm income. Yet the Government has \$3,500 million tied up in wheat—30 percent of the total currently in-

vested in farm support operations. And, if the present system is continued, that will only be the down payment.

Basically, President Eisenhower would start solving the problem by gradual withdrawal of subsidy incentives to overproduce. He would free the farmer of arbitrary controls by eliminating both acreage allotments and marketing quotas for wheat. Price supports would be continued but would be a percentage of recent average market prices, rather than a higher figure based on parity.

The effect of this system, long urged by Secretary of Agriculture Ezra Taft Benson, would be to stop the marginal production of wheat at a guaranteed profit. At the same time, it would insure the efficient producer against disaster.

As further aids to retreat from overproduction the President would:

Gradually expand the conservation reserve program up to 60 million acres. This would more than double the amount of land now withheld from production by this program. In his budget message the President asked for 9 million additional acres in fiscal 1961, bringing the total to 37 million acres. Expanding population will require the use of this land years hence. Meanwhile its cultivation swamps the market.

Be willing to consider payments in kind reduction of surplus crop acreage. This is an interesting idea, advanced by farm groups. A wheat farmer, for instance, would stop growing wheat, temporarily, and draw the amount of his usual crop from Government storage. Properly managed, this scheme could reduce Government cash outlays, reduce surplus supplies, and cut storage costs.

The President's recent trip strengthened his belief in the food-for-peace program which uses surplus crops to feed hungry people abroad. He wants greater emphasis on research to find new uses for farm products, also more attention to the rural development program, finding new sources of income in depressed agricultural areas.

In none of this is there any quick cure for deep ills accumulating from generations of politically inspired tinkering with the fundamental laws of supply and demand. Reform will take a long time and objective consideration is admittedly difficult in a presidential election year. But, somewhere short of disaster for American agriculture, a start must be made. The President's suggestions are constructive to that end.

Ex-Presidents in the Senate

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Nunda News of Nunda, N.Y., which appeared on February 25, 1960:

James A. Farley, who has been recognized for 30 years as one of America's shrewdest political minds, writing in This Week magazine says, "We've got to stop wasting our country's best leadership." He wisely suggests a simple but highly important step be taken at the present session of Congress by passing a statutory law making all former Presidents lifetime, nonvoting Senators-at-Large—a sensible proposal that would strengthen our country in the critical days ahead.

Fiscal Planning Committee

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. BARR. Mr. Speaker, today I introduced into the House a resolution establishing a Committee for Fiscal Planning. This committee would be made up of the ranking Democratic and Republican members of the Appropriations and Ways and Means Committees, plus one Member of Congress to be appointed by the Speaker.

This five-man committee would be directed to start a continuing study of the finances of the U.S. Government in order to coordinate our revenues and our expenses and to plan for the orderly reduction of the national debt. This committee is directed to report its recommendations regularly to the Congress and to the taxpayers.

Mr. Speaker, I cannot claim that this is a completely original idea. Frankly, it is a variation of an idea introduced by my predecessor, the Honorable Louis Ludlow, in 1940 and again in 1943. Mr. Ludlow served for many years as a distinguished member of the Appropriations Committee and was unquestionably an outstanding authority on the financial problems of the United States.

This is the second of a series of resolutions which I intend to introduce this year on government finances. The first resolution which I introduced on February 25 asked simply for a rollcall vote on every appropriation bill. That resolution was designed to let the taxpayers know how each Member votes on every money bill.

This current resolution is intended to establish a formal cooperation between the Congressional committee that spends our money and the committee that raises the money. As Mr. Ludlow put it "It is an attempt to make the tongue and buckle meet."

At current levels the United States will spend \$1 trillion in the next 10 to 12 years. During the administration of Franklin Roosevelt this Government spent \$374 billion in 12 years; under Harry Truman we spent \$395 billion in 8 years; and during the administration of President Eisenhower we spent \$490 billion in 7 years. This 27-year span marked a certain loss of control by the Congress over spending. But the responsibility for providing this money rests squarely on the House of Representatives. The Constitution clearly imposes this responsibility on the House and reflects the determination of Madison, Hamilton, Washington, Franklin, and their colleagues in the Constitutional Convention to keep the power to spend and the power to tax close to the people. This was their reason for limiting the term of Representatives to 2 years. If we get reckless with the peo-

ple's money, they could throw us out at the end of 2 years.

I came to the Congress with a background in finance. I have been deeply impressed with the debate on defense problems, on foreign affairs and civil rights. In all these instances the debate for and against the issue involved has been presented forcefully and intelligently. The opportunity to listen to the learned gentleman, who have debated these issues, has been the equivalent of a great education.

I have not been impressed with the financial debates. When we get around to talking about money, the air seems to be filled with advertising slogans rather than hard commonsense. "Unfeeling reactionary," "back door spending," "budget busting," "unsympathetic penny pinching," are wonderful expressions to use in a political campaign, but they are certainly not going to solve the financial problems of this Nation.

It seems to me that a basic reason for a lot of the confusion is the lack of coordination between the spending and taxing committees. When an appropriations bill is debated, I am interested in knowing not just "do we need it," but "how does this bill fit into our total financial picture?" If I vote for this bill because I think it is important, do I have to cut back on another bill?

When we debate a tax law, I want to know not only if it is just and reasonable, but I also want to know what effect will the bill have on our revenues. If I vote for a tax cut, will I have to cut an appropriation?

Is our tax structure adequate to cover our expenses and provide for an orderly reduction of our debt? Why does not some one of the financial committees come forward with a plan for debt reduction? All these are questions that bother me every time we have a money bill on the floor, and I never hear these questions debated with what I could call hard commonsense.

Sometimes I feel that we are acting like a family where the wife spends what she likes without bothering to find out how much money her husband is making.

I know that we can turn to the Bureau of the Budget and to the Secretary of the Treasury for answers to the questions I outlined. But to go back to my family story, that is like the wife asking her next door neighbor for spending advice. The place for the wife to turn is to her husband. The place for us to ask questions is from a committee of the Congress. The Constitution gives the President the right to tell the Congress what he would like to have. The Budget Bureau and the Secretary of the Treasury help him prepare a financial plan called the budget. This is fine, but there is nothing sacred about the President's budget. That is just his idea on the subject. We cannot duck the absolute responsibility the Constitution lays on the House of Representatives to make the final spending and taxing decisions.

I believe that a Committee on Fiscal Planning would enable us to meet this clear-cut responsibility. I believe that

it would establish a close cooperation between our spending and taxing committees. I believe it would give a Member of Congress a place to go for intelligent advice about the effect of every spending or taxing vote. I believe that it would give us a chance to take back from the President the control over spending which this body has practically surrendered.

The Legislative Reorganization Act of 1946 authorized the Appropriations and Ways and Means Committees of the House, and the Committee on Finance and the Committee on Appropriations of the Senate, to meet jointly at the beginning of every session to study and report on the President's budget. This part of the law has been a failure and has been abandoned. I earnestly suggest that a new try be made on the lines I have suggested.

Voting Rights

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. WALLHAUSER. Mr. Speaker, there has been so much confusion in the confusing statements made during the civil rights debate last week that I thought the enclosed editorial, which appeared in the Newark (N.J.) Evening News March 19, 1960, puts the issue in proper perspective, and I submit it herewith for the consideration of my colleagues:

VOTING RIGHTS FIRST

After 5 weeks of waiting for the statesmen on Capitol Hill to get down to the business of writing a law to protect the constitutional rights of Negroes in the South, the administration has again entered the debate. It chose a time when the proposal for Federal voting referees was threatened by emasculation at the hands of the southern bloc in the House, and thus serves to spotlight the key point in the whole civil rights program.

The administration's intervention was timely and may well have saved the heart of its civil rights package. The southern raid was turned back in the House yesterday by a three vote margin.

The voting referees would see that qualified Negroes are permitted to vote and that their votes are counted. It simply enforces a franchise granted the Negro by the Federal Constitution, and its importance is ironically attested to by what has happened to the Negro without that protection at the polls.

The southern bloc would like to limit such protection to Federal elections. The administration, through Attorney General Rogers, correctly protests that this would in effect encourage a segregated election system for State offices, and would deny the Negro his constitutional rights.

Without an effective voting rights provision it would be folly to call anything that comes out of this windy session of Congress a civil rights law. The administration knows this; the southern bloc knows this; and most important, thanks to Mr. Rogers' protest on behalf of the administration, the public knows it, too.

Niagara

EXTENSION OF REMARKS

OF

HON. JOHN W. BYRNES

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, it is unfortunately true that many communities are blandly surrendering their rights and responsibilities to the power-hungry Federal Government.

A notable exception is the village of Niagara in my district which, although it has a population of only 2,300, has constructed within the last 3 years a \$100,000 sewage treatment plant, a \$35,000 municipal garage, a \$30,000 mercury vapor street-lighting system, a \$50,000 water well, and a ski tow worth \$12,000.

It is a proud record and I am submitting the following letter from the finance chairman of the village board as an example of what one community has done without looking for handouts:

NIAGARA, WIS., February 12, 1960.

Representative JOHN W. BYRNES,
House of Representatives,
Washington, D.C.

HONORABLE REPRESENTATIVE BYRNES: Received your memo of February 9 and am sorry to hear that Congress is being lured into making additional appropriations that appeal to the public. Some of the welfare proposals presently under consideration do have some merit, especially those affecting people on pensions and those that affect the handicapped or disabled. However, I personally do not think much of this proposal concerning sewage disposal plants. Maybe I am of a biased opinion because the village of Niagara built their disposal plant without any Federal or State aid or bond issues. It is my own personal belief that the sooner municipalities wake up and stop running to the Federal and State government every time they have a financial problem, the better off we would all be.

Several years ago the village of Niagara received a court order to construct a sewage disposal plant to digest all of the sanitary sewage being dumped into the Menominee River. We on the village board are quite proud of the fact that we constructed our sewage disposal plant without any financial assistance. It took us 3 years to complete the construction of the three lift stations, digesters, clarifier, and disposal plant at a cost of over \$100,000. This was paid for by local tax levies over this 3-year period. Niagara as you recall has a population of only 2,300. During this same period we also financed other major improvements; namely, a municipal garage, 50 feet by 110 feet for \$35,000, and a \$30,000 mercury vapor street-lighting system.

I have been on the village board for 8 years, during which time I have been finance chairman. All of us on the village board are quite proud of our village for its improvements and its financial status. Our bonded indebtedness is only \$30,000. This last year we incorporated a new well into our water system that cost us \$50,000. Our latest municipal project that you might be interested in is a ski tow within the village limits. This ski tow was constructed primarily by volunteer labor in the village. The actual cost to the village was only \$1,200, yet the installation is estimated to be worth \$12,000.

We in Niagara trust that you will continue to use your good judgment on the various issues as they arise.

Very truly yours,

HECTOR H. MAGNUSON.

**Secretary of State Christian A. Herter
Commended for His Protest to Red
China for Their Sentencing of Bishop
James Edward Walsh**

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD I would like to include a letter I have today written to the Honorable Christian A. Herter, Secretary of State, congratulating him on the prompt and forthright protest to the Communist government of Red China against the harsh and unreasonable sentencing of Bishop James Edward Walsh.

We are certainly aware of the fact that the Communists are not amenable to any suggestions we might make. However, we must stay with this protest and continue our efforts to effect the release of Bishop Walsh and others who have been the innocent victims of totalitarian thinking.

I would also like to include an editorial which appeared in today's New York Times, entitled "Bishop Walsh's 'Crime'."

The letter to Secretary of State Herter, and the editorial follow:

MARCH 21, 1960.

HON. CHRISTIAN A. HERTER,
Secretary of State,
Department of State,
Washington, D.C.

DEAR MR. SECRETARY: I am very pleased to learn of your prompt, vigorous and entirely justified protest against the patently unfair sentences meted by the Red Chinese to Bishop James Edward Walsh, and many of his colleagues.

This new incident so vividly recalls many other instances relating to our fliers, Cardinal Mindszenty, Archbishop Stepieniac, and numerous other political and religious persecutions perpetrated by the Communist countries.

We have learned from bitter experience that the Communists do not understand decency, and construe decency to be weakness. We have also learned from this experience that only by a continuing and firm stand can we ever accomplish anything with these totalitarian governments.

I accordingly urge that you continue your strong protests and bring every pressure possible to see to it that Bishop Walsh and his colleagues are promptly released.

I am sure you know that you have all the American people behind you in this effort.

With my best wishes, I am,

Sincerely yours,

LESTER HOLTZMAN,
Member of Congress.

[From the New York Times, Mar. 21, 1960]

BISHOP WALSH'S "CRIME"

Bishop James Edward Walsh, of Cumberland, Md., may spend the rest of his life in a Chinese prison for offending the Red China Government. At 69, he has been a servant of the Chinese people and of his church for almost half a century. All of us, of whatever religion, can share in an admiration for Bishop Walsh and indignation for the cruel 20-year sentence inflicted upon him.

An associate, the Very Reverend John P. Donovan, vicar-general of the Maryknoll Fathers, said of him: "If love is a crime, then he is guilty; if opposition to a brutal and tyrannical regime is a crime, he is guilty; if allegiance to his church is a crime, then he is guilty." In the raw, bitter communism of mainland China most of the civilized virtues are crimes and the Sermon on the Mount is full of treason.

Secretary Herter's protest will carry little weight with a Government which charges our own Government with an "imperialistic scheme to subvert the Chinese people's democratic regime." But outrages such as this may well be remembered when somebody inquires why we do not want Red China in the United Nations or a Red Chinese Ambassador in Washington.

A Long-Range Look at the Farm Problem

EXTENSION OF REMARKS OF

HON. ELMER J. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. HOFFMAN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of Mr. Earl M. Hughes, of Woodstock, Ill., to the House Committee on Agriculture on behalf of the Illinois State Chamber of Commerce, March 17, 1960.

Mr. Hughes has farmed all his life and has been active in farm organizational work at the State and local level for many years. His statement follows:

STATEMENT OF EARL M. HUGHES, FOR THE ILLINOIS STATE CHAMBER OF COMMERCE, TO THE COMMITTEE ON AGRICULTURE, U.S. HOUSE OF REPRESENTATIVES, MARCH 17, 1960

My name is Earl M. Hughes. I am a livestock and grain farmer, former Administrator of the Commodity Stabilization Service and former Executive Vice President of the Commodity Credit Corporation. I am presenting this statement on behalf of the Illinois State Chamber of Commerce, which is a statewide business organization with over 17,500 members in 412 communities in all parts of Illinois.

I have been a member of the Illinois State Chamber of Commerce for several years and served as chairman of its agriculture-business relations committee the last 2 years. Included in the membership of this committee are 21 farmers. The businessmen on the committee are connected with firms having a close relationship with farmers and farm problems in all parts of Illinois.

This committee has for 17 years worked with farm people throughout the State to bring about a better understanding of mutual problems of agriculture and business. In the course of these efforts, the importance of a sound agriculture to the economy of our State and Nation has become readily apparent.

As an outgrowth of this close association with the farm leadership in Illinois on a State and local level, the recommendations discussed in this statement were formulated. The program offers no easy way out of our present dilemma—it presents an opportunity for lasting strength under our private enterprise system.

It is essential that the Government approach to the agricultural situation should be one that will enable a flexible, dynamic farm industry to adjust to the changing times and to take full advantage of the advances in techniques and technology which have and will become available to it. The Illinois State Chamber of Commerce believes that adoption of the recommendations outlined in a later section of this statement would provide a positive step in that direction.

GENERAL COMMENTS

First, I should like to make a few general comments about the farm situation as we see it in the Midwest.

Illinois representation on your committee

I hope you will not consider me presumptuous if I start by calling attention to the fact that we in Illinois have no representation on your committee. We would be most pleased if the House leadership would, at some early date, arrange for 1 of our 25 representatives to become a member of your committee. We are quite proud of the fact that Illinois consistently ranks third or fourth in the value of its farm production. It would seem that one of the representatives of our great agricultural State would make a valuable contribution to your committee's deliberations.

Taxes, labor, and the cost-price squeeze

While we will confine our remarks today to what is generally classed as "farm legislation," it seems appropriate that I mention in passing two closely related problems which are of great concern to farmers today—monopoly pricing of labor by unions and the increasing tax burden. When we analyze the "cost-price squeeze in agriculture" it becomes obvious that high taxes, rising cost of marketing farm commodities and increased costs of equipment and other farm needs are contributing a heavy additional burden on the Nation's farmers.

With regard to taxes, it seems logical that expenditures must be cut before we can expect to have any tax relief. I urge you, then, to watch Government spending and make sure that every tax dollar we spend buys a maximum of goods and service and represents a sound expenditure of public funds. Further, we hope that you will look with disfavor on new, unwarranted spending proposals and carefully reexamine with a view to reducing certain nonessential spending legislation already on the books.

Rising costs in the things needed by farmers and increased costs involved in marketing farm commodities have been brought about largely by the wage increases granted without a corresponding increase in productivity. Take a tractor or any other piece of equipment required by the farmer as an example. The farmer is the one who ultimately pays the price for the equipment, and reflected in that price is the continuous upward spiral of labor costs forced on manufacturers by a virtual monopoly possessed by giant unions today. We farmers bear this cost in the ever rising price of equipment and supplies.

It is true enough that every businessman must necessarily pay higher prices for the equipment he needs to conduct his business, but that increased cost is taken into consideration in the price of the product or service that he merchandises. This is where the farmer is in a bind by comparison. It is for these reasons that the farmer is undoubtedly one of the major victims of union monopoly power.

This, we think, indicates a need for greater attention to the monopoly power of labor. Sooner or later Congress must face up to the problem of labor union "lead-pipe-clinch bargaining." Labor unions must be subjected to the same type of antimonopoly restraints that now apply to business but do not apply to unions. The Labor Management Act of 1959 was a step in the right direction and we commend your action on this measure. As a farmer, I strongly feel the need for further curbing the unbridled power of labor to practically "write its own ticket." Some means must be found to check this serious threat of union monopoly power to our economy.

TECHNOLOGICAL PROGRESS AND ITS EFFECT ON FARM INCOME

In any discussion of farm legislation, the tremendous changes which have taken place in agriculture over the past 30 years must be constantly kept in mind. Not only have these advances in farm techniques and technology resulted in greater production per acre, but they have enabled a cash grain farmer to farm much more land than formerly. Farms are increasing in size, but many farmers today have the labor and equipment to run a much larger unit than they do. Thus, many are actually part-time farmers and earn considerable additional income in other jobs during the balance of the year. Good roads and an expanding economy have enabled us to be less dependent on our farm income than we used to be. You are, of course, aware that farmers actually made half as much from off-farm sources in 1959 as they did from farming. Too many who discuss national farm income figures tend to forget this. I, for one, am not ready to concede that we farmers are in as dismal financial straits as some individuals would have us believe. Farm assets continue to set new all-time highs each year.

In the 12 months ending in March 1959 there were only 6,600 distress transfers of farm real estate. By comparison, in the calendar year 1958 there were 14,964 business failures and in the first 11 months of 1959 there were 12,973 business failures. It is said that other industries are prosperous because they adjust production to meet demand. The coal-mining industry and automobile manufacturers are frequently cited as examples. When we look at the coal industry, we find that the number of coal-mining jobs was reduced more than 50 percent from 1950 to 1958. And over 90 percent of the corporations that manufactured automobiles in this country have either failed or were forced to go into some other business. Farmers, then, are not the only ones who must change with the times.

Effects of 1958 Agricultural Act not yet felt

I feel compelled to disagree with those who are saying that the increased production of corn last year discredits the feed grain program provided by the Agricultural Act of 1958. The increased production is cited to prove that lower supports result in greater production.

There is more to this story than this, however. In reality, price supports for about 90 percent of the Nation's growers were actually higher in 1959 than they were in 1958. The national average support price in 1959 was \$1.12 per bushel for all growers. In 1958, however, farmers who did not comply with their corn acreage allotments received an average of only \$1.06 per bushel in the commercial areas and \$1.02 in the noncommercial area. Only about 12 percent of the corn produced in the commercial area was eligible for the compliance rate of \$1.36. Since the commercial area accounted for about 82 percent of the total crop, less than 10 percent of the 1958 crop was eligible for support at a rate in excess of \$1.06. By far the largest proportion of growers enjoyed a support

price 6 to 10 cents higher in 1959 than in the preceding year.

Other reasons why more corn was grown in 1959 than in 1958 include the following: (1) Certain land previously taken out of production by the acreage reserve of the soil bank was returned to corn, (2) weather conditions were generally exceptionally good, (3) corn supports were still too high, (4) support for other crops which compete with corn for acreage were reduced substantially in 1959, thus causing farmers to plant more corn, (5) many farmers are afraid that acreage allotments will be restored and so keep up high corn production because they want a good base. All these factors must be accounted for in explaining why farmers grew more corn in 1959 than they did in 1958. The reason which is not valid is the one which claims lower supports caused it. It's interesting to note also the increased disappearance of corn this year, which indicates that more corn can be consumed than some of us might think. Total disappearance of corn during the marketing year ending last October 1 was 371 million bushels more than the previous record set the year before. No one really knows how much we might use if supports were lowered further.

CRITICISMS OF OUR CURRENT FARM PRICE SUPPORT PROGRAM

During my service as administrative head of the U.S. farm price stabilization program, I witnessed firsthand the problems created by holding a price umbrella over farm commodities which added new inventory to Government warehouses while we worked desperately to get rid of the already existing boards of surplus commodities.

I am now living on and operating a grain and livestock farm in northern Illinois. All of my income comes from this operation. As an operating farmer, I feel that individual opportunity and an efficient agriculture are possible over the long run only if government retreats from its current price support and production control program. I have two boys who are interested in farming. I have told them that before they commit themselves to a lifetime of hard work and a heavy debt, they should determine to their own satisfaction whether they or the Government will manage their farms. No Government official at a desk in Washington can better manage the farms of the Nation than the men who work these farms and who have their life savings tied up in them.

The Illinois State Chamber of Commerce is fearful for the course of a free agriculture if the present trend is continued. We foresee the possibility of an ever-growing series of controls which would extend to all farm commodities and pose a threat to the freedom of the farmer to operate his farm according to his own best judgment.

If price supports are to be continued and controls over agricultural production are to be made effective, government will have to institute more rigid production restrictions. If Congress is really serious about the need and desirability of controlling agricultural production, it must impose restrictions not only on land use but also on the other items used in agriculture production, such as fertilizer, machinery, irrigation, pesticides, and insecticides, and must limit the introduction of new techniques and high yielding seeds. The Illinois State chamber and Illinois farmers stand firmly opposed to such a bold encroachment on the rights of individual farmers.

We also have observed with growing apprehension the trend toward State trading and the nationalization of our Nation's marketing machinery. Unless the volume of Government acquisition and selling of farm commodities is reduced, our efficient private marketing system will suffer irreparable damage. The tremendous accumulation of commodities in the hands of the

Commodity Credit Corporation presents an ever present danger to private holders and serves as a price depressant.

As taxpayers and consumers, we are more and more concerned with the tremendous costs of the program. When spending for price stabilization programs skyrocket to present levels, something is certainly basically wrong with the system. When the housewife and the low income city dweller ask why spending for farm price stabilization is so high, it becomes extremely difficult to explain. If the present program is continued, I can only see a growing revulsion to this waste with the result that the general public will dictate an abrupt and disastrous end to all price stabilization programs. The potato fiasco of a few years ago may well be duplicated on a far grander scale unless a basic change is made.

Effective solution to the farm problem might be expected from these tremendously expensive programs. Actually, the truth is quite to the contrary. Government holdings of price depressing surpluses are now greater than ever before. The value of this hoard of commodities has reached the staggering total of \$9.2 billion and will probably exceed \$10 billion later this year.

While it would seem inconceivable that the Federal Government would engage in programs which actually contribute further to this farm dilemma, this is exactly what is happening. The Department of the Interior's land reclamation program presents a striking example of this practice. The Department's efforts have resulted in annual additions of hundreds of thousands of acres to the Nation's farm land—1 million acres in the 6-year period ending in 1960 alone. This has been taking place at the same time that millions of taxpayer's dollars were being spent to take land out of production.

The agricultural conservation program offers another example of one farm program working at cross purposes with others. Financial assistance is made available under this program to farmers for conservation measures on individual farms. Eighty percent of the ACP payments in Illinois are made to pay farmers to apply lime and phosphate to their farmland. Few would question that this addition of fertilizer results in anything but increased crop yields. Nearly 70,000 Illinois farmers benefited from this windfall during the fiscal year 1958 at a direct cost of nearly \$7 million to the taxpayer.

A vast bureaucracy is building up in agriculture which is necessary to administer the farm programs which Congress has created. In Illinois alone, the number of people required to handle the price stabilization and related programs on a State and local level has grown to large proportions. Several million dollars is spent each year to pay the salaries of hundreds of employees needed to carry out the program in the State.

RECOMMENDATIONS

The public responsibility in agriculture's problems is often misunderstood. The importance of this biggest of all industries to the well-being of the Nation cannot be underestimated. The fact that the prosperity of more than 20 million persons living on farms is tied directly to the fortunes of agriculture is ample reason for its problems to be of concern to all.

Public interest and responsibility by no means extend to a guarantee of a fixed price for farm commodities, a fixed return on capital investment in farms or a fixed wage to farm workers, however.

Because of the unusual nature of agriculture, there is a role which the public—through the Government—should assume. This role consists of continuing such traditional and successful functions as establishing grades and standards, disease pre-

vention and eradication, crop production and market reporting, helping to find new uses and new markets for farm commodities, basic research and certain educational and advisory activity. These programs serve the best interest of society generally as well as farmers specifically.

In order to help insure long-range solution of current farm difficulties, existing programs which attempt to fix prices or control production should be terminated as soon as possible and no new farm programs for any commodity inaugurated. Experience of more than a quarter of a century strongly suggest that programs which are economically sound are usually politically unacceptable.

It is essential that the Government approach to the agricultural situation be one that will enable a flexible, dynamic farm industry to adjust to changing times and to take full advantage of the advances in techniques and technology which have and will become available to it. The Illinois State Chamber of Commerce believes that implementation of the recommendations outlined in the following paragraphs would provide a positive step in that direction.

With the foregoing comments in mind, then, we urgently recommend that the following changes be made in our farm program and earnestly urge your support of them.

Price support adjustment

The Agricultural Act of 1958 provided transitional price-support programs for feed grains, cotton, and rice. On the basis of 1 year's experience with these new programs and appraisal of the longer range provisions of the law it appears that producers of these commodities are moving toward firmer economic footing. The operation of this law should be observed closely to determine the advisability of future changes. The price-support programs affecting several farm commodities are still virtually unchanged from those that have been in operation over the last several years during which production has outrun market growth. As a result, serious surpluses have accumulated and are continuing to mount.

We, therefore, recommend that programs affecting all price-supported commodities other than those included in the Agricultural Act of 1958 be replaced by new programs that will provide for:

(a) Termination of acreage allotments and marketing quotas.

(b) Price-support levels which will move current output into use through normal channels of trade without reference to parity formulas.

We further recommend that definite dates be set forth for the eventual termination of all farm commodity price supports. During the transition period to a free market price, it is recommended that price support be made available through the use of purchase agreements and recourse, interest bearing loans.

Freeze existing surplus stocks

To make possible the transition to a free market economy, isolate the existing Government surplus stocks from the market while providing for their orderly disposal over a period of time by means which will not unduly disrupt markets.

Make effective use of the soil bank

Tighten up the conservation reserve program of the soil bank and expand it as a means of facilitating resource adjustment in agriculture.

Stop stimulation of surplus production

Coordinate the interrelated functions of Federal agencies responsible for management of Government-owned land, price-support activities, soil conservation work and land reclamation and development projects.

Discontinue Federal financing of power and irrigation projects.

Sharply curtail spending for the agricultural conservation program and limit it to conservation measures which reduce physical destruction of soil, including such measures as reforestation of watershed areas.

Encouraging development of new markets

Continue public and private efforts to expand markets for farm products at home and abroad on a sound economic basis.

Continue emergency programs for disposal of surplus commodities in foreign countries until surpluses are reduced, but reexamine them with a view to improving their effectiveness and reducing their cost.

Reorient research, education, and extension programs

Expand and encourage public and private agricultural research and educational programs to reduce production and marketing costs, to develop new uses and new markets, and to assist in other ways in the long-range improvement of agriculture.

Encourage and help farmers with limited opportunities to move into more rewarding pursuits so as to better their level of living.

Governmental loan programs

Set interest rates on Rural Electrification Administration loans and all other governmental loan projects at levels reflecting current capital costs.

Put REA on a businesslike basis

Provide for patron ownership of the REA cooperatives.

SUMMARY

Adoption of the chamber's recommendations would result in immediate and long-range savings of billions of dollars in tax funds. Further, it would effectively accomplish the following ends:

Stop Government programs which actually contribute to the farm problem.

Lower the prices paid for food and fiber by the consumer.

Give farmers greater freedom to farm efficiently.

Enable farmers to adjust to the changed conditions with a minimum of hardship.

Establish a sound base for agricultural growth and prosperity through initiative, resourcefulness, and self-reliance.

Halt the trend toward socialization of the Nation's farms and regulation of the Nation's farmers.

WHY WE ARE OPPOSED TO H.R. 10358 (FAMILY FARM INCOME ACT OF 1960) AND SIMILAR BILLS

Up to this point we have criticized existing programs and given you our views on the course future legislation in this field should take. I should like to make a few brief comments about a course of action to which we strenuously object.

We are aware of the intense interest this committee has shown in H.R. 10358 and several similar House bills which have been introduced at this session of Congress. The course of action outlined in these bills, as we understand them, is not in the best interests of the American farmer, taxpayer, wage earner, consumer, or businessman. Here are some of the reasons for our views:

1. The proposed legislation, as we read it, is replete with controls and provides for further intervention into the operation of our farms. This, we believe, is inherently distasteful to farmers and is diametrically opposed to the traditional concepts of our free enterprise system. Establishing quotas for every producer, as provided in the proposed act, is repugnant to me and most other farmers I know.

2. Parity price is labeled as a "fair price" in this bill. The State Chamber urges discontinuing use of the outmoded, inflexible parity concept of supporting prices. Parity is based on relationships which existed almost half a century ago. It does not take into account the tremendous technological

advances which have taken place in agriculture, the prices which buyers are willing to pay for farm commodities or the cost of supporting prices at high levels. If the parity price is accepted as standard, this means that wheat would be supported at about \$2.37 a bushel or around \$1.15 above the world market price. The effects of setting such a price on our export market would be disastrous. This is only a sample of what would happen in one commodity.

3. Adoption of this legislation will result in drastic reduction in the number of jobs in certain agricultural industries. If our guess is correct, to achieve parity for hogs would take a reduction in production of between 30 and 40 percent. Have you traced the effect on the 30 to 40 percent on the Nation's packinghouse workers who would no longer be needed to process this meat? What will the effects be on the transportation industry, retail meatcutters, and others? Will such 30 or 40 percent cut in production mean that the American consumer is going to be eating 30 to 40 percent less pork?

4. Prices to the consumer are obviously going to be higher if this approach is adopted. If the farmer receives an artificially high price for his commodities, this increase must eventually find its way into the price which the housewife pays for her food at the grocery store. This poses an additional burden on the consumer and would further restrict the market for food.

5. The program, as outlined in the proposed bill, would seem to call for a whole new army of Government employees to administer it.

As I read the bill, I can visualize the need for hundreds of new office workers, administrators and others from the local to the national levels and a whole raft of directives to implement the program.

We are unalterably opposed to this legislation and urge you to reject it.

CLOSING REMARKS

On behalf of the Illinois State Chamber of Commerce and myself, I express our sincere appreciation to you for this opportunity to present to you today the views of this organization on the very important matter of Federal farm legislation.

Thank you.

Free Asia Opposes U.S. Recognition of Red China, Farley Reports

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview with Hon. James A. Farley held in Los Angeles, Calif., on March 2, 1960:

FREE ASIA OPPOSES U.S. RECOGNITION OF RED CHINA, FARLEY REPORTS

LOS ANGELES, CALIF., March 2.—Free Asia is overwhelmingly in agreement on one thing, inflexible opposition to U.S. recognition of Red China, James A. Farley, world famous Democratic leader and board chairman of the Coca-Cola Export Corp., reported here today on his return from a 6-week business trip to the South Pacific and Far East.

"Leaders throughout free Asia pointed out to me on my recent trip," Farley asserted, "that in the face of Communist China's action in Tibet, its invasion of Indian territory,

its subversive efforts against its neighbors, and its refusal to renounce the use of force, it would be a great error to reward Communist China by recognizing it or supporting its entry into the United Nations.

"They maintained that until Communist China by its actions gives proof that it wishes to live in peace with its neighbors and is willing to cease its effort to undermine their hard-won independence, nothing should be done to enhance the position or prestige of a Communist China regime, since this would simply increase Communist China's ability to increase its subversive action."

Pointing to the steady growth of the Coca-Cola business abroad, Farley reported that there are now 671 authorized Coca-Cola bottlers in 110 foreign countries. "Around the world, more Coca-Cola is consumed than all of the other international drinks combined," he said. "Additional plants are continuously being authorized to keep pace with the increasing demand in foreign markets."

Voting Interest

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. GEORGE. Mr. Speaker, we have in Kansas City a very outstanding newspaper published by and in the interest of the Negro race. The Kansas City Call is an advocate of high ideals and good government.

In an editorial which appeared in that publication on March 18, 1960, the laxity of the American people in exercising their right to vote was called to the attention of its readers. In all segments of American life, Mr. Speaker, people do not take the interest in their Government that they should. This applies to national elections as well as State and local. Often those who do not vote complain the loudest. The editor of the Call points out that all races neglect this important responsibility.

I request, Mr. Speaker, that this editorial be included as part of my remarks:

WE DON'T USE WHAT WE HAVE

While Congress argues over voting rights for Negroes in the South, Negroes in the North, where there are no restrictions, need to set about to use the voting rights that they already have.

Up North, where we can vote, we don't. And down South, where they are denied the vote, Negro citizens are clamoring for it. Perhaps the Negro people in northern and border States would have greater respect for their voting rights and would use the ballot more regularly and more judiciously if they could be transplanted to the South for a few months, a few weeks or even a few days. Maybe if the Negroes up North could go down South and see how really important the ballot is, they would use it up here where it is free and open to everyone with no strings attached.

For some reason, people in the North, white as well as Negroes, just do not go to the polls in their full strength.

Take the last election held in Kansas City—the election on the annexation of four new territories. Although the issue was of vital importance to the future of Kansas City and its citizens, only 13 percent of the

voters took the time and trouble to register their opinions.

Negroes are not the only ones who stay at home on election day, but Negroes, of all people, should appreciate the value of the vote. Citizens of color have been deprived of their rights in many areas of American life. They can correct many of the evils which beset them by wise use of the ballot. Instead, they play the ballot cheap and stay at home on election day.

We are glad to see local organizations taking steps to increase the voter registration among Negro citizens. No more worthwhile community enterprise could be undertaken at this point.

Honor Degree Will Be Given Paul Flowers

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am attaching an article written by George Sisler, which appeared in the Memphis (Tenn.) Commercial Appeal on February 2, and which discloses that Paul Flowers, outstanding man of letters, will have conferred upon him by Erskine College at Due West, S.C., the honorary degree of doctor of literature.

Mr. Flowers has long been recognized as an outstanding newspaperman. His daily column, which appears in the influential Midsouth Commercial Appeal, is read by thousands of people daily. He is truly a man of great ability, and upon the recommendation of Dr. L. H. McDaniel, of Tyronza, Ark., and others, the board of trustees selected Mr. Flowers for this very high honor. Dr. McDaniel is known over the country as the country physician at Tyronza, Ark. He has made famous an annual meeting of doctors and others interested in medicine in his so-called "clinic in the cotton patch."

The article follows:

HONOR DEGREE WILL BE GIVEN TO COLUMNIST
(By George Sisler)

For whatever reason you've followed Paul Flowers' "Greenhouse" column on the daily editorial page of the Commercial Appeal, you are now assured that what you've enjoyed is literature.

One of the Nation's leading colleges will prove it in May.

That's when Erskine College at Due West, S.C., will confer upon the long-time "Greenhouse" columnist and book editor the honorary degree of doctor of literature.

Announcement was made yesterday by Dr. L. H. McDaniel of Tyronza, Ark., himself an alumnus of Erskine College and member of the institution's board of trustees. Dr. McDaniel, whose country-physician office in Tyronza was long since made famous in the "Greenhouse" as the "Clinic in the Cotton Patch," said Erskine officials approved his nomination of Mr. Flowers for the honorary degree last Friday.

ENDORSED BY MANY

The columnist's nomination was endorsed by more than 30 civic, business and profes-

sional leaders, Dr. McDaniel said. Among those adding their recommendations to Dr. McDaniel's nomination were Gov. Buford Ellington of Tennessee, former Gov. J. P. Coleman of Mississippi, Senators John C. Stennis, Democrat of Mississippi and Albert Gore, Democrat of Tennessee, Representative Clifford Davis, Democrat of Tennessee, Mayor Henry Loeb of Memphis, and presidents of at least a dozen leading colleges and universities.

"Erskine College officials based their decision on Paul Flowers' 'Greenhouse' column and other writings submitted to them," Dr. McDaniel said. The degree will be conferred as part of the college's commencement exercises May 30. Erskine is owned and operated by the Associate Reformed Presbyterian Church.

BORN IN TRENTON

Born at Trenton, Tenn., Mr. Flowers began his newspaper career as a reporter on the Lake Charles, La., American Press in 1924 and served on newspapers at Alexandria and Shreveport, La., and Birmingham before a first brief stint on the Commercial Appeal in 1929. He moved on to the El Paso (Tex.) Times, returned to Birmingham and then went to the Ohio State Journal at Columbus as telegraph editor, while earning his bachelor and master degrees at Ohio State University.

He then taught journalism at West Virginia State University before coming home to the Commercial Appeal as "Greenhouse" columnist, his first piece of literature appearing under its now famous heading October 8, 1943.

Spirit of Brotherly Love Continues To Make Friends

EXTENSION OF REMARKS

OF

HON. WILLIAM A. BARRETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, it is my privilege to call to the attention of my colleagues the following citation issued by Philadelphia's greatest mayor, the Honorable Richardson Dilworth, to my very good friend, Mr. Peter M. Del Borrello, 1431 South Juniper Street, Philadelphia, Pa., whose wonderful work in the promotion of peace and brotherly love throughout the world is inspiring.

I am indeed fortunate, to have Mr. Del Borrello as a friend and as a constituent:

CITY OF PHILADELPHIA,
October 23, 1959.

MR. PETER M. DEL BORRELLO,
Philadelphia, Pa.

DEAR MR. DEL BORRELLO: I want to take this opportunity to join with your many friends and colleagues in extending good wishes on your retirement from the Navy.

I have read and heard accounts of your wonderful work in making friends for Philadelphia and for the Navy through your many personal contacts with foreign visitors to our city, by inviting them to your home and affording them hospitality in the true Philadelphia tradition.

It is a source of great pride to me, as mayor, to have such fine citizens as yourself who live in Philadelphia, and who, by their deeds, communicate the real spirit of brotherly love.

I wish you and your family the best of luck in the years ahead. I know they will be fruitful and rewarding years.

Sincerely,

Richard L. Neuberger

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. ULLMAN. Mr. Speaker, under permission to extend my remarks, I want to insert in the RECORD a tribute to the late Senator Richard L. Neuberger penned by his friend, and mine, J. W. Forrester, Jr., editor of the Pendleton East Oregonian. I can think of no more stirring tribute to Dick Neuberger:

[From the East Oregonian, Mar. 10, 1960]

RICHARD L. NEUBERGER

It isn't going to be easy to write this. It never is easy to write of a friend who has been taken by death. This is so very difficult because my friendship with Dick Neuberger goes back to the days when we were kids learning to be newspapermen. It was a friendship that came, over the years, to mean more to me than I can express to you.

Dick Neuberger's death is a tragedy for so many people, not alone his friends. There was so much ahead for him to do, tasks that no one else in Oregon could do as well.

Before he went to the U.S. Senate he was established as a writer whose stories on any subject were sought by all the best magazines and by such great newspapers as the New York Times and the St. Louis Post-Dispatch.

In less than 6 years in the U.S. Senate he became a statesman who was admired and respected by men on both sides of the aisle for his intellect, his capacity to serve the people of his State and his fairness and tolerance.

Because of the respect Members of both parties had for him, he was getting more and more done for Oregon. He worked as effectively with many Republicans as he did with Democrats in the Senate. Members of the Republican Party in Oregon knew that he would unfailingly place the interests of all citizens of Oregon ahead of any other consideration. They knew that they need not hesitate about going to him with their problems.

A few days ago he told me he intended to serve (if Oregonians desired that he should) one more term in the Senate. He wanted to do that because there was a lot of unfinished business in the Senate he wanted to have a hand in. He had become so effective in the Senate in his first term that he most certainly would have accomplished much in the second.

Another term and then he was coming home to Oregon to spend the rest of his years writing and enjoying life with close friends.

Dick Neuberger had an almost unbelievable capacity for work. He fulfilled his duties as Senator as well as any man Oregon has sent to Washington. But he also found time to write for magazines and newspapers, to carry on personal correspondence that would have kept most men busy had they nothing else to do, to make a great number of speeches, and to read every week more than most of us get to in a month.

His personal correspondence was of amazing magnitude. Children of his friends always were in his thoughts. He wrote to them and sent them gifts. So many letters to parents on important matters contained special messages for their children.

He loved young people. When he went to the Senate he was offered patronage rights. What was his first choice? To appoint a Senate page. He established a research internship on his staff for outstanding graduates of Oregon colleges in political science and journalism. He gave a large portion of his earnings from magazines to Oregon colleges as scholarship funds. The book he wrote for children about the Lewis and Clark Expedition was a bestseller.

His devotion to the preservation of natural resources was deep rooted. He paid the wonders and beauties of nature more than lip service, as all who read his magazine articles knew. There was no subject he enjoyed more writing about. He enjoyed even more a day at the beach or at a lake or on a mountain trail. One of the most enjoyable days I've had was spent with the Neubergeres on the beach at Ecola Park, a day of such beauty that we spoke of it many times thereafter.

Dick could have done so much for this State and its citizens in the years ahead. But there is nothing to be gained now in speculating upon that. Let us speak instead of the high place he has in the history of this State because of all he accomplished in 47 years, as a writer, State legislator, and U.S. Senator, and in countless other ways. Those who knew him intimately saw early a man of great stature, a stature that others recognized later. When he was elected to the U.S. Senate, I said to some who had doubts, "Dick Neuberger will be a fine Senator. Just give him time. He has all the qualities that a man needs to be a great Senator." That he measured up was so well recognized throughout Oregon that it was conceded by almost all the politicians that he would be reelected by the biggest margin ever given a candidate for the Senate from this State.

I could write much, much more about Dick Neuberger. But much of it would be personal and this is not the place for that. I shall close by saying that no man will pass this way whom I shall think better of.—J. W. F.

Antarctica

EXTENSION OF REMARKS OF

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. MARSHALL. Mr. Speaker, among the resolutions adopted by the 65th State conference of the Minnesota Daughters of the American Revolution is one of special interest at this time. It urges the President to take such steps as are necessary to secure our interest in the continent of Antarctica.

Inasmuch as a treaty measure is pending before the other body, it is appropriate that serious consideration be given to protection of our legitimate interests in this vital area.

The full text of Resolution 9 follows:

ANTARCTICA

Whereas American citizens have discovered more of the south polar continent than all other nations combined; and

Whereas Antarctic's potential is in mineral wealth and strategic bases in the coming age of ballistic missiles; and

Whereas there is no reason to dispose of Antarctic territories to other than the eight nations that earned them: Therefore, be it

Resolved, That the Minnesota Daughters of the American Revolution opposes ratification in the U.S. Senate of the Antarctic Treaty signed December 1, 1959, with the U.S.S.R. and 10 other nations which would internationalize the Antarctic; and be it further

Resolved, That the President of the United States is hereby urged to proclaim the sovereignty of the United States over her rightful territories in the Antarctic at once and, as already proposed in Congress, negotiate promptly with the seven other claimants to settle boundaries, thus retaining the Antarctic in Western hands.

Soviet Is Backing Cuba Against United States

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Max Frankel which appeared in the New York Times on Sunday, March 13, 1960:

SOVIET IS BACKING CUBA AGAINST UNITED STATES—PRES AND RADIO SUPPORTING CASTRO'S ATTACKS OVER SHIP EXPLOSION

(By Max Frankel)

Moscow, March 12.—The Soviet Government lent moral support this week to Premier Fidel Castro's assaults on the U.S. Government.

Moscow has followed the Cuban leader's line, letting Havana choose the interpretations of events and the charges against Washington and then making available the Soviet press and radio for their dissemination.

The picture of crisis in the Western Hemisphere has been so sharp that no Soviet reader this week would be surprised tomorrow if he were to learn of a U.S. military assault on Cuba or a break in diplomatic relations.

The Soviet Union's support of Cuban attacks on the United States came less than a month after the signing of Soviet-Cuban economic and political agreement. It is believed to be notice to all countries having difficulties with Washington that they can look to Moscow for aid and comfort.

MIKOYAN VISIT RECALLED

During a visit of First Deputy Premier Anatas I. Mikoyan to Havana last month the Soviet Union lent Cuba \$100 million for 12 years at 2.5 percent and agreed to buy 5 million tons of sugar in 5 years.

This week's campaign in Moscow focused on Cuba's charges that the United States had a part in explosions aboard a munition-laden French vessel in Havana harbor last Saturday.

The explosion was first described by Tass, the official press agency, in a brief dispatch that appeared last Sunday in Izvestia, the Government paper. Pravda, the nation's leading paper, did not take note of the event until Tuesday, when it had become clear that the Cuban Government intended to

make an issue of the explosion in its campaign against the United States.

Foreign Minister Andrei A. Gromyko sent a message of sympathy to Foreign Minister Raul Roa, of Cuba. Pravda printed long quotations from Dr. Castro's speech at the funeral of victims of the explosions in which the Premier implied U.S. involvement.

REPORTS DESCRIBE OUTRAGE

Since then daily Tass dispatches from Havana have described the popular outrage against the United States. Tass reports from New York have described press demands that Cuba be "punished."

On Wednesday Moscow papers published a reply by Foreign Minister Roa to Mr. Gromyko's condolences. The papers headlined the following sentence of the reply: "Thanks for such a clear demonstration of solidarity."

This morning Pravda published a Tass article dated Tuesday to report that Secretary of State Christian A. Herter had "made rude onslaughts" against the Cuban Government.

This was an allusion to Havana's charge that Mr. Herter had insulted the Cuban representative in Washington in protesting against Dr. Castro's funeral oration. Pravda has also reported anti-U.S. editorials in Revolution, semiofficial Havana newspaper.

Tass cites quotations from U.S. newspapers to show that military economic and diplomatic action against Cuba is imminent.

The Soviet press and radio describe the Castro government as revolutionary, picture all criticism of it as counterrevolutionary, call Cuban police forces the people's militia, and otherwise apply terms invested with sympathetic meaning in Soviet society.

Observers here expect the establishment soon of diplomatic relations between Moscow and Havana. Recent dealings have been handled in Havana by Soviet officials normally assigned to Mexico City.

CHINESE REDS BACK CUBA

The Chinese Communist press and radio have been vigorously supporting Premier Fidel Castro's charges of U.S. responsibility for the Havana explosion.

The Kwangming Daily last week said the explosion "is another barbarous crime perpetrated by U.S. imperialism after its recent bombing of Cuba's urban and rural areas" and "the people of the world stand on the side of the Cuban people and are against the U.S. interventionists."

Hard Worker for Aged

EXTENSION OF REMARKS

OF

HON. JAMES A. BYRNE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. BYRNE of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two articles from the New York Times of March 21, 1960:

HARD WORKER FOR AGED: AIME JOSEPH FORAND

WASHINGTON, March 20.—The Forand bill is known from coast to coast. But its author, Representative AIME JOSEPH FORAND, Democrat, of Rhode Island, remains almost anonymous in comparison with the political issue he has raised. This is whether there should be a law to provide for medical care to the aged under the social security system. Mr. FORAND, a slightly bald, round, cigar-smoking man of medium size and somewhat lackluster manner, is an authentic example of a tradi-

tional type of American—the self-made success. He never got past the 7th grade in school—but on the now-defunct Providence News he edited the copy of newspapermen who were college graduates. He has been a Member of Congress for 22 years. Well versed in State and local politics he first came to Washington with the idea of learning the national scene and becoming a political commentator.

He found the national scene satisfying, and became part of it. An observer says he is a "putty character" who ducks a hot fight on unpopular issues.

Many who have conversed with him about legislation have paid him the compliment of believing him to be a learned lawyer. But his law degree is an honorary LL.D. from Providence College.

"My father became totally blind from cataracts over both eyes when I was 12 years old," he says when explaining his lack of formal education.

"He was totally blind for a year. There were eight children around our table, and one daughter was bringing home \$8 a week. I had to go to work."

"From that time on it was home study for me—a la Lincoln."

"I took a bookkeeping course sold by Sears-Roebuck. I went to night school and took shorthand until I could write 100 words a minute. I then was working in a cotton mill. I put an ad in the paper asking for office work, saying salary was no object to me, experience was my goal. I got a job with a sheet metal and roofing outfit at \$3 a week. In 2 months the bookkeeper quit, and I took his work on too—my salary was raised to \$5 a week."

Mr. FORAND sometimes amuses himself by trying to name all the jobs he held on his way up—and finishes off by saying it would be easier to name the jobs he didn't hold.

He worked for a wholesale baking company for 4 years before and 4 years after his service in World War I. He was in charge of 25 delivery routes for baked goods, rising at 2 a.m. to walk 4 miles to work. He has driven a dump truck, worked with pick and shovel. He has worked in a grocery store, sold lubricating oils. He has serviced radio sets. He has served as a private chauffeur to two different families.

But always his evenings were spent in study. He says it paid off.

From 1923 to 1927, Mr. FORAND was a member of the Rhode Island House of Representatives. After service as secretary to two Members of Congress in Washington, he was made chief of the Rhode Island State division of soldiers' relief and commandant of the Rhode Island Soldiers' Home.

Mr. FORAND says it was this first-hand experience with the medical needs of the aged that prompted his introduction of the Forand bill in 1957.

"The needy will never again be just statistics to anybody who has to deal with their personal problems," he says. But he never fails to add: "If anybody has a better solution on medical care to the aged than I have, let them come up with it."

Of the American Medical Association, which vigorously opposes the Forand bill, its author repeatedly remarks: "I thank the A.M.A. It has done far more to publicize my bill than I could possibly do."

A joiner, Mr. FORAND belongs to Elks, Eagles, Lions Club, Knights of Columbus (fourth degree), French-American organizations—he comes from French stock—Veterans of Foreign Wars.

He was born at Fall River, Mass., on May 23, 1895, and moved as a child to Rhode Island. He married Gertrude Bedard in 1931. They have no children.

He has been a member of the House Ways and Means Committee since January, 1943, and now ranks second on the Democratic side.

FORAND BILL MAIL FLOODS CONGRESS—JAVITS GETS 700 LETTERS IN 2 WEEKS—WRITERS ARE 2 TO 1 BEHIND AID TO AGED

(By Bess Furman)

WASHINGTON, March 20.—The name of a Member of Congress from the smallest State in the Union far and away tops those mentioned in the incoming mail of the senior Senator from New York.

This phenomenon is more or less repeated throughout Senate and House Office Buildings as Members of Congress struggle with the issue of medical care for the aged—now simply dubbed from coast to coast the Forand bill.

Briefly, this is a plan promulgated by Representative AIME J. FORAND, of Rhode Island, whereby the social security payroll tax would be raised for employers and employees to pay for medical care for old-age and survivor insurance beneficiaries.

Introduced a few days before the close of Congress in 1957, the Forand bill gained momentum in 1958 and 1959 and is going strong in this election year of 1960.

In the office of New York's Senator JACOB K. JAVITS mail mentioning the Forand bill by name has doubled in the last 4 weeks.

This mail has become "uncontested first" among the 100 topics on which the Senator's staff keeps tally. In January and February Forand letters ran around 400 a month. Between March 1 and March 15 the tally jumped to more than 700 letters.

MAIL FAVORS MEASURE

The March mail has been running 2 to 1 in favor of the Forand bill. The "for" mail comes mostly from labor unions, clubs of retired persons, and retired individuals who have chronic illnesses or have had operations.

The "against" mail is preponderantly from physicians, but also voices the views of insurance companies, pharmaceutical houses and businessmen objecting to a rise in the payroll tax. When the aged speak for themselves, they are spunky.

Excerpts from a few representative letters follow:

FOR FORAND BILL

"I am 80 years old, 64 years in industry; sickness has taken my home, insurance policies, and now a pauper's oath, so as to get medical care. Fine thing for a democracy. May I in all fairness ask you and your colleagues how you can vote against this bill when, from the President on down to the newest Members of Congress, you will get free socialized medicine at either the Walter Reed or Bethesda hospitals? After all we retired old folks paid the taxes that erected these hospitals for our political boys to have no worries about sickness and its tremendous expense."

"I haven't been to a doctor in almost 4 years and I just can't afford to go."

"The cost of medical care for people over 60 years of age is exorbitant. I am a member of this age group."

"Surely a country so free spending abroad can take care of its elderly population. Certainly it makes more sense than the bomb shelter plan Rocky (Governor Rockefeller) is trying to push."

AGAINST FORAND BILL

"I am not only strenuously against the Forand bill because of the many objections voiced by the American Medical Association, but I find it absolutely impossible to justify any legal act which will saddle my children and grandchildren with a completely unnecessary tax burden."

"It would seriously weaken if not destroy the entire social security structure."

"It is socialized medicine."

"It is the opening wedge for a Government-controlled program of health insurance."

"Our private insurance companies will always do a far better job at far less expense than the Government could ever hope to do."

Birmingham Bar Association Opposes Voting Referee Plan

EXTENSION OF REMARKS OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I insert herewith in the CONGRESSIONAL RECORD a resolution which was adopted a few days ago by the executive committee of the Birmingham Bar Association in opposition to the voting referee proposal presently being considered in the House of Representatives. The Birmingham Bar Association is composed of all lawyers licensed to practice in the city of Birmingham, Ala., and the opinions expressed in this resolution are those of the best legal talent available in my district. I urge that every Member of the House of Representatives give this resolution very careful consideration:

RESOLUTION OF THE BIRMINGHAM BAR ASSOCIATION

Whereas there is now pending before the 2d session of the 86th Congress of the United States certain legislation relating to so-called civil rights which is but a patent attempt to further infringe upon the rights reserved and guaranteed to the several States, and to the individual citizens thereof under the Constitution of the United States; and

Whereas the legislation thus proposed is inimical to the best interest of the people of the United States of America, and, if adopted, would tend to create discord, violence, and disunity among the people of this country and spread further disrespect for law and order and would gravely distort and immeasurably impair the respect of the people for courts in general, and the Federal judicial system, in particular; and

Whereas many of the provisions of the proposed legislation are as objectionable to the people of this country, in this day and age, as were the provisions of the Reconstruction Acts, which were unfortunately and vindictively adopted over a Presidential veto in the not too distant past; and

Whereas the executive committee of the Birmingham Bar Association views with alarm, the continued efforts of the Federal Government to encroach upon and invade the constitutional rights reserved to the States and to the people under the pretext of guaranteeing "civil rights" to certain segments of the population now residing in the several States: Now, therefore, be it

Resolved by the executive committee of the Birmingham Bar Association, in meeting duly assembled, a quorum being present, That said committee, on behalf of the Birmingham Bar Association, does hereby oppose the enactment into law of any provisions of so-called civil rights legislation now pending before the 86th Congress of the United States, which create or authorize, or tends to create or authorize, the appointment by the Federal judiciary, or by any other Department of the Federal Government, of any referee to police voting qualifications or voting procedures in the several States, or of any registrar to undertake to create a Federal system of registration of voters in the several States; be it further

Resolved, That the Members of the Congress from the State of Alabama be advised by the president of the Birmingham Bar Association of this expression of concern

with the legislation pending as aforesaid, and that each Member of the Congress from the State of Alabama be and he hereby is commended for the vigorous and determined opposition heretofore manifested against such legislation; be it further

Resolved, That Members of the Congress from the State of Alabama be and each of them is hereby urged unrelentingly to continue to oppose and fight against the passage of any legislation which tends to undermine or subvert judicial processes long established in this country, or which impairs, or tends to impair, the integrity and respect of our judicial system and its administration of justice; and be it further

Resolved, That this resolution be spread upon the minutes of this meeting and copies thereof forwarded promptly by the president and secretary to each Member of the Congress from the State of Alabama and to the press and to such other persons and organizations as the president of this association may deem appropriate.

Marine Corps May Get New Cold War Mission

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. FLOOD. Mr. Speaker, in the mounting discussions of U.S. foreign policies, it is gratifying to note an increase in the number of thoughtful articles by writers of responsibility as well as courage. The latest is an informative discussion by Mr. Anthony Harrigan in the March 13, 1960, issue of the *News and Courier*, Charleston, S.C., one of the Nation's most ably edited newspapers. Because of its pertinence, I commend the article for reading by all concerned with the formulation of U.S. policies:

[From the *Charleston (S.C.) News and Courier*, Mar. 13, 1960]

MARINE CORPS MAY GET NEW COLD WAR MISSION

(By Anthony Harrigan)

How can the United States outthrust, outplan and outperform the Communist enemy in use of military forces for political ends?

That is one of the survival issues facing our country. It is not the nation that has the most missiles that will win the cold war, but the nation that finds new ways of using its military power in situations short of a big war.

The Soviets have proved resourceful in discovering ways to apply their military strength. They armed the North Koreans who fought against the United States. At present, the Soviets are helping Chinese Communists to build a submarine fleet. Red Army tanks have been used by Nassar's United Arab Republic in attacks on Israel. Moscow-trained military advisers are with the Syrian Army. Reports are coming from Latin America that a legion of Communists will be formed to fight for any nation threatened by U.S. "reactionaries."

American traditions make it hard for this country to adjust to Soviet cold war techniques. For example, the United States in years past has laid stress on separation of military action and political action. But today, when the Communist enemy fights with a combination of bribery, political leaflets and guerilla groups, separation of

military and political action is a handicap to the United States.

Lack of political preparation of America's fighting men was evident in Korea, where many U.S. prisoners of war were unequipped to face Communist brainwashing. Because other Koreans and Lebanese are likely to occur, the United States must face up to the changed ways of war.

News ways of war are being put into practice in the two great underdeveloped areas of the world—Latin America and Africa. Both areas are the home of unstable countries suffering from political immaturity and explosive nationalism.

Not even the basic political blueprint has appeared in Africa. Though new African nations are gaining independence each year, the political pattern is unsettled. Ghana soon may be locked in political struggle with Nigeria over which nation will dominate west Africa. Armed conflict cannot be ruled out.

The outcome of this and other struggles on the Dark Continent concerns the United States. Where the United States has a stake in the outcome of a political dispute, the need may arise for intervention at some point on the spectrum of politico-military activity.

Many of the new nations in Africa have strategic importance. Somalia, now an Italian mandate area, and British and French Somaliland border respectively the Indian Ocean and the Gulf of Aden. They overlook the southern approaches to Red and Arabian Seas and wash against Iran, Pakistan, and India.

India is a neutral nation, but the other two are allied to the United States. If Somalia, which will soon gain its independence, were ruled by a pro-Communist regime, the seapower of the United States and its allies would be endangered in the Indian Ocean. Red naval units based on the east coast of Africa could seal off that part of the world from the Western democracies.

Neither can the United States ignore the successes of communism in Latin America. One of the principal objectives of Cuba's revolutionary government is to drive the United States from its great naval base at Guantanamo Bay. Throughout the Caribbean are important listening devices that help guard the American mainland against Soviet submarine attack. Leftist rule of the Caribbean Federation, for example, would mean real risks for the American people.

Trouble in Latin America is not new. During the 1920's and 1930's the U.S. Navy and the U.S. Marine Corps were called upon to exercise a stabilizing force in the Caribbean and Central America.

An era of good neighbor relations led to withdrawal of Marines. But the stepped-up tempo of trouble in this hemisphere suggests that the United States may have to link military force to political activity.

If intervention is again a possibility, the United States must give thought to actual techniques. The French experience in Algeria makes clear that police actions require special training of troops.

In 1956, Brig. Gen. Paris de Bollardiere, a French military zone commander in Algeria, developed a new approach to pacification. He said: "We are separated by a wall from the Moslem community." Realizing this difficulty he temporarily abolished orthodox military organizations. He formed small units that combined political work with attacks against terrorists. Thus the French military forces became closely identified with a villager's safety and security.

The time may not be distant when the U.S. Marine Corps will be called on to utilize similar techniques. If ordered into Cuba, the Corps would want to identify itself with Cuban groups that opposed the Castro forces. Political pacification would not be easy for the Marine Corps today, which stresses amphibious warfare and vertical

envelopment with helicopter attack forces. In retirement now are the officers and non-coms who restored order in Haiti and Nicaragua in years past. The whole focus of the Marine Corps has changed as a result of its experience as an assault force in World War II. But a new emphasis on pacification duties may be necessary because of the national stake in holding down Communist movements.

Because the marines are a flexible, battle-ready professional fighting force, they may well become the national instrument for checking Communist indirect aggression. If this is the case, marines may have to be given new and different training in languages, political administration, and pacification methods. Techniques of political persuasion may have to be taught not to a small handful of high-ranking officers, but on the squad level.

This sort of mission would be a new one to the American Armed Forces. But as Communists make clear, they are engaged in a war that could last decades. The counterattack against Communist activity in Cuba, or even Africa, must be made with weapons and tactics that are suitable.

Ireland the Gift Giver—An Address Delivered by the Right Reverend Monsignor John K. Cartwright on March 17, 1960, at the Banquet of the Friendly Sons of St. Patrick, Mayflower Hotel, Washington, D.C.

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. RABAUT. Mr. Speaker, on the occasion of St. Patrick's Day last week I was privileged to attend the annual banquet of the Friendly Sons of St. Patrick here in Washington. The whole program was wonderful and the evening was a happy and festive one indeed. One of the real highlights of the occasion was the singularly fine address delivered by the Right Reverend Monsignor John K. Cartwright of St. Matthew's Cathedral here in our Nation's Capital. Needless to say, I have listened to a great many speeches on the many St. Patrick's Days I have celebrated over the years. Monsignor Cartwright's address ranks among the very finest I have ever heard. Its high quality is immediately apparent and stems in large part, I feel, from its overall tone of universality—a quality not often found in speeches commemorating St. Patrick's Feast Day. I take pleasure, Mr. Speaker, in placing this address in the RECORD so that all may have the benefit of its message. The monsignor's speech follows:

IRELAND THE GIFT GIVER

There is a tradition of good will and of almost mystical friendliness which invests this feast when men of different races take on an imaginative citizenship in the Irish race. The same spirit of good will and compliment is prevalent in the eulogies of St. Patrick. Sometimes the compliments abound in fancy rather than in the sober reality of historical

realization. And it is a pity that a sort of mist—legendary however beautiful—seems to gather around one who nevertheless lived in the real world of the fifth century and whose achievement was one of the most powerful in human history. St. Patrick's mission made a whole people a part of Christendom and therefore a part of European history, and therefore a part of our history. There was about him a splendor of instantaneous success that is nearly unique. There was also a unanimity on the part of the people whom he won. St. Patrick and his companions were apostles, missionaries, teachers. But they were not martyrs. And here again in the marvelous welcome given to his message there was something strange and marvelous and not to be forgotten.

With your permission, however, I shall dwell tonight not so much on St. Patrick and his work but on the centuries that were its consequences.

My subject is "Ireland, the Gift Giver." As such I ask you to dwell with me for a moment upon the rich endowments, the rich generosity of its people in the past, and upon its rich potentialities for further contributions in the present and the future.

In the very distant past of Roman imperialism the Celtic peoples pass before the lens of history. They succumbed at first to the Roman sword and afterward to the organizing genius of the Roman lawyer and engineer. But they were not, for all that, an inferior people. The ancient writers including Caesar, who conquered them, recognized in them a people who had something to give to even Rome. Lucan, the poet, saluted the bards, the spiritual leaders of the Celtic tribes as those to whom was given knowledge "of the gods and the powers of heaven." "From you," he said, "we learn that the frontier of man's spirit is not the senseless grave;—death, if your lore be true, is but the passage to enduring life."

"The frontier of man's spirit is not the senseless grave." So thought the Roman of the Celt, who awakened within his civilized and conventional mind the wild surmises of the spirit, the haunting conviction of immortality which is native to the immortal soul of man. Such was not the only, but the chief contribution of the Celt. The Roman gave him roads and commerce and stability. He awakened in the Roman the suggestion which precedes the faith that "the frontier of man's spirit is not the senseless grave." The Roman worked and fought and built, yielding structures that might serve the purpose of this world's day. The Celt, even before he was a Christian, pointed beyond the horizons of this world's sunlight to the vaster issues of the everlasting day when man's true destiny will be accomplished.

The time was to come when Rome's imperial secret perished from his mind and heart. The legions vanished, the roadways fell into decay, commerce shrank, schools disappeared, art was corrupted, the Roman peace gave place to chaos and the laws yielded to anarchy. Civilization gave place to barbarism. The fair cities with their temples and porticoes were replaced with the hovel structures of those who came from the forests. The power of reason and the human mind to advance upon the wilderness seemed to be lost. And on the ancient frontiers the children of civilized Rome and civilized Celt alike trembled within the diminishing circle of the light.

Then came salvation. Within the frontiers the bishop and the Benedictine arrested the ravaging hand and directed the new tribes on their path to the new civilization of the Middle Ages. And on the frontiers a renewed civilization, not the Roman Empire but Christendom, achieved anew its powers of expansion and of carrying the mission of light to the peoples who sat in darkness.

If we are civilized today we owe it to the past. Not to one past but to many pasts: the

past of Greece and Rome and equally with these to the glorious and sometimes unappreciated past of the Middle Ages. The men of the centuries from the fifth to the tenth strove pitifully and piously to save the fragments of their past. And in the nobility of that struggle was achieved a new present as the basis for an even nobler future. Upon the work of those five centuries you and I depend for letters, for art, for music, for government. Science itself which is the creation of our own time and which sometimes makes our own times seem very self-sufficient—science itself is born to us but the stream of its blood comes down from those noble and pathetic ages when men and women yielded their courage to protect the diminished yet precious inheritance which their age had given to them, and in the midst of exiguous resources and sterile ruins gave birth again to mankind's creative powers.

Those five centuries were great not so much for their achievement but for what they made possible to the high Middle Ages and to us. And in those great five centuries one of the greatest names is borne by those who did the greatest deeds, the scholars and the monks of Ireland. Sedulius Scotus at Liege whose verses carried into Christian expression the ancient Celtic longing for immortality, Virgilius at Salzburg who, long before the instruments of modern science were invented, reflected the scientific longing to break the limits of time and space; John Scotus Erigena who opened again for northern peoples the problems that were first stated in Ionian and Apulian cities by Thales and Pythagoras. These names are perhaps not in much currency among us today. But if others forget, let Irishmen remember that the gifts of scientific curiosity and literary expression and philosophic thought which are the very blossom of civilization were given to the ancestors of Englishmen and Frenchmen and Germans and Americans over 1,000 years ago by Irishmen. It was not always Irishmen who gave them, and they were given not only by Irishmen then. But the Irish gave them and gave them chiefly at the time when the rest of us needed them most, at a critical age of danger and spiritual starvation. And had it not been for those generous gifts of ancient Ireland, the rest of us might be Franks today instead of Frenchmen, Teutons instead of Germans, Anglo-Saxons (or even Jutes) instead of Englishmen. And America might still be a continent of Cherokees and Iroquois.

And note how these great scholars became the pilgrims and colonists of Christendom on its frontiers. Today there are cities in the heart of Europe which then were village outposts of culture. In those places there lingers in many a name and many a monument the remembrance of the Irish pioneers. Their monasteries helped to keep religion and learning in Rouen before it became the Athens of the Normans; in Cambrai where it fronted on the desert northern flatlands; in Cologne when the Rhine was a crossingplace for savages and before anyone had seen even in imagination a Gothic spire; in Luxeuil when Columbanus wrestled with the cruel and lustful strength of the Burgundians; in Rheims when it was just becoming the baptismal front of Christian France; in Ratisbon before the first of the Danube's valleys had become a hearth of ordered industry and peace; in St. Gall when the austere mountain solitudes behind it were not yet won for either faith or patriotism; in Bobbio when the Alpine passes had been lost to the wilderness and Italy's frontier shrank to the Apennines. To all these places the Irish came. On all that march of Christendom they brought gifts to men, and bright in the coronets of those crested cities are the emeralds of Irish faith and Irish learning.

These ancient achievements are our memories. Yet the Irish people do not rest only

upon ancient glories half lost in the Celtic twilight or dim in the distant balefires of the Dark Ages. They are a vital people today in a country which is at long last their own. And to all the countries of the Western World they have carried an individuality which is one of the great contributions to the history of today.

Many peoples of Western Europe have in the last four centuries carried the streams of their best traditions to our country. Here the German has brought his steadiness and workmanship, the Frenchman his art and his clear thought, the Englishman his love of the representative institutions which it was the honor of his forbears first to achieve, the Spaniard his dignity and independence which made Spain in our time the first country clearly to repudiate the international folly and crime of communism. These special characteristics of each land accompany the general qualities of patience and courage which were needed to turn this savage continent into the home of settled peace which is America.

Surely the Irish were not lacking in those general qualities of patience and courage. But patience and courage have been the quality in some degree of every nation that has survived the years. What of the special and individual gifts that Ireland contributed to the treasury of our Nation's annals.

It seems to me that they are two, these gifts of Ireland to America. And I feel that they are gifts which America has not yet used to their fullest extent. They are gifts which at first sight are not closely associated. Yet perhaps their fountains lie close together in the recesses of the human soul. These two gifts are humor and spirituality.

Americans like to think that they are humorous, and so they are. But our characteristic humor finds its expression in clever slang and in the wisecrack. And these, though good things in themselves, do not have the force which they should have to dissipate the snobisms which are among our more-grievous afflictions. These mental inadequacies to deal with the absurd have done much mischief and could do more. But the Irish sense of humor—the realization of absurdities in the heart of things—makes the Irish (and would make us) immune to snobbery and pussyfooting and pomposity.

The second contribution which the Irish have made to America is spirituality. Centuries ago the Roman recognized in the Celt that quality in which he himself was lacking. "The frontier of man's spirit is not the senseless grave." And today America needs if not to gain at least to preserve this realization of the primacy of the spiritual. Perhaps under God the Irish were sent here to enrich our beloved country with a greater vision of the fact that "the frontier of man's spirit is not the senseless grave."

For assuredly the Irish are leaders among the races of men in keeping the sense of the spiritual. In other lands the hard clear light of common day makes real the things of earth and banishes the thought of the supernatural. In Ireland the clouds and rain break from time to time and let heaven's sunlight down as through a window to bless the valleys and to glorify the misty mountain tops. Light is a visitor from heaven that comes and goes. Perhaps that is why the Irish are so hospitable and so polite to suggestions from above and why the thought of heaven is always present in their minds.

Chesterton tells a beautiful story that came to him from Donegal. An Irish farmer was walking on a mountain road. Suddenly he met a beautiful woman holding in her arms a child. To his question she replied: "I am the mother of God. And this is Himself. And He's the boy you'll all be wanting at the last."

Is not that an exquisite story? And is it not very real? Real of our forbears, and, please God, somewhat real to us. The di-

vine and the eternal dwell familiarly in the Irish mind and heart. To such minds and hearts it is not surprising to think of divine incarnations and celestial visitants. Nor is it strange or shameful that these heavenly guests should take the accents of their Irish hosts, or compensate for the poverty of Irish firesides by utilizing the poignant and imaginative speech of a people whose wealth has been of the spirit. The Flemish painters who lived in a land of rich commerce adorned their madonnas with the brocades and velvets of the wives of merchant princes. The Italians endowed her and her Child with the noble physical features that are the endowment of their people. The Irish, without brocades and canvas and without great churches intensely realize the divine and simply conceive it in their daily speech. The word made flesh has these long centuries been a familiar and beloved visitor on the hearth and in the hearts of every Irish home.

We do not wrong the dear country that is our own in saying that it needs more of this. May we hope that it is the destiny of the Irish in America to give her this one more great gift. Our land is richest in the world in material resources; richest in the noble traditions carried to her by her myriad peoples and races; mightiest in the opportunities that lie before her for leading the world to better destinies. May she take from the Irish as she has taken from the other peoples the characteristic and gracious gifts that Ireland has to give. May she achieve in the future as she has achieved in the past a glorious terrestrial destiny without rejecting the insight into the heart of the world which is Irish humor and without forgetting the Irish insight into spiritual realities, the Irish faith that "the frontier of man's spirit is not the senseless grave."

Our Monetary System: A Most Unusual Newspaper Informs Its Readers on the Subject of the Nation's Money System and the Federal Reserve's Monetary Policies

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. OLIVER. Mr. Speaker, during January and February of this year, the Texas Observer ran a series of articles under the general title "PATMAN on Money." This title refers, of course, to our distinguished colleague, the Honorable WRIGHT PATMAN, of Texas, who, as most of us know, is an expert on monetary matters to be reckoned with.

These articles are most enlightening. Despite the obvious importance of this subject, I regret to say it is one which is too much neglected, particularly by the public press. More than that, the Government officials in charge of monetary matters and the banker-philosophers who speak on the subject have a way of surrounding this subject with much mysticism, gobbledygook, and, at times, downright misleading statements. As a result, the public is more confused than enlightened concerning one of our most important social institutions, namely, our money system.

I believe that the Members will find the Texas Observer's articles both informative and stimulating reading. And because of the scarcity of enlightening information on this subject, I have thought that I could do a good service by calling attention to such information from time to time.

A word about the Texas Observer. It is a weekly newspaper, published at Austin, Tex. It is one of the rare giants of American journalism. It reports on those important issues which most of the newspapers of the country find either too hot to handle or too difficult to handle. As a consequence, it has a high reputation and a devoted following of subscribers over the country—from the farthest corner of Texas to Maine.

The first of the articles I have mentioned appeared in the January 15 issue of the Texas Observer, and it is as follows:

[From the Texas Observer, Jan. 15, 1960]

PATMAN ON MONEY—PATMAN CHARGES "ROBBERY IN BROAD DAYLIGHT"

(The observer's intent in the series here beginning on Congressman WRIGHT PATMAN and the banks is not to advocate nor evaluate PATMAN's ideas but to give them a full hearing. We invite disputation on the subject and trust our readers will agree that if Mr. PATMAN is right, the Congress has neglected a national scandal, while if he is wrong, he is very wrong.—EDITOR)

WASHINGTON.—"Oh, it's cruel. It's highway robbery in broad daylight. Imagine the Government paying that much for its own credit."

In such language does the venerable WRIGHT PATMAN, Congressman from Texas since 1928, condemn rising interest rates on money.

In 1945-46 PATMAN said, the interest rate on short-term obligations of the Government was three-eighths of 1 percent, but the rate has increased more than 10 times. Long-term Government interest rates are over 4 percent, and the bankers are "shooting for 4.5 percent bonds."

PATMAN favors a limit of 2.5 percent interest on long-term Government bonds.

"This is a case of the majority needing protection from the minority—the bankers having all the privileges," PATMAN told the Observer in an interview in his Washington office. "The people who run the big papers are hooked up with them."

"We have no supervision over the banks. We can't get an independent audit—we haven't had one in 46 years. They have enough power to stop any investigation."

"The people are paying interest of at least $3\frac{1}{2}$ billion a year they wouldn't have to pay. The total interest payments on the national debt are \$9 billion a year—the largest item in the budget except national defense, 50 percent higher than all payments to all veterans of all wars for all purposes."

RUN THIS COUNTRY

"The Federal Reserve ought to be impeached," the Congressman said angrily. "They absolutely ought to be impeached. It's a disgrace to let a few fellows representing Wall Street absolutely run this country and have more power than Congress does."

PATMAN said the open market committee of the Federal Reserve System, a committee which buys and sells Government securities in the open market but in secrecy, is composed of five members selected by banks and seven who are "supposed to be public members—but of course they're private bankers."

"The Federal Reserve banks regulate no

private banks now—they're just stuffed shirts, spending tremendous amounts of money. The open market committee makes the fundamental decisions," he said.

The people do not understand that the banks manufacture money, PATMAN declared. "They're the manufacturers, creating money. The Federal Reserve banks create dollars out of the Government's credit when they issue Federal Reserve notes. They have 25 percent in gold behind it, but the gold belongs to the Government. The gold is really a fiction; on the international market, some like to deal with gold."

The private banks, in relationship to their reserves, can then "manufacture as much money as they want to make—from their own greedy standpoint," PATMAN said. "They can put all their money in Government securities and go fishing."

A SCANDALOUS STORY

He has been swinging, too, against what he regards as banks' evasion of financial responsibility for the Federal Deposit Insurance Corporation.

"The banks were supposed to pay one-twelfth of 1 percent of their deposits" to FDIC, he said, "but during the 80th Republican Congress the law was changed so that the FDIC Board can get \$3 billion from the U.S. Treasury any time they want it, direct. This is a Government obligation for which they (the banks) pay nothing—a bonus to the banks. And then they began cutting the one-twelfth of 1 percent contribution, until they can subtract 60 percent of that one-twelfth."

"It's a scandalous story, scandalous," PATMAN exclaimed. "The U.S. Federal Deposit Insurance Corporation has 81 cents to protect every \$100 on deposit." In the event of a run on the banks, he said, "the Government would just print the money."

The national debt ought to be paid off to a certain amount, "but we've got to have a national debt," PATMAN believes. To pay it off quickly and abruptly would cause "the worst depression in history." As long as the private sources of capital will not provide enough funds to keep the economy going, the Government must do so, and this means the national debt, he reasons.

PATMAN believes bankers should be removed from the Federal Reserve Board. "It's scandalous. It's shocking. It's so shocking—the people won't believe it," he said, handing the reporter some CONGRESSIONAL RECORDS.

"You won't find debates. Because they won't challenge me. They keep it out because they know damn well what I can do to them," he said.

"Pressures from the bankers and the frequent charges that reforms bankers oppose would be inflationary intimidate many persons on the subject of money," he said.

"It hasn't intimidated you, I notice," the reporter observed.

"No sir. It will not," he said.

THE NO. 1 MONEY MAN

PATMAN is not just another Congressman. He is second-ranking member of the Texas delegation in tenure. Only Speaker RAYBURN has served longer.

He is chairman of the House Small Business Committee. Every other Congress he is chairman of the Joint (House-Senate) Economic Committee. On the powerful House Banking and Currency Committee he is the third-ranking member.

Born near a railroad siding named Patman's switch (for his family, who settled there, near Texarkana, after the Civil War), PATMAN was graduated from Hughes Springs High School and earned his law degree from Cumberland University, Tennessee. ("I only got involved in banking and finance because I had to," he says.)

He served in the Texas Legislature from 1921 to 1924, was district attorney for the

fifth judicial district of Texas, and was elected to Congress in 1928.

Bankers all over the country know about him, and some fear him. The Associated Press said in a story from Washington, December 28, 1958, that his ideas about money and credit "in some outraged quarters" earn tags like "sawdust floor economist," "cheap money," and "funny money."

But, said AP: "Money, like the weather, is something everyone talks about, but few really understand it. PATMAN is one who does. In spite of the controversy over his economic philosophy, the solemn Texan probably rates as the No. 1 money man in Congress because of his knowledge of this complex subject."

When a man of this standing declares, as PATMAN did, for instance, in a letter to the Observer on December 19, 1959, that "the Federal Reserve Board now is guilty of wilful misconduct and gross malfeasance in office. They are doing what is equal to highway robbery in broad daylight by imposing extortionary interest rates upon the people and permitting a few to make their millions overnight through the free use of the Government credit"—then one would expect the Nation to take notice.

But it has not.

TAKE THE FLOOR

His views have made no real impression on the Congress. The Democratic Party does not take them up—in fact, does not, as a general matter, discuss banking, except for occasional rhetorical abuse. And PATMAN charges that the press blankets out a discussion of his field and his ideas.

Last Congress, arguing against what he said would have been a bigger giveaway than all the Teapot Domes, Dixon-Yates deals, public land grabs, timber steals, and defense contract riggings put together, PATMAN said:

"The reason is, the people generally are not informed about it and enter no protest. The Members of Congress have terrific pressure from the banking lobby that will profit so handsomely from this giveaway. Our exposés are scandalous and shocking but they are only printed in the daily CONGRESSIONAL RECORD, which is read by few people."

Last March, PATMAN made a speech to the U.S. House charging that the Federal Reserve system and the Republicans in 1958 "gave"—literally "gave"—the banks \$10 billion in 1958. His reasoning was complex and required some sophistication about banking. He had just finished charging that in fact, the \$67 billion of interest-bearing U.S. Government securities the commercial banks hold have all been acquired by money "created on the books of these banks."

Then he asked the House:

"Is there a Member within the sound of my voice who will dispute what I have said about that? Of course, there is not. There is not a person in the Government who will dispute it, because it is an inescapable fact. It cannot be disputed. So, here we are, 436 Members of the House, sitting right here on the sidelines seeing this happen in broad daylight and feeling helpless to do anything about it. That is the reason I complain."

But a Member did rise to the microphone. The CONGRESSIONAL RECORD reports the colloquy:

"Mr. GROSS. Mr. Speaker, will the gentleman yield?"

"Mr. PATMAN. I yield to the gentleman from Iowa."

"Mr. GROSS. How did the gentleman vote on raising the debt limit?"

He had voted no, PATMAN replied.

He tried again in April. Market trading in onions is regulated by the Government, but market trading in Government securities is totally unregulated, he declared. The interest rate had just gone to 4.26 per-

cent on longtime securities "for the first time since the early twenties." Pleading for attention, PATMAN continued:

"The Federal Reserve Board last year furnished the banks enough free reserves, absolutely free, without a penny cost, for them to go into the market and purchase \$10,400 million in U.S. Government securities. That was manufactured money. That was money created on the books of the banks. Every dollar of that money must be paid. By whom? Every bill says 'U.S. Government will pay on demand, so many dollars.' That is how. That is you. That is the people. In other words, it is a mortgage upon all the property and upon all the incomes of all the people of the United States to pay that money which was created by the flick of a pen on the books of the banks in 1958 in order to buy these bonds totaling \$10,400 million."

"If any Member of Congress can justify that," challenged PATMAN, "I wish that Member would speak out and I wish that Member would take the floor of this House and say it can be justified. I know now that no Member will do that because no Member will try to defend that policy. It cannot be defended. But we have remained silent. We have not done anything about it. Now it has overtaken us in a devastating, ruinous way. We must immediately pay some attention and see if we cannot do something about it."

The Worthy Pilcher Report

EXTENSION OF REMARKS

OF

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. FORRESTER. Mr. Speaker, the leading daily newspaper of the Second Congressional District of Georgia, the Albany Herald, carried an editorial in its March 19, 1960 issue, entitled, "The Worthy Pilcher Report." That editorial points out the magnificent service performed by the Foreign Economic Policy Subcommittee during a 40,000 mile tour of Far Eastern and Middle Eastern nations. The work of that subcommittee reflected great credit upon every member of that fine subcommittee, and I am particularly proud of the leadership and wisdom displayed by my colleague and neighbor, the gentleman from Georgia, Congressman J. L. PILCHER, and I think the editorial points up dramatically the services rendered, and that the editorial should be made a part of the RECORD.

The editorial reads as follows:

EDITOR'S OUTLOOK—THE WORTHY PILCHER REPORT

Second District Congressman JOHN LEONARD PILCHER's Foreign Economic Policy Subcommittee of the House Foreign Affairs Committee, on the completion of a 40,000-mile tour of 17 Far Eastern and Middle Eastern nations to study the impact of U.S. foreign aid in these areas, has issued an eminently sensible report citing the strikingly dangerous gap which exists between grandiose projects at the top and millions of human beings still starving, still untaught, who have neither the stamina to undertake nor the capacity to understand self-government. Significantly, the Pilcher subcommittee does not condemn foreign aid per se, nor has the chairman ever done

so. But it does have a great many thoughtful things to say about obvious maladministration as well as the need for a reappraisal and revision of the mutual security program by the Washington Government.

The conclusions of the subcommittee, to which a lone and mild Republican dissent was raised by a single member, are worthy of the closest attention in the 2d session of the 86th Congress which must act on the administration's request for still another \$4.2 billion in foreign aid funds. What the Pilcher subcommittee had to say about the planning and execution of our assistance programs abroad comes close to spearing directly to the heart of the trouble. Newly independent, underdeveloped countries usually seek to build great prestige public works like huge dams, steel mills, and superhighways, often with little regard to overriding economic considerations. Unfortunately, the United States has acceded to too many of these programs, in the subcommittee's view.

For example, the study notes that the cost of an elaborate highway in Vietnam has skyrocketed from \$18 million to \$85 million and may exceed \$100 million before its completion. Yet the Congressmen found this particular work "completely unrealistic" in terms of that nation's needs. In Korea, the mission found 300 projects were programed and more were scheduled to begin before the existing projects had been completed successfully. "Such an approach is costly in operation and inconclusive in results," the lawmakers held. A Korean fertilizer plant, started with aid dollars in 1955 and earmarked to cost \$19.5 million, already has received more than \$40 million, is still not operating and will not reach full operation for several years. These are but a few of many such examples, and they naturally moved the Congressmen to the only conclusion consonant with the dictates of commonsense: "The study mission found a tendency on the part of several U.S. personnel serving in foreign nations to magnify the interests of the particular country to which they are assigned. As a result of this practice, some projects have been undertaken without adequate consideration either of suitability or excessive cost to the United States."

This situation has resulted in nations like India, which faces a food crisis due to overpopulation and a grave lack of agricultural production methods and procedures, building vast industrial monuments while the national investment in agriculture lags and people starve to death. True, rapid industrialization is the rage in many underdeveloped countries, but the difficulty lies in the too often rapid pace of the undertaking, as the House subcommittee observed. This failure to put first things first can have tragic results, not only for the recipient nations but for the donor as well. Hungry people are easy prey for the glittering promises of communism. In this sense, American foreign aid, as presently constituted, is not meeting the most elementary test of the U.S. national interest.

Our central error lies in our attempt to do too much in too many places with available funds, as Congressman PILCHER and his colleagues make plain. Conceding this premise, it is necessary to proceed to the logical conclusion that American assistance be limited henceforth to a few fundamentals—food, education, and adequate military defenses. The total burden which this Nation bears is no light one. But to make the load even heavier through carelessness, slipshod administration and ineffectual planning is the height of foolhardiness. The Pilcher Report thus serves the best interest of the American people in calling to public attention not only the obvious errors, but the need for a reformation in mutual assistance.

Violation of International Convention of 1888 by Egypt

EXTENSION OF REMARKS

OF

HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. FARBSTEIN. Mr. Speaker, Pennsylvania Supreme Court Justice Michael A. Musmanno, at the Carnegie Endowment Center on March 3, 1960, made a talk that I believe is worthy of his high office and the attention of his fellow Americans. He rightly waxes indignant at the actions of the head of the Egyptian nation in violating the International Convention of 1888 which governs the operation of the Suez Canal, in committing acts of piracy, in violating the decree of the United Nations of September 1, 1951, and further, in violating the principles of the United Nations to which Egypt was bound. "There shall be free and open transit through the canal without discrimination overt or covert." "The operation of the canal shall be insulated from the politics of any country."

Under unanimous consent I include this speech in the Appendix of the RECORD:

ADDRESS BY PENNSYLVANIA SUPREME COURT JUSTICE MICHAEL A. MUSMANNO, AT CARNEGIE ENDOWMENT CENTER, MARCH 3, 1960

Mr. Chairman and friends, in the early part of December 1959, the Green ship *Astrypalea* stood into the beautiful harbor of Haifa, Israel, to take aboard as prosaic and as unprovocative a cargo as ever rode the ocean waves—cement, 400 tons of it. It had been purchased by a firm in Eritrea on the Red Sea. A ship may get to Eritrea from Haifa by traveling southwardly through the Suez Canal, a voyage of some 1,000 miles, or it may reach Eritrea by circumnavigating Africa, that is, by sailing westwardly to Casablanca, southwardly to Cape of Good Hope and then northwardly through the Indian Ocean, a distance of some 10,000 miles. Obviously the captain of the *Astrypalea* took the shorter route, charting his course due south and, on December 18, arrived at Port Said for passage through the canal connecting the Mediterranean with the Red Sea.

Here, however, he found the locks closed to his ship. Egyptian guards, acting under orders from Gamal Abdel Nasser, president of the United Arab Republic, informed the captain that he could pass through the canal only if he first surrendered the cement he was transporting from Haifa. The Greek captain refused to give up his cargo and equally declined to return to Haifa, the alternative offered by Nasser. And with this impasse the *Astrypalea* became immobilized in the waters of the Mediterranean at the head of the canal, as much as if it had been congealed in the cement which it carried.

I was traveling in the Mediterranean at the time and was considerably interested in the legal phases of this extraordinary event.

Ten days later I was honored by an interview with Prime Minister David Ben-Gurion in his office in Jerusalem, and I asked him what he thought of the action of the Egyptians in demanding the cargo of the *Astrypalea*. We had been conversing for some minutes before I mentioned the episode at Port Said, and up until this moment the

Prime Minister had been very cheerful. When I put the question, however, his calm and amiable features tautened, his eyes flashed, his hands clenched and one word explosively rose to his lips—"Robbery."

And that's what Nasser's action was—robbery. Nor was this the first time that the Egyptian Government had unfurled the black standard of freebooters.

In April 1959, the Danish freighter *Inge Toft*, chartered by the United Mediterranean Agencies, of New York, also set out from Haifa, also carrying cement, in addition to other products, for passage through the Suez Canal on her way to the Orient. She was halted at Port Said and directed to discharge her Israel-loaded cement and other cargo. The captain refused and Nasser ordered the ship detained. The Government of Israel, the owners of the ship and the owners of the cargo all protested, but Nasser refused to allow the ship to proceed. As a consequence, the *Inge Toft*, like the ship in Coleridge's *Rime of the Ancient Mariner*, stuck in the motionless sea as if embalmed in pitch.

Eventually the owners had to capitulate to Nasser's imperious demands. The detention was costing them a thousand dollars a day. The cargo was surrendered to Nasser who, adding insult to injury, compelled the owners to pay unloading costs so that it could not be said that they had been coerced into giving up their property. This is like making the victim of a robbery pay for the revolver with which he is compelled to surrender his wallet so that it may be said that, after all, he was not coerced since it was at the persuasion of his own weapon that he handed over his money.

And, so far as the *Astrypalea* is concerned, she still remains to this day rusting in the murky waters of Port Said. Israel has produced documents proving that title to her cargo of cement is in the purchasers at Eritrea who anxiously await their goods, but Nasser still refuses to remove his usurping hand from the bulwarks of the unoffending vessel.

The mere narrative of these two outrages is enough to prompt the brow-wrinkling inquiry: Upon what basis does Nasser claim the right to take property belonging to someone else? And how does such brutal appropriation differ from piracy?

Nasser claims that a state of war still exists between Egypt and Israel and that, therefore, he may, on his own authority, close the Suez Canal to Israel. The answers to Nasser's contentions are so many and so overwhelming, individually and in combination, that, in replying, one runs the risk of allowing indignation to overcome articulation.

In the first place, the *Astrypalea* and the *Inge Toft* are not Israel ships. In the second place there was nothing in the cargoes of these two ships which could possibly do damage to Egypt as they passed through the canal. In the third place, the cargoes were no longer the property of Israel citizens since the consignees had paid for them in Haifa and were merely taking them home. The argument advanced by Nasser, in this respect, if accepted, would justify the creditor of a shoe store owner in assaulting and pulling off the shoes of a customer who had purchased and paid for the shoes in that shoe store.

And then, so far as the state-of-war argument is concerned, it is to be noted that the aggressive war which Egypt launched against Israel terminated almost 12 years ago, and, incidentally, it terminated in Egypt's defeat, so that she may not presume she has a victor's right to a loser's property.

Of course, Nasser maintains that the Egypt-Israel war has not terminated because a treaty of peace has not been concluded between the two countries; there was only

an armistice. But it is not Israel that is at fault here. It is Nasser who refuses to dip the pen into the ink. He prefers to stir into the inkwell the vials of hatred, racial poison, and impassioned hostility.

But, even if we were to assume that technically the two countries are at war, and even if we were to assume that the *Astrypalea* and the *Inge Toft* cement belonged to Israel, Nasser could not, under international law, confiscate the cargo as contraband. The very object of an armistice is to suspend all belligerency. Violently seizing noncombatant goods is as much an act of war as firing a gun.

But these arguments are all wholly unnecessary and superfluous because Nasser has no right whatsoever to stop any ship, no matter what its registry and no matter what it is carrying, from passage through the Suez Canal. The International Convention of 1888, which governs the operation of the canal, specifically provides:

"The Suez Maritime Canal shall always be free and open in time of war as in time of peace to every vessel of commerce or of war without distinction of flag."

"Consequently, the high contracting parties agree not in any way to interfere with the free use of the canal in time of war as in time of peace."

"The canal shall never be subjected to the exercise of the right of blockade."

In spite of this specific, ironclad, interpretation-proof prohibition against interference with passage through the Suez Canal, Nasser has, with a heavy hand, seized the helms of numerous ships at either terminus of the canal and refused to remove his hand until bounty, by way of surrender of cargoes, has been paid into the coffers of his anti-Semitic hatred. In this nefarious process, cargoes of meat and hides have been held until they spoiled, indispensable goods needed in a rapid building and expanding economy have been delayed to the point of ruining innumerable projects. Oil tankers have been held up unless the owners agreed not to sell oil to Israel. This means that Israel has been compelled to expend from \$8 to \$10 million a year more for fuel than she would ordinarily pay if she could buy canal-transported oil.

Israel naturally protested to the United Nations against these acts of outlawry, and, on September 1, 1951, after Nasser had been given the fullest opportunity to explain his actions, the Security Council ordered Egypt "to terminate the restrictions on the passage of international commercial ships and goods through the Suez Canal wherever bound and to cease all interference with such shipping beyond that essential to the safety of shipping in the canal itself and to the observance of the international conventions in force."

But Nasser spurned this decree as he ignored the convention of 1888. On September 28, 1954, he brazenly halted the Israel freighter *Bat Galim*, appropriated her cargo of 93 tons of meat, 42 tons of plywood, and 3 tons of hides, imprisoned her crew, confiscated the ship and impressed her into the Egyptian Navy.

The brilliant Israel Ambassador Abba Eban, in protesting to the Security Council against this Egyptian crime, declared:

"It is difficult to think of a larger aggregate of offenses against international law and maritime tradition than those which Egypt compressed into the single episode of the *Bat Galim*. There is obstruction of free navigation; piratical seizure of a ship in an international waterway; physical violence against the persons of mariners exercising innocent passage; fabrication of charges against sailors intransigent; unlawful imprisonment; the bearing of false witness from the highest tribunals of international security dishonorable nonfulfilment of a

pledge given by a member nation at the table of the Security Council."

When the case of the *Bat Galim* was discussed in the Security Council, the Representatives of the United States declared:

"We cannot fail to state our view that Egyptian restrictions on ships passing through the Suez Canal, whether bound to or from Israel, or whether flying the Israeli or some other flag, are inconsistent with the spirit and intent of the Egyptian-Israeli General Armistice Agreement, contrary to the Security Council resolution of September 1, 1951 (S. 2322), and a retrogression from the stated objectives to which both sides committed themselves in signing the armistice agreement. We cannot fail to state, therefore, that we look to Egypt to give effect to these decisions and agreements."

On October 12, 1956, Egypt was reminded again of her international obligations. The Secretary General of the United Nations read to the Security Council the list of principles to which Egypt was bound. Nos. 1 and 3 read:

"There shall be free and open transit through the canal without discrimination, overt or covert."

"The operation of the canal shall be insulated from the politics of any country."

In February 1957 President Eisenhower said to the American people and to the world that if Egypt tried to block Israel shipping in the Suez Canal "this should be dealt firmly by the society of nations." And what has happened since then? Egypt has not only tried to block Israel shipping. She has blocked it. She has more than blocked it, she has usurped it—all in flagrant defiance of international law, in opposition to United Nations edicts, and in disregard of maritime principles and elementary rules of justice.

And what has the society of nations done about these unspeakable usurpations? There have been remonstrances, protests, and mild criticisms, but no action. The United Nations sent its Secretary-General, Dag Hammarskjöld, whom I greatly admire, to plead with Nasser, but since when, has law had to plead with outlaw, since when has honor had to plead with infamy, since when has authority had to plead with mutiny, and loyalty with perfidy?

Nasser, of course, resisted every appeal. He was deaf to reason, impervious to logic, scornful of legal obligation, insensate to demands of fundamental humanity.

There is utterly no excuse for Nasser's bellicosity. No nation has any design on his territory. On the contrary, many nations are assisting Egypt with heavy financial loans and private investment will tremendously help her economy. But those who are giving assistance to Nasser in this manner, and the United Nations which has been extremely lenient in its treatment of Nasser, should ask themselves if in view of Nasser's attitude toward international law, they are not building for themselves a Frankenstein on the Nile?

I believe in the United Nations with every atom of sincerity; it is the one bastion of hope for salvation of the world, but I feel that its failure to deal firmly with Nasser may lead to holocaust.

Of course, it is futile to compare Nasser with Hitler because the evil of Hitler, as the world now counts time, occurred so long ago that only the victims of his fiendishness can sense the horror which his name immediately conjures. But it is not inappropriate to say that the Western World is appeasing Nasser with the same lack of foresight manifested when the later-to-be allies were attempting to soothe the ferocity of the Nazi monster.

Nasser's despotism over the Suez Canal cannot possibly be defended. It has been condemned by the society of nations gen-

erally and by the United Nations officially, but no pragmatic force has been exerted toward making him obey the law. The situation is worse than that. He has been led to believe that he may continue his usurpations without hindrance. He applied to the World Bank for a loan of \$56½ million with which to widen the canal. This would have been the time to demand guarantees that he respect international law and no longer interfere with Israel shipping. But no such guarantee was asked of him and of course he offered none. The loan was approved and Nasser may now widen the canal to allow for a greater scope to the stream of his fierce hatreds.

He has already given ample evidence of the expansion of his anti-Semitic malevolence. He has called upon all the Arab nations to devise plans and ideas on how to destroy Israel. One of his mad plans is to divert the waters of the Hasbani River in Lebanon, which lies north of Israel, so as to reduce Israel's water supply. In order to accomplish this piece of satanic sabotage, the Lebanese would have to tunnel through mountains at a cost of from \$10 to \$15 million. Another plan is to reverse the course of the Baniyas which now flows down from Mount Hermon, and divert it through mountainous country to the Yarmuk.

Anyone who has traveled through the Arab regions can see the great need for water for the prime requisites of life: the satisfying of thirst, the preparation of food, the answering to the demands of sanitation and agriculture. Nasser is building a dam on the Nile to supply water in his own Egypt, but to the north he would build a reservoir of hatred so as to channel the poison of hateful spite into all the Arab countries. Instead of helping the Arabs to get more water, he would endanger the sources which they do have. Instead of helping them to get more bread, he feeds them with the cry that Israel must be destroyed.

But why must Israel be destroyed? What has Israel done which calls for her extinction? Never was a country brought into existence under more lawful auspices than Israel. The United Nations, in General Assembly convened, after long deliberation and study, decreed the autonomous formation of this state, this little state which in size is not as large as our State of Vermont. The land space of the nations in the Arab League, on the other hand, would cover an area equal to one-third of the whole United States.

On March 14, 1948, this tiny piece of the earth's surface, the state of Israel, with a population of only 650,000, became an independent country. On March 15, 1948, the very next day, the armies of six Arab nations thundered across their respective borders with guns, bayonets, scimitars, and knives to kill off the 650,000. Why?

Were the Arab invaders seeking to take up where the Nazis had left off? The Nazis had already persecuted, tortured, butchered, and slain 6 million human beings, the mothers, fathers, brothers, sisters, and other kindred of the 650,000 in Israel. Were the Arabs hoping to finish off the race entirely? And, if so, why?

What amazes me more than anything else in the history of the last quarter of a century is the fact that the United Nations did not come to the assistance of its own creature. Why didn't the countries which had fought for the freedom of the world extend a helping hand to the Israelis who also needed freedom, needed it as much as any other people in the world? It may be that the world was tired of fighting, tired of helping, so it decided to let Israel fend for itself. But the Israelis had been fighting not only during World War II, but through the centuries for the right not only to be free but to survive. And so, although there were only 650,000 of them banded together in this

little defile of destiny, they opposed the invaders. They fought with the pluck and the heroism of the Spartans at Thermopylae, the Finns at the Mannerheim Line, the minutemen at Lexington, the Texans at the Alamo, and the Marines at Solissons—and they threw back the invaders.

The leaders of the Arab nations should hang their heads in shame for this unprovoked assault on a little sister in the family of nations, and the world should take off its hat to the courage, daring, resourcefulness, and willingness to sacrifice on the part of the defenders of Israel—for the sacred cause of liberty and independence.

Since the end of the war Israel has worked and continues to work. She wants peace. As her citizens plow the fields, operate machines, build roads, erect homes, churches, and schools, she stands ready at any moment to pick up the fountain pen at her side with which to sign a treaty of amity and concord with all her Arab neighbors. But Nasser gives evidence of not wanting peace.

So long as he can keep the Arabs in a fever of agitation over a country other than the one in which they live, he hopes to keep them from thinking about his dictatorship. The only way a dictator can retain absolute power is to direct the attention of his subjects from their own miseries by telling them they must fight against a threatening country. And so, in Hitlerian fashion, Nasser exhorts the Arabs to destroy the Jews who are their mortal enemies. But the Jews are not enemies and they entertain no ill feelings toward the Arabs. I personally witnessed in Israel the freedom which the Arabs enjoy in that country. They have all the rights and privileges of the Jews. They hold property, they vote, they speak without hindrance. They elect representatives to the Israel parliament. The Arab children go to Arab schools. They may worship as they wish and no one attempts to proselyte them.

Nasser blindfolds the people in his country and the other Arab countries to these facts and calls for war against Israel. Using Hitlerian methods of propaganda and employing unashamedly the most primitive hate-raising methods, he screams that Israel is determined to conquer the Arabs and that it wants to reign from the Nile to the Euphrates. If his philippics were not capable of stirring up tragic results, they could be regarded as ludicrous. Israel has a land area of 8,050 square miles. The land area of the countries in the Arab League, whose leaders have all proclaimed hatred for and hostility to Israel, covers 1,444,000 square miles. The population of Israel is 2 million, that of the Arab countries 51 million. Israel's land is basically sterile, stony and one-half of it is desert. Much of the Arab lands are rich with oil deposits and contain vast potential fertile domains. If Nasser would release the Arabs from the physical and emotional burdens of war preparation and if he would lift from them the racial prejudices with which he has yoked them, these domains could be cultivated and eventually developed until they would smile a good living for all the inhabitants.

Eric Johnston, chairman of the Committee for International Economic Outgrowth, who has made an intensive study of the Mideast problems, declared in a special article in the New York Times, that with the harnessing of the five main rivers in the Arab countries, the Tigris, Euphrates, Litani, Jordan, and the Nile, there would be reclaimed for agriculture 8 million acres of land. And why has this not been done? It is not because of lack of offer of financial help. The West has offered many times to finance river development programs in the Arab world. The United States offered to finance a \$200 million project in the Jordan Valley; it has made funds available to Jordan for a project on the Yarmuk.

Why, then, have the Arab countries not devoted themselves to turning arid land into opulent farmland? Mr. Johnston replies to the question: "The answer, I think, lies in these factors: The basic instability of the region; the intensity of inter-Arab mistrust and rivalries; the Arabs' emotional rejection of Israel, and the whole pattern of political insecurity and social ferment that has made the region a hotbed of trouble."

And who has done most to make the Arab world a hotbed of trouble? The answer can only be Gamal Abdel Nasser. Who continues to tell the Arabs that they must reject Israel, even destroy her? The answer is still Gamal Abdel Nasser.

Of course, if the Arabs were to analyze Nasser's fulminations, they would laugh in his face at his ridiculous charges that Israel is intent on gobbling up the Arab countries. To speak of tiny little Israel, which is such a little speck on maps of Eurasia that there is not enough room for printing its name entirely within the space allotted for its geographical borders—to speak of this lamb devouring the elephantine land mass of the Arab nations is nothing short of sheer nonsense.

Of course, while Israel is a lamb in size, it has a lion's heart, and it will not allow itself to be attacked and not fight back. This lamb will not allow itself to be taken to the sacrificial block to satisfy Nasser's ambitions. And therein lies the danger that the United Nations must confront. Nasser is amassing, along the Israel frontiers, troops with tanks, cannon, bombers, machineguns and all other impedimenta of war. And while he is doing this, he is seeking to whip up war hysteria through the Arab League by crying that he is set to begin the sacred march, he is ready to fight the holy war, he is prepared to shed blood, and he yearns to realize his dream of many years to drive the Israelis into the sea.

He taunts the premier of Iraq for not being equally as sanguinary. He calls upon Iraq to "fight with us against Israel on the battle-front lines."

These fiery exhortations are intended to incite the Arabs into attacking along Israel's frontiers. And if they attack, what will happen? The attack will surely be repelled to under the law of self defense, reserved in the United Nations charter. But that will not end the matter. The self-defense will bring on reprisal, and the barbarous spectacle of bloody combat will be upon us once again. And as the blood flows and homes fall, and the ground scorches, the world will hold its breath to see what Russia will do. Unfortunately, Russia's performances in the past can give us no assurance that she would do other than seek to use the conflict to her advantage in fulfillment of her long predetermined plan to achieve world conquest. Russia's action in such a case could be such as might bring remonstrances from the Western World, with the taking of necessary security measures. And then, what?

Aside from realistic attack and defense, there is always the possibility of a misunderstanding of some kind, and the first intercontinental missile would be on its way. It is because of such dire possibilities that the Philadelphia Inquirer said only last Sunday: "The increased massing of the United Arab Republic troops at Israel's borders, plus other military demonstrations pushed by President Nasser, confront the world with a new explosive Middle East."

"Serious tension there could at any time spark off an Arab-Israeli armed clash, with dangerous and widespread consequences."

The editorial carries the heading "Dynamite Keg in Middle East."

The New York Times said recently that border clashes constitute a "warning that a

half-trigger situation continues to exist in Palestine—a situation that could blow up the peace of the Middle East."

Only 2 weeks ago the able and highly respected General Secretary of the United Nations, Dag Hammarskjöld, said that the situation in the Middle East was "deteriorating." He declared that the only way to break the "chain reaction of reprisal and counterreprisal was to strengthen the hand of the United Nations and for the United Nations to stick to its guns."

I agree with that recommendation absolutely. I believe that the Security Council should step in at once—step in before it is too late. I believe that Nasser at this very moment is no less dangerous to world peace than was Hitler, 22 years ago. Nasser does not have the diabolical ability that Hitler possessed, nor does he have anything like the military machine which Hitler commanded. But he has given evidence of being just as unreasonable and as unwilling to listen to reason, and, with the powder keg admittedly existing in the Middle East he could, through unbridled egotism or dictatorial inebriation, strike the match which could accomplish the holocaust the United Nations was formed to prevent.

The United Nations came into being while the flames of World War II were still licking at the ruins of the abode of civilization in which 22 million human beings had been reduced to ashes. Fully aware that another such war would finish off the human race completely, the peoples of the world authorized their representatives to build an ark of covenant for world peace. They spoke through the Charter of the United Nations. Article I of the charter enumerates as the first purpose of the United Nations:

"To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace."

Who can doubt that Nasser's actions threaten the peace of the world?

Article II, sections 3 and 4, provide:

"3. All members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.

"4. All members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the purposes of the United Nations."

Who can doubt that Nasser and the Arab nations with which he is conspiring have violated and continue to violate these provisions of the Charter of the United Nations?

Under all these circumstances, I believe that the Security Council should convene and order Nasser at once to do the following:

1. Lift his illegal blockade of the Suez Canal, and allow ships the free navigation which international law authorizes and guarantees;

2. Cease his agitations for war and the shedding of blood.

3. Enter into immediate negotiations for a treaty of peace with Israel under the auspices of the United Nations.

If Nasser fails immediately to obey these mandates, the United Nations should expel the United Arab Republic from the United Nations, as provided for in article 6, as follows:

"A member of the United Nations which has persistently violated the principles contained in the present charter may be expelled from the organization by the General Assembly upon the recommendation of the Security Council."

Progress in Space Promotes Peace and Economic Growth

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. KING of Utah. Mr. Speaker, it was my privilege last Thursday night to attend the reception and banquet given by the Baltimore Association of Commerce commemorating the second anniversary of the Vanguard I earth satellite, and to hear my distinguished colleague on the House Committee on Science and Astronautics, the Honorable EMILIO Q. DADDARIO. As the principal speaker on this historic occasion, Mr. DADDARIO made an excellent analysis of the great challenge and the equally great opportunity which lie before us in space. He clearly pointed out why this Nation must recapture the leadership in space technology to maintain the security of the free world. I urge my colleagues to give careful study to his speech which follows:

TEXT OF REMARKS BY CONGRESSMAN EMILIO Q. DADDARIO DELIVERED AT SECOND ANNIVERSARY CELEBRATION OF VANGUARD I, AT BALTIMORE, MD., MARCH 17, 1960

From Portland, Maine, to Norfolk, Va., crowding against the eastern Atlantic seaboard, live approximately 40 million Americans. This is the greatest concentration of population in the United States. Within this area is a great amount of our national talent and ability.

This one gigantic community is alert to the future, and it has shown its awareness by meeting the problems of growth that have confronted the Nation. A tremendous road network, interwoven with bridges and tunnels, binds it together. Schools by the thousands, from the lowest to the highest levels of education, have been provided. In our midst are located some of the outstanding intellectual communities of the world.

I live and work in this community as many of you do, and know the great concern that exists about the state of our national effort in space. Our people respect achievement. They were proud when Vanguard I was fired into orbit 2 years ago today. They were proud of the technical accomplishments, in which the Martin Co. played such a large part. They had a natural expectation that the United States would be first in space. They saw the Vanguard accomplishment as a great step forward in the reestablishment of our world position. They expect that more will be done and demand that it shall.

Within the week, we have seen a 94.8-pound sphere hurled millions of miles into space. Pioneer V is on its way to a 527-million-mile trip around the sun. It carries five principal scientific experiments to teach us more about the universe. This, too, is a heartening accomplishment and deserves to be applauded.

To some, the exploration and uses of space are an illusion. It is not unusual to hit pockets of doubt in the course of our progress. You hear expressions of scorn about visionaries, and severe concern about the pocketbook. I am reminded of the words Columbus wrote in a letter after his first voyage:

"For although men have talked or written of these lands, all was conjecture without getting a look at it, but amounted only to this, that those who heard, for the most part listened and judged it more a fable than that there was anything in it, however small."

Consider that Columbus was beset by some of the same difficulties that our scientists and engineers face today. He was required to submit his proposal to the so-called Talavera commission of learned men for review and to justify his requirements. They held hearings in the year 1486, and issued their report in the year 1490, 4½ years later. They judged that the promises of Columbus "were impossible and vain and worthy of rejection." They reported to their royal majesties that it was "not a proper object for their royal authority to favor an affair that rests on such weak foundations and which appeared uncertain and impossible to any educated person, however little learning he might have."

Yet, curiously enough, it was the educated, then as now, who knew how well the foundations had been laid for such a trip. For centuries, men had been making discoveries that pieced together the maps from which Columbus's great design sprang.

The Renaissance was a great age of exploration, not unlike today. We have broken the bounds of many scientific fields, and we have discovered others that our scientists long to invade. Historians think that the welfare of a country and its will to explore may be closely related. The energy, the inquiring mind, the courage for endurance that find expression in exploration may well turn out in themselves to be the most important measures of a country's greatness. I hope the zeal and courage that have brought us in this half century to the top of Everest, to the North and South Poles, to the greatest depths of the oceans, and even into the heart of the atom, will not lessen.

Why do men seek these things? It is sometimes difficult to explain why it was necessary to get to Timbuktu or Lhasa, or even Everest or the Matterhorn. The common motives for exploration are given as conquest, military advantage, plunder or trade advantage, commercial gain or scientific advantage. Yet, I rather like a somewhat more irreverent analysis by the sage of Baltimore, the late H. L. Mencken. He said:

"The value the world sets upon motives is often unjust and inaccurate. Consider, for example, two of them: mere insatiable curiosity and the desire to do good. The latter is put high above the former, and yet it is the former that moves one of the most useful men the human race has yet produced—the scientific investigator. What actually urges him on is not some brummagem idea of service, but a boundless, almost pathological thirst to penetrate the unknown, to uncover the secret, to find out what has not been found out before. His prototype is not the liberator releasing slaves, the good Samaritan lifting up the fallen, but a dog sniffing tremendously at an infinite series of ratholes."

And today, of course, on the heels of the scientific investigator comes the congressional investigator.

Why should Congress, or the Government, display so much interest in scientific advance, the quest for knowledge? Why should men of industry or the university, or the laboratory spend so much time coming to tell of their plans to people on Capitol Hill?

I am privileged to be a Member of the House of Representatives, assigned to the Committee on Science and Astronautics, chaired by the Honorable OWEN BROOKS, of Louisiana. A parallel space committee exists in the Senate. When these committees were established at the beginning of this 86th Congress, they were the first new

parallel standing committees created in half a century.

These committees were created because Washington has recognized that science and innovation is the greatest single factor affecting our future economic growth and national security. Radical technological change has forced repeated attempts to adjust our policymaking processes so we can best use, or come to grips with, the challenge of research and development. An analysis of the 1961 budget shows that some \$8,391 million is identified as Federal support of research and development. How we spend that money is very important to the American taxpayer. In a sense, we are diverting money from his pocket to what we believe is necessary for the common good and the national security. He expects that this money will not be spent lightly, and he is entitled to a close review of these efforts.

While we are reviewing these programs, it is also the responsibility of Congress to establish governmental policies in science and astronautics. We are confronted with issues of a highly technical nature in an era of exploding technology. The world is in the grip of a scientific revolution, which offers both promise and danger. It is of vital importance that we, the lawmakers, make every effort to understand the implications of the language the scientists speak, so that we may incorporate this knowledge into planning for national security and industrial well-being.

We must make every effort to know what is happening in scientific areas. We must analyze these issues and the needs they pose. We must bring together men from government and industry—in short—the best brains we can summon to our assistance in this task, listen to proposals for solution, investigate conditions, seek to choose wisely among courses of action set before us and act to propose laws that can help secure a more orderly progress.

Congress has set the policy that U.S. activities in outer space should be devoted to peaceful purposes for the benefit of all mankind. Project Vanguard satellites were launched on such peaceful missions, to gather data for analysis by scientists throughout the world. One small package of instruments in Vanguard I has provided a tremendous amount of information.

Since that launching, there have been a number of others, up to and including the successful Pioneer V. There have been other attempts which have failed. There have been efforts canceled because no back-ups were available, the funds not having been provided. And criticisms have continued of low priorities, piecemeal funding, and too many administrative channels—faults which plagued the first Vanguard, as well as its successors.

These continued criticisms caused disquiet across the country last fall and led to many reappraisals. When Congress reconvened in January, our committee undertook a broad look at the posture of our space effort, the nature of the so-called space gap, and the details of the criticisms.

We have heard considerable testimony from many witnesses—diplomats, defense experts, space experts, scientists, administrators, and businessmen. Some disputed others. Many acknowledged past errors in the space program. Others tied our space effort to national policy and the defense of the Nation, while still others cried out that defense has no part to play in space.

From these posture hearings, still to be concluded, I have personally drawn some tentative conclusions:

First, space exploration is one of the major keys to our survival. This has far-reaching significance in the cold war today and the possibility of global conflict in the future. Rightly or wrongly, world opinion has asso-

ciated Russian achievement in space with general Communist technological superiority. This fact was substantiated by Under Secretary of State Livingston Merchant, when he acknowledged that the spectacular nature of the space effort in Russia has made the job of the State Department a tougher one. The following day, the Director of the U.S. Information Agency, George V. Allen, said bluntly that space achievements go far beyond their intrinsic importance when they are examined by the peoples of other countries.

The second conclusion I have drawn is that space holds advantages for both civilian and military users, and it can be dangerously unrealistic to hold to artificial compartments for civil and military research.

Going back to the posture hearings again, the committee has heard testimony from numerous civilian and military leaders in the Department of Defense. Each recognized the need for the military in the space race; some stated the case more strongly than others. General Trudeau, Admiral Hayward, and General Schriever did an excellent job of enlightening the public to the potential threat from space. The committee also heard the NASA 10-year program, calling for ever-increasing performance in space throughout the next decade.

My third conclusion is that there is a critical urgency associated with the space program. For years, members of the Department of Defense—then the only organization with a capability for space flight—could not even refer to satellites or space exploration. Our attitudes changed when the first sputnik temporarily shattered our national smugness and complacency. That Russian vehicle and subsequent Russian space accomplishments gave us the shot in the arm to press forward in search of a way for survival in the space age. As a result, we expanded our missile and space base. The foremost space question before the public today is: When will we catch up with the U.S.S.R.?

Our Nation has excelled over all other nations in this industrial age because we have been able, through our vast industrial energies and resources, to produce results faster and better than any other people. And I propose to you that the concentrated, vigorous application of our national talents and abilities cannot only overcome the Russian space lead, but can also surpass it. The full utilization of our resources would leave no doubt in the mind of the world regarding the effectiveness of the democratic system to meet any challenge and overcome any obstacle.

There are several other conclusions that I have reached during these past 2 months of hearings. But I believe the three just mentioned are the most important. To recapitulate: (1) Space exploration is one of the keys to survival. (2) There is a need for both the military and civilian approach to space. (3) There is urgency associated with the program.

Let us again refer to the NASA's 10-year program for space. To many, the program is realistic and acceptable. To me, the program lacks foresight and urgency. I would take exception to the timing of many projects, but will limit my remarks to only three major areas: The F-1 engine; Project Rover, the nuclear-powered rocket; and NASA's lack of a plan for manned lunar landing during this 10-year period.

The F-1 engine, being developed by North American's Rocketdyne Division for NASA, will produce 1½ million pounds of thrust. Four of these engines will be clustered to make the Nova launch vehicle of 6 million pounds of thrust, enough thrust to launch a manned interplanetary mission.

The NASA claims that this engine has been delayed 12 to 18 months, due to lack of funds in the 1960 budget. As a result, the first flight test is not scheduled until 1968,

and no date has been set for the completion of the Nova space vehicle. It will be 8 years before we are ready to flight-test this vehicle. Is that urgency? Is it typical of the urgency associated with the space program? I assure you that I am vitally concerned, and I suspect you are, too.

When the Atomic Energy Commission witnesses appeared to discuss the nuclear propulsion powerplant, their testimony conflicted, in my opinion, with that of the NASA witnesses. Project Rover, the nuclear-powered rocket, is being developed jointly by AEC and NASA. The AEC is responsible for designing and operating an engine. NASA takes it from there, assembles it, flies it and fits it into the space program. The AEC witnesses stated that they can develop the Rover device and demonstrate its actual use, probably in a shorter time than set forth in the requirement.

The NASA witnesses, however, were much more conservative. They assured the committee that the program is being expedited to the fullest extent. So the debate is on—it will continue for years to come. How will it be resolved? Hopefully, there is a sense of urgency in the AEC, as indicated by the fact that on March 8, the AEC itself transferred funds within its budget to add \$11 million to the Project Rover experiments. I see no comparable sense of urgency in the NASA program. And yet, knowing the importance of this project, I long to sympathize with the AEC witness who commented: "I would like to see this one have the stars and stripes on it, for a change."

The last point I wish to make regards NASA's lack of a plan for a manned lunar landing during the next 10 years. There are rumors already flying that the U.S.S.R. will celebrate the 50th anniversary of the Bolshevik revolution on the moon. Will we be there to greet them? Or is that the day we shall promise to accelerate our program for a manned lunar landing?

Mr. Khrushchev has already boasted that the mark of the Soviet Union has been stamped on the moon. It is well within the technical and industrial capacity of the Russians to land a man on the moon one day in the near future.

The future of the free world may well depend on whether or not a U.S. mission is already on the moon when that event occurs.

Consider the possibility of a Russian lunar base and the threat that could literally be hung over the heads of the free world. Gen. Homer Boushey, of the USAF, was the first to speak out in favor of a lunar base, its capabilities and potential. His remarks were scoffed at in some circles. I, for one, fear the results of being second on the moon. A manned lunar landing and return, in the 1970's, as NASA outlines its schedule, is much to late.

The first need, then, is the recognition that we must be first. I believe that we cannot fail, if we resolutely determine that we will not. Once that is accepted, some other lines of approach fall into place.

We must, for instance, make better use of the resources of industry and management available to us in this country. We know that the full scale of the skills and talents here have scarcely been tapped. Even in production, we are not making the defense effort today in terms of proportion of gross national product that we were in 1953—and we are making only one-fifth the effort we made in World War II, when we knew it had to be done.

We must do everything we can to streamline, and to make more effective the organization and management of our national programs. Few believe that we are squeezing every last ounce of effort out of our Defense Establishment. I can tell you candidly that I do not think we have enlisted all our managerial talent in this space field. We certainly do not see the

single-mindedness of a Manhattan district in this space effort.

Even in such a field as communication of information regarding the state of the art, more must be done. Researchers are complaining about the proliferation of scientific papers and meetings. Industry is said to be committing some \$21 million a year to these exchanges, which consume 258,000 man-days of technical time, and it has been difficult to weed out overlapping and duplication.

Is the way we disseminate technical information good enough to meet the challenge of modern technology? A recent Guggenheim Foundation study urged we go beyond our traditional ways to seek better methods that could produce important results.

We have made real gains in awakening to scientific research and findings elsewhere in the world. Government has intensified the translation of scientific documents. We are translating more papers on scientific work than ever before. The material is made available to industry through the Office of Technical Services of the Department of Commerce, and there has been a growing interest. I am told that OTS is selling more monographs every month, and that more libraries, industrial and public, have started following the material. The twice-monthly publication, Technical Translations, which started a year ago with 150 to 175 listings of new translations, now lists about 600 an issue. Government is thus pointing out some 12,000 to 13,000 translations a year which may be of use. Industry is also showing interest in a projected publication that would digest news releases and articles in Russian journals, so that a quicker break is possible in learning what the Russians are doing.

Today, the problems of space research, development, exploration and exploitation are still in their infancy. Vanguard I was a stepping-stone to a great future. What is still needed is a firm and clear decision by the United States and the free world to press ahead. The Communists are making capital of space exploration and the propaganda that goes with it. They found in their space achievements a chance to prove to themselves and to the world what they could do in a highly advanced technology. The United States must counter this propaganda by unleashing its technological know-how and industrial power to regain world leadership in the space race. Then our deeds will speak for themselves.

Statement of Robert T. Stevens, President of J. P. Stevens & Co. Before U.S. Tariff Commission

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement of Robert T. Stevens, president of the J. P. Stevens & Co. before the U.S. Tariff Commission relative to its investigation of cotton imports:

STATEMENT OF MR. ROBERT T. STEVENS,
PRESIDENT OF J. P. STEVENS & CO., INC., NEW
YORK, N.Y., MARCH 4, 1960

Mr. Chairman, Mr. Vice Chairman, members of the Commission, my name is Robert

T. Stevens. I am president of J. P. Stevens & Co., Inc., a publicly owned company manufacturing a wide variety of textile fabrics. We have been in business since 1813—a very long time in American industrial history. I come before you as an individual American citizen engaged in the textile business. I do not represent any group or organization. I do, however, speak in behalf of the 34,000 workers in our company and for the company itself. We are very vitally concerned with these deliberations.

I appreciate the opportunity of appearing before this Commission at this hearing which is called for the purpose of determining whether articles containing cotton are being, or are practically certain to be, imported into the United States under such conditions and in such quantities as to interfere materially with the Department of Agriculture's export program for cotton and cotton products.

I also wish to express my appreciation of the wide knowledge of and interest in the problems of the cotton textile industry on the part of the U.S. Tariff Commission, as evidenced on many occasions over a long period of years.

My testimony will be in full support of the petition filed by the National Cotton Council under section 22 of the Agricultural Adjustment Act, as amended. It is most constructive that the enlightened leadership of the National Cotton Council has seen fit to attack the very ominous situation with which the American cotton growers' best customer, the American spinner, is now faced. The growers' interest and ours are the same.

Already sorely pressed by the dramatic increase in imports of manufactured cotton products, as set forth by previous witnesses, the full adverse effects are yet to come. The extent to which the American cotton textile industry will be permitted to survive, is clearly in the minds of the executive and/or the legislative branches of our Government. The importance of this hearing, therefore, before this duly constituted independent agency cannot possibly be overstated. It is essential that all the pertinent facts be set forth.

Let me, at the outset, make one point unmistakably clear. I do not seek to keep foreign manufactured products out of the United States. Having served our Government, under both Democratic and Republican administrations, from time to time over the past 25 years, I have some real understanding of the problems the country faces, including its foreign trade policy. I recognize the extent to which foreign trade policy becomes an integral part of overall foreign policy. Textiles have, however, been called upon to carry far too much of the load of our foreign policy and the time has come for drastic action, unless our Government desires to consider the textile industry as expendable.

J. P. Stevens & Co., Inc., has a close connection with the cotton growing industry of America. Of our 52 manufacturing plants, spread from Maine to Georgia, south, and west to Tennessee, 23 are devoted to the manufacture and finishing of cotton textiles. Most of these plants are located in close proximity to the traditional cotton growing areas of our Nation. We purchase large quantities of American cotton. American textile mill raw cotton consumption is about 9 million bales per year and J. P. Stevens & Co., Inc., consumes about 4 percent of this total. I believe, without an expanding cotton textile manufacturing industry, that American cotton growing will eventually be drastically curtailed. Likewise, without American cotton, produced in abundance on American farms, the domestic textile industry of the United States would no longer be able to play its appropriate part in the American economy.

I have in my hand, and would like now to submit as an exhibit, an advertisement which our company placed in a number of newspapers, including the Washington Post and New York Times, on February 24. It will be recalled that Congressman HEMPHILL of South Carolina referred to and quoted extensively from our public service message in that advertisement. The chart in the center graphically portrays what has been going on in the unchecked upward zoom of cotton textile imports. The advertisement puts before the American people the facts of life on this subject, under the heading, "The Influence of Uncontrolled Textile Imports on Our Economy."

During 1959 cotton cloth imports, exclusive of garments, reached an all-time record, high of more than 240 million square yards, or a gain of 70 percent over 1958. That is for cloth only. However, according to figures released by the Northern Textile Association, based on Department of Commerce information, in addition, there were cotton goods imported during 1959 in the form of shirts, blouses, yarns, knit goods, and other cotton manufactures in the amount of 406 million square yards. Thus, total imports for 1959 were 646 million square yards. If projected on an annual basis, the figures for December 1959, the latest available, would indicate total cotton and cotton product imports during 1960 of something on the order of 1 billion square yards. The present imports tend to destroy price levels in the United States on all textiles because foreign cotton goods are always sold cheaper than American goods.

One does not have to be an expert in this matter to realize that the American cotton textile industry, as we know it today, cannot withstand the shock of these present and potential floods of goods from low-wage countries overseas. With respect to imports of total garments from Japan and Hong Kong alone for 1959, they represent what would equal the production of about 97 sewing plants in the United States in various communities with an average of 250 employees per plant. A small business individually—a very large business overall.

A noble concept, passed in 1934 as an emergency employment measure to promote international trade, the Trade Agreements Act, has been broadened in its administration, under Secretaries of State of both political parties, to a point of greatly assisting all of the free world trading nations. For some of these countries, the results have been extremely successful. Our markets have been opened up to them as never before. About 75 percent of American protection has gone. Unless action is taken, based upon the facts today and not upon those of 5 years ago, we shall continue to give away a constantly increasing portion of the domestic market. The brilliant economic recovery of the free world trading nations has created an entirely new set of circumstances.

The potential dangers in this situation have frequently been pointed out to the executive and legislative branches by many of us who have weekly payrolls to meet in the United States and could see what was happening. While it is true that the Committee for Reciprocity Information holds open public hearings, subsequent bargaining negotiations with other countries by the executive branch of our Government have been carried on in virtual secrecy. Unlike other parties to these same negotiations, no qualified textile industry representatives have ever been permitted to sit in on the actual tariff cutting.

Once the damage had been done, hordes of importers in the United States came forward to take advantage of the situation. Apparently they do not understand the implications as they ride the crest. With 4,150,000 Americans now unemployed, according to the latest Department of Labor figures, in a time of so-called prosperity, they are not con-

cerned over the closing of still more American plants and the addition of still more Americans to the rolls of the unemployed. Unless havoc is deliberately to be wrought on the American cotton textile industry, it is essential that a system of quotas for fabrics, for garments, and for other important items, including textile fibers, be established by categories and by countries. And there isn't too much time.

It is a mighty good feeling to know that an American businessman can come before this independent commission of our Government and receive objective consideration as he frankly sets forth the problems he faces from overseas.

Gentlemen, I recognize fully the narrow scope of this investigation. I am aware that this scope is not of your making. However, it would be incredible to me that any limitation of scope will preclude the presentation before this Commission of all the pertinent facts bearing upon the problem of the cotton textile industry, as the main customer of the American cotton grower. The stringent limits placed upon this inquiry were not contemplated by the sponsors of section 22 of the act.

During the debate in the U.S. Senate regarding the original section 22 amendment to the Agricultural Adjustment Act, the record clearly indicates the intent of Senator La Follette, author of the section 22 amendment. On page 11503 of the CONGRESSIONAL RECORD dated July 20, 1935, he is quoted as follows:

Mr. La Follette: "So far as I am concerned, I cannot see any logic in taking the position that, on the one hand, we are going to tax the American consumer for the purpose of raising the domestic price of agricultural commodities, and then in the same program, with an alarming increase of imports threatening to undermine and destroy us, we are not willing to grant discretionary power to the President of the United States and the Tariff Commission to take the same action to protect the program which we are willing to afford to American industry under the Industrial Recovery Act. I say there is no logic in it; I say there is no justice in it; and I say, besides that, it is folly, unless we propose to repeal the Agricultural Adjustment Act and abandon the program." That quote from the remarks made by Senator La Follette, author of the section 22 amendment, embodies his philosophy and intent. It is clear and precise.

Senator Walsh, of Massachusetts, in support of the La Follette amendment, referred to the textile millworker and the difficulties which he would encounter. Here is what he said. "Yes; [the textile worker] will be less able to carry on, because his domestic market will be reduced; but, if this amendment shall be adopted, he will be at least protected against cheap foreign labor competing with his own output." Here also the legislative intent is clear and precise as to what section 22 was supposed to accomplish but the desired result has not yet been achieved, even after 25 years. Subsequent amendments to section 22 have served further to clarify and strengthen the intent of Congress but, unless the section is invoked, it remains an ineffective instrument. Has not the time arrived to act?

It is curious that American cotton textile manufacturers should appear at this hearing in an effort to shield their workers from what Senator Walsh called "cheap foreign labor" way back in 1935, especially since our Government has created in large measure the situation which faces us today. For example, during World War II Japan's spindles were reduced, by melting or by bombing, from about 10 million to a little over 1 million. In the reconstruction period which followed the war, with so much aid available from us in various forms, a balance in Japan's industries should have been planned. Those in authority were aware that approximately 60

percent of her prewar exports had been cotton goods and yet they pushed relentlessly to reestablish a cotton goods production base for that equivalent.

Japan is a trading nation, like Great Britain, with few natural resources, and should have reindustrialized with wide diversification, like England or France. American manufacturers have been increasingly plagued by this unnecessary over-emphasis on cotton goods production. The situation has been heightened by the Japanese use of much cotton other than American in their fabrics shipped to us here in America.

A look at the Japanese imports of raw cotton is revealing. During the first 11 months of 1959, out of a total of 2,235,000 bales imported into Japan, 476,000 or 21 percent came from the United States. By comparison, in 1958, total imports for the year were 2,124,000 bales, of which 837,000 bales were American cotton or 39 percent. Not only is the best customer of the American grower, the American spinner, being hurt badly by Japanese textiles but, the 1959 figures just cited would indicate that the American grower has little to count upon by way of Japanese preference for American cotton. The Stevens Co., a single American spinner, is purchasing three-quarters as much American cotton as all the American cotton imported by Japan in the first 11 months of 1959. And we paid 6 to 8 cents per pound more than the Japanese. Which is the more valuable customer for the American cotton grower?

The special Senate subcommittee, consisting of Senator PASTORE of Rhode Island, chairman; Senator COTTON of New Hampshire and Senator THURMOND of South Carolina, which in 1958 investigated the problems of the American textile industry, said in its report to the U.S. Senate in February 1959, "Textile mill products have a high military priority. The Department of Defense has ranked the textile industry second only to steel in terms of military essentiality. It would be the height of folly in a world where we must realistically recognize the necessity for military preparedness—however much we hope for and work toward the elimination of war—to allow the domestic textile industry to contract to the point where it could not satisfy our basic civilian and military needs in the event of an all-out emergency." In my considered opinion, there are parts of the textile industry, as of today, that could not supply the basic needs of war. The recommendation of the Pastore Committee for the establishment of quotas has not yet been implemented, even though made more than a year ago. Action is what is desperately needed.

In addition to providing necessary strength in emergencies, the day in, day out contributions of the textile industry to the national economy in peacetime should also be considered. I shall now outline briefly a tabulation of Federal, State, local, and other taxes paid by J. P. Stevens & Co., Inc., with its 52 manufacturing plants including the approximate amount of money withheld from the pay envelopes of our workers for Federal and State taxes in the year 1959.

Federal income tax	\$6,907,681.80
State and local taxes:	
Income	1,314,355.18
Franchise	202,323.84
Sales and use	178,194.85
Real estate and personal property	2,138,666.29
Other	198,566.57
Subtotal	10,939,788.53
Federal income tax withheld	14,702,604.86
State income tax withheld	1,500,000.00
Subtotal	16,202,604.85
Total	27,142,393.39

This is the yield from only one company in the textile business and there are thousands of other textile companies in the United States. If a lot of them are not to survive, where will their share of Federal, State, and local taxes come from? Is it reasonable to expect that foreign countries will come to the aid of the U.S. Treasury?

Another vital facet of these imports is the serious balance-of-payments deficit in which our country now finds itself. And this at a time when our production is larger than production in any other country. But our exports have declined from their peak and our imports have increased. This fact, along with foreign aid and other elements has created this adverse balance-of-payments position. Instead of large credit balances, we now have deficits on the order of \$3,500 million to \$4 billion per year.

That 646 million square yards of cotton products imported in 1959 played its full part in last year's imbalance. It must be apparent that what is being done or not done about foreign trade concerns the very economic foundation of the United States.

I have already testified to the fact that our company consumes every year, large quantities of American cotton and that we pay more—now about 8 cents more—per pound than any foreign manufacturer. We do not object so much to paying a premium price if it really results in assisting the American cotton grower to maintain his markets. We do object, however, to paying the premium price and then having excessive foreign yardage and garments coming in to our stores in unrestricted amounts, thus resulting in unfair advantage to the foreign manufacturer.

For the last 10 years we, as a nation, have been very busy shipping our textile workers' jobs abroad. Since 1950, there has been a steady decline in jobs from about 1,290,000 to approximately 950,000, a drop of 340,000 workers. Not all of this was due to imports but that was surely one of the most important factors in our loss of textile jobs.

As the chief executive officer of a company employing 34,000 workers, it is my principal responsibility to see that these fine people have full-time jobs, thus providing not only for their economic well-being but also contributing to the well-being of their families and the communities in which they live. I am sure you will agree that such an operation requires a lot of planning and forward scheduling. It seems a fair question to ask—how can any textile manufacturer plan ahead effectively with the constantly eroding influence of these skyrocketing imports?

We expect periodic ups and downs in our business and we have learned to roll with the punches, as business conditions demand. But we cannot, with a high labor cost content in our products, compete with wages as low as one-tenth of ours, and with brand new textile plants overseas constructed with the aid of the American taxpayer. And it is no easy thing to plan modernization, expansion, and research in the face of these steadily ascending imports. Is it wise to invest more of our share owners money in the things we should be doing? This is a very serious question.

It is no secret that many American companies in various lines are rushing overseas to manufacture components and end items, taking advantage of low foreign wages, in order to bring these products back into the American market at costs far below American costs. Is that really what our Government intended as a byproduct of its foreign trade policy? I do not think so. And yet, if our Government does not, through definite action, and soon, make clear to the American business community that this is not the desire of Government, then the movement overseas will continue at an accelerated rate. Every day of delay in making our national

policy clear in this regard means the loss of still more American jobs. And make no mistake about it. There are plenty of plants that are now operated in certain areas overseas by Americans primarily to supply the American market with products which exploit cheap foreign labor. Do we support such runaway plants as American policy? I certainly do not. We have not used a yard of foreign cloth, even though many of our competitors feel they must do so.

As these hearings progress, regarding one specific phase of foreign trade, there seems to be mounting evidence of unrest elsewhere in Washington on some aspects of overall foreign trade policy. I refer to the Bailey concurrent resolution in the House, which seeks to forestall further tariff cuts by our GATT negotiators. Then, there is the revised Keating bill in the Senate, which would make very drastic changes in foreign trade determinations. We are not yet halfway through the period of the Trade Agreement Act of 1958 but the rising groundswell of American discontent with some phases of our foreign trade policy becomes increasingly evident. Only a week ago last Wednesday, the day the Stevens Co. advertisement appeared, 12 Senators went on record about the danger of these textile imports in a 2-hour discussion of this serious matter on the floor of the U.S. Senate.

This devastating effect of imports on some American industries was surely not intended by Congress or the executive branch. President Eisenhower's letter of February 17, 1955, to Congressman JOSEPH MARTIN, made the position of the executive branch clear. And I surely do not believe the President's position has changed. While the extension of the Trade Agreements Act was being considered by Congress, he said—in part:

"I wish also to comment on the administration of this legislation if it is enacted into law. Obviously, it would ill serve our Nation's interest to undermine American industry or to take steps which would lower the high wages received by our working men and women. Repeatedly I have emphasized that our own country's economic strength is a pillar of freedom everywhere in the world. This program, therefore, must be, and will be, administered to the benefit of the Nation's economic strength and not to its detriment. No American industry will be placed in jeopardy by the administration of this measure. Were we to do so, we would undermine the ideal for which we have made so many sacrifices and are doing so much throughout the world to preserve."

On the same date, February 17, 1955, the President also wrote to Congressman BASS of New Hampshire. He said:

"I appreciate that legislation of this character has always aroused concern among industries that are fearful it may be administered so as to affect them adversely. Such fears are in fact groundless, for it would ill serve our Nation's interests to undermine American industry or to lower our high living standards. Our own economic strength is a pillar of freedom throughout the world, and it would be irresponsible to take any action that would weaken it. For this reason no American industry is going to be placed in jeopardy by the administration of this measure. Nor will any American industry be placed in jeopardy in the trade negotiations which are to begin next week at Geneva under the existing trade agreements law."

If ever any industry has been placed in jeopardy, it is the textile industry of the United States right now. The President said in his letters to Congressmen MARTIN and BASS that this would not happen. Administration of the legislation has thus not yet in fact worked out as the President clearly intended that it should.

If this Commission recommends to the President the imposition of an equalization

fee on imported cotton manufactures, and, if the President implements such a recommendation, the job will only be started. It would surely be helpful. Such action will not of itself, however, stop the erosion of the industry. In heavy cotton yard goods, a real measure of assistance will result. In fine cotton goods entering the United States in the form of blouses and other made-up garments, the implementation of a favorable recommendation by this Commission will afford much less assistance.

In conclusion, I want to reiterate the basic relationship which exists between the American cotton grower and the American spinner. The economic facts of life dictate the need for this relationship because the American spinner has been, is, and should continue to be the best customer of the American cotton grower.

Until our Government effectively removes by executive or legislative action the sword of Damocles which hangs over the industry's head, there can be no real security for textile workers and no real foundation on which the industry, both grower and spinner, can build to its rightful place in the American economy. Dynamic, growing American industries, including the essential textile industry, all in support of a strong military defense posture, are the surest guarantees of free world survival in the nuclear age.

I thank you.

Unrest In Panama

EXTENSION OF REMARKS

OF

HON. A. PAUL KITCHIN

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. KITCHIN. Mr. Speaker, Chairman HERBERT BONNER of the House Merchant Marine and Fisheries Committee 2 weeks ago went to Panama at the request of U.S. officials. His purpose was to help allay the unrest that exists in the Republic over U.S. operation of the canal.

Mr. BONNER was accompanied by Representative THOR TOLLEFSON, the ranking Republican member of the committee, which handles legislation dealing with the canal. They made the trip by commercial airlines. While they were there, they talked to President Ernesto de la Guardia, Jr., and Ambassador Julian F. Harrington, two newspaper editors and many businessmen, about the existing problem and what might best be done.

Under unanimous consent I place in the RECORD a series of three newspaper articles by Bruce Jolly, Washington bureau chief of the Greensboro (N.C.) Daily News, who was in Panama on another story at the time, which describes the situation as he found it, its importance to the United States and how Mr. BONNER and others feel it might be met: [From the Greensboro Daily News, Mar. 14, 1960]

CANAL PROBLEMS—EGYPT FUNDS HINTED IN PANAMA UNREST
(By Bruce Jolly)

RIO HATO, PANAMA, March 13.—The Panama Canal is the lifeline of the Western Hemisphere, and quite possibly of the free world.

It is also becoming one of the major headaches for the United States at both the international and the Latin American level.

The canal is only 50 miles long, but around it centers political intrigue that extends as far as the Soviet Union. In both South and Central America, where tensions already exist, the United States will be judged by what it does here.

At issue is U.S. control of the canal, through which 50 million tons of cargo float each year from all parts of the world.

So far as nationalistic elements in the Republic of Panama are concerned, U.S. control is a festering sore nurtured by a rash of political promises.

But the issue is international. Funds for the upcoming election, in which control is an issue, are said to be coming from as far as Egypt, where it is felt it would be to that nation's psychological advantage if the Panama Canal were nationalized. However, Communist elements are not playing a major role in the picture, yet.

This is the situation as an election in Panama approaches in May. It means problems for the U.S. Department of State, has caused concern in Congress, and was one of the reasons for a demonstration of strength by the 82d Airborne's 325th Battle Group centered at Fort Bragg, which dropped paratroopers in war games here last week.

Currently the problem hinges on two things. Panamanians want the Republic of Panama flag flown on the Canal Zone with the U.S. flag. They also want a larger slice of the proceeds from the operation of the canal.

Now Panama gets approximately \$2 million annually from the U.S. Government in connection with canal operations. Extremists want that increased to half the gross take of \$80 million a year.

More moderate Panamanians realize the absurdity of such demands. Nonetheless, they feel the Republic of Panama is getting the short end of the stick. For the most part, they feel the Republic's return should be around \$4 million.

They say that the Panama Canal Company returns \$2,700,000 annually to the U.S. Treasury, and ask why the Panama Government shouldn't get a larger return too.

In no sense in the picture is Republic of Panama military strength involved. There is none. Panama is a small country with a population of about 1 million, ruled by the old-line families. What industry there is runs on a monopolistic basis, with these families having most of the control.

The situation has generated a fear in many quarters that some day, under the stimuli of the issues that exist, there will be a ground swell behind an elected opportunist who would attempt to become the nation's strong man.

Such a pattern is not unfamiliar in Latin America. If it should develop, it would create one of the biggest problems the United States could face in its own backyard. That such a development is deemed possible here is indicated by the fact that much of the money old-line families have is placed in banks elsewhere, and not put back into developing the country.

Part of the Panama problem stems from the low living standards that exist because of lack of industrial and agricultural development. One of the best means of bringing those standards up, it is felt generally, would be through investment of capital from the United States and other states and other parts of the world.

But private capital investors are cautious. Growing tensions in Cuba, uneasiness in other South and Central American countries, and the Latin temperament, all play a part in the picture.

No development of the strong man is anticipated in Panama, but the concern over

the possibility is present as the United States juggles with the problem. Every move that is made in relations with the little Republic is weighed carefully.

The current problems that must be met are ramifications of a nationalistic urge. They are whether the Panama flag will be flown in the Canal Zone and whether the economic return from the canal operation shall be increased.

But there may be more to come.

[From the Greensboro Daily News,
Mar. 14, 1960]

CANAL PROBLEMS—UNIVERSITY IS CENTER OF UNREST

(By Bruce Jolly)

PANAMA CITY, PANAMA.—U.S. difficulties in Panama have been intensified in recent years largely because of Panama's economic problems. The center of unrest is the University of Panama.

In Latin American countries universities by tradition are untouchable areas. A person is a student even though he takes only a 1-hour course and is in his early fifties. In Panama the university has become a haven for extremist thinkers.

The leader of Panama's extremist group is Aquilino Boyd, member of a well-known Panama family and a deputy in the National Assembly. He was Foreign Minister at the start of President Ernesto de la Guardia's administration.

His extremist cohort is a professor at the university named Ernesto P. Castillero, who has been described as emotional, short, humpbacked, highly intelligent, and fanatic. While Boyd was Foreign Minister, Castillero was Vice Minister of Foreign Affairs.

STARTS PROTESTS

Boyd embarked on an aggressive campaign of diplomatic protest toward the United States, and in June 1958 the President reorganized his Cabinet. Both Boyd and Castillero were out, and Boyd broke with the President.

It was Boyd who was credited with starting the demonstration on March 3 in the Canal Zone that many feared would get out of hand.

But his own party has repudiated him, and Boyd today is considered meaningless as a candidate in the elections to be held in May.

However, of necessity, all the candidates have taken over Boyd's principal ideas. Essentially, they are for the flying of the Panama flag along with the U.S. flag in the Canal Zone and more financial return for Panama from canal operation.

Their demands, however, are by no means as extreme as Boyd's, who overreached himself when he called for the United States to hand over one-half of the gross income from operation of the canal. That would have been \$40 million annually.

The main candidates today in the election are Ricardo Arias, who was president of Panama briefly following the assassination of President Remon, and Rodolpho Chiari, a ranch owner. Both are prominent Panamanians.

Neither of the candidates likely to win is an extremist, basically. But each, either by inclination or under public pressure has been asserting that the United States must make greater concessions in control of the Panama Canal.

There is a growing middle class in Panama, but for the most part its citizens are poor. They are excitable and intensely nationalistic. The canal issue is more of a rallying point for their resentment against the free spending, sometimes arrogant Americans than anything else.

But the overall problem has created tremendous difficulties for the United States in its relations with the Republic of Panama and its peoples.

There are many, however, who see the situation more clearly than others. A taxi driver had this to say one night:

"They want more than they can handle and it will hurt the country if they get it."

MIXED PEOPLE

People of Panama are a heterogeneous mixture. At the top are the pure Spanish, who took over the nation from the Indians. They killed them off to the point that they had to import Negro slaves.

Later came the West Indian Negroes, who were imported to work on the canal, first by the French and then by the United States. Chinese were also imported, and many have become prosperous. There is a large Hindu colony, and those Indians are said to have "just sort of come."

There has also been some English and United States immigration, along with Greeks, Italians and some French. A number of Jews came here and stayed during the 1600's when Ferdinand and Isabella threw the Jews out of Spain.

These are, for the most part, the peoples who make up the population of Panama. Despite their derivation, they today are Panamanians. They want to prosper and they want their nation to prosper.

[From the Greensboro Daily News, Mar. 16,
1960]

CANAL ISSUE SOLUTIONS DISCUSSED

PANAMA CITY, PANAMA, March 15.—There are short-range solutions to the United States-Republic of Panama problems over operation of the Panama Canal, but the real answers are long range.

This is the opinion of U.S. Ambassador Julian P. Harrington, a career diplomat who has been in Panama since 1955.

He accompanied Representative HERBERT BONNER, Democrat of North Carolina, chairman of the House committee that handles Panama Canal Zone legislation, when BONNER conferred with Panama President Ernesto de la Guardia last week about issues involved in canal operation.

There are two outside potential sources of trouble. The Communists, who are small in number but able troublemakers, and the United Arab Republic unit which has a staff in Panama that has been increasing in size.

CONCERNS UNITED STATES

The UAR move concerns U.S. officials, but BONNER declared before he left Panama to return to the United States last week that the United States and Panama could get along all right "with proper diplomatic relations."

He said he felt that the operation of the canal is a "mutual project," and "I think something can be worked out to satisfy these people under the tensions that exist."

BONNER declared that more consideration should be given to flying two flags (United States and Panama) in the Canal Zone area, provided it is done "under proper conditions and in the proper place."

But the North Carolina legislator sidestepped the question of a possible increase in the amount of Panama Canal profits the Panama Republic gets. So did the Ambassador.

PROPOSAL REJECTED

In the background lies the question of whether the Canal Zone operation should be handled by an international unit. Such a suggestion has been made by former President Harry S. Truman and by Adlai Stevenson.

It wasn't received too well in Panama and BONNER rejected any such proposal with an emphatic "No."

"We must retain control of the canal for the best interests of everybody," he declared. Representative THOR TOLLEFSON, Republican, of Washington, ranking GOP member

on the committee that BONNER heads, was of the same opinion. TOLLEFSON accompanied BONNER to Panama.

Another major question that has been raised, principally by Panamanians, is the possibility of Republic of Panama representation on the Board that runs the Panama Canal. BONNER also rejected this proposal.

"Any Panamanian on the Board would be pestered to death. It would create too many problems," he asserted.

HUMAN NATURE

Whether concessions to the Republic of Panama in the operation of the canal would alleviate the tensions, or just bring a desire for more authority is still another question that the United States must consider in weighing the problem.

"It is human nature for the Panamanians to want more and more, but in any step in that direction, we must have a firm basic agreement as to how far we will go," BONNER asserted.

No one expects the elections that are coming up to have any great effect on the situation. Extremism will be in the wings and not in the foreground, but even a moderate leadership in the Republic of Panama will face pressure to get something done.

Besides, as one source put it, "the people have learned the power of mass demonstration."

Communists are and will be in the picture, but they are being watched closely by the police.

The situation in Panama today is what has been described as an "uneasy truce." If the United States operated as the Soviet Union does, the issue could be resolved in short order at the expense of the Panamanian people.

But it doesn't and it won't. So the answer will come from only one avenue, which was expressed by BONNER in this way:

"We've got to have a greater understanding between the two nations over this issue, and the peoples of the two nations. To my way of thinking, that's the answer."

Wins Service Award

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. WESTLAND. Mr. Speaker, in times of peace, even during a cold war, many of us are inclined to overlook the fine job our armed services are doing to protect our Nation.

One of the units defending us has its headquarters at Redmond, Wash., in my district, and I believe this unit typifies the hard work and devotion to duty of our soldiers, marines, sailors, and airmen. This unit is the 4th Missile Battalion, 60th Artillery.

Under leave to extend my remarks in the RECORD, I want to insert a news story which appeared on page 1 of the March 3 issue of the Sammamish Valley News, published in Redmond, Wash.

LOCAL NIKE UNIT NAMED THE BEST IN UNITED STATES

Redmond's military units were named the most outstanding in the entire U.S. Air Defense Command at a special ceremony held on the parade ground of D Battery's control area Monday morning.

Presentation of the trophy for the best Nike-Hercules firing record in the United States during 1959 was made by Maj. Gen. P. H. Draper, Jr., Chief of Staff of the Army Air Defense Command. The general, who is stationed at Colorado Springs, Colo., was on a 3-day orientation tour of the 31st Artillery Brigade units throughout Washington.

Acceptance of the trophy for the men was made by Lt. Col. Richard F. Cox, commander of the 4th Missile Battalion. Colonel Cox also accepted a similar trophy for outstanding performance presented by the 31st Brigade Headquarters at McChord Air Force Base.

Accompanying General Draper on his visit to Redmond were Brig. Gen. Daniel O'Connor, commanding general of the 31st Brigade; Lt. Col. P. A. Anson, secretary to the general staff, U.S. Air Defense Command; and Maj. Charles A. Duncan, training officer of the 26th group.

Mr. Speaker, the Department of the Army has informed me the trophy was awarded for the highest annual service practice score during calendar year 1959 for a battalion of three batteries or less. The 4th Missile Battalion scored 8,249 points out of a possible 9,000 pounds.

Since the battalion was first organized in December 1917 at Fort Monroe, as part of the 60th Artillery Regiment, it has served with distinction. During World War I, the battalion earned campaign streamers for its action at St. Mihiel and the Meuse-Argonne.

Its demobilization in February 1919 at Fort Washington, Md., was only for a brief period. The unit was reconstituted and reorganized 3 years later as the 60th Artillery Battalion, Antiaircraft, at Fort Crockett, Tex. It was expanded to regimental size later and sailed to the Philippine Islands, where it fought the Japanese forces until May 6, 1942.

Before it was forced to surrender, the unit earned three Distinguished Unit Streamers. These decorations were embroidered Manila and Subic Bays 1941-42, Manila and Subic Bays 1942, and Defense of the Philippines. It also won the Philippine Presidential Unit Citation, embroidered "7 December 1941 to 10 May 1942." Among its campaign streamers, of course, is the one which reads Philippine Islands.

Its officers and enlisted men have earned for the battalion the 1957 USARADCOM annual service practice championship in addition to its recent award.

Mr. Speaker, I congratulate these men and believe they represent the type of personnel in all forces. They are men who in preparing for war help maintain the peace.

Ohio State Western Conference: NCAA Champions

EXTENSION OF REMARKS

OF

HON. SAMUEL L. DEVINE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. DEVINE. Mr. Speaker, to its laurels as Big Ten champion, Coach

Fred Taylor and his great Ohio State University basketball team added the National Collegiate Athletic Association title Saturday night, March 19, 1960, defeating California by the widest margin ever registered in a championship in the NCAA tournament history.

Coach Fred Taylor is to be congratulated for his outstanding leadership and guidance of the fine young men who made up this championship team. Much credit also must be given to Jack Graf and Frank Truitt for their excellent work in scouting and assisting in coaching.

The championship is the result of strictly team effort and although there are a number of outstanding individual stars on this ball team, their sportsmanship and team play were particularly impressive.

The State of Ohio and the Nation are justly proud not only of the starting five, Jerry Lucas, Larry Siegfried, John Havlicek, Joe Roberts, and Mel Nowell, but also the bench strength of five players possessing nearly equal abilities, Dick Furry, Richie Hoyt, Howie Nourse, Bob Knight, Gary Gearhart, John Cedargren, and Dave Barker are entitled to an equal share of the credit.

Inquiry Into the Sunset Years

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, last week I introduced a bill, H.R. 11159, which I believe would broaden significantly work opportunities for people over 65.

Often it is difficult for the aged, after retirement from work, to channel their energies into leisure-time activities. Although there are some signs that Americans are beginning to accept other values besides those of productive work, the most desirable utilization of leisure time is still not understood by many. Today as yesterday, holding a job is still the badge of self-respect for an overwhelming majority of people. For many, work is more than a source of income; it also provides personal dignity, a sense of worth, and a feeling of social participation.

In the March 20 New York Times magazine, Gertrude Samuels, reporting on old-age retirees in St. Petersburg, Fla., wrote a rather gloomy description and concluded in part:

Boredom and loss of community status as well as the need for work are usually at the root of the trouble.

She pointed out that a large problem was that the local labor market was glutted with old people who offer to work for "practically nothing" in order to hold on to their social security benefits.

This article underlines the importance of the bills I have introduced that will

discourage exploitation of the elderly, and increase their incomes.

Mr. Speaker, under unanimous consent I include Gertrude Samuels' "Inquiry Into the Sunset Years" in the Appendix of the Record:

INQUIRY INTO THE SUNSET YEARS

(By Gertrude Samuels)

ST. PETERSBURG, FLA.—Every week, more and more people in the afternoon of their lives pack up and go south in search of the rainbow—sunshine and security. Some have quit work because of compulsory retirement plans; some are widowed or alone in the world, and seek to start a new life; some are weary of the rigors of northern winters; some heed the sun to fight illness.

Florida, with its advertised sunshine, sea, and ease of living, promises the rainbow.

Some 4,000 prospective permanent residents, young and old, pour into Florida each week, giving this State the second fastest rate of growth in the Nation (after Nevada). By 1970, the newcomers are expected to push the population from today's 4,900,000 to 8 million to make the State the eighth largest. Since 1950, it has had an 80 percent increase in elderly residents; and in 1957, the latest year studied by Washington, the migration to Florida of social security beneficiaries aged 65 and over—the so-called retirees—was greater than that to all other States combined.

Who are the retirees? Where are they living? What do they do with their new leisure? Where do they get their income? Are they happy?

The answers must be approached through understanding what growing old means to most people economically: 74 percent of our aging population either have no income or receive less than \$1,000 a year; 11 percent have an annual income of between \$1,000 and \$2,000; only 15 percent of retirees receive more than \$2,000 a year.

For the most typical picture, the Florida State Development Commission at Tallahassee refers the visitor to St. Petersburg. The town of 180,000 on the west coast is known as the retirement capital of the United States. Although its city fathers stress that 50,000 schoolchildren attest to the number of young couples in the community, the city has long been geared to attracting senior citizens, some 64,000 of whom draw social security checks.

Central Avenue, which bisects the "Sunshine City" and is its Broadway, looks like a vast, friendly summer porch. Hundreds of green park-like benches are placed back to back for the comfort of passerby and shoppers. From the crowded benches, where oldsters in dark glasses and light clothes soak up the benign sunshine comes, snatches of conversation:

"Where you from?"

"Cleveland, where else? That's where all the healthy ones are from."

"Joe, I've found where you can get two cups juice for 15 cents, real good stomach medicine like, don't give you heartburn, nothing."

Three white-haired, suntanned ladies, neatly got up in summer coats, gay scarves and comfortable shoes, totter into the crowd arm in arm, saying to no one in particular, as though on a cruise ship, "We're just going to take another turn around the block." They pass signs for "Blood pressure on the heartometer, 50 cents," hearing aids, and one moralizing: "The best way to break a habit is to drop it." On one side of the block are 4 finance and loan companies and 4 real estate companies. The streets are built up at sidewalk crossings to make it unnecessary to step down.

Many newcomers live a short drive out of this crowded central area in the mushrooming housing developments on the outskirts.

But many on the green benches live in the small hotels and rooming houses nearby. For the most part, these are not equipped to cater to the older persons' needs, but offer only standard, small bedrooms with bureaus and rocking chairs. To save money, many retirees eat in the 10-cent stores, and at 4 o'clock every day, a little drama is enacted on one downtown street where 3 cafeterias provide cheap meals: the elderly start to come, some alone, some assuming indifference, to study and compare the 3 window menus before queuing up for dinner.

Many living on marginal incomes have discovered Webb's City, an extraordinary cut-rate department store which sells everything from 65-cent haircuts to hamburgers, furniture, fur stoles, and drugs. The oldsters buy cheap meals there and stock up on low-priced canned foods.

The sun and their calories are what they watch closely. You find them fishing off the bridges when the weather is not too frosty (a poll shows that fishing is the biggest attraction), listening to free concerts from folding or wheel chairs, playing shuffleboard by the hundreds every day on the Mirror Lake courts, sitting in lonely contemplation of pelicans and life on the pier.

Many tell you that they are detached enough about families, friends, and material possessions to enjoy making their old dream of retirement in the sun come true. But many are clearly finding that the arithmetic of aging has little to do with the sun.

On the first of every month they eagerly await the postman who brings them one or two O.A.B.'s (old-age benefit checks). These average \$67. In some cases there is a company pension check. Then they crowd to the banks downtown to cash them personally.

But sudden medical expenses can drain away savings. Under the law, they cannot qualify for public assistance for the first 5 years of residence. Thus, at a critical time of life, when dignity and self-reliance are precious possessions, they may have to turn to friends or families for help.

In some boarding houses there are people alone in the world without means, sharing a room with two or three others. Often they need nursing care, but there are few hospitals to accommodate them, or else hospital beds are priced out of reach. A visit to the county veterans hospital disclosed that it had a waiting list of 700 persons.

And for many there are also social and psychological problems. Many feel cut off from families and lifelong friends, from grandchildren and from just seeing young people. There are new industries on the fringes of town that have attracted younger families. But the preponderance of the old, the halt and the lame wherever one goes is depressing to many who feel separated from the natural flow of life. As one spry old lady who looked about 100 put it: "Too many old people."

A measure of what transplanting brings can be glimpsed from a sampling of successes and failures.

Dr. Francis Smith and his wife Emily, in sport shirts, shorts and sandals greet the visitor with, "We haven't had as much fun all our lives as we've had here in the last 2½ years."

They live at Catalina Gardens, a green community of pastel-colored, middle-income homes, flowering lawns and one-car garages. Dr. Smith, 62, mild, genial, gray haired and bespectacled, was a scientist with the Bureau of Standards in Washington, doing gas-chemistry research. After 32 years he was making \$8,200 a year. Mrs. Smith, vivacious and gray haired, was a professor of textiles at the University of Maryland, but stopped teaching 6 years ago. They had good friends in Washington and hated to leave them.

"But we simply decided," said Dr. Smith, "that if we were going to have any fun out

of life—now that our children are grown—I'd better retire before I went out on a wheelchair. When I looked out of the window, I wanted to see sand and not snow."

They toured Florida and neighboring islands, and liked the west coast best because of its relatively large city facilities plus vacation attractions.

Dr. Smith continued to work until 60, to qualify for his full annuity; then they sold their five-room house in College Park, Md., for \$13,200 and, by cashing an insurance policy and adding some savings, they put cash down—\$14,500—for their new house and lot here "to relieve us of any worries about paying out installments from annuities."

They furnished the airy two-bedroom house for ease, and Dr. Smith put in the lawn. They have learned to live on his annuity of \$4,800 a year by carefully planning a budget: \$350 a month for food, utilities, clothes and entertainment; no eating out; \$37.50 for winter heating.

Most important, they found that "instead of retiring from life, we didn't stop working, we just changed our work." An old hobby—shelling—has become their joint scientific interest. It pays them nothing, but enriches their information about the life of the sea. Today Dr. Smith heads a shell club of 180 persons, aged 12 to 80, and the Smiths have developed and scientifically labeled an enormous collection of rare, tiny shells, 100-specimen sets of which have been sent to schools throughout the country.

"We love this," Emily Smith says, "spending hours of the day together and having a sense of accomplishment, making scientific information available where it has not been before."

"I think I know now the difference between the happy and the lost," Dr. Smith adds. "You must have a general background about a lot of things, and an innate curiosity about everything. Then you're never lost."

Another couple with less to live on than the Smiths, but just as content in their way, are the Alexander Andersons, both 74, from Zellenople, Pa. (population 5,000).

In the roominghouse area of the Mirror Lake district, they have rented at "Aunt Genie's Cozy Inn Apts," a furnished, two-room-and-porch flat for \$75 a month. The furniture is worn but comfortable, cretonne drapes separating the bedroom from the living room and large kitchen.

Mr. Anderson, a retired carpenter, large and ruddy faced, still retaining his Scottish accent, is almost totally deaf and suffers from dizzy spells. Mrs. Anderson, plump, precise and motherly, has arthritis "which I just refuse to give in to." They lost their only son, Robert, in Korea and she carries his picture and the War Department letter of condolence in her bag.

In Zellenople, they live in a rented room, and come to St. Petersburg by bus for 6 to 8 months each year "for the climate." They must manage on \$212 a month—\$132 from social security plus \$80 in veteran's compensation. Their pleasures are simple: she likes to read—newspapers, church papers, her Bible; he likes the shuffleboard courts and lawn bowling, and is proud of the food bargains that he brings from Webb's City several times a week.

They carry some hospital insurance, "but it doesn't cover but a third of our needs, and if anything happened to us, I don't know what we'd do." Thus, Mrs. Anderson literally counts the pennies, keeping groceries to \$2 a day, and occasionally dropping some item—like buttermilk, when the price rose 2 cents recently—so as not to incur debts.

They like this life in their old age, and their new friends. "Some people are wedded to their furniture and carpets," Mrs. Anderson says with a smile, "but our values are

higher than material things. I had 94 Christmas cards to send, so that shows how many friends we have everywhere."

On the other side of the picture, one glimpses disillusionment and frustration. Boredom and loss of community status as well as the need for work are usually at the root of the trouble.

In the Brentwood Heights area of middle-income homes, where several "for sale" signs are planted firmly on the front lawns, are the Browns (they wanted their real names withheld—two brothers and a sister in their 60's). They are from Philadelphia, where one brother was a cabinetmaker, the other a school board attendance officer. Another aged sister and her son bought the house next door.

The two families sold their homes to come here 2 years ago. They paid cash, \$17,000, for each of these three-bedroom homes, where they live on pensions and savings. But both families became fed up a year ago.

In their former suburban homes they had raised their own crops of vegetables and had an idea they could do the same here. "But the ground is all sand, and nothing will grow," said one brother. "All summer long you're out there spraying insecticide to kill the bugs. We can't even raise grass. But the most important thing is that we're not interested in fishing and old people's hobbies. We need to be active. Here we just sit around and do nothing. It's boring."

One sister suffers from arthritis, and thought it was going to be warm here all the time. "But the frost sets in, and these houses are not built to withstand the cold weather—they're masonry homes and not insulated to withstand the cold like ours up North. And my son can't get work—he's a war veteran and needs a construction job."

They looked bitter and worried. "Any-one coming here should rent for 6 months first," the sister added, "not buy, like we did, to see if they like the change. And our family's up there. In a way, you can say that we're homesick. We're going home."

Not far from this area was a Long Island couple who had put their life savings into their new home, in hope of getting a job to supplement their income. They now are desperately trying to make ends meet. The husband a 65-year-old builder and construction worker, had suffered from heart attacks and high-blood pressure, and paid \$11,500 cash for the 2-bedroom home so as to save the interest on a mortgage. They had loved their nice home in Glen Cove, but had been persuaded that life in St. Petersburg would be cheaper and healthier.

Now the husband finds that the local labor market is glutted with old people who offer to work for practically nothing in order to hold on to their social security benefits. Moreover, it costs a separate license fee to work in each city district. He has occasionally been driven to repair roofs (which endangers his health) so as not to dip into savings that can only see them through for a year.

To help out, his wife has been working part time at a snack bar, bringing in \$30 a week. Food costs are high—they, too, shop at Webb's City—and they are doing without a phone or any luxuries.

"We don't owe anyone anything right now," she said with mixed pride and bitterness, "but we're making it by the skin of our teeth."

"If I could just get a repair job here and there," he said. "A lot of people making the change don't realize that you leave all your lifelong friends behind. It's hard to start again."

What lessons are there in the St. Petersburg story?

Some retired couples, living simply without luxuries, feel happier here than in their for-

mer lives. But some—no one knows how many—are certainly unhappy in their discovery that it takes more than sunshine and shuffleboard to solve critical problems. For the old have the same basic needs as the young—to feel needed, to feel loved, and to give love, to know a degree of economic security, reasonable health, meaningful work. Here, far from families and friends, many are discovering that their needs are unmet in this setting with its inadequate services.

Dr. Howard Carter, county health officer in the division of gerontology and research, which is conducting a 5-year survey of oldsters to determine their health status and needs, puts it this way:

"Where we are falling down is that older people with limited means have difficulty finding the proper housing, proper food, proper care here. They have virtually nothing except the boarding home where someone might try to care for them out of kindness."

Even State and local officials, who once made a play for retirees, now try by letter and interview to discourage from coming, prospective newcomers who have less than \$250 a month fixed income, or who need jobs either to forestall boredom or to supplement income. They warn that job opportunities are so scarce in St. Petersburg and many other Florida communities that only 1 percent of those 65 and over are able to get work; and that under the law new arrivals cannot get public assistance for 5 years.

In contrast to the "sharp operators" who paint optimistic pictures of cheap lots on the beach and the life of Riley in new housing developments; the State retirement department is urging prospective residents to drive up and down the State first, and to ponder the wisdom of severing home ties and making a change. But as one official wryly said: "You can point to the hazards involved, but you can't stand at the border with tommy guns and order people back."

As for retirees in general, wherever they may be, the St. Petersburg experience underlines four basic facts:

1. Most of them do not have enough money to live on. Social-security benefits are inadequate, whether oldsters are living in the sun or the cold. The latest figures published by the Social Security Administration, for March 1959, show that aged beneficiaries (women 62 and older and men 65 and older) numbered 10,500,000; the average old-age (retired worker) benefit paid to them was \$71.84. (Only about 1 million—less than one-tenth—of these retired workers are helped by private pension plans.) The figures do not cover people in the most severe straits—those who are on public assistance or who receive no social-security benefits.

2. Retirees must struggle to stay well in later years. At some point, a 65-year-old couple who today are well and self-reliant will need partial or total care. Because they live in straitened circumstances, they cut corners on food, undernourish themselves and fall ill. They are denied care, because they cannot meet medical costs which in recent years have skyrocketed, and because few communities provide them with proper nursing facilities.

3. They need places to live. A generation ago it was not uncommon to find two or three generations living together in our largely agricultural and small business society. Today there is no room for grandparents in the new urban society; and in any case, doubling up gives rise to family conflicts. But too much emphasis is being placed on the commercial, single-family dwellings, instead of on low-cost living facilities that are suitable to those of advancing age (with uniform heat, maximum sunlight, grab bars to reduce hazards, nursing care within reach).

4. They need meaningful jobs. Just as bewildering for the man who is independently wealthy as for the retiree on marginal

income is the sudden discovery that after a lifetime of work society has no use for him. The older generation, at present around 16 million, is expected to number 21 million by 1970. Since man is living longer, thanks to science, he is going to have to be able to work longer—otherwise he will be a burden to himself, the younger generation or the mental wards.

For many months panels of the U.S. Senate Committee on Labor and Public Welfare have been studying problems like these, and touring the country for firsthand stories of senior citizens. Proposals now before Congress are for an increase in old-age benefits; expansion of the program to provide medical care for beneficiaries; improvements in nursing facilities; the enactment of State and national laws that would bar discrimination against senior citizens still capable of handling good jobs.

While Congress probes the matter, the retirees here can perhaps get some cheer from an old hooper at the pier auditorium.

Captain McGinley, of Virginia, small and frail and 78, loves to get on stage several nights a week to tap out his old soft-shoe routines for the enthusiastic crowds of retired laborers and telephone operators and engineers and patrolmen and doctors. He replies to their applause with an undeviating curtain line:

"Good night, folks, God bless you, and may the good Lord take a liking to you."

"Tad" Walters

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 18, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Sunday, March 20, Dallas Morning News, written by one of the finest newspaper reporters I know, Mr. Walter Hornaday. The article concerns one of our colleagues, the Honorable FRANCIS WALTER, of Pennsylvania:

WALTER'S COOL CALMNESS HELPS CONTROL DEBATES

(By Walter C. Hornaday)

WASHINGTON.—A white-haired Congressman from Pennsylvania presided all last week over the House of Representatives while the inflammatory civil rights bill was debated.

FRANCIS WALTER, Democrat, of Easton, Pa., was unruffled as liberals pressed for strong legislation and southerners fought back with might and main.

His own calmness and reputation for fairness helped immensely to keep the discussion from becoming too heated and getting out of control.

"TAD" WALTER has been called on many times by Speaker SAM RAYBURN to sit in the chair when highly controversial issues were before the House.

(To explain why RAYBURN isn't presiding, the House, after general debate on a bill, resolves itself into the Committee of the Whole to act on amendments and the Speaker names a Member to wield the gavel.)

"He's one of the most useful men in the House," RAYBURN said. "I've put him in the chair when these hot bills come along because every Member has faith in him."

WALTER'S Pennsylvania district is highly industrialized and a conglomeration of many nationalities—descendants of migrating

Irish, Welsh, Poles, Germans, Italians, Slav, and what not.

Ordinarily a Congressman from such an area would be a leftwinger. But not "Tad" WALTER.

His thinking is more Texan than extreme liberal. He fares poorly in Americans for Democratic Action vote scoring.

He was floor leader for the tidelands bill that restored the offshore submerged lands of Texas and other coastal States and set aside a Supreme Court decision.

WALTER believed the Supreme Court was wrong in saying the States didn't own their tidelands and has since been critical of other decisions.

The Pennsylvania Congressman has been responsible more than any other single member for preventing the long-existing limitations on immigration from being weakened.

When President Eisenhower last week urged Congress to change the immigration formula to double the number of entrants to around 500,000 a year, WALTER charged it was purely a political move. He said the welfare of the Nation must not be sacrificed to the dictates of election-year politics.

WALTER was equally vociferous in criticizing Adlai Stevenson for advocating liberalization of the immigration laws. He got aboard the Stevenson campaign train to explain to the presidential candidate why he was wrong, but was not able to reach the presidential candidate, either because Stevenson didn't want to see him or his aids barred the way.

As chairman of the House Judiciary Subcommittee on Immigration, WALTER is in strong position to stop legislation breaking down existing laws on entrance of aliens.

While J. Frank Wilson, of Dallas, was a Congressman, he worked closely with WALTER on immigration matters. One year he accompanied WALTER to a meeting of the inter-governmental commission for European migration.

WALTER and RAYBURN have a deep admiration for each other.

In 1952, when it appeared possible that the Democratic National Convention might be deadlocked, WALTER and other friends of the Speaker set up an organization to be ready to move in if the opportunity came.

WALTER was assured of 95 percent of the Pennsylvania delegation for RAYBURN, but the chance to push the Texan's name never arrived.

"It's a shame that the Speaker has not been our President," WALTER said.

The Pennsylvanian has his hands full at all times. He is chairman of the House Un-American Activities Committee and next in line for Democratic chairman of the House Judiciary Committee. He heads the House patronage committee, whose task it is to distribute jobs on Capitol Hill to deserving Democrats. WALTER first came to Congress in 1933. Only eight Democrats have more seniority.

The 65-year-old Congressman is a veteran of World Wars I and II. He has received numerous awards for his public services, including decorations from foreign governments.

He is a graduate of George Washington and Georgetown Universities of Washington, vice president of a Philadelphia bank, and director of a hometown bank.

For all his idealism, WALTER is a practical politician, as shown by the fact that he has had no opposition in the Democratic primary since he was elected to Congress for a third term.

When he goes to his district and visits industrial plants, the workers greet him as "Tad." WALTER explains his ability to get reelected year after year to his constituents' faith in his desire and ability to look after their welfare, even if they may disagree with him on many matters.

"My people are not hyphenated Americans," he said. "They are Americans."

WALTER was once invited to join the minorities section of the Democratic National Committee, a group that tries to round the votes of so-called minority blocs. He refused to accept. Gov. G. Mennen Williams, of Michigan, took the place.

His staff wishes he wasn't so busy. His secretary, Ruth Miskell, complained she has a hard time getting him to slow down long enough to talk to him about congressional office problems.

WALTER works at high tension and worries a lot about the way the Nation is turning, but keeps his faith in the ability of the people, through Congress, to work out the best solutions.

"I believe Speaker RAYBURN and I have much the same political ideas," WALTER said.

Civil Defense Continues To Lag

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. EDMONDSON. Mr. Speaker, very few articles have illustrated more vividly the strange picture of neglect that prevails in America's civil defense preparations than the penetrating report of Brig. Gen. Thomas R. Phillips, U.S. Army, retired, in the St. Louis Post-Dispatch, March 18, 1960.

The article by General Phillips is a stern reminder of the continued failure of this Government to face up to its major responsibility in the field of civil defense.

The life or death of millions of Americans may be determined by what we do in this area in the next few years.

I hope that every member of this body will read the Phillips article, which follows:

UNITED STATES SPENDING MORE IN 2 YEARS TO PROTECT A FEW DOZEN ICBM'S THAN TO SAFEGUARD ITS PEOPLE—DISPARITY BETWEEN EFFORTS IS NIGHTMARE TO ADVOCATES OF CIVIL DEFENSE WHO SEE LIVES AS MOST PRECIOUS ASSET OF NATION

(By Brig. Gen. Thomas R. Phillips, U.S. Army, retired)

WASHINGTON, March 18.—The United States will spend more money to harden (protect) a few dozen intercontinental ballistic missiles from hostile attack in the next 2 years than it will to protect 170 million Americans from the same attack.

The money spent for active defense against attack—air defense, warning systems, etc.—each year is more than would be spent for civil defense in 50 years at the present rate.

To those who study the problem, the disparity between the effort to protect the weapons and to protect the people is a nightmare. They regard the people as the Nation's most precious asset. Productive capacity and capable military forces are only services provided for the welfare of the people. Of what value is a protected missile if the populace is destroyed?

Study after study has shown that casualties can be reduced 50 to 75 percent if an adequate system of shelters is built—simple home shelters against radioactive fallout and deep ones against blast in cities.

The complacency in a matter so vital seems to stem from the whole theory of deterrence.

It is not hard to sell the idea of spending to deter a war, but it has always been difficult to get the United States to spend to prepare for war. But preparedness has always meant the same thing as deterrence.

Deterrence can fail. If it does, the resultant catastrophe will be greater than has ever been visited on mankind. It is quite possible that the survivors will be few, in the absence of large-scale provision of shelters.

The United States is spending between 0.1 and 0.2 percent of its military budget on its civil-defense program, Switzerland, Sweden, Norway, Denmark, Germany and the Netherlands are spending a proportion from 10 to 20 times as large. The Soviet Union has a very extensive program, but its cost is not available.

In a strategic sense, civil defense is also a deterrent. In a crisis, the threat of nuclear war against an unprotected population is much more serious than it would be against a protected people.

The credence our allies are willing to give to use of our deterrent in their defense may also depend on whether our own population has a reasonable chance of survival or is unprotected.

When the major war threat was a bombing attack, a warning period of up to 3 hours could be expected. Under these conditions, evacuation of cities, in the absence of other protection—and none was provided in the United States—was deemed a proper defense measure.

Now that the major threat is an attack by ballistic missiles, with no warning or, at the most, 15 minutes of warning, evacuation is no longer feasible.

Shelters are the only possible protection for those who are in metropolitan areas that can be considered targets. There will almost certainly be strategic warning, that is, a period of tension (which ordinarily is not recognized to be serious). During this period a semipermanent evacuation of women, children, and the aged could take place.

But the majority of the population of metropolitan areas would have to remain. There will, however, always be a small percentage with a well-developed instinct of preservation who, like the wise ones in Berlin last May 27, will find the period of tension a proper time to take a vacation.

Shelters can vary from simple protection from fallout for a few hours or days, to reinforced basement shelters in homes that will enable the residents to survive even if the house is destroyed, to heavy shelters below reinforced floors in large buildings, to deep underground shelters in major cities built to withstand anything except a direct hit.

All types are necessary, but few of any type are likely to be built unless the building is required by Federal law and some incentive or subsidy is provided.

Sweden has the most advanced program of deep shelters for the city population. Rock or concrete shelters designed to give protection against high altitude detonation of hydrogen bombs are being built in the central parts of all cities with a population of 50,000 or more.

One example is in Stockholm. The famous Rock Garage, with a granite roof 50 to 65 feet thick, cost \$1,600,000 and can seat 10,000 people. In peacetime it is used as a garage. The cost was shared by the central government, the city of Stockholm and the private garage firm.

The Swiss shelter program is aimed at providing shelter for 2 million people in cities by 1963.

The Soviet Union uses all means of civil defense. Civil defense is under the Ministry of Internal Affairs (MVD) with a first vice minister in charge. He holds the rank of lieutenant general. The chief of the national civil defense staff is a major general.

The subordinate MVD organization of civil defense is militarized. The staffs extend to larger cities and potential targets outside the cities. The suborganizations are composed of members of the governments of the Soviet republics, regions and cities.

The subways in Moscow and Leningrad have been deliberately built deep, up to 130 feet, to provide shelters. The Moscow subway can shelter about 1 million persons. New buildings must have approval of the civil defense organization for the shelter protection built into the basements. Extensive instruction on the construction of fallout shelters have been given.

An official Soviet statement asserts that 85.5 percent of the population has completed a 10-hour course on civil defense. A second course of 22 hours was started in 1958. The training is compulsory and includes protection against chemical and bacteriological warfare. A third program was started in 1958 to be completed in 1960. Two additional courses, one of which was for school children, have been announced since.

The United States is the only major nation living with the threat of nuclear war delicately balanced on the deterrent theory that fails to take protection of its people seriously.

To the Sons and Grandsons of Confederate Veterans: Why You Should Join the Sons of Confederate Veterans

EXTENSION OF REMARKS

OF

HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a statement made by the distinguished writer, Lee Meriwether, of St. Louis, addressed to the sons and grandsons of Confederate veterans.

This statement was forwarded to me by a very distinguished lawyer in Memphis, Mr. John W. Apperson, who reminded me that Mr. Meriwether was once a citizen of Memphis, Tenn. In December 1862 his mother was banished from Memphis by General Sherman.

Mr. Meriwether has written many books, including the life of Senator Jim Reed, of Missouri. He is now writing what he calls his last book to be entitled "My First 98 Years." He was 97 years old last Christmas Day.

The article follows:

TO THE SONS AND GRANDSONS OF CONFEDERATE VETERANS: WHY YOU SHOULD JOIN THE SONS OF CONFEDERATE VETERANS

(By Lee Meriwether)

Since I became a member of Sterling Price Camp No. 145, of the Sons of Confederate Veterans, 50 years ago, I have often been asked "What is the good of such an organization?"

I reply to that question: "Do you want the word to think your father was a traitor who should have been hanged?"

When you reply, "Of course not," I say: "Then you should join the Sons, for their sole purpose is to keep history's records straight."

Never was there more need for our organization than now, for hardly a day passes but some northern newspaper or magazine says the South fought to perpetuate human

slavery and that Confederate soldiers were traitors who should have been hanged. Recently Time said Alabama hates Negroes so much that it sentenced a poor Negro boy, Jimmy Wilson, to death for stealing only \$1.90. I got from Judge Walter B. Jones, who tried Jimmy Wilson, these facts: Jimmy, the "boy" is a husky man of 40; it is true the purse he stole contained only \$1.90, but it is also true that Jimmy seized a woman by the throat, almost strangled her, tried to rape her, and desisted only when her screams brought people to her aid. It also developed that Jimmy had been convicted of several felonies.

I asked Time to publish these facts and not let its readers think Alabama hates Negroes so much that it hangs a "poor Negro boy" for stealing \$1.90. Time replied it had no more space for the Jimmy Wilson case. I mentioned this case at a meeting of the Sons of Confederate Veterans, and they broadcast the facts Time refused to publish. Thus, thousands of people learned the truth about Jimmy Wilson because the Sons helped keep history's records straight.

On January 11, 1960, Time devoted a whole column to praising the play "Andersonville," presently being presented in movie theaters throughout the country. The column contains not one word to let the readers know the play it praises libels Major Wirz, commander of Andersonville prison, and also libels the entire people of the South. The play pictures Wirz as starving and torturing 20,000 prisoners while the southern people looked on approvingly, and did nothing to stop the atrocities.

The truth is, Wirz was a humane man who did all in his power for the welfare of his 20,000 prisoners. He gave them the same rations given Confederate soldiers, and when the South became too impoverished to supply even those meager rations, Wirz offered to release all his prisoners to a Union commander if he would accept and feed them.

The offer was rejected because the North's policy was to starve the South into surrender. The Union commander knew if he accepted and fed the Andersonville prisoners it would mean Wirz would not have to feed them, then the rations he was giving prisoners could be given to 20,000 Confederate soldiers.

The U.S. War Department's 1867 report says the percentage of deaths of "rebel" prisoners in northern prisons was greater than the deaths of Union prisoners at Andersonville; the report explains this by saying the "rebels" when captured were so emaciated they could not respond to adequate rations.

While the South struggled for independence it was necessary to lie about Major Wirz and the South in order to make northern men willing to invade the South and kill southern men and burn southern homes. But it is not necessary, it is not decent, to repeat such libels today, nearly 100 years after the South was conquered. I asked Time to tell the truth about the South, but it refused to do it; so the Sons again kept history's records straight by broadcasting the facts about Andersonville.

During the War Between the States, 2,200 Confederate prisoners were confined in a camp at Elmira, N.Y. The camp was unsanitary; unaccustomed to northern winters, the prisoners in ragged, threadbare uniforms, suffered from cold and lack of medicines.

The North could have remedied those conditions, for it received supplies from all parts of the world. But it did not remedy them and the 2,200 prisoners died and were buried in Elmira.

The South's ports were blockaded by northern fleets; it had only its own scanty supplies. Drugs that might have saved the lives of Union prisoners at Andersonville were made contraband by their own Government.

In the light of these historical undisputed facts the movie play "Andersonville" is an infamous libel.

As long as the northern press and such plays as "Andersonville" picture our fathers as cruel traitors, just so long will it be the sacred duty of the sons and grandsons of Confederates to join our organization and help keep history's records straight.

Educational Dilemma

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial on the subject of American education, which appeared in the Lawrence Sunday Sun, Lawrence, Mass., on March 20, 1960:

[From the Lawrence (Mass.) Sunday Sun, Mar. 20, 1960]

EDUCATIONAL DILEMMA

If we accept the views of some critics at face value, American schools are in bad shape. Standards are woefully low. Other countries, such as Britain, are so far ahead of us as to be practically out of sight.

This kind of criticism, and the very serious questions that arise from it, caused U.S. News & World Report to look into the British educational system and to compare it with ours. The results of the study, under a London dateline, appear in the magazine's March 7 issue. And the picture, from the American point of view, is a good deal brighter—despite some cloudy patches—than the more extreme detractors of U.S. education would have us believe.

The article starts out with the big question: Do British children get a better education than their American counterparts? And that, it finds, can't be answered with a simple, unqualified yes or no. The answer, instead, is divided: "It is true for a minority—the brightest children in Britain. It is not true, on the whole, for the majority of youngsters."

It is important to understand that there are fundamental differences between the British school system and ours. As the magazine puts it, "In Britain the bright pupil gets practically all the breaks." If it is decided, when he is 11, that he is among the top 25 percent of pupils in his district, he is eligible for a special school and is destined to get much more education than the mill run of children.

These latter, the article goes on, must be content with the second best. Attending college is virtually out of the question. They usually enter the ranks of labor at 16.

Britain's famous "public schools"—which are in reality private schools, with tuitions running to \$1,500 a year—are widely and deservedly praised, as are her great universities. But only about 7 percent of British children go to those schools. Moreover, Britain is near the bottom of the list of nations—25th—in the proportion of population attending universities. The United States is first in this regard, and Russia is second.

U.S. News observes: "Many educators say the big difference between British and American schooling is this: Americans believe that all children should have the opportunity of equal education. The British believe

in educating an intellectual elite by limiting the opportunity of higher education to a tiny minority."

Britain does seem to be ahead of us in certain areas. Educators are high in their praise of what is known as streaming. This is a system by which children are assigned to classes on the basis of intelligence, so the bright child will not be held back by the dull. And British schools seem to be much more advanced in maintaining discipline than is generally true on our side of the ocean.

But American education has its virtues, too. As a matter of fact, Britain is borrowing ideas from U.S. education and is particularly interested in providing greater educational opportunity for more children. Here's the conclusion U.S. News reaches after its close study: "The conclusion reached after a close look at the educational system in this country is this: The theory that British schools are better than American schools doesn't hold water as a general proposition. The brightest pupils go to schools that, on the whole, are appreciably better than most American schools. But the vast majority attend schools that are inferior to those in America. And, for most, schooldays end at a very early age, by U.S. standards."

Joseph I. Echikson, M.D., Honored

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. WIDNALL. Mr. Speaker, in view of a number of bills pending before the Congress that seek to solve for the elderly the problems of costly and prolonged illness, I have asked consent to include in the Appendix the remarks made on February 9, 1960, by Dr. Royal A. Schaaf, President of the Medical-Surgical Plan of New Jersey, at a testimonial honoring Dr. Joseph I. Echikson at South Mountain Lodge, B'nai B'rith, South Orange, N.J. The viewpoint that he has expressed contains statements that are worthy of serious consideration by every Member of the House.

The talk by Dr. Schaaf follows:

REMARKS BY ROYAL A. SCHAAF, M.D., PRESIDENT, MEDICAL-SURGICAL PLAN OF NEW JERSEY, AT TESTIMONIAL HONORING JOSEPH I. ECHIKSON, M.D., SOUTH MOUNTAIN LODGE, B'NAI B'RITH, SOUTH ORANGE, N.J., FEBRUARY 9, 1960

Mr. Chairman, Dr. and Mrs. Echikson, distinguished guests, members of B'nai B'rith, and friends of Dr. Echikson, I deem it at once a pleasure and a privilege to have been invited to speak to you tonight as you pay tribute to my close friend and professional colleague, Dr. Joseph I. Echikson, on this auspicious occasion. It is most gratifying to have heard the words of praise and appreciation of Dr. Echikson's life and work and the recognition of his great service to his patients and to the people of our State. He well deserves all of the nice things that have been said about him and I concur fully in the thoughts that have been expressed. I have been happily associated with your distinguished guest for many years, in a variety of activities related to health care, especially in the field of cancer control to which Dr. Echikson has contributed so much.

There is much that I could say in praise of Dr. Echikson but to spare him embarrass-

ment and to avoid "gilding the lily" I shall only quote the phrases that are engraved on the Edward J. Ill Medal awarded to him by the Academy of Medicine of New Jersey last May: "Unselfish physician. Devoted teacher. Generous public benefactor." These seven words epitomize the sentiments of his professional colleagues in regard to their beloved friend Joe.

THE ECONOMICS OF HEALTH CARE

I have chosen for my title "The Economics of Health Care," a subject among those currently uppermost in the minds of our people, because of its personal, economic, social, and political aspects. By most of us, good health is thought to be an inalienable right of man, along with life, liberty, and the pursuit of happiness. By many of us, also, ill health is thought to be—as indeed it is—a personal misfortune to the sufferer and his family, one for which he, himself, is in no way responsible, and hence, that he, individually, should not be required to bear the cost of his treatment. All too many of us, our number increasing rapidly, are prone to shirk our duty to our parents, and, too often, to our defective children—prone to send an aged parent, a little forgetful, a little childish, in need of tender, loving care, to a public mental hospital; an afflicted child, to a haven at Vine-land. This tendency, although quite understandable in the light of present day hectic living conditions, is most regrettable.

Health is defined as a state of complete physical, mental and emotional well-being. By this criterion, it may be said that few of us enjoy perfect health, even though we are able to live a full and active life. A great many of us can be truly said to be healthy in one of these areas, a lesser number, in two, but rare is the individual who may be said to be healthy in all three—a man such as Winston Churchill at the time he assumed the reins of the British Government following Dunkirk. Think of his physical vigor, his keen intellect, his imperturbability in the face of frightful danger.

A complete program of health care requires much more than the services of physicians and hospitals. Many other professional people, organizations and agencies must contribute their talents and resources to the total effort. Among these are dentists, nurses, pharmacists, laboratory technicians, research workers, drug and instrument manufacturers, public health officials, sanitary engineers, the voluntary private nonprofit health agencies, such as the American Cancer Society, in which Dr. Echikson has been so active, the Antituberculosis League, the National Foundation for Infantile Paralysis, and others. The aggregate cost of all of these services is of course, very great—staggering in fact—yet it is less by a large margin than the combined amounts spent in the United States each year for liquor, tobacco, cosmetics, and beauticians not to mention amusements alone. There is no doubt about the ability of our people to pay for a complete health care program, the best in the world, under a voluntary, free enterprise system of payment if they have the will and choose to do so. Certainly there will always be many unfortunate people who are unable to pay for their health care, just as there are many who cannot defray the cost of food, clothing and shelter. There are presently available, throughout New Jersey, ways and means for providing health care for all needy persons and there is no good reason why they should not obtain it if a reasonably intelligent effort is made by them or in their behalf.

The present day standard of health care in the United States is simply astounding as demonstrated not only by the lower morbidity and mortality rates but also by the average life span of our people, increased by more than 20 years since 1900. More progress has been made in the field of health care in the past 50 years than in the 50 centuries that

preceded them. The late 18th century developed vaccination against smallpox whose ravages had kept world population at a stable level for at least a thousand years. The 19th century introduced general anesthesia, by chloroform and ether. Pasteur's work in the field of bacteriology, with his demonstration of micro organisms as the cause of disease in man and animals; the application of Pasteur's principles to the development of antiseptic and, later, aseptic surgery by Lister, the identification of the malarial parasite and its transmission by the mosquito, and the isolation of bacteria as the cause of several diseases, notably the tubercle and the typhoid bacilli. It was in the 20th century, however, that the application of this basic knowledge bore fruit. Since 1900 we have effected the control of most of the diseases caused by bacteria, protozoa and parasites.

We have learned about allergy and the use of vitamins in nutrition, how to save and prolong the lives of sufferers from diabetes and pernicious anemia; how safely to transfuse blood; how to administer anesthetics; how to use the sulfonamides and the numerous antibiotics, so valuable in the treatment of infectious diseases, especially pneumonia, syphilis and many of the diseases caused by viruses.

Great as these advances in health care have been, our health picture is much less rosy than we should wish to have it. Although many of our dangerous health problems have been solved, as a result of our increased life span, they have been replaced by several others in the field of degenerative diseases incident to older people; notably cardiovascular disease, arthritis, and cancer. In addition, our complex, rapidly moving machine age life has brought about a notable increase in our mental stress and emotional tension with the resulting marked increase in the number of cases of mental and emotional disorders.

For the most part these newer and more pressing health problems are included in the category of long-term illnesses—those requiring extended and expensive medical and hospital care, with their consequent drain on the financial resources of the patient and his family. How tragic is the plight of the family whose breadwinner lies for months dying of cancer, at the end leaving his family bankrupt, not only in money but also in hope.

A health care problem of increasing importance is that related to the medical and hospital care of our senior citizens—those of us, like myself, who, in the minds of some, having attained the arbitrarily selected age of 65, instantly become indigent and in poor health—or do we? From my own long observation I know that a great many of us, after the age of 65, enjoy excellent health, remain vigorous, and are capable of much productive and valuable work. It is wasteful of manpower and money to force the retirement of able-bodied and competent workers so arbitrarily, and the prevalent practice has created economic problems and hardship for many persons and families who are thus forced to subsist on the meager benefits of the social security system. Certainly, under the present conditions of full employment and the demand for additional workers, the age limit for compulsory retirement for all able-bodied workers in industry must be increased at least to age 70. This practice alone will change radically the problem of health care for our senior citizens, many of whom are and wish to remain independent and self-reliant.

My purpose in speaking to you this evening is to outline for you, in general terms, a practical method of defraying the cost of health care in a voluntary free enterprise manner, a method advocated and wholeheartedly sponsored by organized medicine, which includes the American Medical Association, the Medical Society of New Jersey

and the Essex County Medical Society. We should bear in mind that much of the expense of our present health care program is borne by government at different levels, Federal, State, county, and/or municipal, out of general tax revenues, including the cost of food, milk and water protection, sewage and refuse disposal, correction of air pollution, public health services and other agencies, not forgetting the voluntary nonprofit health organizations such as American Cancer Society and numerous others. Moreover, the cost of medical and hospital care for mental, tuberculous, and contagious patients is largely met by special publicly supported State and county hospitals for such patients. Therefore, our problem is related to the payment for medical and hospital care rendered to sick individuals.

For purposes of discussion we may divide the population into four groups from the economic standpoint. These are:

1. The wealthy who can easily pay for as much and as elaborate health care as they need or want.

2. The great middle class of gainfully employed people who may quite readily bear the expense of adequate medical and hospital care by purchasing prepaid sickness insurance, either in the Blue Cross and Blue Shield plans, or in one of the strong commercial insurance companies such as the Prudential, the Metropolitan, the Travelers, the John Hancock, the Equitable, and others.

3. The medically indigent, by which we mean those persons who are able to pay for their food, clothing, and shelter, but who cannot meet the expense of personal or family illness.

4. The indigent, by which we mean those persons on the relief rolls of our municipalities, who are wholly dependent upon public or private charity for the provision of the four essentials of life—food, clothing, shelter, and medical care.

The voluntary prepaid sickness insurance movement has been the most spectacularly successful insurance venture in the entire history of that industry in its many ramifications. For example in New Jersey, about 80 percent of the population have some hospital and medical insurance in one form or another. Although sickness insurance covers a large part of the cost of medical and hospital care, there are a number of areas in which it is inapplicable or unavailable.

Except to a limited extent, it can be obtained by the elderly only at prohibitive premium rates, because of the greatly increased incidence of illness requiring medical and hospital care among such people. It is unavailable to the indigent and the unemployed, partly because of the high incidence of illness among such people, but also because they lack the money with which to pay premiums. Neither is it available to persons who are suffering from chronic or long-term illnesses. One cannot insure against a catastrophe that has already happened any more than one can insure a house against fire, when a conflagration has already started. Nor should we attempt to insure the cost of ordinary house and office calls. To do so inevitably leads to a multiplicity of small claims, the adjudication of which costs just as much as large ones and, in addition, the premium rate becomes excessive.

There is, however, an increasing demand on the part of labor, in labor-management negotiations, for management to assume the cost of house and office calls as well as that of hospital and medical insurance for employees, because the payment of the premiums for such insurance does not represent taxable income on the part of the employee, and it is deductible as a business expense on the part of the employer. Of course, the people eventually pay for this coverage by the increased cost of the products they buy. "Vincere non notest" is a Latin phrase which

roughly translated, means "you can't win." We, the people, always pay and pay and pay.

At this point you well may ask "If the elderly, the indigent, the unemployed, the chronically ill may not be insured against the cost of medical and hospital service, how, then, may they be provided with the needed medical and hospital care?" In reply, I would say that every man, woman, and child in the State of New Jersey is entitled to adequate medical and hospital care. If they, themselves, are unable to pay for these services, they must be paid for out of general tax funds, State, county, and/or municipal, the administration to be at the local level, where the need for the aid and the amount thereof may be accurately determined.

Next, you may ask "How may the required money be obtained?" To which I would reply "Let the Federal Government relinquish to the States the field of the amusement tax. Adequate amounts of money could be raised almost painlessly from this source. If people objected to paying an amusement tax, they could avoid doing so by seeking entertainment at home via television and radio. There would be no hardship entailed to anyone. Certainly the Federal Government should not be involved in this kind of relief. It could be provided much less expensively were the taxes to be levied by the States and expended by the State and county governments. Of every \$3 sent to Washington only \$2, at most, are returned to the States. Besides, a needy person in Newark would be only a piece of paper in Washington. Charity is a personal thing—the gift, without the giver is bare.

We, as citizens, should be willing to have our municipal, county, and State governments pay to the hospitals the proper per diem cost for the care of indigent patients. Were this done, much of the financial difficulty of our hospitals would be averted. I know of one important hospital in which the per diem cost is \$31, but where the county government pays only \$9 a day for the care of indigent patients leaving the balance to be added to the bills of self-paying patients. Such a situation is unjust and intolerable.

We hear much these days about the exorbitant premium rates for Blue Cross coverage, not only in New Jersey but throughout the entire United States. There are three principal reasons for this state of affairs:

1. The 8-hour day, the 40-hour week, the month's vacation, and the 2 weeks of sick leave with pay each year for most hospital employees, not to mention the minimum hourly wage of \$1 for all. Even thus, the hospital worker is receiving only his or her fair compensation, long overdue.

2. The greater demands for additional coverage of hospital benefits—X-ray, oxygen, drugs, and expensive special services of all kinds.

3. The growing inflation in our country which adds to the cost of all goods and services.

Still, prepaid sickness insurance is the greatest bargain available to the American people, but we should not kill the goose that lays the golden eggs by excessive demands for medical and hospital service under our sickness insurance contracts.

You have heard much recently about the widely debated and controversial Forand bill, which proposes to pay the hospital and medical bills of all persons over 65 covered by the Social Security System. This would be unnecessary, frightfully expensive, and unjust to the younger people whose social security taxes would be considerably increased in order to raise the needed money. Moreover, if adopted, the Forand proposal would be a Trojan horse approach to the establishment of a system of socialized medicine in

the United States. All Congress would need to do would be to lower the age limit for eligibility by 5 years each year, and in 10 years we would have completely socialized health care.

At this point I might say parenthetically that organized medicine is unalterably opposed to socialized medicine, not for economic reasons, but because it would lead inevitably to deterioration in the standards of medical and hospital care now prevailing in the United States.

In conclusion may I say that we, the people, must have a complete health care program of excellent quality; that such a program will be costly; that we can pay for it under a voluntary, free enterprise system; if we have the will to do so, and whatever the cost may be, its attainment will be well worth the expense and effort required. We are living in a marvelous age, and we can confidently look forward to national good health and happiness, if only the leaders behind the Iron and Bamboo Curtains can restrain themselves from unleashing nuclear warfare.

U.S. Hospital in Poland

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of Thursday, March 10, 1960:

U.S. HOSPITAL IN POLAND

With Joseph Lester of Kingston general chairman, Representative DANIEL J. FLOOD toastmaster and a large delegation of local residents due to attend, the dinner the Pulaski Foundation is sponsoring in Washington on March 28 in honor of Representative CLEMENT ZABLOCKI of Milwaukee and W. O. Biernacki-Poray of Montclair, N.J., for promoting better understanding between the peoples of the United States and Poland will have special interest to this community. The guests of honor have been designated as Polonia's "Men-of-the-Year" for their roles in the erection of a children's hospital and pediatric center at Krakow in tribute to the memory of General Casimir Pulaski, Polish hero, who gave his life for American independence in the Revolution.

Presence of 100 Members of Congress and a descendant of General Pulaski, who is coming to America from Poland especially for this occasion, will make the gathering a memorable one. Mr. Poray was the architect who prepared the plans for the project and Representative ZABLOCKI made it possible to realize this dream through legislation, releasing U.S. funds to Poland to finance the work, with special contributions from private citizens and groups.

The timing of the project is excellent as Poland observes the 1,000th anniversary of the launching of the nation and also prepares for the 600th anniversary of the famed Jagiellonian University of Krakow in 1964. In this undertaking, the close ties existing between the people of the United States and of Poland, will be demonstrated in no uncertain terms.

The idea of the hospital originated with Mr. Poray who was born in Poland and came to the United States with his parents in 1917. A highly successful designer, it was natural for Mr. Poray to conceive a

memorial that would be both lasting and useful. He made a special trip to Poland to survey the possibilities of such a project. The need for a hospital for children was so apparent no selling was required.

Back in America, he enlisted the cooperation of a number of friends of Poland and admirers of General Pulaski. The administration in Washington gave the project the green light and the next step was to release a portion of the \$200 million credit the United States has in Poland through the sale of goods. It was here that Representative ZABLOCKI fitted into the picture because action by Congress was necessary to change the law, prohibiting aid to countries, dominated by the Communists. An exception was made because of General Pulaski and the nature of the project, intended to benefit the Polish people directly, not the regime in power.

The United States has spent billions around the globe to promote good will for our country and to advance the cause of freedom. The relatively modest investment in this project should yield eminently satisfactory dividends, for it will be a daily reminder not only of the Pulaski links that bind the two peoples, but of other things they have in common—love of God, respect for humanity and dedication to justice as well as liberty.

Your Education for Leadership

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address by the distinguished Chief of Staff of the Army to the members of the cadet corps at one of the most outstanding military colleges, the Citadel, on the occasion of Corps Day, marking the 117th anniversary of that historic institution.

General Lemnitzer, a friend of Gen. Mark Clark, the president of the Citadel, is a former comrade in arms of General Clark. General Lemnitzer, the soldier's soldier, gave words of wisdom and advice to future officers of the military. No one is better qualified to give advice. No institution has made a greater contribution to our military—in every war since its founding in which this Nation has become involved.

The address follows:

YOUR EDUCATION FOR LEADERSHIP

(Address by Gen. Lyman L. Lemnitzer, Chief of Staff, U.S. Army, at Corps Day, The Citadel, Charleston, S.C., March 19, 1960)

The opportunity to be present at the Citadel's Corps Day gives me a great deal of pleasure. In the first place, I have a number of close associations with the Citadel and with Charleston. These I value very highly. In the second place, I welcome the chance to speak to this particular group of young men. This is so because you and your contemporaries represent a potential of tremendous value to this country's future.

Throughout the years, I have had the opportunity to observe many of the graduates of this great school. In World War II, during the North African campaign and the Sicilian landings, I commanded the 34th

Antiaircraft Artillery Brigade. Practically my whole staff in that organization was made up of Citadel men. Consequently, I have first-hand knowledge of the splendid qualities the Citadel instills. Indeed, the outstanding work of Citadel graduates has come to my attention in peace as well as war; and not only in North Africa, but also in Europe, Korea, Japan, and the United States.

These achievements are a tribute to the education which cadets receive here, and to the great traditions with which they are imbued. These achievements are a tribute, too, to the outstanding staff and faculty who direct this school. That great soldier, educator, and gentleman, Gen. Charles P. Sumner, made a tremendous imprint over many years. The men who direct the Citadel today have carried on his same high standards.

Among the officials of the Military College of South Carolina, it has been my great privilege to know several of them for a good many years.

In fact, your administrative dean—General Honnen—and I were classmates at West Point. I remember very clearly the days when he was captain and star shortstop of the Academy baseball team, on which I was the catcher.

My association with your president, General Clark, and my admiration for him are also of long standing. During the days when the United States was mobilizing its strength for World War II, General Clark was Chief of Staff at the Headquarters of the Army Ground Forces. At that same time, I served at that headquarters as Assistant Chief of Staff for Plans. Later, I had the chance to work closely with General Clark in England, during the preparations for the north African landings. He was General Eisenhower's Deputy for Operation Torch, as the invasion was known, and I was the Assistant Chief of Staff for Plans and Operations. I was with him as his deputy on the submarine mission, in advance of the landings, when secret meetings were held with French representatives. I can assure you, from personal knowledge, that General Clark's persuasiveness and skill as a negotiator made a tremendous contribution to the success of the invasion when it took place shortly afterward.

It was also my privilege to serve with General Clark, as his Deputy Chief of Staff, while the 5th Army was being formed, prior to the invasion of Sicily. Throughout the long, bitter fighting in Italy, I gained still further reason to admire his skill and leadership. I was Deputy Chief of Staff to Field Marshal Lord Alexander, who was the Supreme Allied Commander in the Mediterranean. In that capacity, I was in an especially good position to observe General Clark's outstanding achievements in the face of innumerable obstacles and difficulties, and his great contribution to Allied victory.

In addition to my associations with the graduates and officials of the Citadel, I have a special feeling for this beautiful old city of Charleston. Nearly 20 years ago, I was stationed for a time at Fort Moultrie. Then, 2 years ago—on Armed Forces Day of 1958—I had the opportunity to visit here again, and to renew my acquaintance with Charleston and its citizens.

For all these reasons, therefore, coming to the Citadel today gives me a great deal of personal satisfaction.

However, while it is pleasant to look back, it is more important to look ahead. For you young men, it is especially important to do so. It is because I want to speak in terms of your opportunities and responsibilities in the future that I have entitled my remarks "Your Education for Leadership."

We are living in an age of extremely rapid change. Indeed, there has not been any time since the Renaissance when the

rate of progress has been so great. During a period of only a few years, advances in technology have brought fantastic developments in communications, in transportation, in the control of physical power, and in medicine—indeed, in virtually every phase of man's material endeavors. These, in turn, have made it possible to achieve great improvements in the daily living conditions of large segments of the world's population. The pace at which our knowledge is growing holds out the clear promise that the progress which has been achieved in these fields is only the beginning of what we can anticipate.

With all this, it is ironic indeed that we are also faced with dangers which far exceed anything that the world has ever known. President Eisenhower summed this up very clearly in his state of the union message. He said:

"With both sections of this divided world in possession of unbelievably destructive weapons, mankind approaches a state where mutual annihilation becomes a possibility. No other fact of today's world equals this in importance—it colors everything we say, everything we plan and everything we do."

To meet these dangers, we must of course maintain the strength to counter the threat which menaces us and other free nations. Such strength depends in part on military capabilities. In addition, it also depends on economic factors, and on the psychological and moral factors which can be summed up in such terms as determination or strength of will.

Our efforts to maintain our strength in all these forms are essential. However, there is also another line of effort which, to my mind, is also essential. What I am referring to is the achievement of progress in the fields of understanding and human relations which will match our progress in technology.

Technology is based on natural or scientific laws. These are statements or formulas of the nature, order or sequence of given phenomena. As far as existing human knowledge goes, these characteristics will always be the same under the same conditions.

In contrast, the type of progress which I have in mind is, in many respects, far more difficult to attain. For one thing, it depends on a large number of interrelated variables. It concerns the human mind and emotions. It involves individual and social forces. These, clearly, are matters which we cannot treat with the certainty, exactitude, and precision which are possible in technology. Hence, the progress of which I speak not only requires knowledge, but it also requires keen judgment and penetrating insight.

In sum, this is a very complex task. People who have tried to visualize the future, from Jules Verne to the authors of science fiction today, have had no serious problem when it came to conceiving fantastic technical devices. Buck Rogers and his counterparts live in a world of scientific marvels. Nonetheless, it is noteworthy that the problems involving human relationships with which they cope are no different from those which have troubled mankind for centuries.

Many people perhaps assume that human attitudes are unchanging. I cannot agree. If this were true, man would still be a savage in a jungle. Only a hundred years ago—at the very time when the Citadel was being established—there were many places in the world where a foreigner, simply because he was a foreigner, was greeted by automatic suspicion and distrust. The presumption was that he had arrived to gain something at the expense of the local population. Why else would he be making his visit?

Improved travel and communications, with increasingly close ties between peoples, have changed this situation considerably. There is a tremendously greater opportunity for people of different nations to meet and un-

derstand each other. Look at the opportunity which military service affords. Time was when a soldier could expect to spend only a relatively small part of his service overseas. But today, members of our Armed Forces are serving around the globe, alongside our free world allies.

Such service affords marked opportunity to the individual to improve his personal understanding of other peoples. The accumulation of such understanding by individuals increases the body of understanding within the Nation as a whole.

In this connection, I want to stress particularly the importance of communication between people of different languages and cultures. The potential consequences of misunderstanding today are much too great to be risked. Consequently, foreign languages have become an increasingly vital field of study. Not only does knowledge of the language of a nation permit much more effective communication, but it provides an insight into the character and culture of that nation, which can be obtained in no other way. In addition, again for the purpose of crystal-clear communication, it is important for Americans to master our own language, in both written and oral expression.

Certainly, too, a great deal of effort in the areas covered by the social sciences in general is clearly called for. Knowledge and understanding in these fields are as vital to success in meeting the problems and dangers facing us as are knowledge and understanding in the technical sciences. Obviously, a starting point for any such effort is in education—not merely in subject matter, but in the basic approach to the educational process.

Education, in my opinion, has three essential elements.

One of these—but only one—is, of course, the development of knowledge. Education instills knowledge of facts, of techniques and skills, and of the principles underlying those techniques and skills. Such knowledge, however, is in the nature of a tool. It is essential, but it is a means rather than an end.

The second element of education is development of judgment. To be sound, judgment must be rooted in thorough factual knowledge, but it transcends knowledge alone. In this regard, I want to quote from William Johnson Cory, the 19th-century English poet and educator. He wrote that:

"You go to a great school not so much for knowledge as for, arts and habits; for the habit of attention, for the art of expression, for the art of assuming at a moment's notice a new intellectual position, for the art of entering quickly into another person's thoughts, for the habit of submitting to censure and refutation, for the art of indicating assent or dissent in graduated terms, for the habit of regarding minute points of accuracy, for the art of working out what is possible in a given time, for taste, for discrimination, for mental courage and mental soberness."

The two elements I have listed—knowledge and judgment—pertain primarily to the intellect. To them I want to add a third. That element which has fundamental influence on the effectiveness with which knowledge and judgment are used, is the development of character. This Nation looks to its college graduates—as men who have completed the process of formal education—for the leaders to guide the way through the dangers and difficulties ahead. For that reason, I consider character development one of the most overriding requirements of education. That is because character is absolutely essential to wise and effective leadership.

This fundamental principle was the basis of the brilliant work of Col. Sylvanus Thayer,

who was the superintendent of West Point from 1817 to 1833. It is fitting that he is known as "the father of the Military Academy." More than that, however, he ranks among the most influential figures in the evolution of American education. His process of developing educated leaders can be described as a triangle: a solid base of personal integrity, with thorough academic instruction and sound discipline—which must begin with self-discipline—providing the other two sides. No one has yet been able to improve upon this design.

Because they operate within the pattern established by Sylvanus Thayer, combining so effectively all three of the elements of education which I listed, schools such as the Citadel are making a vital contribution. It is a contribution which benefits the young men who have the privilege of receiving this education. Through them and their future influence, moreover, it benefits the Nation as a whole.

I am greatly impressed with the developments here at the Citadel under the leadership of General Clark. The high academic standards which are maintained here foster the intellectual qualities which I mentioned. Beyond that, however, the Citadel offers something more. This is the development of qualities of responsible leadership. The development of the leadership ability of you young men, based firmly upon the Citadel's Honor Code, is invaluable from the viewpoint of the military services. However, it is also invaluable from the viewpoint of this country's future.

First, there is the military advantage of your education. To a very large extent, after your graduation you will begin a period of active duty with the Armed Forces. Some of you will become career officers. Those who do not will enter one of the Reserve components, which constitute a major element of our military strength in today's threatened world. In any of these cases, your education enables you to make an important contribution to our military effectiveness.

This is so for a number of reasons. Because the Citadel is a military school, you have been taught about discipline, but you have learned that effective discipline is intelligent and understanding, not blind and slavish. You have been taught to be confident and self-reliant, because an effective military man must be able to plan and think for himself. You have been encouraged to be forceful and energetic, because an effective military man must be able to put his plans into prompt and vigorous execution. You have learned the importance of forethought and attention to detail, because an effective military man must be able to carry out complex operation, often in short periods of time, without the opportunity to correct earlier mistakes. You have been taught to be flexible, because an effective military man must be able to meet and overcome the unexpected. Finally, you have learned the importance of understanding people and of getting along with them. This is of overriding importance, because an effective military man—especially an effective military leader—is concerned with activities whose success depends upon the combined efforts of many people working together toward a common objective.

These characteristics are of obvious value in the military field. However, they are equally of value in any field of endeavor. They are qualities which are vital in order to continue the progress which has already brought us so far. They are vital, also, in order to work out solutions to the problems and to overcome the dangers which lie ahead.

Although you are receiving a splendid education, you must not allow your process of learning and growth to stop when you get your diploma. Robert M. Hutchins, the former chancellor of the University of Chicago, once stated that "The college graduate is presented with a sheepskin to cover his intellectual nakedness." I would not go so far as that. However, I do want to point out that although some of you will be seniors at graduation time in June, in whatever field of activity you enter you will be freshmen again the following September. This by no means discounts what you have already accomplished. It merely emphasizes the truth that the only basis for continued accomplishment is continuing effort.

In my remarks to you, I have stated that the future holds great opportunities, and that it is threatened by great dangers. I have said that because of your special advantages of education, a great share of the responsibility for exploiting these opportunities and eliminating or surmounting these dangers will shortly rest upon you. I am well aware that you have heard much the same statement before, and I am sure that you will hear it again. Even so, this point is worth emphasizing because it is a fundamental truth that should guide your thoughts, efforts, and decisions.

To meet your great responsibilities, the Citadel has given you tremendous assets. It has given you knowledge; it has provided you with outstanding models of achievement; it has imbued you with a great tradition. Most important of all, it has fostered in you the qualities of character which are the indispensable foundation of all lasting accomplishment. You could not be better armed for the tasks that lie ahead. I am sure that in carrying them out, your actions will add still greater luster to this great school's splendid reputation, and contribute positively and substantially to the Nation's benefit.

The Chinese Outlaws

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Mirror of March 16, 1960:

THE CHINESE OUTLAWS

James A. Farley, eminent American and one of the greatest leaders in Democratic Party history, has returned from a 6-week business trip (he's board chairman of Coca-Cola Export) in the Far East and South Pacific.

His sound advice, based on talks with leaders throughout free Asia, is that it would be a colossal mistake to give any kind of recognition, United States or United Nations, to Red China.

The bloody crimes against Tibet, the invasion of Indian territory, harassment by China of other neighbors, Peiping's refusal to renounce the use of force—these have all caused a sense of revulsion in Asia. Any weakening toward the Communist butchers would be disastrous.

A Tribute to Gov. G. Mennen Williams of Michigan

EXTENSION OF REMARKS OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. RABAUT. Mr. Speaker, under leave to extend, my remarks I would like to include in the RECORD a letter that I received today from a citizen of Wisconsin. The writer is one Robert Moses and his purpose in writing was to apprise me of a resolution adopted by the State administrative committee of the Democratic Party in Wisconsin. The resolution expresses in glowing terms the high respect and admiration for Gov. G. Mennen Williams of my own State of Michigan that is felt by these Wisconsin Democrats. As you know, Mr. Speaker, Governor Williams is one of my constituents. Speaking as his representative here in the Congress I feel that this letter bears out very well something I have felt and known for a long time; namely, that the splendid efforts that Governor Williams has put forth on behalf of our own fair State of Michigan have endeared him to people in many other parts of the Nation. I am pleased to introduce this letter as concrete evidence of that fact:

MARCH 18, 1960.

Representative LOUIS RABAUT,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN RABAUT: As the Congressman of Governor Williams' home district, you may be interested in the following resolution which I presented for unanimous adoption at the March 5 meeting of the State administrative committee of the Democratic Party of Wisconsin, held in Milwaukee:

"Whereas, Gov. G. Mennen Williams of Michigan announced this week that he would not seek reelection to an office which has brought great distinction to himself, his State, his country, and his party;

"Whereas Governor Williams, a warm humanitarian and dedicated champion of a better world, has decided 'as a private citizen or as a public official to advance the cause of peace in the national field';

"Whereas Governor Williams, an outstanding liberal, has built a 12-year record of unmatched accomplishment of Michigan history—a record which has earned for him the kind of admiration and respect that make many people feel he deserves an even higher executive office;

"Whereas Governor Williams, a giant among national Democrats in the pattern of Franklin D. Roosevelt, has provided brilliant political leadership to a rejuvenated Democratic Party—the type of political leadership that not only has helped to mold Michigan into a Democratic stronghold but also has had remarkable influence on the resurgence of Democratic Party strength in Wisconsin and other Midwest States: Therefore be it

"Resolved, That the State administrative committee of the Democratic Party of Wisconsin, meeting in Milwaukee, March 5, express deep regret that Governor Williams has decided to step out of public office in Michigan; be it further

"Resolved, That the State administrative committee commend the fine achievements

of Governor Williams during the past 12 years; be it further

"Resolved, That the State administrative committee extend to Governor Williams the best of luck in his future undertakings; be it further

"Resolved, That a copy of this resolution be sent to Governor Williams so that he may be reminded that Wisconsin Democrats have a soft spot in their hearts for him and that they hope he comes back to Wisconsin again and again in the years ahead."

Yours sincerely,

BOB MOSES.

A Farmer Speaks

EXTENSION OF REMARKS OF

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. MOULDER. Mr. Speaker, several weeks ago I was impressed by a discussion of farm problems with my friend D. J. Wedding, of Cairo, Mo. He is a 100 percent farmer and it is his contention that one of the major farm problems is "agribusiness." Upon my return to Washington I received a letter from Mr. Wedding wherein he clearly presents his reasons for the farm problems as follows:

According to one report 90 percent of all food products goes through a food chain at one time before reaching the consumer. The food chains are now buying farms, raising crops, and feeding these crops to their own livestock which were raised on their farms. All this is in direct competition with the individual farmer. We think this is fast leading to a monopoly. We just cannot compete without Government help.

The domestic parity plan, developed by the Grange, will solve most of our problems with cereal grains. First let's not let our surplus holding scare us into senseless programs. In designing our agricultural programs we must remember two facts: We must continue a program of abundance; all control measures should be to see that this oversupply moves along a narrow line. Another fact is we cannot allow one commodity to decrease the price of another. A good example of this is feed wheat. If wheat prices are allowed to drop to the feed price level, then wheat will replace corn in many feeds, thus increasing the carryover of that crop. For these cereal grains then I believe we must take the domestic parity approach with the addition of many more acres in the conservation reserve.

Now turning to feed grains, no one likes production controls but everyone I talk to thinks this is the fastest and best way out of our oversupply. Most are willing to leave 10 to 15 percent of cropland idle, without compensation, if the Government will guarantee a fair and livable price for the rest of the crop. This price to be 100 percent of a new fair-price formula based on cost of production, labor management, and risk. Until this new formula is reached, 90 percent of present parity may be used.

For a short-term program the Missouri Grange recommends that allotments of bushels or hundredweights be established for feed grains, corn, and grain sorghum, with all farmers complying. These allotments to contain the estimated amount of each commodity that will be used in this country for the year of allotment. This will stabilize

consumption with production. The surplus can be handled by setting aside a security reserve. We suggest a 3-month supply. The remainder to be used in foreign aid, Public Law 480, and expanded school-lunch and institutional programs.

These plans will take the Government out of the storage business which is very costly and doesn't help the farmer. I believe that overproduction and low prices can be handled simply and much less costly to the Government if we face the facts and not listen to economist and city publications that do not realize we must have a net farm income that is livable in this country.

Prairie Creek, Ind., Flood Project Nears Reality

EXTENSION OF REMARKS OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. WAMPLER. Mr. Speaker, having had a continuing concern for flood control and water and natural resources development, it is with great interest and pride that I note the commendable progress being made toward the establishment of the Prairie Creek, Vigo County, Ind., watershed program.

Recently, the Prairie Creek Watershed Association and supervisors of the Vigo County Soil Conservation District signed the official application for Federal authorization to establish flood-control measures in the area.

As reported, under the program the area can receive Federal funds for the construction of flood-retention walls, dredging of the creek beds, grabbing and widening of the creek bank, and the creation of numerous small water basins.

The following article, appearing in the Terre Haute, Ind., Tribune, March 17, 1960, further explains this laudable project which will benefit so many in the Prairie Creek area:

To qualify, a large majority of landowners in the area were required to pledge themselves to conservancy measures on their farms in order to discourage later erosion and watershed faults that might recreate the land inundation problems.

WILL SEEK APPROVAL

The signed application now goes to the State office of the U.S. Soil Conservation Service for designation to the Water Shed Planning Party Headquarters after it has first received the approval of the Indiana State Flood Control and Water Resources Commission. The WSPPH at Paoli is in charge of planning flood prevention and soil conservancy projects with persons in the various conservancy areas.

The Prairie Creek effort is the first such movement in Vigo County to progress to this degree, although, others are currently underway, officials pointed out.

Some 9,000 acres in southeastern Vigo County are involved in the Sullivan County watershed area now established under the name "Busseron Watershed Conservancy District." It has progressed through legal authorization by court order.

As in the Sullivan County project, the Prairie Creek watershed area of 30,000 acres

extends over into Sullivan County, including some 2,000 acres.

Work on the Prairie Creek project has been aided through the cooperation of the Agricultural Stabilization Administration and the office of the Vigo County Extension Service, according to Lawrence Wilson, soil conservationist.

Officers of the Prairie Creek Watershed Association are: Lloyd Deutsch, chairman; Forrest Johnson, vice chairman; Burch Harlan, secretary-treasurer; Dale Hayhurst, and Edgar Boyll, directors from Vigo County, and Gene Hunt, Sullivan County director.

Supervisors of the Vigo County Soil Conservation District working on the project: Pete Farmer, chairman; Lyman Pendergast, vice chairman; Dale Hayhurst, secretary-treasurer; Alen Haymaker, and Floyd Lenderman.

A New Chapter for the Norwich Diocese

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BOWLES. Mr. Speaker, last Thursday, St. Patrick's Day, the Most Reverend Vincent Joseph Hines, D.D., J.C.D., was consecrated and enthroned as the second Roman Catholic bishop of the young diocese of Norwich, Conn., at St. Patrick's Cathedral in that city.

A native of New Haven, Conn., Bishop Hines brings to his new post a wealth of experience, a rich academic background, and the humility of a true man of God.

Last Thursday the citizens of eastern Connecticut of all faiths joined in extending their sincere congratulations and best wishes to this eminent churchman as he began his stewardship as spiritual leader of eastern Connecticut's 155,000 Roman Catholics.

Under leave to revise and extend my remarks, I should like to call to the attention of my colleagues an editorial in the Hartford, Conn., Catholic Transcript of March 17, 1960, on the subject of Bishop Hines' consecration. The editorial, entitled "A New Chapter for the Norwich Diocese," follows:

A NEW CHAPTER FOR THE NORWICH DIOCESE

Today a new chapter in the as yet brief annals of the diocese of Norwich opens. The second bishop of the see is consecrated and enthroned. The latter ceremony has local precedent, in the enthronement of Bishop Flanagan 6 years ago. But Bishop Hines is the first to receive the fullness of the priesthood in the Norwich cathedral. Eastern Connecticut, of course, did not have to wait until the fifties and sixties of the present century to make the acquaintance of bishops for the first time. From 1843 to 1953 it was within the jurisdiction of the bishops of Hartford and saw nine of these travel its broad expanse furthering the work of the Lord.

Indeed, from 1843 to 1872 what is now the diocese of Norwich was closer to the bishop of Hartford, at least geographically, than Hartford itself, for in that period the bishop, though styled "of Hartford," resided in Providence and could readily glance over the border at the section of Connecticut which first catches the light of day, while Hartford is still in shadow. Moreover, previous to 1843 some bishops of enduring fame vis-

ited the land of the Thames: John Carroll, the first of the American hierarchy, when all American Catholics looked to Baltimore for fathering; and Jean de Cheverus, later a cardinal, when the hub of New England Catholicism, if not of the universe, was Boston.

Eastern Connecticut, to repeat, has not waited until now to learn about bishops. And as the first bishop of its very own, it had a churchman of unusual competence and cordiality, a man and priest who commanded reverence and love. Bishop Flanagan pioneered wisely. He organized carefully, put many good works in operation, and set down foundations on which his successors could build for many a lifetime.

The first bishop now has his first successor, and again Norwich can count itself blessed. Bishop Hines brings to his new office a wealth of talent, breadth and depth of experience, the respect and confidence of all who have observed him in the busy years he has spent in various capacities in the diocese and archdiocese of Hartford. He has been assistant in a parish, principal of a school, Army chaplain, chancery official, and a most trusted and prized adviser to his former ordinary. His academic background is rich; studies, pursued with distinction and crowned with honors, in this country, Paris, Rome. He has dealt with every sort of business that confronts the ruler of a diocese, and has always handled it sagaciously, efficiently, and constructively. He has all the initiative and the prudence, nicely balanced, required of one in the position to which the Holy Father has called him.

But he is only human. He needs the best that the priests, religious, and laity of Norwich can give him if his purposes are to be realized and his program successfully carried through. He needs the prayers of every one of us, in or out of his diocese, who wish him well and look for great things from his administration.

More Hawaii Flights

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to call to your attention and to the attention of my other distinguished colleagues a timely editorial appearing in the Los Angeles Examiner of March 12, 1960, concerning "More Hawaii Flights":

MORE HAWAII FLIGHTS

Growth of Los Angeles as an air traffic center stands as one good argument in support of the application of Western Air Lines to provide jet service to Hawaii, now under study by the Civil Aeronautics Board.

With travel to and from the islands rapidly increasing, commonsense also would seem to be a factor. Existing transpacific air service, excellent as it is, frequently finds schedules sold out and travelers, not only vacationers but those on urgent business, forced to wait.

Entrance of Western Air Lines into the Pacific coast-Hawaii picture would mean more adequate provision for a travel demand that gives every promise of even greater increase in the future.

Furthermore, Western's plan for direct San Diego-Hawaii service and linkage with other

western cities served by the line recognizes the practical value of fast, convenient travel.

For Los Angeles itself, every new airline coming in, every addition of service means better airport facilities, better passenger convenience and many other advantages. Western Airlines' proposed service would be a step forward in our own progress.

Autumn Island and Other Poems

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. SIKES. Mr. Speaker, previously I have called to the attention of the Congress some of the very fine poems of Mrs. Mattie M. Kelly, of Destin, where the waters of the Gulf of Mexico meet those of Choctawhatchee Bay in Florida. I received many commendations about the caliber of Mrs. Kelly's work and I have the privilege of again submitting a number of her poetic creations:

AUTUMN ISLAND

This time of year the island
Is the pawn of summer's firebrand dawn.

Autumn gold anoints the heads
Of branch and brush,
And tufts of brown and tattered grass
Spur jewels in the burnished sun.

Against the moted, slanting rays,
Some stumbling crisscross in their ripened age,

Heavy-bellied sea oats,
Shaped with love and lust,
Nod wheatbrown heads to the wind's even-song,

Pregnant with fertile seeds of warmth and sky
And fecund earth sea-washed to snow-whiteness.

Frescoed against the island sky,
A match and mate of blue herons
Prance and coo, fly and prance,
To the stilling summer dance;
Behind them longing shadows fade into a yesterday.

Distance is wider in-between,
The silences and voice and echo—
Sounds of sea upon the ear are mellowed rapture
Of autumn-filled and autumn-gloried things.

SEA BIRDS' BIRTH

Let us hie to the sea again
While the water is pale blue silver,
The sun is up, and the clock has struck
The seven sabre.

Let us hie to where the birds build nests,
Where they nest, my darling, together,
Let us cradle alone on the white sea sand
That cradles the migrant strollers.

And watch the baby wings like angel wings
Flitting above the snow-downy bed,
White fledglings sprawled like new-flung shells

From some deep ocean floor.

Sunning, running—
White conchs washed in winter sun;
Learning, yearning
For the bright, far world beyond.

Soon some strong wave or sou'west wind
Will wash away the bar where you are,
And the transient sand will be a new-formed
nesting strand
For your love-things to come again.

LOVE

When God made love, He made the beautiful,
A tiny tendril for a finite hour,
When God made love, He made the miracle
That brightly twines the tapestry's full
flower.

Though some have scorned the fingers angels
kissed,
And boldly bent the blessed form of birth,
When God made love, He made the beautiful,
The joy, the wonder-power that fills the
earth.

High Costs, Low Prices Drive More Farm People to the City

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. REES of Kansas. Mr. Speaker, it occurred to me that Members of Congress, as well as others, will be interested in an article that appeared in the March 20 issue of the New York Times entitled "High Costs, Low Prices Drive More Farm People to the City." This statement, by J. H. Carmical, analyzes the farm situation in a somewhat different light than others who discuss the agricultural situation. The article in particular gives facts and figures that are most interesting and I include it herewith:

HIGH COSTS, LOW PRICES DRIVE MORE FARM PEOPLE TO THE CITY

Despite the billions of dollars being poured into agriculture by the Federal Government, the economic situation of the Nation's farmers continues to worsen. With production costs rising and prices for farm products declining, the producers of the country's food and fiber are finding it increasingly difficult to operate profitably.

Some of the big and efficient farm producers still are able to make a fair profit and thus are sharing in the Nation's general prosperity. There are many not so favorably situated, who are less efficient and just able to squeak by. But there is a large group, mostly smaller farmers, who cannot mechanize advantageously, and they are being forced out of agriculture.

TREK OF LONG DURATION

The trek from the farm has been underway for years, reflecting largely the technological changes taking place in farming that have brought about a steady rise in production. The number of farms has dropped steadily and the farm population has fallen to about 20,000,000, from 30,000,000 20 years ago, despite the great gain in that period in the Nation's total population.

There is virtually no slackening in the decline in the number of farms. Only recently, the Department of Agriculture estimated that the number of the Nation's farms fell 2 percent last year. In addition, it noted that those persons who remained on the farm were obtaining a larger amount of nonfarm income.

Whether this movement away from the farm is good or bad for the Nation is a question only the future can answer. So far, industry has been able to absorb rather easily the millions who have quit the farms. Factors that have eased the movement have been the building of homes and other facil-

ities in cities for the newcomers and the billions of dollars being spent for mechanization and improvement of the farms by those who remained.

In the last 20 years, the shift in the Nation's population to urban areas from the farms has become such a part of the general economy that a slackening in the trend would tend to slow business activity.

The creation of bigger and bigger farms and the increase in production for each man-day have caused a serious surplus production problem. At the same time, these are factors tending to hold prices of food down and thus helping to stem the inflationary tide. With the number of farm units declining, there are fewer to share in the proceeds from the sale of farm products and thus the earnings of some farmers may have increased in times of falling prices.

The farm dollar, however, still must be shared by too many people to permit a reasonably high standard of living for most farmers. According to the Department of Agriculture, the income of the farm population from farming last year averaged \$643, or \$105 less than in 1958, when it was \$748. With the \$317 cleared from nonfarm sources, the per capita earnings of the farm population were raised to \$960 last year, in contrast to earnings of \$2,202 for the nonfarming population.

NET INCOME FALLS

The average realized net income for each farm unit last year is estimated by the Department of Agriculture at \$2,364, compared with \$2,767 in 1958. These figures cover the rental value of farm dwellings, the home consumption of farm products and Government payments to farms.

Because of increased expenses and lower prices for their products, farmers last year retained as net income only 29.6 percent of the gross realized farm income. This was the lowest figure in history.

The farmer last year received only 38 cents out of each dollar the consumer paid for food produced by the domestic grower. This also was the smallest amount on record and it compared with 49 cents in 1951 and 52 cents in 1946. The decline stemmed largely from increased transportation and processing costs that the farmer had to absorb.

FOOD BASKETS COMPARED

Further proof that the farmer is not sharing as he should in the present prosperity is offered by the trend in the retail cost of food and the value at the farm.

Last year, a typical urban wage earner's family paid for food originating on domestic farms a total of \$1,040, for which the farmer received \$399. In 1946, this same food basket would have cost only \$752 at retail and the farmer would have received \$392. In 1951, the food basket would have cost at retail \$1,024 and the farmer would have obtained \$497.

In 1959, the farmer was receiving only about 2 percent more for the food he grew than in 1946 while the consumer was paying almost 50 percent more at the retail level. As an indication of the stability of food prices at retail in the last 8 years, the food basket in that period has risen only \$16, or about 1½ percent, but the farm value has declined \$98, or about 20 percent.

Of course there were more food baskets sold in 1959 than in 1951, since a farm population of around 20 million persons was feeding upward of 160 million. In 1951, it took 24 million people on the farms to furnish the food baskets for about 133 million persons.

While the decrease in the farm population and the increase in the nonfarm population will aid agriculture by increasing the consumption of farm products, the adjustment has not yet been such as to absorb the falling price of farm products.

Despite the decrease in the number of farm units in recent times, the problem of the farmer still is that he can produce more than he can dispose of at a fair price. With the production curve pointing still upward as a result of research and technological improvements, the problem appears likely to become more acute.

At present, Washington is trying to find an answer, but it will be most difficult because of the complicated nature of the problem. Also, it is involved deeply in politics and the feeling is that a sound law would be difficult to draft in an election year with Congress and the administration so far apart on the question of what should be done to have a sound and prosperous agriculture.

Some Aspects of the Forand Bill: Food for Thought

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. RABAUT. Mr. Speaker, one of the more controversial pieces of legislation pending before this Congress is the health insurance bill, commonly referred to as the Forand bill, H.R. 4700. Throughout the various stages of its pre-vote consideration we have heard many claims made for it and many charges leveled against it. I am somewhat afraid, Mr. Speaker, that these many and varying claims and counterclaims may have had the effect of confusing the American people about this bill. I submit that such confusion, if indeed it does exist, is contrary to the nature and ends of the democratic process. In our democracy the public—from whom all power comes—should be clear and well-informed on the important issues of the day. Only in this way can we here in Congress hope to devise and elicit legislation that truly reflects the will of the people. In this connection, Mr. Speaker, I would like at this time to include in the RECORD an article from the March 19 issue of the AFL-CIO News concerning the Forand bill. I make this inclusion in the earnest hope that the information imparted in the article may serve to clear the air and eliminate the confusion that I fear now exists about the Forand bill and what it proposes to do.

The article is as follows:

AFL-CIO CALLS FORAND BILL BAR TO EXCESSIVE CHARGES

Passage of the Forand bill would protect the public against excessive charges on medical care for the Nation's older citizens, the AFL-CIO has declared.

At the same time, the federation asserted in a fact sheet published by the department of social security, the measure would relieve welfare agencies, hospitals, and non-profit medical care programs of the high cost load of the aged, which has led to large and growing deficits.

Here are the highlights of the fact sheet, entitled "Nine Good Reasons for the Forand Bill," available through the AFL-CIO department of social security:

"1. More than 13 million men and women now eligible for old-age benefits under so-

cial security would get lifetime protection under the bill which would pay the cost of 60 days of hospital care annually, additional skilled nursing care, and surgical benefits. If the beneficiaries under the railroad retirement system were also covered the figure would be considerably larger.

"Old people not entitled to old age benefits would be aided indirectly if they were forced to turn to public assistance. Since a smaller number of people would be forced to seek public aid, each one could be given more adequate assistance from the limited funds available to welfare agencies.

"2. Young workers would gain since their aged parents would be protected at once, and they and their families would have similar protection on retirement. Maximum cost to each worker would be \$12 a year, with a similar payroll tax for the employer.

"3. Few persons over 65 have or can afford good health insurance protection through any other means. According to the latest Government figures, only two out of five have any protection, most of it inadequate since it can be canceled or has lifetime ceilings. In addition, such policies cost between \$6.50 and \$8.50 per person per month and pay part, sometimes not even half, of hospital costs for up to only 31 days.

"4. Claims that voluntary insurance will grow rapidly, as are made by the commercial insurance industry and the American Medical Association, are unsubstantiated. Not only have no figures been released to support these assertions, but predictions for the future disregard serious financial obstacles to the aged purchasing this insurance.

"5. The Forand bill would strengthen welfare agencies, hospitals, and such voluntary plans as Blue Cross and relieve them of the high-cost load of the aged. Many hospitals have large and growing deficits. Because it includes retired people without charging them more than the community rate, Blue Cross keeps raising rates, as a result is increasingly threatened by competition from commercial insurance.

"Public welfare agencies now spend \$300 million a year for health care for the aged. In many communities a large part of all old age assistance costs are for medical care, which is an evergrowing burden.

"Financing health care costs through the social security system would help community agencies to improve and extend services. In particular, high-quality, skilled nursing homes would be assured of adequate revenues.

"6. The cost would be moderate—only about \$1 billion the first year, according to the Secretary of Health, Education, and Welfare.

"7. The new benefits can be financed on a sound basis through social security payroll taxes without endangering present cash benefits. Health insurance provided through this system would be the best insurance buy available.

"8. The Forand bill follows the established patterns for paying the costs of health care, despite charges from the AMA that the bill advocates political medicine or socialized medicine. These opponents used similar unfounded slogans against medical care for dependents of servicemen, workmen's compensation, Blue Cross and Blue Shield plans, disability benefits, Federal grants to local health agencies, and many other worthy programs.

"The bill would protect the public from excessive charges by the small minority of doctors, hospitals, and nursing homes who let business motives dominate their medical activities.

"9. Persons most familiar with social security operations and the health needs of the aged support the Forand bill's principles. Among them are two former Social Security Administrators—Charles I. Schottland and Arthur Altmeyer; the retired president of the

National Blue Cross Association, Dr. Basil C. MacLean; the American Public Welfare Association; American Nurses' Association, and the National Association of Social Workers."

Cardinal Cushing Calls Bishop Walsh Modern Martyr—Red Chinese May Have Sounded Own Death Knell

EXTENSION OF REMARKS

OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. BOLAND. Mr. Speaker, Richard Cardinal Cushing, Roman Catholic archbishop of Boston, said Friday night that the Chinese Red regime may have sounded its own death knell when it sentenced American Maryknoll Missionary Bishop James Edward Walsh to 20 years imprisonment.

The vicar general of the Maryknoll Missionary Order, Very Rev. John F. Donovan, said of the Shanghai people's court action:

If love is a crime, then he is guilty.

Mr. Speaker, under leave granted, I insert in the RECORD the statement by Cardinal Cushing, which appeared in the Boston Globe of March 19, an editorial from the Springfield Daily News of that same date entitled "No Room for Love," an editorial from today's New York Times entitled "Bishop Walsh's Crime," and a New York Times News Service dispatch printed in the Boston Herald, also on the 19th:

[From the Boston Globe, Mar. 19, 1960]

CALLS BISHOP WALSH MODERN MARTYR—CARDINAL CUSHING SAYS CHINESE REDS MAY HAVE SOUNDED OWN DEATH KNELL

Richard Cardinal Cushing said last night that by imprisoning Bishop James Edward Walsh, an American missionary, the Communist regime in China may have sounded its own death knell.

The cardinal, who has known the bishop for nearly 40 years, called him one of the finest missionaries ever to go to China and one who was loved by the Chinese people.

The Communists by their action have attacked China itself, the cardinal declared.

Here is the cardinal's statement:

"The news that Bishop Walsh has been sentenced to prison may solve the mystery as to his whereabouts these past few years but it scarcely reveals what manner of man he is.

"I have known this extraordinary Maryknoll missionary for almost 40 years, most of which time he has spent working in China. He lived and breathed the mission. He had come to know the Chinese people very well, to love them very deeply and to serve them faithfully.

"In giving himself with unselfish dedication he had become a victim of those rulers who would replace freedom with slavery, love with exploitation. We can see in Bishop Walsh the modern martyr whose courage is born of a Christ-like spirit of charity.

"I would call him the finest missionary to go forth from America in my lifetime.

"By sentencing Bishop Walsh the Communist regime may have sounded its own death knell in China. In its newest treachery 'the friend' of the Chinese people is unmarked; he is exposed; not as a giver,

but as a thief; not as the benefactor; but as an enemy without peer. In attacking a man of charity who has given his life for the Chinese people the Communists have attacked China itself.

"Love is his only crime and because of this sublime guilt he may well have the courage to say of his persecutors. 'Forgive them, for they know not what they do.'"

[From the Springfield Daily News, Mar. 19, 1960]

NO ROOM FOR LOVE

The United States shares, with Secretary of State Christian A. Herter, what he has described as his personal feeling of "revulsion" over the sentencing by a Shanghai "people's" court of Roman Catholic Bishop James Edward Walsh to 20 years' imprisonment.

Bishop Walsh, now 68, the last high non-Chinese Roman Catholic official on the Chinese mainland, was accused of leading a campaign to undermine the Chinese Communist regime.

Bishop Walsh, a member of the Maryknoll order, first went to China in 1918 as a missionary and remained there several years before leaving on another assignment. In 1948 he returned as head of the Central Catholic Bureau of China.

In 1955, with his movements made increasingly difficult by the Communist government, he and others were offered an opportunity for repatriation. Bishop Walsh rejected the opportunity, and told friends he would attempt to continue his work among the Chinese people despite the perils of the political situation.

The sentencing of Bishop Walsh, disclosed yesterday, was followed promptly by the statement from Very Reverend John F. Donovan, vicar general of the missionary order, that the bishop was indeed guilty—but only of the crime of love.

"If love is a crime," said the vicar general, "then he is guilty."

The vicar general noted that Bishop Walsh has endured flood, famine, pestilence, bandits, and war to manifest his love for the Chinese people, and "remind them that they were not alone in their time of suffering and persecution."

Red China has shown once again that there is no room for this kind of love in a state which reduces the individual to the role of vassal.

Mr. Herter chose accurately when he expressed the feeling of his own nation in the word "revulsion."

[From the New York Times, Mar. 21, 1960]

BISHOP WALSH'S "CRIME"

Bishop James Edward Walsh of Cumberland, Md., may spend the rest of his life in a Chinese prison for offending the Red China Government. At 69, he has been a servant of the Chinese people and of his church for almost half a century. All of us, of whatever religion, can share in an admiration for Bishop Walsh and indignation for the cruel 20-year sentence inflicted upon him.

An associate, the Very Reverend John F. Donovan, vicar general of the Maryknoll Fathers, said of him: "If love is a crime, then he is guilty; if opposition to a brutal and tyrannical regime is a crime, he is guilty; if allegiance to his church is a crime, then he is guilty." In the raw, bitter communism of mainland China most of the civilized virtues are crimes and the Sermon on the Mount is full of treason.

Secretary Herter's protest will carry little weight with a government which charges our own Government with an "imperialistic scheme to subvert the Chinese people's democratic regime." But outrages such as this may well be remembered when somebody inquires why we do not want Red China in the United Nations or a Red Chinese Ambassador in Washington.

[From the Boston Herald, Mar. 19, 1960]

BISHOP A PIONEER IN MARYKNOLL

New York.—Bishop Walsh was one of the first six students to join the American Catholic Foreign Mission Society of Maryknoll in Ossining, N.Y., when it was founded in 1911. He was ordained to the priesthood 4 years later and began his long missionary career in China in 1918 when he was among the first American priests to enter the Far Eastern mission fields.

He was born in Cumberland, Md., and was graduated from Mount Saint Mary's College at Emmitsburg, Md.

NAMED PREFECT

In 1924 he was named prefect apostolic of Kongmoon, the first American-born prefect in China, and 3 years later he was consecrated bishop of Sanclan Island, off China's southern coast, where St. Francis Xavier, the 16th century Spanish Jesuit missionary died in 1552.

During the next 10 years he assumed charge of missionary work in Koan area of south China covering 20,000 miles. The general chapter of the Maryknoll Fathers held in Hong Kong in 1936 elected Bishop Walsh the order's superior general.

Shortly after completing his 10-year term as superior general in Ossining, Bishop Walsh returned to China where he became executive secretary of the Catholic Bureau, a religious organization coordinating missionary, cultural, welfare and educational activities in China. The organization was suppressed in 1951 by the Chinese Communists who accused Bishop Walsh of turning it into an anti-Communist stronghold against the people.

Bishop Walsh is a brother of William C. Walsh, former attorney general of Maryland, and of the Reverend John F. Walsh, also a Maryknoll priest. Three sisters are in religious orders.

Union County Farm Bureau Letter Regarding National Defense Education Act

EXTENSION OF REMARKS

OF

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. ULLMAN. Mr. Speaker, not long ago, I inserted into the RECORD an editorial from one of the newspapers in my district which was critical of the American Farm Bureau Federation's position regarding the disclaimer affidavit in the National Defense Education Act. The Farm Bureau unit for that newspaper's county has asked that their reply to this editorial also be entered into the RECORD. Under leave to extend my remarks, I therefore want to insert the following letter from Mr. Grant Henderson, president of the Union County Oregon Farm Bureau:

ISLAND CITY, OREG., March 18, 1960.

Re S. 2929.

HON. AL ULLMAN,
Member of Congress,
House Office Building,
Washington, D.C.

DEAR MR. ULLMAN: In regard to the reading of an editorial from the La Grande Observer into the CONGRESSIONAL RECORD on March 1 of this year, we would like to clear up a few apparently mistaken ideas you may have.

The Farm Bureau policy in regard to the National Defense Education Act can be found on page 46 of the American Farm Bureau handbook for 1960.

As you well know, Farm Bureau policies are not written by the people in offices or at the top of the organization. Rather, they are introduced by local Farm Bureau members within their own county, from there they progress to the State office where they are studied and sent to each county and center for action by all the members within the State. Once each year the voting delegates from each county meet with all the other delegates from the remaining counties and they cast their votes on each and every policy or resolution as directed by their county farm bureau.

The result of this caucus then gives the State president his instructions as to how to vote when he convenes with the other State presidents. As in all democratic processes the majority rules and these then become our American Farm Bureau policies for the current year.

This is the way the policy concerning the disclaimer affidavit was arrived at by the 1,600,000 members of the American Farm Bureau.

Certainly these farm families should carry more weight with our lawmakers than just one person writing an editorial in a small-town paper.

We, the members of the Union County Farm Bureau, request that this letter be written into the CONGRESSIONAL RECORD also. We feel it states clearly our thinking and should be heard by the Members of Congress and should be read by you.

We recognize the fact that many persons would not flinch when asked to sign the loyalty oath or disclaimer affidavit but when they must face the possibility of perjury it would throw a different light on the subject. This is our one weapon against more socialism and communism and, if we are correct in our thinking, there are too many Socialist and Communists in our Government, education plants, etc., now.

Please give this matter your most careful consideration and carry out the wishes of your many Farm Bureau friends.

Sincerely,

GRANT I. HENDERSON,
President, Union County Farm Bureau.

A Free Poland

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include two interesting and factual articles appearing in successive Sunday editions of the Salem (Mass.) Sunday Express of February 28 and March 6, 1960, written by my good friend, the Right Reverend Monsignor Ladislaus A. Sikora, of Salem, a great thinker and a foremost fighter in the cause of a free Poland.

These impressive articles deserve widespread coverage because they come from a great inspiring spiritual leader endowed with superb piety, great ability, and extraordinary vision, as well as lofty patriotism.

Monsignor Sikora has been one of the outstanding leaders in the Polish cause for some time past, and he is fully informed on all aspects of the questions relating to the establishment and restoration of freedom, liberty, and democratic institutions for Poland and other small nations of the world.

This is one of the greatest moral questions facing the free world, and we cannot afford to settle it on the basis of appeasement. Instead, Americans must show they are prepared to render constructive assistance in helping all small nations in reaching the goals of restored independence and freedom.

I hope that Monsignor Sikora's sage views and sound, wise recommendations regarding this great human question will be widely read and taken to heart by the American people.

The material follows:

[From the Salem (Mass.) Sunday Express, Feb. 28, 1960]

FREE POLAND IS KEY TOWARD FREE EUROPE—I (By Rt. Rev. Ladislaus A. Sikora, P.A.)

The reason we have difficulties with the Soviets today, is because their armies are in Berlin, and on the banks of Elbe and Vistula Rivers, but mainly because Poland is under the Soviet occupation. (Western Powers are responsible for this state of affairs.) Our strategists, in focusing their attention on Berlin, let the Russian bear sneak through the central Europe with millions of Soviet armies occupying Poland, East Germany. Now we are trying to get them out of these territories.

At present, many realize that Poland is the main political and strategic point in the central-eastern Europe. Napoleon learned this truth when he said that Poland is the keystone of Europe. Unfortunately he learned this too late. Are we realizing this fact? We hope that it is not too late.

Poland is important because of her geopolitical position in that part of Europe. She forms a natural wall protecting the western culture and the Christianity against any aggressor. Unfortunately Poland at the same time is the springboard for any and for every aggressor, who may be eyeing the conquest of Europe. He knows that he must overpower and possess that springboard. That is why we have Germany's "Drang nach Osten," and that is the reason why for centuries Russia struck against Poland.

Because the one who seizes the Polish Baltic and the Poland's territory will reign not only over Poland, but over all the central-eastern Europe, and over all those nations, over all their riches and exports. When Poland loses her freedom and independence, all the nations (inhabiting) from the Baltic to the Black Sea and the Adriatic lose their freedom and independence. And the one who reigns over these territories from the Baltic to the Black Sea is easily tempted to become master of the whole Europe.

Germany has tried to do this during the last two World Wars. And now the Soviet Russia is attempting it. (The writer by accident has met Trotsky in Boston during one of the secret meetings, when Trotsky was forming the first Communist cells in Boston. Trotsky boasted then that it will not be very long after they prepare and brainwash a new Russian generation that the Soviets will rule whole Europe. He boastfully threatened that they will take the United States of America. This was 41 years ago. How similar is the Khrushchev's: "We will bury you.")

Let us look at some figures. According to the Anglo-Saxon report: One day during World War II cost Britain about 20 million

pounds and the United States of America over \$100 million.

Now, if, after defeating Germany in World War I, the equivalent to 10 days of war expenditure was spent in due time to strengthen the defensive potentiality of Poland, there certainly would be no World War II. And if at the same time the Western Powers and especially the United States did not give enormous credit to Germany, we absolutely would not have the Second World War. (America alone has pumped into defeated Germany over \$200 billion.) The Western Powers refrained from investing their capital either in Poland or any other country located in that sector of Europe between the Baltic and the Black Sea.

After all, these countries and these nations are by nature peaceful countries. The credits allotted to them, doubtless they would have used toward the reestablishment of peace in Europe and not for the military and war preparations.

They would have used these credits to rebuild and to strengthen their economic conditions, to bring about prosperity to their peoples.

And they would have been a strong asset in supporting the rest of Europe by way mutual and reciprocal exchange of food and raw products. But the Western investors were afraid of the risk?

They wanted rather to reinforce the Militarism of Germany. Why we ask? The final results were that our American soldiers were killed on the battlefields all over the world during the Second World War.

They were felled by shells made by American labor and paid for by our own and with our American moneys. These are the facts. Sad as they are, nevertheless, these are true facts which should not be forgotten.

Whoever wants to assure a lasting peace, freedom and real security in Europe, must so arrange the future European peace agreement as to make it impossible not only on paper, but in reality and factually to prevent any future aggressor from rising again to threaten or to disturb that peace. This pertains to both Germany as well as to Russia. At the same time these peace agreements should strengthen Poland and other nations of central Europe, that they be able to fulfill their historic destiny of defending the Western civilization. Strengthen these so that they may not be again temptation to or the prey of any future assailants. There are over a hundred million inhabitants in central Europe. Its natural political, economic and strategic hub is Poland. Poland has never threatened their freedom. When Poland is strong, the neighboring nations have confidence and will cooperate with Poland for their common good, as they have done for centuries before.

[From the Salem (Mass.) Sunday Express, Mar. 6, 1960]

A FREE POLAND SEEN KEY TO FREE EUROPE—II

(By Rt. Rev. Ladislaus A. Sikora, P.A.)

It is a real tragedy for Europe and for Germany as well, that the fate presupposes that the Germans be good Europeans. But the Germans have understood their position in Europe as having the right to dominate Europe, to be the masters of Europe. And if today Chancellor Adenauer's Germans tell us and the world that they wish to be good Europeans, they should be such, not only in regard to the Western Europe and in regard to the Western nations, but they should be so especially in their attitude toward the nations in central and Eastern Europe. Otherwise we must question and doubt their "European cooperation." This pertains especially to the Oder and Neisse boundaries. They must set aside any and all plans and endeavours of "revision." This

particular territory restored to Poland, belongs historically to Poland. Statistics show that there are over 8 million Poles living in this sector, and less than 100,000 Germans. This territory is not essential to Germany's existence. For without these territories Germany today is a foremost economic power on the European continent.

Certainly it does not suffice to hear the official statement of the Chancellor telling us that Germans do not intend to demand a change or revision of the boundary lines of Oder and Neisse, but that they only wish to make agreements with Poland in a peaceful way. Unfortunately, such and similar assurances were made by the Germans after World War I.

We recall 1918, 1919, and 1939. Stresemann wanted to be known as a good democrat. But his assurances did not prevent Germany from invading Poland in 1939 and to start World War II. Today's assurances could be broken tomorrow.

That is why we say that it is in the interest not only of Poland, but to the rest of Europe, in the interest of peace and security of Europe, it is essential that the Western Powers and especially the United States recognize immediately the present boundaries of Oder and Neisse as permanent and unalterable.

Like the so-called Danzig Corridor so today this Oder-Neisse boundary line decides the fate.

On this boundary line depends the war or peace in Europe, with all its consequences for the free world.

We realize that it would be impossible today to defeat Russia by military or material forces.

Irreligious communistic idea which threatens the whole civilized world today, must be counteracted by another strong idea, christian idea, idea of freedom and that the right is the might. Give back to Poland a real freedom and independence.

Liberate and free Poland from iniquitous, cunning, insidious Soviet occupation, imposed on the Polish nation by the Allies, who should now insist that the Soviets take their armies out of every captive country.

This is fundamental condition, basic and so necessary to the very idea of the free world.

Strong Poland, free and independent with her eastern boundary as agreed upon by the Treaty of Riga, and the Oder-Neisse frontier in the west will have amicable cooperation of other freed nations in central Europe.

This will become a natural and a strong bastion of freedom, peace, security and the progress of the Western democracies.

Only then, Americans will not be obliged to cross the Atlantic to save Europe.

And the American people will not have to contribute so heavily of their national income for the defense of America against the Soviet menace or against any other assailant.

We repeat, Poland is the test of the big powers' sincerity. Strong Poland is needed to hold in abeyance both the Soviet and German imperialisms.

Today everything points to the American Nation's prestige, greatness, integrity, and leadership in the free world.

Destiny places upon us, Americans, a serious obligation to pursue a great, clear, but firm and decided policy in protecting and regaining the freedoms of the captive nations, which were seized and are occupied by the Soviets.

It is necessary that we here in America add to our enormous material strength and potentialities also our spiritual and moral forces.

Europe looks toward freedom. World wants to be free. It is not sufficient that the western half of the world be free.

The entire Europe should be free. And this includes the central and eastern Europe. Every nation wants to be free.

The organization of free Europe should be given over to the free nations.

Certainly it should not be left to Germany or Russia. United States of Europe could and should unite all the nations in Europe. Free with free, and all equal.

To this idea Poland has always been a strong exponent.

Poland betrayed, martyred and exhausted was thrown into the orbit of her enemies, the Soviets, now is awaiting her liberation by those who are responsible for her present plight.

As long as that nation holds her own in present horrible conditions, with odds stacked against her, there still is some hope of saving the world from the barbarism and the tyranny.

Other captive nations look toward Poland for a sign of hope whether the allies of yesterday will keep their word and promise.

We must realize that endurance has its limits, no matter how strong, noble or courageous it may be. We must hasten to help Poland.

Captive nations watch for developments in Poland.

And they ask are the Western Powers ready to give help to Poland, known as the foremost ally.

If they do not help Poland, these captive nations lose faith in the Western Powers.

We have failed the Hungarian patriots. We must not fail Poland.

This would bring only a despair among all occupied countries. Help given to Poland, will raise the spirit and give hope to millions.

We should hasten to aid Poland get rid of her occupant. We must help Poland. Poland was and still is, in spite of the betrayal a true ally.

She is ideologically a friend of the United States of America.

That is history. Poland called the Mother of the Allies, the inspiration of the heroic world in these her tragic days looks forward with confidence toward the United States and waits hopefully, that during the coming summit conference our American representatives will represent our great Nation with dignity and firmness to give hope and confidence to the enslaved and captive world that America is the champion of freedom for all nations.

South Is Seeking Home Rule, Too

EXTENSION OF REMARKS

OF

HON. CHARLES E. BENNETT

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. BENNETT of Florida. Mr. Speaker, the Florida Times Union of March 20, 1960, contains a stimulating editorial entitled "South Is Seeking Home Rule, Too." It occurs to many southerners that some people these days are more interested in giving home rule and local self-government to people in the District of Columbia than they are in allowing such throughout the South. Moreover, there are some who are more interested in local self-rule in areas across far distant seas than they are in such self-government in the Southland. The editorial is as follows:

[From the Florida Times-Union, Mar. 20, 1960]

SOUTH IS SEEKING HOME RULE, TOO

Maybe if liberals weren't so determined to impair home rule in the South, they'd

have better luck with their pet bill to provide self-government to the residents of the District of Columbia.

As should be generally known by now, Washingtonians not only are disenfranchised—wonder if the Civil Rights Commission ever investigated conditions in its place of birth?—but they have no say at all in the conduct of local affairs. They can't even combine to try their hand at bloc voting.

So there's a bill in Congress, as there has been for years, to let the inhabitants of democracy's capital enjoy the rights, privileges, headaches, and frustrations that go along with self-rule. The well laid plan, though, has run up against a southern stumbling block—refusal by the southern-dominated House District Committee to discharge the bill from its clutches to the House floor for debate and action.

This question of sovereignty for district residents offers the southerners a chance to point out that it is control over local affairs that they are fighting for in the civil rights dispute. The various proposals for Federal legislation on voting and desegregation matters would chip away in the South at the very thing that some are attempting to restore in Washington. If it's good one place, it ought to be desirable in another.

What would appointment of referees or registrars to police voting practices do but take control of elections out of local hands? Does the Federal Government have such a monopoly on virtue that it would do a more honorable job? Exposure of wrongdoing in high places within the Federal hierarchy doesn't support any such thesis.

The same argument can be advanced concerning education. There are strong efforts to let the Federal Government move into our classrooms. Its resources are more unlimited, and consequently the job it would do would be superior, or so the reasoning goes.

All of this questionable "progress" has to be weighted against the loss it would cause. Removal of local control would discourage local interest in home affairs, hastening the day of absentee government, the day when the "Feds" take over every walk of governmental life and tell citizens when and how to do everything.

Only when that day comes, the people subject to such outside influence will no more be citizens, with the power to determine their own fate, than the residents of Washington.

Second Battle of Gettysburg

EXTENSION OF REMARKS OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. QUIGLEY. Mr. Speaker, it was just a year ago that I rose on the floor of the House and began what I termed "the second battle of Gettysburg." The situation at Gettysburg itself—the impending threat of commercial invasion into the heartland of the Nation's most historic shrine—has changed little if at all in the intervening year. What has changed has been the awareness of the Nation, and I hope the Congress, to the fate that lies in store for a precious national monument unless something is done about it.

It is somehow fitting that almost as if to commemorate the anniversary of the campaign to save Gettysburg a group of

school children has chosen to send me their own contribution to help. I would commend both their action and their letter to my colleagues. The letter from D. Bruce Connor, supervising principal of the Newport Union schools, Newport, Pa., follows:

Several days ago in our eighth-grade history class the students were discussing with their teacher, Mrs. Mary Wertz, the "Save Gettysburg campaign." Our boys and girls seemed highly disturbed over the invasion of commercial activities on the land surrounding the historic Gettysburg battlefield. Feeling that their nickels and dimes might help preserve this site as a national shrine, the class set out to enlist the help of all students and teachers in the Newport Union school system.

As a result of interest in preventing further nonhistoric encroachment to the Gettysburg battlefield area, I am pleased to enclose a check in the amount of \$60.10 on behalf of the Newport students.

Because of your interest in the Gettysburg project, we are sending this check to you and asking that you forward it to the proper officials.

That check I have turned over to the Gettysburg Battlefield Preservation Association, the group which has been organized to raise funds with the purpose of doing whatever they can to assist the National Park Service in saving the battlefield for history rather than souvenir stands. To tell you about the Gettysburg Battlefield Preservation Association, let me include their fact sheet in the RECORD:

GETTYSBURG BATTLEFIELD PRESERVATION ASSOCIATION, GETTYSBURG, PA., FACT SHEET

WHAT GBPA IS WORKING FOR

To prevent non-Government-owned lands within Gettysburg's famed battlefield proper from disappearing in a welter of housing developments and commercial structures. In recent years, business and residential expansion has encroached heavily on important battleground areas, and the pace of expansion appears to be increasing. The only guarantee of preservation of hallowed areas is ownership. A total of 680 acres is needed now—as building expands eastward, lands must be acquired to preserve the cavalry battlefield, 3 miles east of Gettysburg. The current problem that is urgent is the protection of the main battlefield.

GBPA SERVES THE INDIVIDUAL AND THE NATION

The Gettysburg Battlefield Preservation Association is a nonprofit, nonsalaried association incorporated under the laws of the State of Pennsylvania. In the words of the association's governing body, in a resolution adopted November 21, 1959:

"The Gettysburg Battlefield Preservation Association shall be an organization wherein all who are in accord with its objectives may join in supporting and preserving this most historic battleground and assuring the safeguard of the Nation's hallowed shrine."

HISTORY OF GBPA

The Gettysburg Battlefield Preservation Association was initiated in August 1959 by a committee of Civil War students, attending the second annual Civil War Study Group at Gettysburg College, Gettysburg, Pa. GBPA was strengthened further when on September 26, 1959, a board of directors and temporary officers were selected. On November 16, 1959, the association received its charter of incorporation from the Adams County court, Pa., and on November 21, 1959, directors and officers were confirmed, and bylaws were formulated.

Members of the Second Annual Civil War Study Group recognized the need for the

association when it became apparent that privately owned land, long considered important parts of the battlefield, was purchased by a development company to be sold for building lots, at the same time Adams County commissions decided to sell farmland owned by the county of the poor farm homestead.

Realization that part of what was always considered the battlefield could be lost forever to housing and commercial development led Gettysburg Battlefield Preservation Association to take immediate action to secure this ground for the National Shrine.

GBPA HONORARY ADVISORY BOARD

Maj. Gen. U. S. Grant III, U.S.A., retired, Washington, D.C.; Robert E. Lee IV, San Francisco, Calif.; the Honorable J. Lindsay Almond, Jr., Governor of Virginia; the Honorable J. Caleb Boggs, Governor of Delaware; the Honorable Price Daniel, Governor of Texas; the Honorable Foster Furcolo, Governor of Massachusetts; the Honorable Luther H. Hodges, Governor of North Carolina; the Honorable David L. Lawrence, Governor of Pennsylvania; the Honorable Robert B. Meyner, Governor of New Jersey; the Honorable J. Millard Tawes, Governor of Maryland; the Honorable S. Ernest Vandiver, Governor of Georgia; the Honorable J. Glenn Beall, U.S. Senator, Maryland; the Honorable John Marshall Butler, U.S. Senator, Maryland; the Honorable Harry F. Byrd, U.S. Senator, Virginia; the Honorable John A. Carroll, U.S. Senator, Colorado; the Honorable Joseph S. Clark, U.S. Senator, Pennsylvania; the Honorable Kenneth B. Keating, U.S. Senator, New York; the Honorable Hugh Scott, U.S. Senator, Pennsylvania; the Honorable Willard S. Curtin, U.S. Representative, Pennsylvania; the Honorable Edith Green, U.S. Representative, Oregon; the Honorable James M. Quigley, U.S. Representative, Pennsylvania; the Honorable Fred Schwengel, U.S. Representative, Iowa; the Honorable James E. Van Zandt, U.S. Representative, Pennsylvania; Mr. V. C. Jones, Curtis Publishing Co., Washington, D.C.; Maj. Gen. Milton A. Reckord, State of Maryland, Military Department, 5th Regiment Armory, Baltimore, Md.

GBPA BOARD OF DIRECTORS

Maj. William M. Haller, U.S.A., Hollidaysburg, Pa., president; John J. Cabaugh, Harrisburg, Pa., vice president; Dr. Robert L. Bloom, Gettysburg College, secretary-treasurer; William D. Andes, Andes Advertising Agency, Lancaster, Pa.; William H. Baker, York, Pa.; Joseph N. Dempsey, attorney at law, Asbury Park, N.J.; Robert D. Hoffmann, Harrisburg, Pa.; G. Henry Roth, newspaperman—Gettysburg Times, Gettysburg, Pa.; Dr. Frederick Tilberg, Historian—Gettysburg National Park, Gettysburg, Pa.; Scott A. Trexler, Allentown, Pa.; Fritz S. Updike, editor—Rome Sentinel, Rome, N.Y.; and Dr. Theodore M. Whitfield, Western Maryland College, Md.

LOCAL DEVELOPMENTS PRIOR TO GBPA

The emergency created by the housing development on the first day's field and the potential private use of the adjoining Adams County Poor Farm led local organizations and individuals at Gettysburg to attempt to request congressional purchase of the lands over which the 1st and 11th Corps fought on the first day, including the Barlow's Knoll. Areas also in jeopardy include land along the Emmitsburg Road, near the Peach Orchard, Devil's Den and the Round Tops.

The local groups were joined by interested persons and organizations throughout the Nation. Much publicity was given by major national publications.

WHAT THE CONGRESS DID AND DIDN'T DO

In March 1959, the House of Representatives rejected the Department of the Interior's request for three-quarters of a mil-

tion dollars to acquire additional battlefield lands at Gettysburg and other Civil War battlefields. Finally after many debates both Houses agreed to appropriate a sum of \$450,000.

Any portion of the appropriated sum designated for use at Gettysburg would be subject to congressional limitations. The first required zoning at local levels. Assuming that zoning is completed, this proviso is completely logical. Zoning would prevent commercial blights from appearing on the battlefield in the future, and the Federal moneys would be spent to acquire and remove those which already exist. The final condition imposed by Congress is that under no circumstances will any of the money be spent for the acquisition by the Federal Government of the Adams County Poor Farm.

The limitations imposed by Congress preclude the immediate use of Federal funds for the purchase of land—which must be acquired now, if at all, for preservation.

LOCAL DILEMMAS

Cumberland township faces difficulties in enacting adequate zoning laws, ones that should have been created a generation or more ago. Not only will the zoning laws be difficult to enact, but they will require time, and time is of the essence now. Many local persons argue against zoning, and the limitations on individual rights. When these limitations are imposed on property rights and these properties have value, enacting a zoning ordinance is most difficult. Moreover, zoning will protect only from commercial development, not housing expansion.

For the erection of a new and modernly equipped county home, Adams County commissioners have depended upon the income obtainable from the sale of the old Poor Farm. The county, to make an immediate profit by selling the Poor Farm, would destroy a huge segment of the battlefield. This area cannot be purchased with Federal funds.

HISTORY OF GETTYSBURG BATTLEFIELD AS A NATIONAL SHRINE

On August 14, 1863, Attorney David McCaughy, of Gettysburg, wrote to other residents: "Immediately after the battle of Gettysburg, the thought occurred to me that there could be no more fitting and expressive memorial of the heroic valor and signal triumphs of our Army on the 1st, 2d and 3d days of July 1863, than the battlefield itself with its natural and artificial defenses, preserved and perpetuated in the exact form and condition they presented during the battle."

On April 30, 1864, Gov. A. G. Curtin of Pennsylvania approved an act to incorporate the "Gettysburg Battlefield Memorial Association." The first organization dedicated to raise funds and purchase the lands required to preserve the battlefield.

The association was organized to sell shares, at \$10 each, without limitation as to the number of shares any citizen could subscribe, as the more generous the fund the more liberal the bounds of this sacred patrimony which it is proposed to perpetuate.

Committees throughout the State of Pennsylvania were named and they joined the local men in the project of raising funds.

By 1895 the Pennsylvania-Incorporated Memorial Association had secured about 800 acres of land and had erected numerous markers and monuments.

On February 11, 1895, the Federal Government by act of Congress established "A National Military Park at Gettysburg." The Secretary of War was authorized to receive all of the land, rights of way and property of the Gettysburg Memorial Association.

In 1933 the national park was transferred from the War Department to the Department of the Interior.

CURRENT SITUATION

At the present time there are 2,773 acres of land held by the Federal Government. Some acreage was purchased as directed by congressional acts, and others were bought by organizations and donated.

Over the years much of the remaining privately owned holdings, such as the land currently in jeopardy, has remained much as it has always been, and so for most visitors it appeared the same as the adjoining Government-owned land. With this situation remaining unchanged, no outcry came, but the recent rapid growth of homes and businesses everywhere revealed the present danger.

GEPA AIMS OR GOALS

The Gettysburg Battlefield Preservation Association is aware of zoning and other efforts being made to prevent the desecration of the battlefield, but holds to the belief that the only permanent solution is the immediate purchase of the land with or through privately donated funds.

The Gettysburg Battlefield Preservation Association will solicit funds on a nationwide basis. All private donations collected will be used to secure the additional land for the National Park Service.

The perfect result of this Gettysburg campaign of solicitation would be a contribution, however small, from every man, woman, and child in the United States.

EMERGENCY COMMITTEE OF GEPA CONTRIBUTIONS RECEIVED BY GEPA

Emergency committee: Chairman, Mr. Cliff Arquette, Gettysburg, Pa. (television star, Charlie Weaver). The current program of the emergency committee is the television appeal through Charlie Weaver for contributions toward securing one square inch of needed battlefield land.

The Gettysburg Battlefield Preservation Association receives mail at the Gettysburg Post Office, Post Office Box 1863, Gettysburg, Pa.

For convenience in writing checks or money orders, the short title "Battlefield—Gettysburg," presently publicized by the television star, Charlie Weaver, can be used.

Mail donations, contributions, and/or gifts to the Gettysburg address for purposes of tax exemption to benefit donors, GEPA has applied to the U.S. Government for a certificate of exemption.

The Gettysburg Battlefield Preservation Association will acknowledge all contributions.

WILLIAM M. HALLER,
Major, U.S. Army, President, Gettysburg Battlefield Preservation Association.

Doctors and Hospitals Oppose Forand Bill

EXTENSION OF REMARKS

HON. MORGAN M. MOULDER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. MOULDER. Mr. Speaker, during the past few weeks I have received many letters from good friends and influential people of the congressional district I represent in opposition to the Forand bill—H.R. 4700—and any similar legislation to amend the Social Security Act to provide hospital, nursing home, and surgical benefits. From my tabulation of the let-

ters received on this proposal it is my opinion that an overwhelming majority of all doctors and hospitals are opposed to the Forand bill. Not only doctors but a substantial number of other responsible citizens have expressed their opposition to the bill.

Today I received a resolution from the Missouri Association of Osteopathic Physicians and Surgeons, as follows:

Whereas House Resolution 4700 (Forand bill), 86th Congress, and the Kennedy-Hart bill, U.S. Senate, propose hospital, nursing home, and surgical benefits for old-age and survivors insurance beneficiaries under the Social Security Act; and

Whereas other such legislation may yet be introduced; and

Whereas all such legislation would unquestionably lead to extension of such provisions to a wide segment of the American people, with apparent socialization of medicine in the United States; and

Whereas all such proposed programs under governmental direction would lead to a drastically lower standard of health care at a much higher cost to the American people; and

Whereas such programs would seriously curtail voluntary private effort which continues to provide for the American people the highest standards of health care found anywhere in the world; Therefore be it

Resolved, That the Missouri Association of Osteopathic Physicians and Surgeons registers opposition to House Resolution 4700, 86th Congress, and the Kennedy-Hart bill, and any similar legislation that may be introduced.

Tripletalk on Vested Assets

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ROBISON. Mr. Speaker, with reference to my bill, H.R. 1345, and that of my colleague, Representative O'BRIEN, H.R. 404, and the companion Senate measure, S. 1103, by Senator KEATING, which would permit the sale of vested enemy assets to private American investors, I include an editorial from the Washington Post of Tuesday, March 1, 1960:

TRIPLETALK

That remarkable collection of philanthropists (with other people's money), the Committee for Return of Confiscated German and Japanese Property, has now achieved the improbability of surpassing even itself in the concoction of cant. In addition to all their other heart-throbbing designed to seduce the American taxpayer into paying the German Government's debts to German citizens, the committee's propagandists now urge this handout as a "gesture of confidence in the wholesome, democratic forces which are currently under strain in Germany." Parsing this doubletalk for the unsophisticated reader, the committee's press release explain, somewhat ambiguously, that it refers "to the recent swastika paintings in Cologne and elsewhere."

The severity of some U.S. reactions to the recent wall paintings in Germany may have created there the feeling that, as a nation, we have reacquired the wartime stereotype

of Germany as a nation of National Socialists. The best way to deal with this threatening doubt of our stability is to deliver on the promises the United States made before the incidents started.

What this seems to be saying is that the recent indications of lingering nazism in Germany have raised doubts there as to American stability; and the only way to regain German confidence in the United States is through the payment of a large, lush cash ransom. It also seems to be saying that the notion that there was ever any national socialism in Germany, even during the war, is just a thickheaded American invention. What it doesn't seem to be saying is that there is any need at all to restore American confidence in German stability.

Let's set the record straight once more about those "promises the United States made before the incidents started." The only promise made by the United States was a promise made (along with other victims of Hitler's aggression) to forgo reparations after the war in return for a German promise to pay the claims of German citizens arising out of the seizure of their investments here. This was a simple bookkeeping quid pro quo. A formal treaty was signed embodying it. The United States kept its promise—thereby helping Germany to become the most prosperous country in postwar Europe.

It is true that in the summer of 1957, when Chancellor Adenauer was running for reelection, the White House in Washington announced that it would ask Congress to give Germany an equitable monetary return for some \$400 to \$500 million in property seized during the war. Next spring, President Eisenhower did ask Congress for this largesse; Congress, very sensibly, ignored the request. The Committee for Return is now trying to get Congress to redeem the German Government's promise to pay the claims of Germans. And they may lose confidence in us if Congress does not. The mind boggles. The stomach turns. There is fever; there is pain.

Election Notice

EXTENSION OF REMARKS OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 17, 1960

Mr. TOLL. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert into the Appendix of the RECORD an interesting election notice from Jamaica. It was called to my attention by a distinguished Philadelphia lawyer, Martin R. Freedman, Esq.

While we are debating the voting rights issue, I think it is important for us to note that in islands neighboring us, there is a plan guaranteeing universal suffrage and assuring the only kind of literacy which the voter should need in casting his ballot: knowing which candidate for public office is his choice.

In the Jamaican election notice prospective candidates either pick certain campaign symbols or are assigned them. These symbols are used both in the campaign by the candidates and the election board which places these symbols opposite candidates' names on ballots. The purpose of having the symbol is, of

course, to help those voters who cannot read but who have sufficient interest, knowledge, and understanding to recognize the candidate of their choice on their respective ballot.

In the United States the problem of illiteracy does not exist to the extent that it would be necessary to adopt the Jamaican method. On the other hand, the meaning of literacy seems to vary so much from State to State that it has been used in many places as a weapon to stop qualified people from voting. I am hopeful that the present civil rights bill will change this situation.

The election notice follows:

ELECTION NOTICE—SYMBOLS TO BE USED OPPOSITE CANDIDATES' NAMES ON BALLOT PAPERS

Prospective candidates for the pending K.S.A.C. and parochial elections are hereby informed in accordance with regulations published in the Gazette on the 13th of February 1956 that they should apply to me in writing before nomination day for the allocation of symbols to be printed opposite to their names on the ballot papers to be used on polling day.

The regulations provide that prospective candidates should set out in their application three symbols in the order of their preference. I shall, in due course, allocate to each candidate 1 of the 12 symbols set out below, subject to the provision in the regulations designed to give effect to the wishes of political parties or groups.

Under the regulations the allocation of symbols is made at my discretion and it is pointed out that it may not be possible to meet the wishes of all nominated candidates. I shall, of course, notify all concerned of the symbols allotted to all candidates.

Any person nominated as a candidate who does not make an application for a symbol will have allotted to him 1 of the 12 symbols which has not been allocated to any other candidate in the same electoral division at this election.

The symbols to be used at elections are shown below.

1. Hand.
2. Star.
3. Head.
4. Horseshoe.
5. Bird.
6. Bell.
7. Woman.
8. Tree.
9. Bus.
10. Hoop.
11. Crossed hammers.
12. Heart.

O. M. ROYES,
Chief Electoral Officer.

Electoral office, Kingston, January 25, 1960.

Disarmament Blackmail

EXTENSION OF REMARKS OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 23, 1960

Mr. BOSCH. Mr. Speaker, with all the present talk about disarmament, it behooves us to be wary of proposals put forth by the rulers in the Kremlin. Our experiences of the past in dealings with the Soviet have not been favorable, to say the least. Their utter disregard for the sanctity of agreements has been am-

ply demonstrated on many an occasion. Let us be sure that when we move in any direction so important to the future we are aware of all consequences.

Under leave to extend my remarks, I include an editorial from the U.S. News & World Report of March 28, 1960, which I commend to the attention of my colleagues.

The editorial follows:

DISARMAMENT BLACKMAIL

(By David Lawrence)

The Soviet plan calls for disarmament within 4 years. During that time, the West is supposed to abolish all foreign bases, send American troops back home, and trust to the good faith of the Communists thereafter to destroy their nuclear weapons.

The Soviets insist that they shall retain a free hand to do as they please after the West has given up its conventional forces and abandoned all foreign bases for troops, missiles, and planes.

The Western plan calls for three stages without arbitrary time limits but demands initially a formula for compliance by the governments concerned.

Basically, the West wants a condition of mutual trust. It asks for immediate action aimed at "preventing aggression and preserving world peace and security, as national armaments are reduced," and declares that this can best be achieved "by an international organization, to be an organ of, or linked to, the United Nations."

The Western plan, in a nutshell, seeks to establish conditions of mutual confidence and good faith before either side is expected to give up its weapons.

The Soviets, on the other hand, brazenly ask that the West disarm at once, with all foreign bases and conventional forces eliminated in about 3 years. The first official statement made by the Soviet delegate at the Geneva Disarmament Conference says:

"During the same period it will also be possible to carry out such measures as the liquidation of alien bases on foreign territories, the withdrawal of foreign troops from these territories back within their national frontiers, and their disbandment as well as the cessation of the production of all types of conventional armaments."

Then, after the American missile pads and air bases for our bombers in Europe and Asia have been demolished and all American forces have gone home, the Soviets say that "all types of nuclear and rocket weapons should be destroyed and liquidation of entire machinery of states should be fully completed."

What is surprising about the plan is not that the Soviets propose such a procedure, but that they should believe the Western governments are naive enough to accept it. No Trojan-horse scheme could be conceived with greater boldness or more transparent insincerity.

The world is asked to accept a disarmament plan which weakens its power of military retaliation while relying on an autocratic government in Moscow to carry out its pledge of disarmament. Actual experience, moreover, teaches us that the Soviet Government has violated virtually every important international agreement it has made in the last 25 years.

The British Minister of State, David Ormsby-Gore, touched on this same problem when he told the assembled delegates at the Geneva Disarmament Conference that the plan adopted must not at any stage give significant military advantage to one country or group of countries over others. He called for effective controls and remarked that there is no use "blinking at the fact that suspicion exists between nations and they will not be convinced that their neighbors have in fact reduced their forces until they

have proof of it." He also warns that "it must be the object of a control system to furnish such proof."

The world has known for a long time that disarmament cannot be undertaken either immediately or in stages without foolproof measures of control, and that to permit one side to have a military advantage during any stage of the process opens the way to blackmail.

Really nothing new in principle has been developed by the disarmament discussions of recent years. They resemble many past efforts in history. They are either well-meaning attempts to stop the arms race temporarily for economic reasons and to preserve a "balance of power," or they are crafty and insidious schemes to accomplish a military supremacy for one side or the other by playing on the credulity of an adversary.

The Soviet objective of the moment is primarily to make propaganda—to give the appearance of peaceful intent and benevolent purpose. This is designed to allay unrest and fear inside Russia that the Kremlin is heading toward war. But the plain facts are that the tensions in the world are produced right along by the Soviet Government and its agents in foreign lands who are engaged in intensive campaigns of subversion.

The Communists are responsible for the tension in Korea and the Far East, the tension in the Middle East, the tension in Africa, the tension in Cuba and Latin America, and the tension over West Berlin.

How can there be any progress toward disarmament when there is so little faith in the word of the present Soviet Government? Only the peoples of the Soviet Union can assure world peace, and they can do so by ridding themselves of a tyrannical government that doesn't honor its agreements and by substituting a free government that the world can trust. That's the only sure road to a reduction of armaments.

Comments by the Late Senator Robert A. Taft in Support of School Legislation

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. LEVERING. Mr. Speaker, Abraham Lincoln said, when the Nation was faced with new conditions and new problems, that "we must disenthral ourselves." The people, he declared, had to understand the changed state of the Nation to make new decisions. This was at a time when our country was predominantly rural. Today, our population is increasing so fast that it will pass the 200 million mark in only a few years. Plainly, we are facing new conditions and new problems. New challenges demand new stratagems and new tactics. Never before has our Nation faced the threat of a first-class industrial power with such a concentration of advanced technical force as that of Soviet Russia.

In order to meet the challenge of Russia's swift thrust toward leadership, we are going to have to call on every resource. Most of all we are going to have to call on our mental resources. Winston Churchill said:

The empires of the future are the empires of the mind.

We cannot afford to lose the talents of even one person with a superior intelligence merely because he may come from a poor home and has no money to go to the high school or college.

The fact is apparent that our lack of foresight is catchig up with us. J. Edgar Hoover has said that crime is increasing four times as fast as the population. The huge waste involved in crime is far more costly than would be the cost of perfecting our educational plant, raising our teachers' salaries, and assuring everyone as good an education as he desires and deserves. The U.S. Office of Education points out that there is a classroom shortage of at least 135,000 and a teacher shortage that is to become more pronounced. Education, primarily, should be the responsibility of local authorities, but if they do not meet the challenge, I am afraid Uncle Sam will be forced to step into the breach in the interest of national security. I think that given the facts our people will find the right way.

Mr. Speaker, because the House will soon debate the question of what further role, if any, the Federal Government should play in the vital field of education, under leave to extend my remarks in the RECORD, I include for the benefit of my colleagues the comments made on the floor of the U.S. Senate in support of legislation for schools by the late Senator Robert A. Taft, of Ohio, on March 23, 1948:

SENATOR ROBERT A. TAFT, SR., OF OHIO

Why Mr. Taft changed his mind: "Four years ago I opposed the bill on this subject, but in the course of that debate it became so apparent, upon further study, that that was not the fault, necessarily, of the States where they lived, but rather of the financial abilities of the States that I could see no way to meet the condition which now exists regarding illiteracy in the United States and lack of education in the United States without some Federal assistance, particularly for those States which today are considerably below the average of wealth in the United States."

To keep America free: "I do not think I can exaggerate the necessity of education. Primary education lies at the basis of all forms of republican government. A government depending on the making of decisions by the people and depending on their intelligence can exist only if the people have some ability to understand the problems of government which are presented to them. Unless there is a satisfactory educational basis, there cannot possibly be hope for success in any democratic form of government where the people are expected to rule and to decide the questions which are placed before them."

The Federal Government must help: "In matters affecting the necessities of life—and I should like to confine it so far as possible to the necessities of life, namely, to relief, to education, to health, and to housing—I do not believe the Federal Government can say it has no interest, and say to the people, 'Go your way and do the best you can.' I do not believe we should do that. Because of the way wealth is distributed in the United States, I think we have a responsibility to see if we can eliminate hardship, poverty, and inequality of opportunity, to the best of our ability. I do not believe we are able to do it without a Federal aid system."

Strengthen all States: "I do not believe that even the wealthier States are able today to do all the things the people want them to do. They are not able to do it simply

because the power of the States to levy taxes is very limited and unsatisfactory. We may approach the problem in some other way; but I do not know of any State aid program which has undertaken to exclude any State from some participation in the program. I believe that the general principle holds true, that if we are to do it at all, we must include all the States, including the wealthier ones. My theory is that if we do not undertake a Federal aid program, we shall have a national program forced upon us. I think it would be far better to strengthen the States—the strong States as well as the weak States."

No other way: "It is popular to provide for public works. Public works are nice things; we can see them. But when it comes down to the basic necessities of life and the basic elements of human welfare and human progress, there is nothing more important than education. It does not have the glamour that other things have, but it seems to me we must go forward in the field of education for our people and I know of no way of going forward in that field to any substantial degree without providing some Federal financial assistance."

Safe from Federal control: "In my opinion, those of us who are interested in seeing that the power of the Federal Government does not increase are on sound ground in supporting the granting of Federal aid to enable the States to do what is necessary to resist Federal action, and then to insist that there be no interference with the power of the States to require their governments to administer their own affairs."

A long history of U.S. education support: "I should like to point out that Federal aid to education is not new in principle, that the Federal Government has always shown an intense interest in education throughout the United States. The Land Grant College Act provided an endowment to support at least one agricultural and mechanical college in every State. Furthermore, we have made appropriations for agricultural experiment stations. We have extended Federal aid for programs of cooperation with the States in extension work in agriculture and economics, and also in agricultural and industrial courses in secondary schools. Of course, going back to the beginning, it will be remembered that practically all public lands, I think, were distributed on condition that one section, sometimes two sections, in every township should be set aside to be sold and used for the purpose of local education. So, the general interest of the Federal Government in education cannot be questioned from a historical standpoint."

It can be done: "But I believe very strongly indeed that in this field and in health and other fields dealing directly with human welfare we must work out a sound system of improvement. I think that the best form we have today is the form of Federal aid to the States, leaving complete control of the administration of the funds and the administration of the programs, for which they must have the primary responsibility, in the hands of the local communities."

Fundamental American principle: "I think we have a tremendous obligation to provide equality of opportunity to the children of the United States. When the Declaration of Independence said that all men are created equal it perhaps made an extreme statement, but I have always felt that what was meant was that all men in the United States are entitled to equality of opportunity. No child can have equality of opportunity, in my opinion, unless to start with he has a basic minimum education. There are many children who may have the mental capacity or the mental brilliance to rise above that handicap; there are many who will educate themselves; but I think they comprise a very small proportion of the total. The ordinary child who receives no education is, in effect, condemned to a life of poverty, a life

on the basis of a low standard of living, a life of little interest, and a life which is of little value to the people of the United States.

"I feel very strongly that we in this country have an opportunity which no other country has ever had, because of our tremendous productive ability, to see to it that equality of opportunity is afforded to all children born in the United States, or at least to aim in that direction and to achieve that end as closely as possible by administrative methods."

People on the move: "Today people move all over the United States, so there is a national interest in the basic education which they have received."

Demands of the people: "The people have become more and more interested in the action of States and localities in various fields. The demands for State action have constantly increased until today I believe that even the wealthier States are not able to meet the demands the people themselves make upon them in the particular fields which are their primary obligation."

Greek Independence Day

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. MULTER. Mr. Speaker, as the Fourth of July is our national holiday, so independence day under various names is the signal holiday for many nations of the world.

For the Greeks, independence day has special and perhaps unique significance. Celebrating the beginning of the revolt against Ottoman rule which began on March 21, 1821, Greek Independence Day marks the renewal of the traditions of freedom, independence and cultural excellence which have been the hallmarks of Greece since ancient times.

Indeed, if there were such a thing as a copyright on these ideas the Greeks would hold it. For it is to ancient Greece that we must look for the source of our ideas of individual freedom, of the relation between the free citizen and the state and of many other of the highest achievements of Western civilization. The Greeks conceived these ideas, developed them and put them into practice, and finally, through their writings, transmitted them across the dark ages of history so that they might be reborn in modern forms.

These ideas and traditions have never really been lost in Greece, although that country through the centuries suffered heavily from alien rule and oppression. Throughout the long Muslim rule, lasting more than 300 years from the 15th to the 19th centuries, these ideas and traditions kept Greek society alive and ready to reassert its rightful place in the world. The Greeks fought bitterly for their independence for over 6 years from 1821 to 1827 and in this fight and victory set an example for the nations of the modern world.

As Greeks celebrate the 139th anniversary of the beginning of their renewal of independence, the sentiments of all people committed to freedom and independence are with them.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ALGER. Mr. Speaker, I include the following newsletter of March 19, 1960:

WASHINGTON REPORT—MARCH 19, 1960

(By Congressman BRUCE ALGER)

The civil rights debate struggles on with progress not readily recognizable (see newsletters March 5 and 12). Contrary to expectation, debate time has not been curtailed. Patience and tolerance also exceed expectation. Since only the House bill (compared to the Senate's) went through normal committee hearings and deliberation, the House action becomes even more important in determining the final bill. Yet, even in the House, much of the legislation is being written and rewritten by floor amendment and debate, rather than acceptance of the committee's bills and amendments. While full membership participation is democratic, many Members suspect that such hasty drafting and offering of amendments may result in poor legislation.

House action included: (1) Two amendments were ruled out of order. (a) Federal aid for desegregation of schools, and (b) the creation of a Commission on Equal Job Opportunity; (2) furor over the "conclusive presumption of the denial of voting rights" when an area is ruled by Federal court as having such a pattern of practice; (3) conflict over Presidential appointed Federal enrolling officers (to police local elections) versus Federal court appointed referees to assure everyone a vote regardless of race or color. The referee plan won out; (4) Acceptance of amendment to permit the issuance of court provisional voting order if qualified applicant has filed a complaint 20 days prior to election; (5) a southern Member, spokesman for others, threatened to bolt party leadership and the Speaker when the House is organized in the next Congress. This brings up the question, is there a basic Democrat clash? While party differences are most evident in civil rights, southerners are not nearly so dedicated to States rights and conservatism in other legislation. Southerners, at Congress outset are responsible for selection of their liberal leaders, whom they now battle and criticize.

For my part, I am most aware that the civil rights controversy is a political exercise for both parties. So much is this evident and true that I cannot share the viewpoint of many in either political party. This is a sectional dispute. The grave issues of constitutional freedoms will not be solved, only endangered or transgressed. True, we are safe to the extent that bad law may not take effect because it lacks popular acceptance (the prohibition law, another example). My earlier questions asked in debate remain unanswered. Not explained is why another law is needed now—allegedly to protect voting rights. The 15th constitutional amendment, the act of 1870, and the 1957 act provide pro-

tection. Why in 2 years has the tough 1957 act, protecting voting rights, been invoked only four times?

On the Senate side, noteworthy is the Goldwater list of the 800 separate acts of labor violence in the Kohler strike and the extension (for the first time) of bans on bombing and violence to include labor-motivated trouble. Another blessing as one Member saw it was that lengthy civil rights debate prevented other unnecessary liberal legislation from being considered. Still overlooked are these factors: (1) Discrimination according to many is greater in the North; (2) the crime rate and illegitimate birth rate in integrated areas are soaring.

The civil rights bill—whatever it may be by that time—should pass next week. Other controversial problems confronting us, awaiting attention, include: (1) Political postponement of interest rate ceiling removal; (2) socialized medicine; (3) Federal aid to education; (4) increased immigration quotas; (5) increased Federal aid to promote growth of export trade.

Some interesting defense capability figures came to my attention the other day. Before anyone takes to the hills, stampeded by an election year's military scare talk, he might ponder this for a moment: What if we could swap positions with the Russians? If you could trade places, and problems, with them tomorrow, both nations would still have operational missiles with lethal destructive capability, but you would also face a nuclear bomber force at least four times the size of yours, poised at innumerable nearby bases in every direction from you, and against which you have virtually no proven defenses. There would be aircraft carriers and strong naval forces cruising 100 miles off your coast, capable of launching nuclear bombers and missiles. Nuclear submarines would lie undetected within missile range of every one of your major cities. And there you would sit, with no comparable weaponry.

If we traded places with Russia we'd find ourselves producing only two-fifths as much steel, one-third the hydroelectric power, one-third as much oil, and one-half as much aluminum, 10 percent as much natural gas, one-third as much copper, and only 5 percent as many electric motors. To get in Russia's shape, we would have to abandon 14 out of every 15 miles of highway, destroy 19 out of every 20 autos and trucks, scrap 2 out of every 3 miles of railroad track and 60 percent of our freight cars, and sink 8 out of every 9 merchant ships. And we think we've got problems. If we traded places with Russia, our only gain would be a rocket on the moon. Oh, yes, it was free enterprise and individual freedom that produced our present armed might, and the economic strength to support it.

Resolutions Memorializing the Congress of the United States To Enact the Forand Bill To Provide Health Insurance Coverage as Part of Social Security Benefits

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I

include resolutions adopted by the General Court of Massachusetts in support of the Forand bill:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT THE FORAND BILL TO PROVIDE HEALTH INSURANCE COVERAGE AS PART OF SOCIAL SECURITY BENEFITS

Whereas the Forand bill now pending before the Congress of the United States provides health insurance coverage as part of social security benefits thereby providing 9 out of 10 people 65 years of age and over with health and hospitalization benefits as part of their social security benefits, said benefits to be paid for by the beneficiaries during their working years; and

Whereas said bill has the endorsement of many medical and hospital authorities and is considered essential to meet the growing need for more adequate medical care for elderly people: Therefore be it

Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to give early and favorable consideration to the enactment of the Forand bill providing health insurance coverage as part of social security benefits; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the Senators and Representatives in Congress from this Commonwealth.

House of representatives, adopted, February 29, 1960.

LAWRENCE R. GROVE,

Clerk.

In senate, adopted in concurrence, March 2, 1960.

IRVING N. HAYDEN,

Clerk.

A true copy. Attest:

JOSEPH D. WARD,

Secretary of the Commonwealth.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentations be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee)". His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Getting Ahead With Cotton

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include a copy of the speech made by Dr. Charles R. Sayre, president, Staple Cotton Cooperative Association, Greenwood, Miss., before the annual meeting of the Cotton Buyers' Division, South Carolina Textile Manufacturers Association, Charleston, S.C., on March 11:

GETTING AHEAD WITH COTTON

TARGETS IN COMMON

First, may I thank you, ladies and gentlemen, for the opportunity to participate in this meeting of the cotton buyers' division, South Carolina Textile Manufacturers Association.

The common target for all in the industry is getting ahead profitably with cotton.

As businessmen in cotton, you and I must consider these basic questions:

First, Will I make a profit this year—1960-61?

Second, Will this year's actions bring more profitable business next year?

Third, Are my actions and those of others in my segment of the industry helping toward a brighter future, expanding markets, and bigger profits beyond?

Fourth, Is greater economic freedom ahead?

I shall use numerous preliminary estimates and guesses in this discussion. They represent the best arithmetic and opinions that I have come by. Please adjust them to fit your information. Use them warily, with discretion, and, at your risk.

POSSIBILITIES—1960 CROP

As most of you know, the national allotment for 1960 is 16,310,000 acres, identical with 1959. This total climbed to 17,333,000 acres when the B option acreages were included last year. According to data developed recently by Mr. Lamar Fleming, Jr., more than 13 percent of the allotted acreages were not harvested. This underplanting reflects the soil bank and other reasons for nonuse of allotments mainly in the Southeast and in the hilly areas of the Mid-south, Texas, and Oklahoma.

PUBLIC LAW 86-172

One new feature enters the 1960 underplantings picture. Public Law 86-172 was passed during the last session of Congress. This law makes it possible for a farmer who decides not to plant to release more freely the unused acreage to his county agricultural stabilization committee and still keep his acreage history for the future. He must plant 75 percent of his allotment once in each 3 years and release the unused portion or he loses the allotment permanently. This provides considerably greater incentive than heretofore for unused allotment transfers. Transfers can be made across county lines by the State ASC committee without affecting the statistical history of the county of origin. Much of the unused acreages in 1959

were in the Southeast. In Mississippi, the net underplantings in 1959 amounted to 168,500 acres. A statewide campaign is underway to get these allotments transferred and planted. Similar campaigns will be conducted in several other States.

A reduction in the allotments not harvested, by as much as 20 percent, would mean approximately 480,000 more acres in production, compared with 1959. Assuming a yield of 375 pounds of lint per acre with the bulk of the transfer in lower yield sub-regions, the net addition to production would amount to about 360,000 bales. Most of this cotton will be eligible for price supports, mainly under the (A) option purchase program.

PRICE SUPPORTS LOWER—1960 CROP

Again, as most of you know, the 1960 crop will be the second and last year of the (A) and (B) grower options under existing law. Price support levels will be 5 percentage points of parity lower for each option, compared with 1959. Using the August through January quality differences and the usual locational differentials, the SLM 1½¢ inch support and release values at Mississippi Delta points, would compare with the September figures for the crop as follows:

	1959 crop	1960 crop
Strict Low Middling 1-1/16:		
(A) Purchase.....	32.30	31.32
(B) Loan.....	26.60	25.53
CCC resale, (A) cotton.....	29.26	28.08

It is needless to mention to this group that a greater reduction will prevail for white cottons and still smaller difference between the 1959 and 1960 support levels for the lower grades. For example, projections of CCC resale values for LM 1-1/16 using the same methodology, gives 24.55 cents per pound. The September 1959 resale for LM 1-1/16 was 24.64 cents in the Delta.

RESALE POLICY AND CARRYING CHARGES CHANGED

On the first day of this month, USDA announced that the minimum resale price for 1959 and prior crops of upland cotton in its inventory will be the higher of (1) the market price, as determined by Commodity Credit Corporation, or (2) 115 percent of the Choice (B) loan during the 1960-61 marketing year. The options (A) cotton from the 1960 crop will, as for 1959, be sold at 110 percent of the Choice (B) loan.

Preliminary approximations for September 1960 reflecting the above policy, compared with CCC minimum resale value for September 1959, gives the following:

Preliminary projections, September 1960, CCC minimum resale prices compared with September 1959—Mississippi Delta¹

	1959 resale, all stocks	1960 resale	
		Option (A)	1959 and prior crops
Middling 1½¢.....	33.22	31.28	32.71
Strict Low Middling 1½¢.....	29.26	28.08	29.36
Low Middling 1½¢.....	24.64	24.55	26.66

¹ Using August through January differences for 1960 crop.

Carrying charges for price support and resale purposes for the next marketing year will hinge upon 20 points per month compared with the current 15 points. None will be added in August and September, and in October the addition will be 10 points only.

FIVE OTHER SOURCES OF UNCERTAINTY—1960-61

We face five other sources of uncertainty as each of us try to extend our profits for 1960-61. These include the extent of growers' choice of the (B) option, level of export subsidy and CCC reclass regulations, level of textile demand, level of textile imports, and, of course, the weather.

We all admit our frailties in dealing with the weather. But, it is already dealing with the planting season at hand. Freezes on February 24 and 25 knocked out about 100,000 acres of cotton which had been planted in the Rio Grande Valley. Ground temperatures were around 50 degrees as late as March 5, with plantings getting underway in stride just this week.

In much of the Southeast and Midsouth land preparation is considerably behind schedule.

OPTION (B) PROSPECTS

Along with price support difference six primary factors affect growers' efforts to maximize income as they choose between the (A) and (B) options including:

1. Availability of top-quality land and water.
2. Adequate machinery.
3. Stable sources of labor.
4. Management on the job.
5. Suitable financing and financial risks.
6. Market prospects.

I shall review in detail only two of those considerations—financial risks and market prospects.

Cash outlay for preharvest production costs have skyrocketed during the past 15 years. I happen to be the President of the Staple Cotton Discount Corporation, which finances approximately 175,000 acres of Delta cotton each year. On the average for 1944 through 1949 the preharvest advances per acre were \$42.06. In comparison, those advances for 1955 through 1959 averaged \$99.60 per acre—a 237 percent increase. In other words, the Delta cotton grower must lay a \$100 bill on each acre of land before he picks a lock and has a chance to get a dollar in return.

Financial risks, coupled with the noncontrollable elements of production, have spawned an attitude of caution among the medium and small-sized cotton farmers in many parts of the Belt. This is counteracted to some degree by contracts being made in advance, particularly in parts of Texas and California and, to a lesser extent, in the Midsouth.

A \$50,000 limitation upon the amount of price supports advanced to any one person or firm was imposed by Congress last July. This catches many growers at about the 300-bale production mark. Beyond \$50,000 the available price supports for either (A) or (B) options will be provided as recourse loans repayable 1 year after a date as yet to be established by the Secretary of Agriculture. This adds greatly to producer risks.

At first glance, it seems that because of the limitation many additional growers would choose (B). This is offset, in part, by a provision in the law which enables a grower to bypass the \$50,000 limitation through a reduction in production (as measured by

acres) to 20 percent less than his plantings in 1959.

Last year about 31 percent of the Mississippi Delta acreage was under (B). This year I'm guessing the Delta percentage at 36 to 39 percent with little change in the rest of Mississippi. However, obtaining 3-year average yields, rather than last year's high yield would mean a total (B) production about the same in the State.

Rapid sale of the 1959 production, except the middling and better cottons, and the policy change for resale of old crop stocks by CCC to 115 percent of the (B) loan level have provided encouragement to (B) growers as to market prospects.

A rather wide range of guesses have been circulating in the industry as to the probable (B) acreages and production for the coming crop. I shall add my guess by subregions. Adjustments in acreages by States and parts of States have been based upon viewpoints of a number of people. Yields have been adjusted roughly to the 3-year period 1957-59.

Mr. C. C. Smith, vice president of the National Bank of Commerce has been particularly helpful in this guessing effort. The record should be clear, however, that errors committed and omissions made must be placed at my doorstep.

The subregion picture could turn out to be something like this. The production on farms under the (A) option with cottons not eligible for purchase because of the \$50,000 support limitation are included with (B) option cotton.

1959 (B) acreages and estimated production compared with "highly preliminary" estimates 1960 (B) acreages and production by subregions¹

	1959		1960	
	Acreage	Production	Change expected	Production
			Acreage	Yield
Southeast	Thous. 170	Thous. 163	Same	Increase
MidSouth	986	1,217	Increase	Decrease
Southwest	1,487	1,164	do.	Same
Far West	813	1,754	do.	Decrease
Total	3,456	4,300		5,960

¹ (A) Cotton on farms affected by support limit included with (B) baleage.

Taking a plus or minus of 5 percent from the 5,960,000 bales total, a reasonable guess ranges between 5,650,000 and 6,250,000 bales of (B) production.

A little increase through better yield would be logical in the Southeast. Compared with 1959, the yield reductions in the MidSouth may offset some of the acreage increase. The options and the data for Texas almost defy analysis, but a big gain appears to be obvious. The same holds true for Arizona and the rest of the Far West.

For guesses of 7 million plus bales of (B) production a favorable planting season throughout the belt and peak yields everywhere are implicitly assumed. The actuarial possibilities of a completely favorable combination are rather remote.

If (B) production is 6 million bales, or perhaps a little less, the spot market situation should be a healthy one. More than 3 million additional bales would be needed to round out a 9 million bale domestic consumption. The 115 percent release price for old stocks should bring this out of current crop. There should be no hesitation on carryover since 1961 price supports are apt to be about the same or a little above the 1960 crop support levels.

These are interesting added wrinkles in relation to low grades. The CCC inventory will include only a limited supply. In coun-

tries outside the United States most of the cotton is hand-picked. These factors should result in extra activity for the Strict Low Middling and lower qualities.

DEMAND FOR UNITED STATES TEXTILES

Growers benefited greatly from the pickup in textile demand in this country during the past several months. Since textile production has not reached a high peak so quickly after the upturn, it is to be hoped that the top curve of the cycle will be prolonged. The evidence that new orders have slowed a bit in some lines is a source of concern. Also, any shadow of inventory increases is of key consequence.

On net balance, domestic consumption must be well in excess of 9 million bales yearly, if growers here are to achieve and maintain even a reasonable level of production efficiency.

IN BRIEF, PROFIT PROSPECTS FOR 1960-61

All of the above has been pointed toward an appraisal of profit prospects for 1960-61 for major segments of the cotton industry.

The picture in brief is about like this:

1. Some 350,000 bales primarily (A) option, could be produced from acres released and transferred under Public Law 86-172.
2. Price support down 5 percentage points both (A) and (B) options—resale SLM $1\frac{1}{16}$, Delta points about 28.08 cents.
3. CCC resale of 1959 and earlier crops 115 percent of (B) loan—SLM $1\frac{1}{16}$ Delta points about 29.36 cents.
4. Carrying charges for price supports and resale, 20 points per month.
5. (B) and "(B) type" production might range between 5,650,000 and 6,250,000 bales.
6. Export program delayed—subsidy should be roughly 1 to $1\frac{1}{4}$ cents below the current 8-cent level.
7. Hope for continued high level domestic textile demand.
8. Textile imports approaching 400,000 bales annual rate—quotas needed, likely hard to get.

On net balance, I read that rating card as favorable for the home team. But, long profits will require top-level batting averages. Slow starters could easily be left out. Good volume, reasonable prices.

AHEAD FOR 1961-62

The second consideration, posed earlier, is: Are the things being done now, by Government and by industry, likely to obstruct profit possibilities a year hence—1961-62.

Under current laws the Government program will be:

- (1) A single price support at a minimum of 70 percent of parity based upon the average quality of the crop.
- (2) Minimum national acreage allotment, 16,310,000 acres with no upward adjustments on individual farms.
- (3) Continuation of release and transfer of allotment acreages between farms and counties within same State without loss of history.
- (4) CCC required to sell abroad at price that will maintain the "fair historical share" of world markets for cotton from the United States.
- (5) CCC stocks to be offered at 115 percent of the loan level.
- (6) No restrictions, except voluntary quotas with Japan, on textile imports—unless new action taken.
- (7) Import quotas on raw cotton.
- (8) No limitation on amount of price supports extended to individual farm or firm—likely to be reenacted.

I shall renew only two of the above features in which the Government is directly involved.

The base for price supports will shift, for 1961-62, from M seven-eighth-inch cotton to the average of the crop (something near SLM $1\frac{1}{16}$ inches). This should reduce the level of support 1.0 to 1.35 cents per pound. But, parity itself is likely to continue to rise,

but more slowly if the formulas are not adjusted again. The net change should not be a very big one—perhaps a sideways movement or up slightly.

By 1961-62 unrestricted, textile imports could do unreckonable damage to offtake from domestic sources. Remedial actions are a must.

Here it is well to recognize that U.S. exports make up only 13 percent of the total entering world-market channels. Whenever we pull back, other cotton-exporting countries expand and quickly fill the gap.

There are three most important areas of activities in which the industry could materially affect the 1961-62 prospects. One is, continued use of discretion in the amount of increase in mill operations.

Another is, greatly intensified attention to factors affecting cotton's "processing-performance qualities" on the farm, at the gin and in market channels.

The third area, for early analysis, is the quantity and makeup of the supply, if the national acreage allotment remains at the minimum level. If you use 6 million bales in round numbers, as the estimate of 1960 crop (B) production, then production on (B) option farms might be reduced by say 1,700,000 bales for the 1961 crop. If domestic consumption and exports continue at current levels, it is readily conceivable that a larger national acreage allotment would be highly desirable for 1961. If action is attempted legislatively, the practical timing would probably be near the end of the present session of Congress.

IS MARKET EXPANSION AHEAD?

In 1958 the cotton industry, USDA, and much of the leadership in the Congress turned boldly toward market expansion as a fundamental adjustment that would bring reasonable levels of profit and stability. The basic tools to be used include price adjustments, quality development, and preservation, research, and promotion.

Big steps have been taken in price adjustments amounting to roughly 4 cents per pound in 2 years.

Additional narrowing of quality differences will encourage harvesting and ginning practices which will preserve more of the desired qualities. The incentives have often been lacking or not big enough. In fact, rigidities in the price support structure have often thwarted educational efforts in the quality field. Something of a "muddling through" attitude has prevailed in some areas when spot values and support levels have remained close together for one or more entire marketing years.

Steps taken during the past 2 years have helped greatly. Many of you have reviewed, in a fine way, the several sides of cotton's quality problems with producers throughout the belt, and when they have visited in your mills. Such efforts, I'm sure, will be continuing ones.

With custom ginning and other transitional steps appearing, a series of price and risk-spread mechanisms may evolve. These may bring profit motivation and processing-performance into the same alignment for the grower, ginner, and manufacturer.

On several quality problems, progress seems to be moving at a snail's pace. A few examples are in bagging improvement; rapid measurement, tools, and techniques; improved chemical modifications of cotton; and "break throughs" in genetics and breeding to bring practical results from interspecies hybrids in cotton.

Through intensified research and promotion the cotton industry and its leading firms must guide more of its own destiny in the future.

Tremendous technical advances in cotton production, marketing, and manufacturing will be required to make U.S. cotton, and cotton goods competitive in price and in quality in the future. This can only be done

if the textile industry is in a healthy and economically virile position with promising prospects foreseeable for at least a decade or longer. The industry has charted a course—a sound one. But, tangible safeguards from cheap competitors from the outside is an essential if the industry is to have enough financial depth to invest, in a big way, in future progress.

It is fair to say, too, that cotton farmers cannot wait indefinitely for market expansions. The reduction of 4 cents per pound must be offset by larger volumes, if farm incomes are to be kept at reasonable levels.

CAN LESS GOVERNMENT INTERFERENCE BE EXPECTED?

The cumulative effects of economic disparities throughout the world and the great amount of excess capacity at each level of the cotton industry has ensnared us in one Government program after another. It is likely that even more entanglements are ahead.

Yet, to develop the economic vigor adequate to stand alone, against all odds, should be the continuing target of a united industry.

It may be a long way off, but it is worth working for.

Thank you.

Power for a Billion Years

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we in New Jersey are proud of the vast research efforts which have been centered in our home State, particularly in recent years. The skills and knowledge assembled in New Jersey are formidable; the projects which have taken place there are often incredible and stirring to the imagination.

In the Newark Sunday News magazine section of March 13, John Cunningham tells about one such effort. In it he shows how today's investment in research could become a small down payment on an achievement which could be one of the milestones in the history of man's progress.

Though scientists must necessarily be precise and cautious about the potential effects of their work, we laymen cannot help being impressed at the ultimate goals which spur their day-by-day work. I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POWER FOR A BILLION YEARS

(By John T. Cunningham)

Twenty minutes in a Colorado ski chairlift in the winter of 1951 might well have implications for the next billion years—and if those 20 minutes do stretch into a billion years, give or take a few centuries, then Dr. Lyman Spitzer, Jr., and his aides at Princeton University will have conquered a personal Matterhorn for the benefit of all mankind.

Dr. Spitzer was the man on the chairlift and he is also the mild, even shy, director of

Princeton University's project Matterhorn, a research project which seeks to convert the awesome potential of nuclear fusion into a fuel source unto the year 1 billion, A.D.

Nuclear fusion takes place naturally in outer space on the sun or in the stars. This known phenomenon of the heavens is common knowledge to Dr. Spitzer, whose achievements in astronomy have earned him a respected niche in scientific circles even without his current work at Princeton.

Naturally, then, the device which may one day solve mankind's power problems is termed a "stellarator" or "star generator." Dr. Spitzer thus neatly ties up enthusiasms: "project Matterhorn," for his interest in mountain climbing and skiing; "stellarator" for his hope to transform a secret of the stars into an earth source of power.

The third basic model in a series of stellarators is now nearing completion on a 70-acre tract at Princeton University's James Forrestal Research Center, south of Route 1 and about 3 miles from the main university campus. This is called the model C.

Will this third model, being finished at a cost of \$36 million (Atomic Energy Commission funds), be the anticipated source of power?

Everyone connected with the project quite frankly answers negatively.

The AEC's area manager at the project, Enzi De Renzis, declares: "This is not a prototype of a nuclear fusion power source. This is not even a tool; we don't know what it will do. Two years ago there was an air here of 'it's just around the corner,' but now we know we're in for a long haul."

In agreement, Dr. Spitzer says: "This is another step in our research. We hoped to know whether our theories would work before now. I can't say how likely we are to be successful ultimately, but I would say our chances are 50-50—exactly what I believed in 1951."

Even now, with the model C stellarator not yet installed, project heads discuss refinements. They speak of C-2 and C-3 stellarators and beyond these, even other stellarators.

How does a governmental agency dare spend \$36 million on a device and the buildings to house it, knowing in advance that this is not an answer? Well, for one thing, this is \$36 million expended against a billion years of the future. It is, more important, \$36 million invested against the day when all known sources of energy—coal, wood, petroleum, and uranium—are used up.

Should that seem something trivial to the average American as he steps on his starter on a Sunday afternoon and prepares to burn gasoline at the rate of 12 to 14 miles per gallon, let him take heed.

This is how serious the matter is: If the world's use of power continues to rise at today's rate, consumption 100 years from now will equal about 1,000 times the present demand. At that rate, all known oil reserves would last 1 month in the year 2060, the coal would last about 6 months, and readily available fission fuels, such as uranium, would disappear in a few decades.

Soon, possibly before the year 2100, the world would come to a great and silent halt. No Sunday traffic jams would be experienced; there would be no gasoline. No TV critics would be needed; there would be no electricity, much less TV. Cold and darkness could engulf the world a mere 150 years hence. An alternative might be solar energy, but the cost would be staggering.

Princeton's stellarator has as a goal setting back the fuel exhaustion danger beyond the point where any of us need to fret. Should the Matterhorn theories work, unlimited power would be available to meet 1,000 times the present energy consumption for 1 billion years.

Anyone who wishes to find the detailed

workings of a stellarator can find thousands of words of description and scores of incredibly complicated formulae. This is no longer classified information, but for all except far-advanced mathematicians and physicists, it might just as well be.

All too simply stated, a stellarator works by confining and heating deuterium gas, a heavy form of hydrogen, to temperatures above those on the sun (about 100 million degrees). When this is done, the deuterons—or nuclei of the deuterium atoms—will fuse and give off the sought-after energy.

A very small fraction of the released energy would be directly in the form of electrical power, but nearly all would be heat. That, quite prosaically, would be fed into steam boilers to make generators run for a billion years and on and on would go the refrigerators and TV sets exactly as in the year 1960.

Theoretically, then, by heating the heavy hydrogen sufficiently and by devising a container capable of enclosing a hot gas equal to heat on the face of the sun, the world would be back to full power.

Scientists long have theorized in these general terms. Many have sought to find the solution. One Argentine scientist announced in 1951 that he had found the answer—just as Dr. Spitzer, who never had hoped to seek, much less find, the answer, began on a skiing trip to Aspen, Colo.

"I knew the problems of containment of a gas at 100 million degrees," Dr. Spitzer recalls. "I wondered how the Argentine scientist had succeeded."

The wonderment whirled in his brain until he began the 20-minute ski lift alone. When he stepped off the lift, he felt he had an answer: A "magnetic bottle," not a bottle in the conventional sense, but rather a continuous flow of magnetic force which would keep the tremendously hot deuterons in place as effectively as a glass bottle contains beer.

Returning to Princeton, Dr. Spitzer wrote a modest paper setting forth his theory and on that basis received an AEC grant of \$50,000, a sum as modest as his paper.

Acceptance of an AEC grant for anything which seemed so close to "practical" research called for some soul-searching by the Princeton University Research Board. This, quite bluntly, seemed well removed from the "pure" or "basic" exploration which universities see as their role in research.

Dr. Henry De Wolf Smyth, present chairman of the research board, remembers the quite debate. His viewpoint is of utmost importance since his work in atomic energy ranges from fundamental work on the atomic bomb to membership of the Atomic Energy Commission from 1951 to 1954.

Princeton tradition is much a part of Dr. Smyth, since his father taught at the university before him. He muses in retrospect:

"This project is unique in the university setup. Ordinarily we wouldn't be involved, but we approved the project because our Dr. Spitzer had suggested it and because the goal was so vital, so spectacular, that we felt the work would be a national service."

From such a moderate beginning, with the implicit belief that the work would soon move off to an industry for development, Project Matterhorn has grown. Today, in its multimillion-dollar surroundings, the project employs about 350 persons (with more to be hired).

Curiously, Dr. Smyth points out, as more and more money and scientific knowledge is expended, the goal becomes increasingly remote.

"None of the early shortcuts to power worked," he explains, "so that has forced us into original research. This is a novel twist."

Dr. Spitzer felt the goal could be reached quite readily in 1951. The name "Project

Matterhorn" symbolizes that belief. Dr. Spitzer, a mountain climber of considerable skill, chose the name himself. This is why: "To me, Matterhorn means a spectacular peak, one worth climbing but one which is not too difficult to climb."

Dr. Spitzer and his wife, Doreen, have scaled the mountain peak itself—going to the top of Matterhorn in 1955 ("thanks to a good guide"). He still likes the name for his project, but comments wryly: "We haven't fallen off any ledges yet, but our Matterhorn at Princeton has difficulties more subtle and dangers less fatal than Switzerland's peak."

By dangers less fatal might be meant perils from radioactivity found in atomic fission (splitting) as a source of energy (as differentiated from fusion of a stellarator). The stellarator has virtually no radioactive dangers, and no radioactive waste.

As far as the difficulties are concerned, however, they are very much present, subtle or no.

Dr. Melvin B. Gottlieb, associate director of the project and an articulate spokesman, sums up the situation by declaring, "We haven't found the answers, but we've come up with some most pertinent questions."

The answers have not yet been found to the problems of containing the gas or heating the matter to temperatures beyond a few million degrees. The charged particles stray from the magnetic bottle long before fusion takes place.

"We had to assume the plasma (the deuterons and electrons in the magnetic field) would act in a simple way," Dr. Gottlieb explains. "Now we know that the assumption of simple process is not valid; more complicated processes are going on, too."

Nine years and millions of dollars certainly have not been expended in vain. Theory has advanced tremendously, especially at Project Matterhorn, now recognized as having the Nation's top collection of plasma physics theorists. Each advance in theory means a step nearer the threshold of the exciting potential of unlimited energy sources.

Project Matterhorn attracts top minds. For one thing, this field of plasma physics has become increasingly popular; each advance brings more applicants for positions. They must bring with them a knowledge of the science, plus an appreciation for theory. "Theory always has been vital here," Dr. Gottlieb emphasizes. "That's in the image of Lyman Spitzer, who is strong in theory, in method and in control. He is the heart of Project Matterhorn."

Scientists also seek identification with projects such as Matterhorn because of the chance to work in mankind's behalf. "Scientists are sensitive people," says Dr. Gottlieb. "They've inwardly been hurt by charges that they're bent on destroying civilization."

Accordingly, with theorists on hand to propose new challenges for the model C stellarator, with enthusiastic physicists, mathematicians and engineers to translate that theory into action, and with the great new stellarator about to be installed, Project Matterhorn nears new heights.

Already the three tremendous 95-ton flywheels are being put in place to run the generators which will send direct current electrical power into the stellarator at fixed pulsations of a fraction of a second's duration. The emplacements for the stellarator are ready, the controls and measuring devices are nearing completion. Sometime within the next year the model C will be tried.

Everyone is optimistic, but wary. Perhaps this is signified by the fact that the model C will occupy only about one-third of the floorspace in the huge room allotted to the stellarator. That makes a visitor aware that something else is anticipated.

Up the figurative slope of Princeton's Matterhorn climb the scientists, guided by Dr.

Lyman Spitzer, Jr. He is aware that in at least one way he is better off than the Argentine scientist whose faulty announcement of the discovery of nuclear fusion began that fruitful thought session in the Colorado chair lift.

What happened to the Argentine?

"They put him in jail," responds Dr. Spitzer, with the slowly widening grin that makes him a more likely-to-succeed Matterhorn guide than a man with knowledge and theory alone. People follow such a man.

Chemicals in Food

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. GUBSER. Mr. Speaker, because the subject of chemicals in food is of nationwide interest I am inserting, under leave to revise and extend my remarks, a letter from the superintendent of one of the largest food processing plants in the entire United States and which is located in my congressional district.

This letter shows that the National Canners Association, reputable canners of food, and the California Packing Corp. in particular, are taking steps to insure that food offered to the public is completely pure.

The letter follows:

CALIFORNIA PACKING CORP.,

San Jose, Calif., March 8, 1960.

Subject: Chemicals in food.

The Honorable CHARLES S. GUBSER,
Congress of the United States, House of
Representatives, Washington, D.C.

DEAR CHARLIE: Public attention has recently focused on the question of harmful chemical residues in food products resulting from the misapplication of pesticides to the raw products. Consumers are understandably confused because the amounts of certain chemicals that would be harmful to humans have never been scientifically established. Growers and processors of fruits and vegetables have a problem in making certain that only permissible pesticides are used at the proper times and in the proper concentrations. I am writing this letter to acquaint you with our company's chemical pesticide policy and the control program recently adopted by the canning industry.

Our company's raw product procurement and processing operations in Santa Clara, Santa Cruz, and San Benito Counties as well as in all other areas in which we procure and process fruits and vegetables are governed by formal policy, which specifies that:

"No crop is to be accepted and processed which has been treated with or grown on land treated with a pesticide chemical which has not been accepted for registration by USDA for use in connection with all growing of the commodity involved * * * (and) the usage limitations which have been accepted by the USDA must be adhered to for the specific fruit or vegetable commodity to which they apply."

It is understood that to effect such a program requires not only extreme vigilance on our part, but complete understanding and cooperation on the part of growers.

The canning industry through its national organization (National Canners Association) and State and regional canning associations has initiated a program to inform all of the

canners throughout the United States of their responsibility in this matter, with suggested procedures for implementing control measures. This program also embodies cooperation with the U.S. Department of Agriculture Extension Service, land grant colleges, various State agricultural agencies, national and local farm organizations, the farm press, and various other means of educating those engaged in growing and processing.

A considerable tonnage of fruits and vegetables for canning are grown in your district, and therefore this subject is of importance to the growers of these crops. I am sure you likewise recognize the long-range economic effect on our community should consumer confidence in canned food become damaged. Negligence by a very small percent of the Nation's canners or growers can mean financial ruin for all, regardless of acreage location or who distributes the product.

For these reasons I am calling this matter to your attention so that you may be apprised of the action which we and other members of the processing industry are undertaking in this respect, and I am attaching a copy of the industry program.

Canned fruits and vegetables are today among the most economical buys the consumer finds on the supermarket shelves, and we intend to keep them that way through the use of every advance in agricultural and processing science which is consistent with the complete health safety of our products.

Should you have any questions or comments relative to our effort, I would be very pleased to hear from you.

Yours very truly,

W. F. WESTON,
Superintendent.

Imports of Lambs and Sheep

EXTENSION OF REMARKS

OF

HON. ROMAN L. HRUSKA

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. HRUSKA. Mr. President, in view of the import statistics in the last 2 or 3 years as compared with previous years, it is not difficult to realize that the sheep industry is justifiably alarmed and distressed at the serious threat to continued existence in the United States. My State of Nebraska is among those that are so concerned.

The sheep and wool industry is a vital one to the well-being of this country. Sound national policy would dictate that such measures as are available be taken to assure survival of the growing of sheep and the production of wool within the United States, and the avoidance of a situation of being totally dependent on imports for our supplies.

Steps in the direction of either tariff rates revision or of quotas on imports can be taken only through action before the Tariff Commission and a recommendation by it which will later be acted upon by the President.

Hearings before that Commission on this subject are currently in progress.

Among the witnesses who have been called to testify on the current and specific statistics, especially as they apply to Nebraska and Wyoming, are

Charles Jones, of Huntley, Wyo., president of the North Platte Valley Lamb Feeders Association; J. F. (Pat) King, of Morrill, Nebr.; and Lowell Wilkes, of Scottsbluff, Nebr.; who are members of that association.

It is from witnesses as these that the real, brutal impact of imports on the domestic industry will be clearly and forcefully presented and portrayed.

As a preliminary to their more specific and authoritative presentation, the Senator from Nebraska personally appeared before the Tariff Commission earlier today to present a statement on this general subject.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the Record the statement to which I refer.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR ROMAN L. HRUSKA
BEFORE THE U.S. TARIFF COMMISSION ON
LAMB AND MUTTON IMPORTS INTO THE
UNITED STATES

I appreciate this opportunity to appear before the U.S. Tariff Commission on the subject of lamb and mutton imports into the United States.

The prompt scheduling of this hearing on your own motion following the application of the National Wool Growers Association and the National Lamb Feeders Association was gratifying to all who are concerned with and affected by the growing competition from lamb and mutton imports facing this industry.

Much attention has been justly devoted to this recent development by the press and trade journals. It is abundantly clear that the industry is genuinely alarmed and distressed by the growing competition from abroad. Its concern with the present and prospective situation must not be ignored if our domestic production is to survive the new developments.

Under such circumstances, this hearing and the reported findings by the Tariff Commission will accomplish many good purposes. In the first place, a record will be available against which we can substantiate or dispel the apprehensions of the lambgrowers.

The alarm, by the way, over the present import situation must not be underestimated. With the information presented at hand, it is reasonable to say that the picture has changed over night. Shipments of mutton into this country increased from 17.2 million pounds in 1958 to 47.3 million pounds in 1959. Imports of lamb climbed to 9.5 million pounds last year as contrasted with 6.8 million pounds in 1958.

The total imports of lamb and mutton were more than twice as high in 1959 as in 1958, and 15 times as high as the 8-year average from 1950 to 1957.

We are told that Australia and New Zealand have immense sheep populations. These countries are seeking new markets, especially since the termination of an agreement to supply the United Kingdom market with certain quantities of lamb and mutton. Indicative of this, in addition to increases in imports of dressed lamb and mutton, last fall two shipments of live lambs, and so far this year a third, each numbering about 25,000 head, were imported from Australia.

The long-range and total meaning of these figures I will leave to those present and intending to testify. They are better versed in the economics and familiar with the statistics which pertain to this situation. They are prepared to furnish the desired analysis and evaluation which might assist you in this investigation. I will make only one, pos-

sibly self-apparent, observation. As matters now stand, such foreign production spells competition under increasingly adverse conditions for American producers.

Furthermore, we do not need to speculate as to how soon such conditions will endanger the industry generally. The growers have already experienced a sharp drop in ewe prices. Also, last fall when imports of dressed lamb were heavy, growers received 15 percent less for their lambs than the year before, which was 7 percent lower than the average for the last 5 years.

The inescapable fact is that our Australian and New Zealand competitors can deliver lamb in this country considerably lower than our production costs. Furthermore, the marginal difference cannot easily be overcome. It is estimated that, to compete with the foreign price, our producers would have to be able to raise lamb for about one-half of what it costs today. Faced with steadily rising production costs, rather than declining, this means that the industry is virtually unable to match the foreign price.

Against this background of large and continually increasing imports, the need for the industry to turn to the Tariff Commission for protection of the domestic production is clear and urgent.

With me this morning are Mr. Pat King, of Morrill, Nebr., and Mr. Lowell Wilkes, Scottsbluff, Nebr., both representing the North Platte Valley Lamb Feeders Association. They join the many others present in urging this investigation under section 7 (the so-called escape clause) of the Reciprocal Trade Agreements Act. They have prepared a thoughtful statement with the knowledge that, only upon a finding that dressed lamb and mutton and live lambs are being imported into this country in such quantities as to cause or threaten to cause serious injury to the domestic industry, can the desired relief be recommended by the Tariff Commission.

I subscribe fully to the idea that an application be made to the Tariff Commission under this provision of the act. The action of the Commission, furthermore, in recognizing the urgency of their case by setting this hearing was indeed welcomed by all of us. Through your investigation will the industry obtain a full report regarding the current situation and the expected trends of the market.

Any action taken by the Tariff Commission must be geared to the established facts of immediate or threatened injury. In this respect, the reported findings will furnish the information and lay the foundation for recommendations balancing the needs of the industry and the public at large.

I commend to your attention the statements that will be made by the representatives of the industry present here this morning.

May I urge that careful consideration be given to establishment of action affording a proper and fair measure of protection to the domestic production of this vital industry.

St. Lawrence Seaway: Engineering Marvel; Economic Fizzle

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. DAGUE. Mr. Speaker, an editorial appearing in the Sunday edition of the Philadelphia Inquirer, entitled "Still

Waiting for Spring on the Seaway," effectively points up the one feature; namely, the 4 months' freezeup, that persuaded many of us to vote against the project when it was originally before the Congress.

The Inquirer editorial is prefaced by this observation:

This is the first day of spring, by the calendar, but the ice is still hard along the St. Lawrence Seaway, where not a ton of ocean cargo has been moved since last December 3.

And then, to emphasize the vast difference between the seaway and a truly year-round waterway, the Delaware River, the Inquirer zeroed on the obvious shortcomings of a transportation medium that is out of service for 4 months out of every year in these words:

The St. Lawrence Seaway rates high as a product of human ingenuity, but it simply is not in the same class with the Delaware River when it comes to moving cargoes—whatever the season.

Last year, before the seaway went into deep freeze in December, it handled 20 millions tons of cargo. That's about one-fifth the tonnage on the Delaware in 1959.

Finally the Inquirer concluded with these comments:

The St. Lawrence Seaway may be an effective avenue of maritime commerce within narrow limitations, but its value and efficiency have been vastly overrated. The American people should be told more about the superior facilities provided by the Delaware River and the port of Philadelphia. And no waiting for the ice to break up in April, either.

Mr. Speaker, there is little that I can add to emphasize the facts of a situation which the quoted editorial has scored on all essential points. I want to reaffirm, however, that these facts were before the House when many of the members voted against a project that could never be reasonably efficient and which will always constitute a two-pronged attack on Pennsylvania; namely, by bypassing the port of Philadelphia and at the same time exacting so much from our taxpayers to pay for what has turned out to be an economic disillusionment.

Coastwise and Intercoastal Shipping Problems Ignored in Commerce Department Report

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. ENGLE. Mr. President, as a firm believer in the need for an adequate U.S. merchant marine, to serve both the foreign commerce of our country and its logistics requirements in time of war or national emergency, I have awaited with much interest the report on Federal transport policy which the Department of Commerce undertook at the request of President Eisenhower.

That report has now been made, and given broad publicity. Our Committee on Interstate and Foreign Commerce, which likewise is conducting a study of the Nation's transportation policies, facilities, and needs, has a particular interest in this report, and I will have something to say about it at a later date.

Today I would like to direct attention to an editorial which appeared in the New York Journal of Commerce, under date of March 17, anent the Commerce Department report. Particularly I would like to quote one short sentence from the report, which goes as follows:

It is almost incredible, in fact, that a survey covering so broad a transport field, and going into some of its aspects in such detail, should ignore the problems of coastwise and intercoastal shipping, now fighting with its back against the wall on issues that cut across the most vital nerves of Federal transport policy.

So deplorable is the condition of the coastwise and intercoastal shipping industry, that since we began our committee hearings in this field late in February, the one remaining common carrier vessel serving Pacific coast ports has been forced to suspend operations. Thus, for the first time in this present century, except possibly for a year or so during wartime, the Pacific coast is without a single vessel offering itself as a common carrier to transport the lumber, canned goods, and many other items which traditionally have been carried by vessels in the coastal and intercoastal trades.

When the Commerce Department, which was established to foster and develop transport facilities to serve the country's needs, ignores a situation such as this, which is clamoring for redress, it lays upon the Congress, and, in a special way, upon our Senate Committee on Interstate and Foreign Commerce, a responsibility for action which cannot and will not be ignored.

I ask unanimous consent that the editorial from the Journal of Commerce be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

YET TO COME

It is not fair to dub the Mueller report on Federal transport policy "just another Weeks report," as some carriers are doing, with reference, of course, to the survey released by then Secretary of Commerce Sinclair Weeks in 1955, only to vanish shortly thereafter into obscurity.

Perhaps it was due to the very fact that the present Secretary feared this appellation and determined to avoid it that the Commerce Department's new approach (Federal transportation policy and program) became a far broader, more penetrating and more thoughtful document than its predecessor.

That something is wrong with our transportation system, with the Federal law that governs it and with the administrative apparatus regulating it is getting more apparent every year. The financial deterioration of the railroads, the vast complexity of the rate structure, the constant battles between carriers, the great wastage of time, money and talent on trivial regulatory cases, the glacial slowness of ICC procedure and the inequities of tax and regulatory poli-

cies—all testify to the need of not one, but many broad changes. It is, indeed, high time that the seriousness of the problem should be stated in terms as somber and in a perspective as broad as set out in the Mueller report.

But to say this is not to say that this report lived up to its promise, not even in its statement of the problem, which is clearly its strongest section.

It is almost incredible, in fact, that a survey covering so broad a transport field, and going into some of its aspects in such detail, should ignore the problems of coastwise and intercoastal shipping, now fighting with its back against the wall on issues that cut across the most vital nerves of Federal transport policy. It is more understandable, but still regrettable, that its authors could not come to grips with two problems of great moment to the trucking and railroad industry, the multiplicity of State weight limitations in the first instance, and of State and local taxation in the second.

So while the picture presented is graphic, it is incomplete. And because it is incomplete, the recommendations which have now emerged are lopsided, and as strangely vague in some instances as they are surprisingly specific in others.

Nearly all carriers can find something of what they want in this report.

If the rails are chided for showing too little imagination, for cutting rates in the wrong places and not cutting them in the right places, they have the satisfaction of knowing the report's authors want ICC to be more lenient on them in setting floors on rates, and want it stopped from suspending their proposed rate changes just because some other carriers protest. These are important points.

If the Mueller report would saddle trucks and water lines with user charges and deprive them of some of their current protections against rail competitive rate cutting via ICC, it supports their claims for a greater integration of transport through joint rates and indicates that, if the rails are given these added advantages, they may get them only at the price of losing some of their exemptions from antitrust prosecution.

It is quite possible that all the different policies the report advocates could be pursued simultaneously (including a greater coordination of Federal transport controls) with benefit to the transport industry and shippers alike. But can they? We may never know.

The trouble is in the maldistribution of weight among the points put forward. The report states precisely where out-of-pocket costs should be set in computing the railroad rate minima. But when it gets around to user charges on inland bargelines and airlines, it speaks only in terms of principles. And it is even more vague in suggesting a change in the protection weaker carriers might be granted under the antitrust laws. Having just touched upon the subject, it promptly dropped it.

We would not say that the Mueller report is a prorailroad document loaded against other types of carriers. But because it is as specific in recommending certain changes in Federal regulatory policy that the railroads want right now as it is vague in holding out compensating benefits to other carriers, we cannot altogether blame other sections of the transport industry for feeling aggrieved.

This does not cancel altogether the soundness of some of the major recommendations contained in the Mueller report, but it does pretty well dash the expectations of those who hoped this would turn out to be the definitive or ultimate survey of U.S. transport policy. That, unfortunately, is yet to come.

Here Comes Your Airmail—By Train

EXTENSION OF REMARKS OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CUNNINGHAM. Mr. Speaker, there has recently appeared in Washington newspapers an interesting message from the Southern Railway System. Under a picture of a diesel engine pulling a train through a snow storm, there is this caption: "Here Comes Your Air Mail—And Your Highway Mail, Too."

The picture and caption tell quite graphically the story of how the Post Office Department—and private business, too—depends on the railroads when all other means of transportation fail.

The message continues:

Every year, the railroads are being squeezed out of more and more of the mail-carrying business. Mail once hauled by rail is being diverted, instead, to highway trucks and to the airlines.

But what happens when the weather gets ornery—when trucks bog down on snow covered highways and planes are grounded?

You guessed it. Back to the railroads it comes in a veritable flood. Then the railroads get the mail—and get it through, too. All of it. Until the sun shines again.

The proven ability of the railroads to carry the mail under any conditions and in all kinds of weather didn't "just happen." Railroad transportation is dependable transportation. And in their mail-handling equipment and facilities, railroads have an investment of about a billion dollars.

During the recent series of bad storms throughout the South, railroads were called upon many times and in many places to help carry on the postal tradition that the mail must go through. And it did.

But if diversions to other carriers continue, the day may come when railroads will not be able to move all mail at the drop of a snowflake. And if this ever happens, all America will be the loser.

It is signed by Mr. Harry A. DeButts, president of the Southern Railway System.

Mr. Speaker, this message has a significance for Congress. We all recognize the importance of the railroad industry, as everyone does. But we must do more than merely recognize this importance. We must take action to see that this most vital mode of transportation is healthy and ready for emergencies, not only those caused by inclement weather, but the emergencies, related to national defense.

I do not believe it is any exaggeration to say that this country could not have won recent wars without the railroads. Certainly we could not carry out our national defense effort today without the tremendous moving job done by the Nation's railroads.

There are many bills before Congress which would aid the railroads in one way or another. I would call attention to H.R. 9488, which would prohibit the diversion from the railroads to the airlines of first-class mail on which airmail

postage has not been paid. There are several companion bills to H.R. 9488, which I introduced early in this session, among them H.R. 9741 by the gentleman from Pennsylvania [Mrs. GRANAHAN].

A companion measure has also been introduced in the Senate, S. 3214, by Senator ANDERSON, of New Mexico.

I am hopeful that there will be early hearings on the House bills before the Post Office and Civil Service Committee.

It does not make much sense for the Government to engage in any practices which would hurt the railroads when the Nation depends on the industry so much. Unless we act most carefully in promoting competing means of transportation, we will surely find we are hurting the industry which carries the bulk of the freight which is moved in this Nation. Unless we are careful, we will find the railroads will not have the ability and capability of handling the load—of mail, of defense freight, and of private business—which we expect them to carry when other forms of transportation temporarily fail or when special needs arise.

Biographical Sketch of Ernest Henderson

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief biographical sketch of Mr. Ernest Henderson, president of the Sheraton Corp. of America and a distinguished citizen of Boston. I bring this to the attention of the Senate because of the publication yesterday by the David McKay Co. of "The World of Mr. Sheraton," the autobiography of Ernest Henderson. This autobiography affords an insight to the workings of the American economic system as well as to the genius of one of Massachusetts' leading citizens.

There being no objection, the sketch was ordered to be printed in the RECORD, as follows:

ERNEST HENDERSON, PRESIDENT, SHERATON CORP. OF AMERICA

The head of a system of 54 hotels, with over 25,000 rooms, maintained by a staff of 21,000 people, yet a man who finds time to be proficient in many dissimilar fields, is Ernest Henderson, president of the Sheraton Corp. of America.

In addition to directing operations of the one-third-billion-dollar hotel empire from the Boston home office, Mr. Henderson travels an average of 50,000 miles a year between the 34 cities that have Sheraton hotels and numerous other centers around the globe to scout out new locations—yet this modern Yankee trader still finds time to: collect antiques, with which he sometimes furnishes hotel luxury suites; play several musical instruments and compose popular tunes and become an accomplished color photographer. He is an avid radio ham, operating a 1,000-watt broadcasting set from his home, from which he can establish con-

tacts with radio hams in 40 countries around the globe.

Mr. Henderson's heterogeneous interests perhaps developed from what was an unusual background and schooling for a boy born in Chestnut Hill, in the suburbs of Boston on March 7, 1897. He was the son of Bertha von Bunsen and Ernest Flagg Henderson, a historian whose work involved research in many libraries throughout the world, with the result that young Ernest attended schools in France, Germany, and Switzerland. He also attended Noble and Greenough and Browne and Nichols in this country, before entering college. He then entered Harvard University, with the class of 1918, proficient in several foreign languages.

During his freshman year, young Henderson first met Robert Lowell Moore, a classmate who was to become his business partner, closest friend, and cofounder of the great Sheraton Hotel system.

It was 1914, the early days of World War I, and there was an acute truck shortage, as a result of which, and in order to supplement their families' allowances, the two freshmen entered into their first corporate business venture.

At that time the Ford Motor Co. made no trucks, but some enterprising businessmen had discovered a serviceable truck could be made from a Ford chassis by removing the body of the Model T, taking off the rear wheels and welding on a more powerful rear axle.

This transformation involved discarding the new bodies of the Model T passenger cars and the two Harvardians found a use for them. They bought the surplus bodies from the truck makers for \$25 each, combed the used-car yards for 1912 and 1913 Model T's, and, with hammer, welding torch, and wrench, welded the 1914 tops to 1912 chassis, resulting in a net profit of about \$175 a car.

Within a few months their dormitory yard looked like a used-car lot, and business increased so much that the Model T magnates rented a barn and were employing classmates as mechanics on their assembly line.

The partners converted dozens of these automobiles before the Ford Motor Co. went into the truck-making business and the supply of automobile bodies dried up. But by that time, the two had lost interest in supplementing their college allowances, for when the United States had entered the war, they both left school to join the services.

Young Henderson became a pilot in the Navy Air Service, and was shipped to Europe where he logged most of his time ferrying Caproni planes from the Italian factories to the front in France. His service was not without hazard in the early days of flight and lackadaisical maintenance which the lieutenant soon discovered when he made a forced landing because a worker had left a hammer in the engine.

At the war's end, Ernest, his brother George, an infantry captain, and Moore, a first lieutenant in the U.S. Army Air Service, traveled all over Germany, picking up souvenirs. However, they were enterprising and picked up items that were scarce in this country and yet inexpensive in Germany because of inflation—articles like German Army binoculars, cameras, lenses, police dogs, and ship models.

From this start, after their return to the United States, was born Henderson Bros., importers, and the three friends alternately took summer trips to Europe to purchase their varied goods.

One item on which the partners took a flier that almost turned out to be a failure was a German ersatz suit, which retailed at only 50 cents. The suit turned out to be made of paper and unfortunately tended to disintegrate in the rain leaving customers occasionally in distress during moist

weather. The alert importers eventually found a market for them, however, and no complaints. They sold their stock to a Chicago undertaking concern who used the suits in their business.

Immediately after the war, young Henderson obtained a job with General Electric in Schenectady, N.Y., but after a year returned to Boston and rejoined his former roommate, Moore, for graduate study at the Massachusetts Institute of Technology.

Radio was in its infancy in 1920 when Henderson and Moore were studying in the M.I.T. laboratories. Good sets with loudspeakers cost a lot of money, but the partners discovered that with the profit from importing activities they could assemble radios and sell them for \$89.50, well below any competition.

They put together the first sets themselves, but after they got into production formed the World Radio Corp., and as the popularity of radio increased and the boom years came, they had 30 retail stores spotted around New England and were grossing \$1 million a year.

In the depression thirties, the partners bought control of an investment company, Beacon Participations, for \$10,111. They used this company to purchase real estate at deflated prices and within 5 years were in control of \$30 million worth. It was through Beacon that they made their entrance into the hotel business with the purchase of the Hotel Continental in Cambridge, Mass., which they bought in 1934 at an auction as an experiment.

By 1939, the chain had four hostels including the Sheraton in Boston, from which, with typical shrewdness, it derived its name. The hotel had a new neon roof sign. This helped influence the adoption of the name and urn symbol of the 18th century cabinet-maker, Thomas Sheraton, whom antiquarian Henderson had always admired.

In 1941, the complex capital structure of Henderson and Moore's various investment companies was simplified into one top investing company entirely financed by one class of stock. The company continued to pick up hotels and office buildings from banks, insurance companies and bondholders' committees that were having a hard time then. In 1943, it shifted from the investment company status to become Sheraton Corp., a real estate owner and manager. From then on, the Sheraton chain expanded rapidly, and in 1946, through an exchange of stock, the corporation took over the ailing U.S. Realty & Investment Co., acquiring valuable real estate and a listing on the New York Stock Exchange.

Starting in Boston and Cambridge, Sheraton moved outward, taking in Worcester, Rochester, New York, Baltimore, Philadelphia, Buffalo, Pittsburgh, Detroit, Washington, Chicago, St. Louis, and eventually San Francisco and Los Angeles, as well as eastern Canada with the purchase of seven hotels in the Cardy and Ford chains in 1949 and 1950. During the acquisition of these properties, Henderson and Moore instituted scientific methods of cost-cutting and management. Experts in interior decoration, engineering, personnel, entertainment, public relations and advertising were put to work providing the hotels with the best possible services and all benefited from the economy of control purchasing within the framework of local autonomy.

In 1956, in a \$30 million deal, Sheraton bought the Eppley chain of 22 hotels.

Until 1957, Sheraton had followed a policy of buying existing hotels and converting them to the high standards set, but in that year the first Sheraton-built hotel opened in Philadelphia—the \$16 million, 1,000-room Sheraton.

Another phase of Sheraton expansion began. The \$15 million luxury skyscraper Sheraton-Dallas opened this spring. The

200-room Sheraton Inn in Binghamton, N.Y., opened this spring and a 300-room hotel in Portland, Oreg., opened at the end of September. Other projects are underway at Baltimore, Md.; San Juan, P.R.; Kingston, Jamaica; Edmonton, Alberta; Minneapolis, Minn.; Oakland, Calif.; and Houston, Tex.

Despite all his corporation activities and the numerous hobbies he pursues, Mr. Henderson still reserves time for civic duties. During 1956-57, he served as president of the Greater Boston Chamber of Commerce, and was also a director of the United Fund drive. Mr. Henderson is now chairman of the board, Greater Boston Chamber of Commerce; he will soon retire as president of the World Trade Center in New England, in whose behalf he has been active in promoting international business for the prosperity and development of the six-State area.

In his spare time during the past year, Mr. Henderson has completed the manuscript of a book to be entitled "The World of Mr. Sheraton," to be released by David McKay Publishers, next February.

Mr. Henderson married the former Mary C. Stephens in 1923, and they have five children: Ernest III; Victoria Lee (Mrs. Thomas Mott Osborne II); Augusta Gurney deBunsen (Mrs. J. Carleton Petrone, Jr.); Barclay Stephens; and Mary Caldwell Stephens. There are currently seven grandchildren.

Johnny Kemp: 1960 National Easter Seal Child

EXTENSION OF REMARKS OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. BURDICK. Mr. Speaker, I am privileged and proud to pay tribute today to a young fellow North Dakotan who is an inspiration to all America and especially to all children and adults who live with crippling handicaps. He is, furthermore, outstanding proof of the fact that America cares what happens to its crippled.

This young man—10-year-old John Daniel Kemp of Bismarck, N. Dak., is the son of John B. Kemp, civil engineer in charge of the Federal roadbuilding project in western North Dakota. He is also the 1960 national easter seal child, chosen in recognition of his almost incredible conquest of a major handicap.

Johnny was born with only stumps of arms and legs. Today, because of the combined forces of many individuals, public and private health agencies brought to bear on his rehabilitation, and because of his own indomitable spirit, Johnny Kemp plays baseball, football, and marbles. He swims, draws, and writes. He attends regular school and gets better than average grades. He is an active member of a Cub Scout troop. He is a daily communicant at his church and he has a Sunday newspaper route. He is fully accepted as one of the boys in his neighborhood. All of this he accomplishes on two artificial legs and with two hook hands. It is his ambition to be a doctor.

Johnny is in Washington to further the annual Easter seal campaign of the National Society for Crippled Children and Adults and its affiliated units in all

of our States. He is working so the diversified professional services of this organization may be extended to more crippled boys and girls in addition to the quarter of a million now being helped in Easter seal treatment centers throughout our Nation. He wants to see all crippled children have the same chance at rehabilitation he has had.

In view of the fact that nearly 5 percent of our population presently can profit from care such as that provided by the Easter seal societies and because some 60,000 babies are born in this country each year with major crippling problems, and because Johnny Kemp appears here today as the representative of these millions of Americans, I therefore, commend and congratulate John Daniel Kemp for his remarkable achievement in personal rehabilitation. I wish him a long and useful and rewarding life and success to the Easter seal appeal for which he is working so unselfishly.

Students Take Stock Plunge

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. WILLIAMS of New Jersey. Mr. President, teachers in our public schools are continually finding new and novel ways to give students meaningful lessons on topics of great interest and usefulness. I have the feeling that many of these experiments and programs go largely unnoticed outside the classroom; they are accepted as a matter of course by the teachers and the students.

The Newark (N.J.) Evening News of March 10, however, did give considerable attention to one program in three civics classes in my hometown, Westfield, N.J. A teacher, James N. Sabbagh, has decided that the best way to help students understand the stock market is to help them participate in its activities, at least in a limited way.

As chairman of the Senate Subcommittee on Securities, I was particularly interested in his methods and in the students' response, which was decidedly enthusiastic.

Mr. Sabbagh has again demonstrated that a good teacher will usually find a way to make the most intricate subject understandable and even enjoyable.

At a time when American financial news is of worldwide importance, it is surely important for Americans to understand that news to the greatest possible extent.

I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

STUDENTS TAKE STOCK PLUNGE

(By Richard Y. Haver)

WESTFIELD.—The budding blue chip barons of Westfield are off to a slow start in the stock market, but optimism still prevails.

The youthful investors on the New York

Stock Exchange are members of three civics classes at Roosevelt Junior High School. They have pooled their resources, totaling \$53, and taken the plunge on one share of common stock of Pennsylvania Railroad and one of Detroit Steel.

But the nature of the market being what it is, the students soon learned the pot of gold was not close at hand. In fact their holdings have taken a dip in value, with "Det Stl Cp" down from 24½ (which the students paid) to 19½ late this week, and "Pa RR" off from 15½ to 14¼, a new low for the year.

MOANS AND GROANS

"These kids aren't discouraged yet," James N. Sabbagh, their teacher, observed. "They still come charging into the classroom each day and head for the bulletin board to check the closing prices. Lately all I've been hearing are moans, but back they come the next day expecting to see the chart line on the rise."

The idea of purchasing stock was conceived by Sabbagh a year ago, but initial classwork was restricted to having pupils choose and follow a stock through the graph method. The experiment was so successful Sabbagh decided to have a more detailed program with this year's classes.

The first step by the classes was the selection of a board of directors, consisting of two members and one alternate from each of the three civics classes. The board chose a chairman, secretary, and treasurer and decided that participation in the stock plan would be voluntary with a minimum of \$1 and maximum of \$2 from a student.

The board, which makes all decisions, purchased the two stocks, with the remaining money held for miscellaneous expenses. The faculty adviser only makes recommendations and votes only to break ties. At the end of the school year the stock will be sold and the money returned in proportion to the investment.

WALL STREET VISIT

To gain firsthand experience about the operations of the stock exchange the three classes toured the Wall Street building in January, about 6 weeks after they had purchased the stocks.

Sabbagh noted that "the students now have a better understanding of our basic economic, political, and social ideals. They are actually participating in free enterprise, but I should mention that their investments are by no means speculative, with the only objective capital gain. Such a practice would obviously destroy the purpose of our program."

But capital gain is not entirely forgotten. One student commented, "Right now it looks like I'm going to lose money on the deal, but it has been a great experience and fun just making like a financier."

His classmates are equally enthusiastic and agree the experience is a profitable one—academically, if not financially.

It Is the Red Chinese Who Block Exchange of Newsmen

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Mr. Roscoe Drummond from the New York Herald Tribune of March 19, 1960. It is strange that the erroneous notion is still

so widely held that it is our Government that is blocking responsible American newsmen from going into Communist China to observe and report conditions there, when in fact it is the Red regime itself which blocks such entrance. Their action seems to be the orthodox Communist practice laid down by Lenin, "In diplomacy words must never have any relation to deeds, otherwise how could it be diplomacy?"

The article follows:

THE RED CHINESE—THEY BAR EXCHANGE OF NEWSMEN

(By Roscoe Drummond)

After 2½ years of fruitless negotiation between the United States and Red China to bring about an exchange of working newsmen, the evidence is conclusive that the Chinese Communists want to continue to talk about it—and seem determined to prevent it.

Each side says that it favors reciprocal reporting privileges.

Each side blames the other for the fact that nothing happens.

From a study of all the official statements made since the talks began in August, 1957, it seems clear to me that the Chinese Communists do not want to exchange reporters with the United States but do not want to admit that they don't.

Here are the reasons why this conclusion now is inescapable:

1. From the beginning of the negotiations the United States has offered to Red China exactly the same rights and facilities for accreditation as the United States offered to every other country. Chinese Communist correspondents would be admitted to the United States on the same basis as British, French, Indian, or Soviet correspondents—and vice versa. This equal treatment Red China refuses to accept.

2. Red China demands something different. It demands an advance agreement that a precisely specified number of correspondents be guaranteed. Such an advance agreement would mean that by limiting its applications, Red China could require us to admit any individual it chose to nominate or else force us into violation of the agreement. No other country in the world deals with correspondents on this basis.

3. The State Department has validated passports to Red China for the representatives of 30 American news-gathering organizations. Red China has granted but one visa, this to John Strohm, an agricultural expert who wrote for the Newspaper Enterprise Association. Though claiming we prevent their correspondents from entering the United States, Red China has never made even one application for a U.S. visa so that we could permit them to do so.

4. Even if Peiping wouldn't undertake a larger exchange of correspondents with us, the New York Herald Tribune recently suggested a one-for-one exchange. The Red Chinese didn't say "No." They just didn't say anything.

It was to this end that the president and editor of the Herald Tribune sent on December 22 last a letter to Chou En-lai, Minister of Foreign Affairs of the Chinese Peoples Republic, making the following proposal:

"DEAR MR. MINISTER: The New York Herald Tribune has long believed that reciprocal reporting privileges in the Chinese Peoples Republic and in the United States would be beneficial to both our countries and would promote better understanding between our people. To this end one of our most experienced staff correspondents, who has served this newspaper for years, Mr. A. T. Steele, has applied for a Chinese visa. I am taking the liberty of asking if you would give this your personal consideration in the hope that you

also believe it would be desirable to have American journalists in China and Chinese journalists in America. . . .

"What I am suggesting, in good spirit and in good faith, is that one good way to begin is to take a modest and practical first step.

"I would like to see any Chinese newspaper and the New York Herald Tribune join in making such a beginning, which could well grow into larger reciprocal reporting privileges. For this purpose I hope you will authorize a visa for Mr. Steele and I feel sure I am correct in saying that an application for a U.S. visa for a Chinese correspondent will be welcomed in Washington.

"ROBERT M. WHITE II."

Two days after this letter was cabled to the Embassy of the Chinese Peoples Republic in London, the Herald Tribune received a cable from Yeh Shou-tseng, Third Secretary of the Embassy, stating that the letter had been received and transmitted to Peiping.

Result: Total silence; no visa for Mr. Steele; no visa request from any Chinese correspondent.

Fort Scott National Park

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. CARLSON. Mr. President, few Midwest cities can boast the historical significance of Fort Scott, Kans., evidences of which have been remarkably preserved.

Camp Scott was commissioned in 1842 as headquarters for troops and a few years later was officially named Fort Scott for the popular hero, Gen. Winfield Scott.

In the period from 1862 to 1865 Fort Scott was a vital point in the proslavery and free-State guerrilla warfare. With slave territory to the east and free-State Kansas territory on the west, Fort Scott was the center of the prewar conflict that gave the State the name of "Bleeding Kansas."

Today the military barracks of 1842 and one of the Civil War blockhouses, Fort Blair, are still standing on Fort Scott's historical site, the Carroll Plaza. The blockhouse, built in 1863, has recently been restored to its original form and surrounded by an embankment with a Civil War cannon at the entrance. It stands behind Headquarters House on a bluff that overlooks the north approach of the more than 100-year-old military road. Other buildings still standing at the site are officers' quarters buildings, hospital building, and bakery.

Local organizations and many prominent citizens in our State are endeavoring to have this area designated as a national park.

At a current session of the Kansas Legislature, meeting in January of this year, Senate Concurrent Resolution No. 6 was unanimously adopted, urging and requesting Congress to speedily act on pending bills which would establish a national historic site at Fort Scott, Kans.

Last December I requested the Department of Interior to send representatives from the National Park Service to

Fort Scott to further evaluate the possibility of designating this area as a national park. I am glad to report that this visit has been made, and their report is being further evaluated by the National Park Service.

An editorial written by Fred Brinkerhoff, editor of the Pittsburg Headlight & Sun, in regard to Fort Scott, appeared in the March 12 issue of that paper. Mr. Brinkerhoff is recognized as our State's outstanding authority on historical matters and in view of the State's centennial, which will be celebrated next year, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A SPOT IN HISTORY

Fort Scott has received new encouragement in its efforts to have the old Military Establishment site taken into the national park system. Service officials have just paid a visit to Fort Scott and been given information upon which there can be based a review of the proposal. This review has been promised. Other Government officials having to do with the proposal have reported adversely as to Fort Scott. Fort Scott, the military post, they have said, was not important enough in history to warrant its being taken into the national park system. But at Fort Scott Monday night the visiting officials were told of the significance of the old post in history and furnished with documentary evidence. Unfortunately eastern influence on the bodies making decisions, is great. Many of these persons never can see any value in anything in the Midwest. Here, officials are dealing with a subject that involves the Civil War and the years immediately preceding that war. The big battles and campaigns of the Civil War were east of the Mississippi, the largest ones in coastal or near-coastal areas. Historians of the period naturally devoted most attention to the major struggles in the East. Later, attention has been given the war in the West, meaning the Mississippi valley and nearby, on the east side of the Mississippi. Historical appraisals were sound and so historians have long bypassed the war on the western border, the battles and campaigns and other operations west of the Mississippi. But it should be crystal clear that the Civil War history cannot be written without including the operations west of the Mississippi. Grant's early operations were in Missouri. Sherman had a command in that State. The possession of St. Louis was a vital thing for the Union cause. Missouri territory from St. Louis to Independence or Leavenworth was tremendously important to the Union cause. The Confederates fully recognized this fact. They organized operations and early battles, Wilson's Creek near Springfield and Pea Ridge in northern Arkansas were of great significance in the developing war.

For 4 years the armies of Price and other Confederate leaders campaigned through southwestern Missouri and northwestern Arkansas. There was action over in Indian territory in which Indian troops were involved. Up and down the Kansas border, from Westport south to Fort Smith and beyond in Arkansas the conflict raged. Throughout the entire war the rehabilitated Fort Scott—a post created 20 years before for the protection of the white settlers against the Indians—was used as a supply station for the Union troops operating in Kansas, Missouri, and Indian territory. Fort Scott was threatened by the Confederate forces throughout the war but it never was taken and stood there as a base of supplies

and the mobilizing point for Federal troops. And still Interior Department officials cannot see that Fort Scott had real significance in the Civil War.

Surely no history of the Civil War that overlooked the war west of the Mississippi, the war on the western border, could be written. No history of the war on the border, the war west of the Mississippi, that ignored Fort Scott as a major place, could be written.

The old buildings at Fort Scott, the plaza, and the grounds around that were in the establishment should in simple justice to millions of Americans who in future years will be touring their country to take a look at history firsthand, be put into the national park system.

Johnson's Position Stronger Than Ever

EXTENSION OF REMARKS

OF

HON. OMAR BURLESON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. BURLESON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial of March 13, 1960, from the Abilene Reporter-News, Abilene, Tex.:

JOHNSON'S POSITION STRONGER THAN EVER

It was no surprise when the Senate of the United States refused to impose a gag-rule on 18 southern Senators who were filibustering against a new civil rights bill.

It requires a two-third vote of all Senators present and voting to impose cloture on debate. The actual vote by which cloture was rejected was 53 against, only 42 for, or about 22 votes shy of the required two-thirds.

Senators on both sides of the party aisles crossed over to put the quietus of cloture. Whereas it is conceivable that two-thirds of all Senators might vote for some form of civil rights legislation, the point at issue was a gray horse of another color; namely, preservation of unlimited debate in a body that has shown a traditional hostility to gag rule.

Eventually, perhaps, some sort of civil rights measure will be put through; but it won't be what the extremists sought, and it could be something the South can live with without stultifying its views on the subject.

More than likely, the bill that passes, if any, will more closely resemble the moderate measure introduced by Senate Majority Leader LYNDON JOHNSON in January, a measure denounced by press and politicians of the South in ringing tones, than the administration measure introduced later.

This writer pointed out at the time that Senator JOHNSON might feel that acceptance of a moderate bill, like his own, was preferable to having a much more severe group of laws shoved down the South's throat by a coalition of Republican and northern liberal Democrats.

The result of the vote on cloture, along with one or two other Senate actions at the time, strengthening this view, and the raucous outcry against JOHNSON in the Deep South may simmer down without any permanent impairment of his presidential ambitions, if any.

Senator JOHNSON's mastery of Senate leadership suffered no setback in the hullabaloo over cloture. The man is still in command of the situation, the most powerful single figure in the Nation's Capital.

Those who had begun to count him out as a presidential potential might find it expedient to revise their estimate.

East-West Center for Cultural and Technical Interchange

EXTENSION OF REMARKS

OF

HON. HIRAM L. FONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. FONG. Mr. President, recently the Globe-Gazette of Mason City, Iowa, published a very apt editorial entitled "Hawaii Is Indeed Crossroads of World."

The March 1, 1960, editorial points to Hawaii as the meeting place and link between East and West, between Orient and Occident.

I ask unanimous consent that this editorial, calling attention to the proposed International Center at the University of Hawaii, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAWAII IS INDEED CROSSROADS OF WORLD

Manifest destiny has a peculiarly important role for our 50th State, Hawaii. That's to be a meeting place and link between East and West, between Orient and Occident.

With the granting of statehood to the islands, the opportunity and the challenge have been expanded. And, it should be added straightway, the Hawaiians are ready.

An International Center, integrated with existing facilities of the University of Hawaii and the State of Hawaii, has been set in motion. Its program is complete and far-reaching.

Students from abroad, especially southeastern Asia, as well as American youth, will study and consider together the trends of history and the pressing international issues.

An international training facility, utilizing the university's best minds, will train Asian students in agriculture, community services, education, health, industry, and social welfare.

Scholarships and fellowships to the center will be provided for selected Asian and American students. Distinguished teachers from both Asia and the Western World will be available.

Translations of significant materials to and from English and Asian languages is planned. Tutors and counselors with a mastery of both eastern and western languages will live in the special dormitories.

The University of Hawaii in a half century has grown from a single college to 7, from 500 students to 7,000, from a faculty of 13 to 500.

Under the guidance of Dr. Gregg M. Sinclair, who served as president for many years, the university placed special emphasis on its departments of Asian studies.

Now, in retirement but still vigorous, Gregg Sinclair is giving much time and attention to this international center of which we speak. It's constantly in his thoughts and dreams.

This year the Hawaiian Legislature revealed its concern by appropriating half a million dollars to construct the first unit of a building to house foreign students.

Two hundred students from other lands, most of them Asians, already attend the university under visas. The international center would be a projection and amplification of existent activities.

The oriental collection of the Sinclair Library, established in the thirties, contains 75,000 volumes and some 350 periodicals, with newspapers published in Chinese, Japanese, and Korean.

Admitting Hawaii to statehood, after having granted independence to the Philippines, was a 10 strike for American prestige in the uncommitted parts of the world.

President Eisenhower in several public utterances has directed attention to the strategic situation of the Hawaiian Islands.

"To the islands," he once observed, "Asia and Europe and the Western Hemisphere have contributed their peoples and their cultures to display a unique example of a community that is a successful laboratory of human brotherhood."

The active interest and support of mainland Americans in making this manifest destiny materialize will be welcomed, we are assured.

Southern Senators at the Pass of Thermopylae

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. GRANT. Mr. Speaker, in yesterday's Montgomery (Ala.) Advertiser, there appeared an article entitled, "Southern Senators at the Pass of Thermopylae," by Judge Walter B. Jones.

This is a tribute to the 18 southern Senators who are presently battling for constitutional government and States rights. This article should be read by all liberty-loving people:

SOUTHERN SENATORS AT THE PASS OF THERMOPYLAE

(By Judge Walter B. Jones)

Two of the most heroic fights in all recorded history are the battle at the Pass of Thermopylae and the defense of the Alamo during the war for Texan independence.

You recall that during one of the wars between the Persians and the Greeks, 480 B.C., the defense of the little pass leading from northern to central Greece by King Leonidas and 300 Spartans made history which will never be forgotten. The Spartans opposed the Persian Army of about 40,000 soldiers, holding the mountain pass for a whole day after the treacherous Ephialtes showed the Persians an unguarded pass over the mountains so they could attack the Spartans in the rear. When it was suggested to the Spartan leaders that they should retreat because the Persians had so many archers, the flight of their arrows would darken the sky, the Spartan remarked: "So much the better, we shall fight in the shade."

The 300 Spartans stood their ground. Leonidas was killed and not a Spartan was left alive. Years after a monument was erected at Thermopylae to the gallant Spartans. This was the epitaph:

Go tell the Spartans, thou that passest by, That here, obedient to their laws, we lie.

Then history tells how Travis, Bowie, and Crockett and 180 Americans defended the Alamo in 1836. They were besieged by 7,000 Mexicans under Santa Anna for 2 weeks. The Americans were all killed and massacred, but around them lay dead 1,500 Mexican soldiers. "Remember the Alamo" became the war cry of the Texans.

And so today there stands in the U.S. Senate at Washington a group of 18 southern Senators battling with Spartan-like courage for constitutional government, waging heroic struggle against an overwhelming majority from the rest of the country.

Who are these 18 southern Senators? What States made them Senators of the United States?

LISTER HILL and JOHN J. SPARKMAN represent Alabama; JOHN L. MCCLELLAN and J. W. FULBRIGHT, Arkansas; SPESSARD L. HOLLAND and GEORGE A. SMATHERS, Florida; RICHARD B. RUSSELL and HERMAN E. TALMADGE, Georgia; ALLEN J. ELLENDER and RUSSELL B. LONG, Louisiana; JAMES O. EASTLAND and JOHN C. STENNIS, Mississippi; SAM J. ERVIN, Jr. and B. EVERETT JORDAN, North Carolina; OLIN D. JOHNSTON and STROM THURMOND, South Carolina; and HARRY F. BYRD and A. WILLIS ROBERTSON, Virginia.

These Senators of the United States from nine Southern States represent the very flower of American statesmanship. Their total length of service in the Senate is 261 years. RUSSELL and BYRD have been in the Senate for 27 years, LISTER HILL 22 years, EASTLAND and MCCLELLAN 17 years, JOHNSTON of South Carolina 16 years, HOLLAND, ROBERTSON, and SPARKMAN 14 years, and other southern Senators for many, many years.

Seven of the U.S. Senators have served as Governors of their States: HOLLAND, RUSSELL, TALMADGE, ELLENDER, JOHNSTON, THURMOND, and BYRD. Many of them served in the House of Representatives for term after term. Many of them were great trial judges and one of them a member of the supreme court of his State.

These Southern Senators of the United States hold the chairmanships of nine powerful Senate standing committees: ELLENDER of Louisiana, Agriculture and Forestry; RUSSELL of Georgia, Armed Services; ROBERTSON of Virginia, Banking and Currency; BYRD of Virginia, Finance; FULBRIGHT of Arkansas, Foreign Relations; MCCLELLAN of Arkansas, Government Operations; EASTLAND of Mississippi, Judiciary; HILL of Alabama, Labor and Public Welfare; JOHNSTON of South Carolina, Post Office and Civil Service.

These great statesmen from nine Southern States, with loftiness of purpose, are standing in the Senate hour after hour, day after day, waging, under the leadership of Senator RUSSELL, a courageous battle against the civil rights bill, a bill which would take away from the States of the Union their time-honored right to determine the qualifications of voters in the State. The bill would place the rights of the States in this respect under referees appointed by Federal judges and would nullify the State constitutions. The bill would enact punitive legislation against the South. Its aim is to punish the South because it stands for obedience to the Constitution.

The States have never delegated to the Federal Government at Washington the power to control elections in the States. There is not one line in the Federal Constitution giving either Congress or Federal judges the power to control and direct elections and voting in the States. The American Bill of Rights distinctly says that the "powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

It is a tragic thing that a partisan majority in Congress, on the grounds of political necessity, are attempting to change our form of Government. This majority seeks to take away from the States power that has always belonged to them, and give to Federal courts and judges a power the Federal Constitution denies to them. The letter of the Constitution has not changed in all the years since its adoption. It speaks today as it did when it came from the hands of its framers, and it speaks plainly against the civil rights measure now before the Senate.

Northern papers and magazines, the New York Times, the Herald-Tribune, Life, Time, Look, and other publications, denounce the 18 statesmen from the South, when they ought to be praising them for their courage

and determination in battling for the preservation of the Constitution. These Senators are pictured as standing in the way of the right to vote, and this they are not doing. They are standing for the Constitution. They are battling for the preservation of States' rights for local self-government, and they stand in the Senate unafraid and undaunted.

As I think of these 18 American statesmen, representing 9 Southern States in the Senate of the United States, and recall their courageous stand—call it "filibuster" if you want to, and probably Leonidas at Thermopylae and Crockett and Bowie at the Alamo "filibustered," too—I recall William Wetmore Story's stirring words:

Speak, History! Who are Life's victors? Unroll thy long annals and say, Are they whom the world called the victors—who won the success of a day? The martyrs, or Nero? The Spartans, who fell at Thermopylae's trust, Or the Persians and Xerxes? His judges, or Socrates? Pilate, or Christ?

Cuba and Communism

EXTENSION OF REMARKS

OF

HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cuba and Communism," which was published today in the Wall Street Journal.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CUBA AND COMMUNISM—BUSINESS, PROFESSIONAL MEN NEAR DESPAIR AS LEFTISTS' POWER GROWS—TEN OF GOVERNMENT'S TOP 50 ARE REDS OR SYMPATHIZERS; PATROLS TEACH YOUNG—KEY JOBS FOR FOREIGN LEFTISTS

(By Cal Brumley and Ed Cony)

HAVANA.—"Now, our country is nobody's private property. It is collective property—that is to say, the people's."

"One worker is not going to go on exploiting the other workers. All rewards will be equal. If we establish 10 factories, one earning much, the others less, we will not reward one more than the others. No, sir."

These words are Fidel Castro's. He uttered them one night recently over TV as he told the Cuban people what his revolutionary government had in mind for them. At the very least it must be described as a form of socialism. And many, both here and in the United States, see it as a communism.

A young Cuban businessman, still in his twenties, says in bitter, exasperated tones: "It doesn't matter that Fidel himself isn't a Communist. Just look at what his government is doing. Study the decrees they're issuing."

A U.S. official in Washington offers this appraisal: "We see nothing to stop the leftward drift of Castro. The Communists seem to know the right buttons to push to get the reaction from him they want. The Reds couldn't ask for a better front man than Fidel."

A LEFTWARD MARCH

A visitor to Havana is struck by the degree of unanimity among business and professional groups here—both Cuban and foreign—that Prime Minister Castro's govern-

ment marches leftward at an accelerated pace and that there's no hope of stopping it.

A few months ago these same people weren't nearly so pessimistic. There was a feeling then that the influence of moderate advisers would limit Mr. Castro's leftward drift. But many of these moderates since then have quit the government or have been fired. Now the increasingly violent anti-U.S. line of the government and the spate of government decrees affecting business adversely are seen as the results of calculated Communist policy. Business and professional men here now commonly accept the view that the Communists have penetrated deeply into the government, the army, the labor unions and the educational system.

This view may be biased, of course. Many business and professional men, in these groups, especially those in the American colony here, have viewed Mr. Castro with suspicion right from the start. And some, attracted by the seeming stability offered by the Batista regime, were considered pro-Batista almost until Castro's predecessor fled on January 1, 1959.

While it may be subjective, the concern over the Castro government is genuine, and, it's shared by foreign diplomats and other impartial observers here. Businessmen are close to despair. "Castro will take every last acre of land we have, eventually, and drive us right out of the country," gloomily predicts an American sugar executive here. Already, this official has seen men from the Institute for Agrarian Reform (I.N.R.A.) take 3,000 head of his company's cattle and burn the I.N.R.A. brand into them. "We have no receipt or no idea of what—if anything—the government will pay us for them," he says.

The vice president of another American-owned sugar company says flatly: "They are deliberately out to destroy private enterprise in Cuba."

HIGHER LABOR COSTS, TAXES

A man in another line of business—he asks that it not be identified—says without the slightest bit of hope that he can last perhaps 3 more months. "Then," he says, "I will have to close down because of the higher labor costs, higher taxes and declining business. But it is forbidden to close down. So the government will intervene (seize and operate the business without formally expropriating it). In normal times I'd have an equity of \$400,000. But now I won't get a cent. I will have to leave Cuba and try to start over again somewhere else."

A Cuban businessman in a service industry reports he sees long-time business clients "being ruined every day." He is certain it is no accident. "Cuba today follows the straight party line. Some people say Fidel uses the Reds. I think it is the other way around. He's a virtual prisoner of the Communists."

Although it is a matter of debate whether Mr. Castro is anyone's prisoner, Communists certainly do have a chance to get his ear. One man here whose job it is to analyze the political scene estimates that 10 of the top 50 Government posts are now held by Communists or extreme leftists. "All of them are in key positions," he adds. And an associate of his observes: "It's really academic whether these men carry Communist Party cards in their pockets or not."

LEADING LEFTISTS

Among the 10 top leftists are such individuals as Raul Castro, Fidel's brother and chief of the army; Ernesto "Che" Guevara, the Argentine revolutionary who heads the National Bank; Antonio Nunez Jimenez, chief of INRA, which has become a sort of super-state with a mission to run a large slice of the economy; Armando Hart, who holds the Education post in the Cabinet; Foreign Minister Raul Roa, described as a "semi-Red with a long-held hatred of the United

States"; and Osmani Cienfuegos, Minister of Public Works.

These key men are bringing others of like ilk into the Government to fill posts just under the top rank, as well as posts down the line. "Communists are sprinkled all the way through the Government now," sums up one informed American. Che Guevara, for instance, in the short time since he succeeded moderate Felipe Pazos as head of the National Bank, has brought in a new general manager, a new secretary of the bank, a new chief of the loan department, and a new head of the monetary stabilization fund. "They all sympathize with Che politically, and you know what that means," says one U.S. official.

A Cuban businessman says: "In my limited contacts with the bank, I've run into at least five Communists—a majority of them from other countries. One Chilean told me the party had ordered him up here to help out the revolution."

While no one has been able to make an exact count of the Communists and pro-Communists who have been coming into Cuba from other lands to help out, the number is considerable. One man in the Government ventures there are "at least 300" of these foreign technicians from Chile, Guatemala, Peru, Argentina, and Mexico. It is too early for the Russian technicians to be appearing under the new Cuban-Russian trade and aid pact, but there is no doubt they'll be coming soon.

A RUSSIAN BEACHHEAD

In Washington a U.S. official says bluntly: "The Cuban-Soviet pact gives Russia a propaganda and subversion beachhead in Latin America such as they've never had before. The Soviet technicians will begin to pour in soon."

Already, the Cuban Government is aiding Reds from other lands. Latin Communists, unable to get passports from their home governments to visit European or Asian countries, come to Havana. Here, they get these highly prized documents from the Castro regime just as if they were Cuban citizens.

Although these passport irregularities have been a well-kept secret, a source in Havana in a position to know the situation says: "They began issuing these passports 6 to 8 months ago, and since then, there's been an uninterrupted flow of Latin Communists to such cities as Vienna, Geneva, Cairo, Peking, and Moscow."

Communist influence in the Government spreads out to infect many other areas of Cuban life. Consider the handwork of Education Minister Hart, who has completely reorganized the school system. Private school owners fear his Decree 2099, which spells out the reorganization, threatens the end of private schools in Cuba.

Paragraph 178 of the decree, for instance, gives the Government the right to intervene in any school whenever Government education officials "consider this measure convenient because of problems which would affect educational interests." This broad, ill-defined power "means one student can go up to the education ministry and complain that we have disorder in the classroom—and that is all it will take for the Government to seize the school," says one educator. "Or one parent or one teacher could do it," he adds.

HIGHER TEACHER PAY

Private schools already are being buffeted by a decree of the Minister of Labor which has raised teachers' salaries from 22 to 100 percent. A stiff tax increase has raised costs, too. "And at the same time, our income is going down," says the director of one private school getting out his books and showing a visitor that his February billings were off 36 percent from February, 1959. "We depend on the economy of the country," he says. "Some people can no longer afford to

send their children to us; others are leaving the country." This educator is convinced his school will be either bankrupt or intervened before the next school year rolls around, and he claims this is just what the Government wants.

Next year, all Cuban schoolchildren are supposed to learn their geography from a new book by I.N.R.A. Chief Nunez Jimenez. This "revolutionary geography" will expose the young students to political and economic ideas heavily flavored with Marxism and generously seasoned with nationalism.

One passage holds that whoever owns the lands, mines, woods and other national wealth will dominate transportation, commerce and industry, too. "Political control is only a consequence of economic control," Mr. Nunez Jimenez adds. From this Marxist idea, he goes on to say that foreign companies dominate the sugar industry, "the basic wealth" of Cuba. He also points to foreign control over mining concessions.

He says this concentration of "wealth in North American hands weakens" Cuba. He claims it dilutes the culture, habits, folklore "and even our language." He deplores the tendency in Cuba to call "bodegas" grocery stores, and "escuelas" schools. "The greatest task for Cuba today is to struggle against all this, so the land will be ours, the mines nationalized, the industries run by us," Mr. Nunez Jimenez exhorts his youthful readers.

STRESS ON U.S. EXPLOITATION

It certainly is no secret that the army indoctrinates its recruits. One American here explains that almost every course of army instruction includes "discussions on the revolutions." He says the instructors emphasize American "exploitation" of Cuba. No less a figure than Che Guevara, as head of army training, directs the indoctrination program.

In addition to the regular army, thousands of other Cubans are getting the rudiments of military training in workers' militia, farmers' militia and in student militia. And the training includes "civic indoctrination," as well as close-order drill.

"In this indoctrination, they don't openly talk of communism," says a Havana businessman. "Instead, they say there are two sides in the world—the capitalists and the socialists. We have four of our own workers here in the office taking the course and already they tell us they're on the side of the Socialists. All four are good Catholics, too, but they've been brainwashed," says this businessman sadly.

One rule on militia membership: Excluded are Cuban employees holding responsible positions in foreign companies.

Cultivation of the young mind is being pursued through a militia-type program, as well as through school books. One Cuban here tells this story: "My 15-year-old son joined a juvenile patrol at the urging of his friends who told him he'd learn scouting and marching. They picked up the boys in Jeeps and station wagons and took them to the Cabana military fortress for training."

POLITICAL AWAKENING

This parent didn't become concerned until suddenly he began hearing his son talking about "oppression of the masses" and about "imperialist capitalists exploiting the Cuban people." He found his son's sudden "political awakening" stemmed from indoctrination classes with the juvenile patrol.

For the training of even younger minds, there are the "infant patrols"—children not yet in their teens.

In the CTC, the Cuban labor federation, there are no card-carrying Communists among the top 13 members of the governing group. David Salvador, head of the CTC, was expelled from the Communist Party in 1951. But there is no indication that he has

drifted very far to the right since then. At least three other Communist sympathizers are among the federation's top 13, including Jesus Soto of the textile workers and two officials of the bank workers' union. Arrayed against these four are two anti-Communists and seven nonentities, according to one American labor specialist here.

This man puts his finger on what he regards as two examples of Red penetration of labor: Hoy, the Communist newspaper, is sold—or given away if it can't be sold—in almost every workplace where there are union members. The workers' militia "is right out of the Communist handbook," he says.

Another labor specialist here contends: "The CTC isn't a labor movement any more, but rather a well-organized labor wing of the Castro government." This man notes the CTC has recently extended a 6-month no-strike agreement. He also cites a new labor law under which the Minister of Labor, a Government official, is to have the say in new hiring. The law provides that the Minister make a census of the unemployed. Thereafter, when an employer wants to hire someone, the Labor Minister will submit a list of those eligible.

GETTING OUT THE MILITIA

One assigned task for the labor movement: To trot out the workers' militia for Castro-called public demonstrations.

Communist influence in Cuba today seems to exceed greatly its relatively small numerical strength. Party membership has expanded about 50 percent since the revolution, but it still numbers only about 18,000 in this nation of nearly 7 million people.

Actually, the Cuban people have little appetite for communism when it is openly identified. This may help explain the violent reaction of the Castro regime to any charge of Communist influence in the Government. Anyone who criticizes the Government as Communist-leaning faces the charge of being a counterrevolutionary.

Some anti-Communist groups are beginning to appear. A Catholic youth group has been distributing anti-Communist pamphlets, for instance. One of its most successful ones: A leaflet linking Cuban Communists to the Batista regime, which did allow the party and its top members a certain amount of freedom. With typical Cuban humor, the leaflet listed a telephone number to call for further details of the Communist-Batista ties. The number was that of the Communist Party. "They got hundreds of calls, we're told," says one member of the youth group with relish.

A newly organized group with anti-Red overtones is the Christian Democratic Movement, or the MDC as it's called. Said to be an embryonic political party, the MDC recently announced its aspirations. It called for free elections in Cuba as soon as possible, a fairly direct slap at the Castro government which shows not the slightest inclination to hold elections.

The MDC also identified both communism and neofascism as the great enemies facing Cuba. And it hinted strongly that the advocates of Marxism are out to subvert the revolution to their own ends.

MDC leadership, primarily young Cuban lawyers and members of other professions, is considered sound, and some observers in Havana give the group a chance to develop eventually into a significant force in Cuban political affairs. The MDC emphasizes it is not tied to the Catholic Church and draws its membership from non-Catholics as well as Catholics.

In fact, one of the MDC's present weaknesses is considered a lack of Catholic Church support. So far the church has been sitting it out despite increasing anxiety among its priests and hierarchy over the Communist influence in the revolutionary government. One vigorous Havana priest who believes the

church should be taking a more active anti-Castro role, contends: "Up to now, the hierarchy here has been intimidated."

PROPERTY RIGHTS, DIGNITY OF INDIVIDUAL

Another churchman agrees in essence but speaks hopefully of a pastoral letter which he says has been prepared and which he hopes the Cuban hierarchy will issue soon to be read in all Cuban parishes, a technique the church used recently in the Dominican Republic against Dictator Trujillo. The letter would defend the private property and the dignity of the individual, without directly attacking Dr. Castro.

There are also reports of small, isolated groups within the revolutionary movement who are beginning to think in terms of diverting the revolution from its leftist course.

There is also some unrest among students at Havana University. A number of students recently have criticized the Government, and some students have led a demonstration against Russia's Mikoyan when he visited Havana to open the Soviet exhibit and sign the U.S.S.R.-Cuba trade-aid pact. There are reports that Dr. Castro plans to install Foreign Minister Roa as the new head of the university to exercise firmer control over the students.

One Cuban cites a recent incident as contributing to student unrest: "Che Guevara made a speech at the university the other day saying that the needs of the state will determine how many doctors we train in the future—not the wishes of individual students."

But like all other resistance groups, the students are given not the slightest chance, right now anyway, of providing serious opposition to Dr. Castro, who still enjoys the adulation of the vast majority of his countrymen.

Federal Pay Increases

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. WOLF. Mr. Speaker, I have today presented the following statement to the Post Office Committee in regard to pay increases for postal workers.

STATEMENT BY CONGRESSMAN LEONARD G. WOLF, DEMOCRAT, OF IOWA, IN SUPPORT OF A PAY RAISE FOR POSTAL WORKERS AND OTHER FEDERAL EMPLOYEES, BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, MARCH 22, 1960

Mr. Chairman, I am wholeheartedly in favor of the enactment of legislation in this session of the Congress to provide a pay raise for our postal and other Federal employees. The wages of these employees should, without question, be brought up to the level of private industry for work requiring the same education, experience, training, skill, and intelligence.

The facts speak for themselves. In a recent issue of Labor Week, it was pointed out that the average weekly "real" income of Federal workers (including Post Office employees) was down 3.3 percent from last year. These figures are based on basic data of the U.S. Departments of Labor, Commerce, and Agriculture.

The most graphic single example of the need for a pay raise for our postal workers is in the fact that under the present pay scale, no mailman can qualify for a Federal Housing Authority loan on even a \$15,000 home. To guarantee a \$15,000 home, the FHA re-

quires an annual salary of at least \$5,384. No letter carrier in the entire United States is making such a salary. The average letter carrier's annual wage is \$4,640.

Employee	Gross pay each 2 weeks	Deducted for Federal taxes	Deducted for retirement	Deducted for insurance	Net pay each 2 weeks	Number of dependents
No. 1.....	\$195.19	\$21.10	\$12.60	\$1.50	\$159.90	3
No. 2.....	195.19	16.40	12.60	1.50	164.60	3
No. 3.....	187.50	10.40	12.19	1.25	163.66	5
No. 4.....	191.72	11.10	12.19	1.25	167.18	4
No. 5.....	195.19	16.40	12.60	1.50	164.60	6
No. 6.....	195.19	7.10	12.60	1.50	173.90	5
No. 7.....	187.50	15.00	12.19	1.25	159.06	3
No. 8.....	187.50	19.70	12.19	1.25	154.36	3
No. 9.....	168.03	6.80	10.79	1.25	149.19	6
No. 10.....	187.50	19.70	12.19	1.25	154.36	2
No. 11.....	181.50	14.00	11.49	1.25	154.85	5
No. 12.....	188.88	15.30	11.49	1.25	160.84	3
No. 13.....	185.12	19.30	11.49	1.25	153.08	2
No. 14.....	191.35	15.70	12.44	1.25	161.96	3

It is not difficult to visualize the difficulty a parent faces in trying to feed and clothe and house as many as five children, most of them in school, and a wife, on a salary of \$72 or \$73 a week. The grocery bill alone for a family of this size cannot be less than \$40 a week—at a bare minimum. That leaves \$33 a week to pay for transportation, housing, clothing, utilities, and doctor bills.

Under the present pay scale, the postal employee receives less pay than the unskilled worker. Three Presidential vetoes have put this pay rate several years behind that of his fellow workers in private industry. If we expect to retain in the Federal service capable, efficient, and well-trained workers, we must pay them a livable wage.

I urge, Mr. Chairman, that this committee report out at the earliest opportunity legislation to bring the salaries of postal and other Federal workers into line with present-day realities.

To point up the problem which our postal employees are facing, I would like to set out the salaries being received by 14 postal employees in my district:

salute these fine Negro leaders. We congratulate them. We believe we speak the sentiments of the whole State when we applaud the intelligent Negro leadership for their sensible attitude.

To say the least, their courage has avoided friction, discord, and strife—possibly a great amount of bloodshed.

Outside agitators entering the boundaries of Mississippi are here to serve no good purpose. Their mission is one of hate and to raise money—to pass the collection plate—and espouse ideas from across the sea.

Storage Charges on Uncle Sam's Surplus Grain Soon May Be Trimmed

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following revealing and interesting article from this very reputable publication:

[From the Wall Street Journal, Mar. 1, 1960]
STORAGE CHARGES ON UNCLE SAM'S SURPLUS GRAIN SOON MAY BE TRIMMED

Private warehousemen got an average of 16.5 cents a bushel annually in Government storage pay. The Federal storage and handling bill for grain and oil seeds now runs over \$500 million a year. Government-industry negotiators are working on a new master contract to replace the one expiring June 30. Bets are that the average bushel payment will be cut by 2 cents. Federal storage men, armed with largely secret study data, say the commercial operator's average direct cost is only 8.4 cents a bushel. Presidential hopeful Senator SYMINGTON contends the cost-payment spread permits lush profits.

Farm boss Benson and his men dispute any idea of widespread profiteering. But they concede they've been dealing without accurate up-to-date information on storage operators' costs. The current contract is 4 years old. Many grain storers in recent years have turned from expensive elevators to cheaper low-lying bins. Government studies suggest some "high cost" operators may be charging Uncle Sam for nonstorage of their grain businesses.

Commercial grain storage capacity now totals about 4.2 billion bushels, more than double the space that was available a decade ago.

Courageous Negro Leadership

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Courageous Negro Leadership," written by Hon. James M. Ward, editor of the Jackson (Miss.) Daily News. Mr. Ward is a very able editor.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COURAGEOUS NEGRO LEADERSHIP

A band of professional egotists, hate mongers, and racial agitators have invaded Jackson and this central Mississippi area within the past few hours in an attempt to organize lunch counter sitdown demonstrations by young Negro college students.

The Jackson Daily News is aware of these attempts to create friction in a city which has enjoyed a wealth of good relations between the races.

We are also aware of the fact that, because of the outstanding and dedicated leadership of various institutions for Negroes in this area, the agitators were turned down. At least one outstanding Negro citizen ousted the delegation from his office.

Such acts of courageous citizenship in the face of pressure should be recognized. We

Sound Economics Can Make Good Politics

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. WILEY. Mr. President, the 1960's promise new plateaus of economic achievement for the American people.

The bright outlook includes opportunity for more jobs, greater personal and national income, attainment of new goals in business and industrial programs, and better living for our people.

At the same time, the future will place ever-greater demands on our economic system.

Among other challenges, those will be the need for: Advancements to meet the needs of a fast-increasing populations, now numbering about 180 million people; and a progressing country; supporting a strong, and costly, national defense program; and successfully meeting the ever-growing economic competition from the Communist bloc.

We recognize, of course, that there are differing theories—even among experts—on how best to further improve our economic system.

Unfortunately, also, realistic efforts to resolve problems are sometimes frustrated, regrettably, by attempts to make political footballs out of economic difficulties. Despite this tendency by would-be opportunists, however, I continue to believe sound economics make the best politics.

In the long run, adherence to fundamentally-sound economic principles can be the only reasonable basis for long-term solutions of our problems in this field.

Now, what are the practical steps necessary to combat inflation and promote progress? These include: First, realistic Federal spending policies; second, a balanced budget, and, if possible, a surplus to begin reduction of the national debt; third, carefully restricting Federal programs to proper limitation of Federal responsibility so as to prevent undue competition on the money market or create unnecessary competition with private enterprise; fourth, revision of the tax structure to plug loopholes, eliminate inequities, provide incentives for economic growth and expansion, and reduce the inflationary effect which taxes—apparent and hidden—have on prices; fifth, further educating our people to the realism that demands for more and more services by the Federal Government can only postpone the time for a lessening of the tax burden; and finally, sixth, assuring a competitive climate in which businesses, industries and other enterprises—both small and large—have an opportunity to prosper and make their contribution to our economic life.

Overall, the Government, as well as consumers, labor, industry and all others, have a proportionate responsibility not only for sharing in the efforts to combat inflation, but also to promote economic health for the country.

How?

Through sound buying, borrowing, spending, and saving practices by consumers.

Labor: By making only realistic demands for pay and better working conditions based among other factors upon productivity.

Industry: By establishing realistic pricing-and-profit practices on commodities.

Recently, I was privileged to publish an article in the American Bar Association Journal entitled "Sound Economics Can Make Good Politics."

Reflecting further upon additional factors involved in promoting economic strength, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUND ECONOMICS CAN MAKE GOOD POLITICS

(By ALEXANDER WILEY, U.S. Senator from Wisconsin)

Not since the Greenback Party heyday in the 1880's has there been as much congressional debate of economic-fiscal policies as there has been in recent months. Listening to the new economic prophets of cheap money at any price, of Government pumping additional money into the economy and the inevitability of inflation—all in the name of full employment and growth, naturally—one may almost feel guilty to sound the old-fashioned notes of dollar stability and budgetary restraint.

Speaking recently to an American audience, the former president of the Central Bank of the Federal Republic of Germany had this to say:

"To a foreigner it seems almost absurd that there should be certain quarters in the United States where inflation is tolerated or even recommended. Surely any price to be paid for inflation must be excessive, considering not only the adverse economic and social effects, but the irretrievable losses in national prestige it may entail. Reports of inflation in the United States would not only mean the depreciation and ultimate devaluation of the dollar, but also an acute decline in the moral authority, power, and international stature of the United States."

And on the lessons of inflation, German economists are certainly entitled to speak authoritatively. The devastating German runaway inflation of post-World War I years still serves as the classic anti-inflation warning in economics textbooks, and it is this lesson that has produced the present German economic vigilance and restraint. That close links bind a nation's prestige to its financial posture is evidenced from the manner in which the emergence of the German mark as a sound and stable monetary unit has enhanced the stature of the new Western Germany in the family of nations.

Yet the full danger of inflation apparently has not yet been sufficiently realized by our "creeping inflation" advocates who continue to preach a theory as old as ancient Rome and the Greenback days, and already discredited that long ago. But this is one time when the man in the street is better advised than some of the economic experts representing him. For the hundreds of letters I receive each month from average Mr. and Mrs. America put the finger on a domestic enemy they fear most—inflation.

IS IT NOT SAFE TO BE THRIFTY ANYMORE?

A recent survey of the country's economic situation concluded: "The gloomiest finding is a weakening of the resistance to inflation." True, most people yearn for economic stability, and four out of five persons inter-

viewed thought that prices, wages, and profits should be held from going higher for the next 2 years. But at the same time these people had little hope that this will happen and 7 of every 10 thought that prices would continue to rise.

To the well-known economic perils of inflation may thus be added the psychological impact of this acceptance of the inevitability of inflation: an erosion of individual and public confidence in the soundness of our currency and economy, with resultant injury to the long-acquired habits of thrift and economic prowess.

A middle-income businessman recently interviewed on the question of inflation responded thus:

It just isn't safe to save anymore. I decided inflation couldn't be stopped. So I cashed in all my insurance and bought stocks.

The lack of faith in the cures of inflation, slowly turning into mass uncertainty, tends to accentuate the already existing problem and may turn the slow march toward inflation into a stampede. The present heights of the stock market are certain evidence of the population's desire to have its savings sheltered from inflation, through a rush into equity investments. What would happen to our economic balance if the present uncertainty turns into a material-value psychosis, with more bondholders, insurance holders, and the like, all at once deciding to liquidate their assets?

The serious effects of the inflationary trend in recent years are easily ascertainable. The 1939 dollar today buys 48 cents worth of goods. The standard indicators of the decline of the purchasing power of the dollar, the Wholesale Price Index and the Consumer Price Index, have risen more than 50 percent between 1946 and 1953. A survey of rising prices indicates that under Roosevelt, the cost of living rose 3.3 percent annually and under Truman, the cost of living sprinted 6.8 percent each year. (Of course, under Roosevelt we had war, and under Truman the postwar problems.) Since 1952, the rise in the cost of living has been held to an average gain of 1.4 percent. In the last 3 years the increases in the Consumer Price Index have still been only moderate: 1.5 percent in 1956, 3.4 percent in 1957, 2.7 percent in 1958, 0.9 percent in 1959.

This slower increase which is referred to as creeping inflation, may not seem to be very large to the uncritical observer. But an annual rise of 2 percent will wipe out half of the purchasing power of the dollar in 35 years, and a 3-percent rate will result in a similar reduction in less than 25 years.

The proponents of inflation say there is no need to worry about inflation, as long as it is of the "creeping type." Since many labor contracts already have escalator clauses, it is suggested that such clauses might be extended to pensioners, insurance beneficiaries, bondholders, and the like—thus permitting everybody to adjust their income with inflation. But it takes a little critical thinking to realize that not everybody can equally ride the escalator at the same time. And as one commentator has put it: "It is the height of folly to imagine that we can inflate without some groups paying the price."

A further weakness of the creeping inflation proposition is its assumption that we can police inflationary trends at will. But let us ask this of the proponents of creeping inflation: "How do you confine inflation and keep it down to a so-called 'delightful' and 'reasonable' 2 percent per year?" It is not too difficult to see that inflation cannot be kept automatically within prescribed limits. For if the public becomes aware of an official policy to permit a limited depreciation of the dollar, it will try to protect itself, and by so doing it will inevitably accelerate the pace of the price rise. As one commentator put it:

If the public knows there will be a creeping inflation of 2 percent per annum, then the 2 percent will be reached not at the end of the year, but at the beginning, and the pressure for inflation will mount.

It must be concluded, therefore, that unless remedial action is undertaken to curb inflation—a large and increasing section of the population will be exposed to its harmful and often devastating effects. Inflation, obviously, affects most adversely that part of the population that must depend on a non-varying income, or an income that does not vary as fast as the price increases—Government workers, other public servants, school teachers, unskilled workers, bondholders, and the 20 million of senior citizens and others living on annuities, pensions, social security, and public aid. The list includes also the farmer who was traditionally thought to favor inflation because it acted to increase land values, but who currently finds himself unable to pass on his rising costs to the consumer. And due to recent population trends, produced by the growth in the population's life expectancy and the increase in the number of people in public service, an increasingly larger percentage of the people is placed on the inflation victim list.

THE FUTURE OF THE DOLLAR IS THE FUTURE OF AMERICAN ECONOMY

The adverse effects of inflation are felt not merely on the purse of the individual American. Its direct impact on economic growth, periodic recessions and the balance of trade must not be underestimated.

Inflation hinders long-term economic growth by discouraging the savings which produce the capital necessary for the country's economic expansion. American economy must continue to expand in order to meet the increasing and more varied needs of the American people, and in order to hold back the growing Soviet economic offensive. The major key to future economic growth in America is increased productivity, and the greatest contribution to such an increase is the investment in new machines and equipment—but the magnitude of such an investment depends upon the level of savings.

This is a time when we can ill afford to lag behind. At present the Soviet industrial output is still estimated to be only 45 percent of ours. But realizing that the rate of growth in Soviet production is about 9 percent annually, while our annual growth is less than 3 percent, it becomes apparent that with the situation remaining substantially the same the Russian economic handicap may disappear and they could catch up with us in as little as 12 to 14 years.

The table that follows shows how long it will take the Russians to catch up with us, if we do not watch out.

U.S.S.R. rates of industrial growth	(In years)		
	U.S. rates of industrial growth		
	2 percent	3 percent	4 percent
7 percent	17	21	28
8 percent	14	17	21
9 percent	12	14	17
10 percent	11	12	14

For those that still think about Russia as the backward industrial country of 1918 or 1928, this will come as a shock. But it is with this realization that we must look at the need of future economic developments in America—and such developments will not be possible in an economy crippled by inflation.

Inflation, furthermore, by interfering with the free operation of the economic forces tends to make our recessions much worse and weakens our post-recession recuperative facilities. The accumulation of excessive

and burdensome inventories during inflation periods—because of the prospect of higher prices as inflation continues—saturates the markets to the point that they are unable to absorb new products, thus slowing down post-recession recoveries. Inflation, similarly, will lead industry to temporary over-expansions, due to the fear of increasing costs, but such expansions must eventually be followed by cutbacks, thus accentuating the problems of cyclical unemployment.

Inflation, finally, has adverse effects on our foreign trade and may cause the United States to be priced out of world markets. The high prices of American products, to which inflation contributes, weaken our competitive position abroad—where 5 percent of what American factories produce is being sold, providing 5 million jobs for American breadwinners.

Unreasonably high production costs make us also much more vulnerable to foreign competition in our own domestic markets. While our 1958 export of manufactured goods still remained 2.4 times as large as our imports, the trend in the last 2 years has definitely been toward a more balanced foreign trade. It is now estimated that the 1959 exports of \$15,900 million will exceed imports only by some \$900 million, which appears like a disastrous drop in comparison with some of the recent exceptionally high excesses of exports over imports, running more than \$6,500 million as late as 1957. But while remembering that the earlier unusual excesses were caused by World War II and postwar needs, and that no country has held such a lopsided trade balance for very long, we must not, at the same time, permit our economy to be inflated to a position of competitive disadvantage. Several pockets of unemployment, in my State and in others, can already be attributed to our disability in specific industries, to meet the prices of our overseas competitors.

That the stability of the dollar is essential to the stability and growth of the American economy is all too obvious. What needs to be determined, however, is what measures would most effectively act to curb inflation. And one big question will then still remain: Will we have the wisdom, the courage and the determination to pursue the necessary remedies?

INFLATION AND THE PROPHETS OF INEVITABILITY

Traditional economics explains inflation in terms of the supply and demand theory, saying that whenever an increasing amount of money is bidding for a limited quantity of goods, prices are driven up. Usually it is assumed that it is the Government money printing presses that produce this increasing supply of money, either directly or indirectly—through fiscal and monetary policies and the operations of the Federal Reserve System. But what must be remembered is that more money in the marketplace does not always mean that new money is being created. More money bidding for goods could also mean that money hitherto in the hands of the population, but unused, is suddenly appearing from its hiding places to compete in the market. Thus while Government fiscal policies and Government spending have a tremendous impact on economic trends, fiscal and monetary manipulation alone will not halt inflation in a relatively free economic system. Certainly the Government cannot be expected to do the job of inflation policing alone. Since the reasons for inflation are manifold, only a comprehensive program which will take all factors into account will provide an effective remedy.

I am certain that there is no need to elaborate here on the factors customarily advanced as responsible for inflation. But it would be desirable to keep in mind the broad composite of the elements contributing to inflationary pressure:

(1) Governmental expenditures based on debt financing which by increasing the amount of money in circulation create inflationary pressures; (2) governmental over-spending in areas where full employment already exists, thus creating excessive and price-raising demands for facilities and labor; (3) floors under commodities which raise prices higher than the level set by the free play of the forces of supply and demand; (4) excise and other taxes which penalize or hinder business growth; (5) excessive import quotas and tariffs, which permit the keeping of artificially high prices for some products; (6) inefficiency in management and inefficiency in production. (Listing the factors which are traditionally stated to be inflationary in terms of price levels is not necessarily an argument against the practices named. For it must be realized that in our complex and comprehensive society some of these practices are quite essential for the protection of our social and economic way of life.)

It is on top of these classical concepts of inflation that the new schools of economists have mounted their newer interpretation of modern inflation. And although the classic theories have not been totally discarded, the vogue these days is to give top listing to the two new theories of "cost-push" inflation and "administered price" inflation. The first, which is contrasted with the classical "demand-pull" inflation, is described as an upward moving wage-price spiral—a vicious circle in which higher wages cause higher prices, which in turn necessitate higher wages, ad infinitum. The second theory, again, explains inflation not as a product of free market play but as a result of the restrictive price-fixing schemes of big business.

In these new theories the prophets of the inevitability of inflation find the foundation for their dogma. Creeping inflation, say they, is the price that we must pay for the maximum growth of our economy. Growth, according to this school, has always been accompanied by inflation, and now too we have two alternatives: either economic growth inescapably accompanied by creeping inflation, or else, price stability accompanied by economic stagnancy and unemployment. And the choice, so they say, is ours to make.

These prophets of inevitability have been divided into two schools—those putting the blame on labor and those attributing it to industry. According to the first, the rise of strong trade unions makes it almost inevitable that economic expansion will be accompanied by rising labor costs. Thus when the rate of expansion is sufficiently high to produce virtually full employment, unions are in a strong position and are able to raise wages far faster than the increases in output per man-hour. Accordingly, the fact is cited that during the 11 years of 1947 to 1958, hourly earnings in all private industry rose about twice as fast as real product per man-hour—for while the rise in hourly earnings was 66.7 percent, the rise in real product per man-hour was 33.6 percent. It is to these extra wages, unmatched by additional products, that inflationary pressures are attributed. To prevent any further inflationary moves, claim the critics, it is industry's duty to stand fast on present wage contracts and not permit any new unjustified wage increases.

Labor, on the other hand, is proposing to find the main reason for inflation in industry. Postwar wage increases are therefore shown to be merely chasing prices up, and labor is pictured as attempting only to restore the real value of labor earnings. Even as middle of the road a reporter as *Business Week*, in commenting on the role wages played in postwar inflation, found that "unit labor costs seem to have followed prices uphill through most of the postwar years." If labor is not responsible for infla-

tion, the real culprit must therefore be elsewhere. It is here that the theory of administered prices comes into being, a theory which charges business with eliminating the flexibility of the free market, and creating a new type of inflation by monopolistically and artificially maintained high industrial prices.

To determine the existence and extent of administered prices practices the Antitrust and Monopoly Subcommittee of the Senate, of which I am a member, has been conducting extensive hearings for the last 2 years. These hearings dealt with the problem of administered prices in the automobile, bread, roofing, and steel industries. One of the measures proposed as a cure to this problem is Senate bill 215, introduced by Senator O'MAHONEY, which seeks to keep the prices of key products down by exposing the big corporations, in a selected number of industries which seem to set the price pattern, to public opinion pressure through a requirement that no price increases be undertaken without prior public notice and a hearing to justify such increase. But although self-restraint on the part of industry in setting prices is to be much desired, I question the wisdom of this bill's interference with price and market flexibility. Still, if industry and labor do not develop a more responsible economic attitude, legislation of this type will become necessary.

But whether subscribing to one of these new theories or the other, several of the new economists allege that the new facts of American economic life will make ineffective the standard measures designed to fight inflation. An economy that is geared to growth and is favorable to high employment, say they, is also favorable to increased prices. Thus, so long as demand is near full employment levels, we must expect that in industries characterized by strong firms and strong unions, prices and wages will react on each other in a steady upward spiral.

The desirability, and indeed the necessity of American economic growth, we will most certainly accept. But that inflation is here to stay, and that more of it is still coming, is not, in my opinion, a necessary conclusion. Economic facts and developments are in a constant state of flux, and I believe that a reappraisal of many accepted economic assumptions may raise serious doubts as to the soundness of the predictions of the inflation prophets. Furthermore, inflation can be fought and must be fought, but like all other social maladies, the remedy is not simple or speedy.

A PROGRAM FOR AN ANTI-INFLATION OFFENSIVE

A recent study of the relationship between economic growth and inflationary trends has produced some interesting new comments on the relative independence of the two. "Despite popular opinion to the contrary," says Edwin L. Dale in the New York Times magazine: "Inflation has not been the normal condition of the American economy. It has been neither usual nor unusual. Prices were lower in 1890 than they were at the end of the Civil War, and the period was one of fairly rapid economic growth and expansion. Prices were stable during most of the 1920's. A great deal of the price rise in the past 150 years has been associated with wars and their immediate aftermath."

Accepting the thesis of the war's responsibility for inflation, some economists forecast only very limited future rises in living costs, now that the postwar adjustment has finally set into effect. It is their view that the use of the classic weapons against inflation, in recent times, was still being blunted by the spending and lending powers generated by World War II. Since the banks emerged from the war with \$90 billion worth of Government securities and only \$26 billion of loans to their borrowers, any Government attempts to tighten the

money market were ineffective since the banks could simply sell some of the security reserves to get the funds to make more loans.

But now, some 14 years later, the country is finally growing out of the enormously inflated money supply with which the economy emerged from the war. In the more or less normal peacetime prosperity of the 1920's, the total money supply in the country was a little over one quarter of the gross national product. At the end of World War II the money supply soared to about one-half of the national product, thus making more money available to chase after the produced goods—but recently we have gotten back to a more normal ratio of less than one-third. This, according to some economists, should act to substantially relieve inflationary pressures in times to come. But stability will occur only if our economic policies take advantage of these natural developments, not if we go contrary to them.

In addition to this natural development in our economy, which may considerably lessen the factors driving for inflation, more effective protection against inflationary pressures must be provided by a planned and coordinated program, requiring both governmental and private cooperation.

There have been some crash programs—designed to knock out inflation—which have contained one or more of the following suggestions: (1) stop Government spending and deficit budgets; (2) abolish farm and other subsidies; (3) cut taxes; (4) tear down import barriers; and (5) break up large corporations and powerful unions. But in looking for means to stop inflation, we must make certain that we are not also knocking out our economic system and our way of life. For example: It is the national policy of this country to protect its citizens against unemployment. Unemployment carries a high price tag: in terms of broken homes, loss of self-respect, and loss of national product. We cannot, therefore, undertake to curb inflation at the price of increasing unemployment. Likewise, we cannot stop inflation at the cost of substituting centralized planning and a totalitarian economy for our long existing and generally successful economic freedom. It must be further remembered that there is no magic in a stable price level. Naturally, stable prices going hand in hand with an expanding economy is the most desired situation. But stability of prices during the 1920's did not prevent a most catastrophic depression—and price stability may often conceal inequalities in the economic structure which may eventually upset the effective working of the whole economy. Our aim therefore must be price stability coupled with economic growth; price stability under which employment is full and the individual is free; price stability under which the economy is not unduly restrained.

GOVERNMENT CONTRIBUTIONS TO STOP INFLATION

Government spending: The oft-repeated proposal for cutting Government expenditures does not offer a simple solution, since national security, increasing demands for Government services and the dangers of unemployment necessitate certain levels of spending. But Government enterprise should be more and more directed to those areas where additional Federal expenditures will act to relieve depressed conditions and to reactivate idle labor and facilities—rather than increase pressures in areas where labor and facilities are already fully utilized.

Balanced budget: A balanced budget does not offer a magic formula, since a balance could coexist with unemployment and a slow rate of economic growth. But deficit financing is inflationary in nature, and although a balanced budget is not always attainable, we should have it as often as we possibly can. Balancing the budget will also go a long way psychologically in con-

vincing the people that the Government is determined on fighting inflation.

Fiscal-monetary policies: The Government can help stabilize prices by tightening credit policies, and this has been one of the most effective means for combating inflation in England, in recent years. But naturally, we do not want a tight money policy which subordinates economic growth to stable prices, and which creates substantial unemployment. It is most essential that we have flexible monetary policies—designed to meet changing needs and to aid market adjustments. But the flexibility of such policies greatly depends on the Government's own financial position: For Government deficit budgeting may produce pressure on the Federal Reserve System to follow an easy money policy, to assist in financing and refinancing Government deficits.

Farm subsidies: It has been said that supporting prices of basic farm commodities at parity is a potent source of inflationary pressure, while at the same time offering only temporary relief to farmers—since the basic farm problems remain unanswered. Because technological progress has tended to make the large commercial farm relatively efficient, 44 percent of our farms now produce 91 percent of the value of marketed farm produce. Quite often it is the affluent farmer that is being subsidized, while little help is going to the needy one. The rise in output per man-hour has in recent years been more rapid in agriculture than in the rest of our economy, but the farmer cannot be deserted because he has learned to be more efficient. Still, with Government payments continuing to comprise 40 percent of net farm income, and the Federal-held surplus and pledged loans totaling more than \$9 billion by the end of 1959, we must search for more permanent, constructive, and lasting solutions for the farming sector of our economy. Developments to bring industry into the farm areas should be encouraged and relocation and retraining grants should be made available to assist the submarginal farmer desiring to enter more promising employment.

Cutting taxes: Cutting taxes, unless we also produce an equivalent reduction in Federal expenditures, will act to encourage inflation rather than to slow it down. But a reform of the tax system, with the main emphasis upon measures that will produce the means for financing research and modernization of our industrial machinery, is an important part of any effort to increase the efficiency of the economy and to keep costs and prices down.

Cutting personal and corporate income taxes and the modernization of depreciation laws are necessary developments, but as long as the people require more and more Government services, and as long as international security requires tremendous expenditures, only minor relief can be expected in the total tax picture.

Foreign trade: Foreign competition, it is said, can generally be expected to act as stimulus for the reappraisal of costs and prices, while high tariffs and import quotas help keep up domestic prices and shelter inefficiency and monopoly. It is quite probable that the United States can at times make its economy stronger by exposing its producers to fair competition from abroad. But modifications in a free trade policy are necessary in order to protect strategically essential industries, or to protect our economy against subsidized and unfair competition. Since cheap labor abroad coupled with effective new machinery and plants, to which we have contributed through our foreign assistance, may have adverse effects on our own economy—it may be necessary to study the further need for quotas. Still, if inflation in this country is harnessed there is no reason why we should

not be able to compete favorably with other countries—both in our own and in foreign markets.

Curbing bigness: The efficiency, mobility and the power of our economy are directly related to its size. There is no crime in bigness, for a big country requires big business. Breaking up large corporations and powerful unions will not by themselves stop inflation. Breaking up unions in several parts, so there would be several unions in the same industry, would not have the intended results—for confusion, rivalry and union warfare would certainly not act to diminish the upward pressure on wages. Likewise, giving the job of big industry to a large number of uncoordinated and resources—poor entrepreneurs will not aid efficiency or lower prices.

But constant vigilance is necessary to make certain that competition becomes more vigorous and pervasive in American economy. The claims of "administered prices" in American industry, as well as the complaints of wage increases causing "cost-push" inflation, indicate that constant Government attention must be directed to the maintenance of a competitive order both in industry and in labor. With labor income comprising some 62 percent of the national income, it is evident that wages have a substantial impact on consumer prices, and thinking citizens will agree that antimonopoly controls must apply to all kinds of private economic activities—whether carried on by industry, commerce, labor, professional associations, cooperatives or any other combines. Such controls, however, must not be exercised in a haphazard, fragmentary and disjointed manner. Creating a just and proper balance in our economy requires the production of a comprehensive program, well-coordinated and positive in approach, in which the legislative, administrative and judicial branches of the Government must cooperate.

PUBLIC INITIATIVE IN COMBATING INFLATION

Our economic system—to which we have been fondly referring, in recent times, as "People's Capitalism"—is dependent for its true success not on centralized direction and scrutiny of the Soviet type but on widespread creativeness, ingenuity, and cooperation. "People's Capitalism" implies that the means of production are not merely in the hands of the few giants of industry, but are dispersed among large numbers of property holders, professional people, farmers, public servants, and laborers. "People's Capitalism" does away with the discredited Marxist theories of capital-labor struggle, predicted to work the internal destruction of capitalism, and strives, instead, toward a closer "working partnership" between all the elements participating in the national production: capital, management, and labor.

It is with the belief in "people's capitalism" that I am calling for a rapprochement of management and labor—to plan together for the common and public good, and to work together against the destructive powers of inflation.

Management by enlisting the active cooperation of all employees, from top executives to the lowest of orderlies, can succeed in reducing the ratio of payroll expenses to sales revenues. "At the present time," we must agree with one expert commentator, "only a few enterprises really succeed in gaining the active cooperation of their workers. Today the most important capabilities of the American workers, their imagination, their ingenuity, their ability to invent and to discover shortcuts are rarely put to use because methods of management in most plants are not designed to bring out these qualities. Indeed, most managers have little conception how much ability is going to waste through not being used."

Encouragement of productivity through a

system of bonuses, providing workers with additional pay whenever the ratio of payroll costs to sales is reduced, has proved effective in the industries that have tried it. Stock options to labor as well as management increase the sense of partnership. Still, the use of these procedures is not widespread enough and their more general adoption will depend on an increasing degree of mutual confidence and a change in some of the adversary philosophies of management and labor. I believe that these and other new management methods, designed to enlist all units of production in improved teamwork, hold great promise for checking rising costs.

Labor, likewise, must exercise statesmanship and restraint in its constant drive for higher pay and better working conditions. It must be remembered that higher labor pay may be almost totally cancelled out by the higher prices of the commodities that labor must buy. Some inflationary force has been previously provided by union-management bargaining in key industries, for although only less than one-fourth of our workers are unionized—the effect of increased wages was often felt throughout the labor market. But the situation is now changing, and the developments in the steel strike indicate that the settlement is likely to produce no substantial increase in the price of steel. If the changed attitude in steel and auto negotiations will be heeded by other labor contracts, the increases in the cost of labor and the resultant impact on prices will be much more moderate in the early 1960's than it has been since the end of the war.

Generally, public encouragement should be given to the nongovernmental sector of our economy in any of its endeavors to increase national productivity, to guide production into items with greater durability, less obsolescence and lower prices. For as the chief manager of the Union Bank of Switzerland put it recently:

"Higher productivity will be able to keep prices down and money sound, provided that management will finally feel the moral responsibility to pass technical progress on to the consumer in the form of lower prices."

I have, therefore, noted with full agreement the recent statement of Dr. Raymond J. Saulnier, Chairman of the President's Council of Economic Advisers, that in order to achieve general price stability, price reductions must be accomplished in the industries "where productivity gains are especially rapid." In fact, Dr. Saulnier urged both labor and management in those fields to forego part of the gains of productivity in the public interest; labor by accepting lesser wage increases than the productivity gains, and management by cutting prices instead of taking the productivity advances in higher profits. Thus, both labor and business should be urged to exercise better judgment and more responsibility in setting prices and wages consistent with general stability. And competition should be preserved in both products and in labor so as to limit the power of business and labor to set unreasonably high prices and wages. England and Germany are apparently finding solutions, cannot we—we reasonable Americans—exemplify our reasonableness by using good judgment?

GOOD ECONOMICS WILL MAKE SENSE

It has been said the term "inflation," like the term "rheumatism" at the turn of the century, covers a multitude of ailments. With the multiplicity of factors which contribute to inflation, it is obvious that no one all-purpose pill will cure it. We have listed the reforms that are needed in several fields, and it would be unrealistic if we forgot that there always are formidable obstacles to changes in public policy. Such comprehensive Government and private sector policy

to curb inflation may appear to present some difficult problems, because at first glance it may seem to pit the general interest in a stable dollar against many organized and vocal special interests. But I believe that the program outlined by me demonstrates that anti-inflation action can be taken without serious or lasting damage to any of the constituent parts of American economy. Still, all these interests and groups must be educated to understand that their own welfare turns, in the long run, upon a strong and effective national economy, adaptable to change and capable of competing in the international market.

I believe that the essential first step in the campaign for a stable dollar is the restoration of the public confidence in the stability of our currency. A legislative statement proclaiming the goal of stabilizing the purchasing power of the dollar is one appropriate way of demonstrating Government's determination to act.

The second necessary step is the development of an economic plan which will combine our desire for stability with our need for growth. A strong statement urging creative thinking on the economic future appeared recently in the St. Louis Post-Dispatch:

"There is not much doubt that the economy can be expanded rapidly if the Federal budget is rapidly inflated. But to conclude * * * that we need only spend a lot more Federal money fast is to ignore the crucial parts of the problem. How can we get a satisfactory rate of growth without inflation and without relying on a vast military effort? * * * Perhaps the answer lies in some kind of economic plan based on a controlled increase in creative public expenditures, accompanied by taxes to pay for them. Devising such a plan is the task of economic statesmanship, and putting it into effect the task of political leadership. Cannot our society generate the political and economic resources necessary to meet such a plain challenge? This much is certain: Unless we do meet this supreme challenge of our times, we shall see more and more peoples drifting toward communism, fewer and fewer committed to the islands of freedom."

To help produce such a plan and to create better and high-level coordination of the several departments and units of government in pursuing both stability and growth, I have introduced legislation for the establishment of a National Economic Council for Security and Progress. I am convinced that the economic challenge posed to the free world by international communism is one of the most serious aspects of the cold war, and that this war may well be won or lost in the markets of the world and on the production line. The proposed Economic Council is patterned after the existing National Security Council, whose main functions are military, and is founded on the belief that planning economic security and progress is as important as planning military defense. Consisting of Cabinet secretaries and other top-level Government officers, it will be the council's function to advise the President with respect to national and international economic development, and to enable the departments and agencies of the Government to cooperate more effectively, amongst themselves and with private business, in matters relating to national economic developments and the role of America in world economy.

I should like to say this in conclusion: Let us restore the faith of the people, and we would have taken the first step. But let us not fail to pursue a comprehensive and long-term program that will guarantee our citizens, young and old, working and retired, employed, self-employed, and employing others, the security and stability that are derived from knowing better what tomorrow will bring.

Our National Flower—The Rose

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. BOYKIN. Mr. Speaker, many of my constituents have written me concerning our national flower, and under leave to extend my remarks in the RECORD, I include an unusually informative letter from a lovely lady who lives at Calvert, Ala., whom I have known all of her life, Mrs. Evelyn Nader. Mrs. Nader has also written to our President last November in behalf of the rose as our national flower. Mrs. Nader has certainly made a strong case for the rose, and I feel confident that her letter will be of interest to all of our people throughout the 50 States of our Union.

The letter follows:

CALVERT, ALA., March 16, 1960.

HON. FRANK W. BOYKIN,
House of Representatives,
Washington, D.C.

DEAR MR. FRANK: The time is getting near when Congress will vote on a flower to represent our Nation. Several people have nominated various flowers, including the corn tassel. But don't you agree that a flower that is going to represent our Nation and our people should not be just anything that can be picked up anywhere? This, to me, would be like walking down a street, up to a person, and say, "Congratulations, buddy; you are now our new President." I think that picking our Nation's flower should be like picking our President. Choose one that has background and morals that we can look at and very proudly say, "That is our national flower." Such a flower will not only represent our Nation, but also what the United States stands for—freedom, democracy, and liberty. And not any of these things have been handed to us on a silver platter. They have been fought for and paid heavily for.

Now I would like to nominate the flower that I think stands for these things—the rose. I know that a Senator is also backing the rose; I don't remember his name or whether he is a Democrat or Republican, which doesn't matter—he is an American.

Mr. FRANK, I know that you love flowers and have had experience in raising roses; so you know that you can't just stick a rose in the ground, forget it, and expect to get beautiful flowers. A rose has to be planted carefully to make sure the roots get a good start. After all, the roots are the mainstay of anything, including our country. A rose also has to be pruned and the decayed leaves pulled away. Doesn't this also coincide with our justice? A decayed person or criminal is pruned away from society so he won't infect other people. A rose must be sprayed to protect against the many insects and bugs that would invade and try to devour it. This is also significant of our Nation. If we don't protect our country against the people who would invade us, our Nation would be devoured. We must continually be on our guard and defense. Our flower must also be able to withstand many hardships and bloom out again—here again the rose. It withstands cold, heat, flood, and drought, and comes out again to be as beautiful as ever. Therefore, it can be raised in every State in our Nation, including our new sister, Alaska—again symbolizing the United

States, because we have withstood many crises and always come out as strong as ever.

There are many varieties of roses, also colors, which again symbolizes our democracy, where people of every race and creed live in one country.

The variety of roses is so large that we could have one named for each State, or have one named for each President. Several Presidents already have been so honored, including the present Mr. Eisenhower.

Several beautiful flowers have been nominated for the role of national flower, but I beg you to compare their qualities and beauty with the rose, then ask yourself, "Can any one of the others even come close to the rose as a representative of our Nation?"

After all, with an American Beauty rose in every yard, can you deny that this would indeed be America the Beautiful?

Very sincerely,

Mrs. EVELYN NADER.

The Most Dilatory Body in Washington—
The Federal Power Commission

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. WOLF. Mr. Speaker, on March 16 the Denver Post carried an excellent editorial on the question of the "Most Dilatory Body in Washington—the Federal Power Commission."

A few days ago I introduced legislation to force the FPC "to get busy and carry out its statutory duty to regulate natural gas rates."

We thank the Denver Post for its support when it said, "We have no doubt the FPC would become a beehive of activity, grinding out decisions in rapid order if the Wolf bill were to become law."

The editorial follows:

IOWA LEARNS ABOUT GAS RATES

Representative LEONARD G. WOLF, Democrat, of Iowa, wants to pass a law requiring the Federal Power Commission to get busy and carry out its statutory duty to regulate natural gas rates.

It seems that in parts of Iowa the Northern Natural Gas Co., a pipeline wholesaler of gas, has made three successive rate increases, which are subject to later review and possible refund.

But the FPC, which is about the most dilatory body in Washington, has not yet gotten around to passing on the reasonableness of any of the three.

While consumers are shelling out money month after month to pay for the three increases, they are wondering if they will live long enough to receive and enjoy any refunds to which they may be entitled when the issues finally have been decided.

Colorado gas consumers can sympathize with the Iowa consumers, but cannot offer them any words of cheer or hope.

In Colorado four gas rate increases were piled up on top of one another from January 1, 1954, to February 5, 1958.

The FPC never did show any interest in trying and disposing of the cases with reasonable dispatch.

When collections under these increases got up near the \$100 million mark, it became obvious that both the pipeline company and its customers would be hurt if the dispute

over the four increases were not settled quickly.

The failure of the FPC to pass upon the increases had kept the pipeline company from going ahead with plans to enlarge its gas supply to the growing Colorado market.

It also was threatening to jeopardize the income tax refunds which the pipeline company needed to recapture if it were to pay large refunds for overcharges.

Because the FPC fell down on its job; the pipeline and the customers finally arrived at settlements between themselves by horse trading methods which gave the customers refunds totaling approximately \$50 million and served to scale down the four increases by a nominal amount.

Settlement by negotiation was far from satisfactory, however.

It required both sides to bargain away certain disputed rate principles, the "rights" and "wrongs" of which could only be decided if the FPC had gone through with normal hearing and decision procedures.

The people of Iowa are learning what the people of Colorado have known for a long time—that gas rate regulation as administered by the present FPC is a joke.

Representative WOLF has proposed a bill which would require the FPC to dispose of any rate increases case filed by any pipeline company before it could permit the same company to file a second rate increase and collect still higher rates thereunder, subject to possible later refund.

We have no doubt the FPC would become a beehive of activity, grinding out decisions in rapid order, if the Wolf bill were to become law.

Any change that might stir the FPC from its condition of suspended animation is greatly to be desired. We wish Representative WOLF luck in his venture.

The Airlift Problem

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Tuesday, March 22, 1960:

THE AIRLIFT PROBLEM—I: CARIBBEAN EXERCISE EXPECTED TO LEAD TO BROAD STUDIES OF MILITARY TRANSPORT

(By Hanson W. Baldwin)

Clarification, or resolution, of the perennial defense controversy about military airlift requirements may result from exercise Big Slam/Puerto Pine, now starting its second week.

The 2-week maneuver, ending March 28, involves virtually all the Military Transport Service's 483 four-engined passenger and cargo aircraft, and more than 20,000 troops of the Army's Strategic Army Corps. The Puerto Pine phase of the exercise involves the transportation from 14 airfields all over the United States to Puerto Rico and return of the Army troops and of 11,000 tons of supplies. It is the largest military airlift exercise ever held.

The Big Slam phase has intensified for the 2-week maneuver the normal flying activities of MATS to an average of about 8 flight hours daily for each plane—a rate estimated as minimum wartime tempo. The strain placed on pilots and air crews, in this doubling of their flying time, and on maintenance and

communications personnel in working 12 or more hours a day, is described as a test of the war readiness of the Transport Service.

FIRST TRAINING OF KIND

It is that, but exercise Big Slam/Puerto Pine is also a good deal more. It is valuable training, the first of its exact kind. It is a public relations tour de force directed toward Congress, now considering military appropriations during an election year.

It is also a field laboratory that may produce tentative answers to some of the major problems, difficulties and controversies that have complicated the issue of military air transportation.

That the Pentagon and Congress are obviously hoping for some answers from exercise Big Slam/Puerto Pine is shown by the schedule of elaborate critiques to follow the end of the operation on March 28.

MATS will hold its own critique at Scott Air Force Base in Illinois early in April. The Army will follow with a similar dissection of the Puerto Pine phase of the maneuver at Fort Bragg, N.C., headquarters of the Strategic Army Corps. Joint critiques will follow in the Pentagon.

About mid-April a Special Armed Service Subcommittee of the House of Representatives, which has been studying the Nation's military airlift capabilities, will be given a full report on the exercise.

The problems to be discussed at these critiques include:

Military airlift requirements; the extent to which these requirements can be met by commercial carriers; the modernization of MATS and the kind of military aircraft required; the effect of developing technology on what were formerly two different and sharply distinct functions—tactical and strategic airlift; and the organizational and command relationships of the Air Force's Tactical Air Command and of MATS and of either of them to the Strategic Army Corps and the Army in general.

Detailed and intensive consideration of all these problems and the close working relationship that has been established between Gen. Thomas D. White, Air Force Chief of Staff, and Gen. Lyman L. Lemnitzer, new Army Chief of Staff, may well lead in time to a greater and more realistic emphasis on airlift requirements for limited, as distinct from general, war.

High Interest Rates

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. WOLF. Mr. Speaker, under unanimous consent I include the resolution of the March 11 meeting of the board of directors of the American Public Power Association to be placed in the Appendix of the CONGRESSIONAL RECORD: RESOLUTION BY BOARD OF DIRECTORS, AMERICAN PUBLIC POWER ASSOCIATION

Whereas the electric power industry requires an unusually high amount of capital investment per dollar of revenue; and

Whereas much of this investment by local publicly owned electric utilities is financed by long-term borrowing; and

Whereas the interest rates which apply to this borrowing therefore have a substantial effect upon the ability of these local publicly owned electric systems to supply an abundance of low-cost power to their consumers; and

Whereas the interest rate on public agency borrowing has recently approached the highest level in a quarter of a century: Now, therefore, be it

Resolved, That the board of directors of the American Public Power Association, a service organization which represents more than 1,000 local publicly owned electric systems throughout the United States, urges the Congress to support policies favorable to low interest rates, and to oppose legislation such as H.R. 10590, which would breach the traditional ceiling on long-term Federal borrowing and would adversely affect the interest rates on bonds issued by local publicly owned electric systems.

Adopted at regular meeting of board of directors, American Public Power Association, at Washington, D.C., March 11, 1960.

Hon. Lyndon B. Johnson

EXTENSION OF REMARKS

OF

HON. OMAR BURLESON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. BURLESON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a portion of the remarks of Dr. Frederick Brown Harris, Chaplain of the Senate, made on March 15, 1960, before several teachers and educators in Abilene, Tex.

The portion of Dr. Harris' speech relates to the majority leader of the Senate of the United States, the Honorable LYNDON B. JOHNSON:

When, with Vice President Nixon, or whoever is to preside, I enter the Senate Chamber at the beginning of each session, and the one in the chair announces "The Senate will be in order, and the Chaplain will lead in prayer," I am never far from a distinguished Texan. A tall form, bowing reverently, but a few feet from the rostrum is the majority leader. I refer of course to my good friend, and your great Senator, LYNDON B. JOHNSON. He is always there at the opening unless an important conference takes him to the White House.

In my judgment, he is as able a leader of a deliberative body as our country has produced.

In his alert brain there seems to be a built-in diagram of the Senate. With uncanny accuracy he is aware of the probable attitudes and reactions of the Senate Members to pending bills. But, all that knowledge is the result of painstaking care and toll.

During these hectic, wearying days of the round-the-clock civil rights debate, I have watched his demeanor with admiration. In the midst of it all he has remained considerate, courteous, and fair. As I have seen him exert his leadership, I found myself thinking of a line from Kipling's "If"—"If you can keep your head when all around you are losing theirs and blaming it on you." Well, Kipling concludes if you can you'll be "a man"—and, we might add, if you can in the U.S. Senate, and Senator LYNDON B. JOHNSON has, you'll be not just a sagacious politician, but a statesman tall enough to look over mere partisan fences to what he deems best for the Nation's welfare as a whole.

When, in the midst of the debate, I told him I was coming to Abilene—in his State—his face lighted up and he said, "that's one of my favorite places—give them my love."

Cheering the Flag

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Dr. Frederick Brown Harris, Chaplain, U.S. Senate, which appeared in the Sunday Star, Washington, D.C., March 20, 1960:

SPIRES OF THE SPIRIT—CHEERING THE FLAG
(By Dr. Frederick Brown Harris, Chaplain of the U.S. Senate)

What has happened to the exultant surge of pride in the hearts of Americans when anywhere the Stars and Stripes are unfurled?

In this year of our Lord, as we enter a fateful decade in the life of our Nation, and of all nations, there is little necessity to exhort people inside our Nation, and outside, to shout our faults and failings from the housetops. There are already too many experts in that field.

Of course, vilifying America has been the stock in trade of atheistic communism both in Russia and on mainland China these many years. For them, nothing good can come out of this free land. Their bitter billingsgate is a sort of pathological reaction to the Marxist goal of ultimate world domination. The jeers of the Sino-Russian tyranny are expressed in half-truths and outright misrepresentations as with gleeful delight they hold a magnifying glass over our admitted imperfections. All that is a part of their big lie propaganda. We do not expect them to cheer for the red, white, and blue.

But our deep concern in this message is the contemporary tendency for misled citizens of this valiant land—the envy of all the earth—to follow the example of covetous outsiders who push their hate campaigns against anything they dub American.

One thing to remember is that dictatorship washes its soiled linen in private. Nothing is made public which does not pass official censorship. The whitewashed reports given to the enslaved, and to the outside world, are "doctored" to conform to the purposes of tyrants whose will is the nation's policy. In a genuine democracy all is different. It is what is wrong which is likely to be exhibited. In democracy the people are not regimented or coerced to accept everything handed down from an all-wise hierarchy. The people with conscience and wills unfettered work out their own salvation in the gymnasium of their own decisions and actions.

In competition with the iron regime of conformity, government of the people, and by the people, has a temporary disadvantage. Its dirty linen is hung out on the public common for all to behold. There are investigations and revelations which enrage and shock the preponderantly decent members of the commonwealth. Those who are aghast at the iniquity exposed are likely to lose a sense of proportion and, looking with scandalized eyes, to ask in despair, "Is this America?"

The subversive forces working feverishly day and night to discount our democracy often succeed to an alarming degree in getting shocked Americans to conclude that this great experiment in freedom has broken down. There are many who, failing to put crimes against the state in their true proportion to righteousness in this good land, come to think of the flag as having lost the

stars of its idealism, and the white stripes of its virtues, leaving nothing but a waving red blush of shame as a national emblem.

But, thank God, this is not so. With all that tends to drag the American dream from its pinnacle, there never was a time since Betsy Ross designed the starry banner which has been lifted in heroic yesterdays from Independence Hall to Iwo Jima, when it was more appropriate for Americans with a Te Deum in their hearts to sing, "Three cheers for the red, white, and blue."

Where, oh where, but in America is plenty so shared, need so alleviated, sympathy so abounding, gulfs so bridged? It is the land of the friendly face turned to all the world. Quite significantly a great British newspaper, true to the Union Jack, the Manchester Guardian, declared editorially some time ago: "The United States has done more than any other country to guarantee peace in the world. America remains the foremost country in the world whose ideal in the words of its own Constitution is 'to promote the general welfare and secure the blessings of liberty.' The United States has done more than any other country in the world to help others, and to secure their help, prosperity and welfare." And so, from 3,000 miles away, under English skies we hear the refrain, "Three cheers for the Red, White and Blue."

Discouraged and disgusted Americans, deceived by a distorted sense of proportion, need to read the story of Elijah. After great hours of triumph in whipping the priests of Baal, the prophet behaved like a pouting child. In a fit of depression he believed that the whole nation had turned to denial and corruption. He thought that he alone had preserved national honor. Sitting under a juniper tree he wished he had never been born. But he was mistaken. God told him there were many quiet homes where people, such as are the heaven of any land, had not defiled their garments. The prophet was given to know that his arithmetic was all wrong and, instead of being alone, he was off by 6,999. God's word came to the prophet, "I have left me 7,000 in Israel whose knees have not bowed unto Baal." And so Elijah ran up the flag again with pride, as we must do in our own land.

To be sure, corruption gets the headlines; but to one traitor to the flag there are 7,000 whose patriotism is as pure as that of the Founding Fathers.

In this epochal day, with many "false lights on the shore" and with those on board who do not have America in their hearts, still with swelling pride we can join in the cheers which ring in Longfellow's lines—

Sail on, O Union! strong and great!
Humanity with all its fears,
With all its hopes of future years,
Is hanging breathless on thy fate!

So cheer for the Red, White and Blue
whose mandates make tyranny tremble.

Clara McMillan

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, it is my pleasure to call to the attention of the House an event which occurred in South Carolina of more than passing

importance. On March 15 Mrs. Clara McMillan, my immediate predecessor and the wife of our late Congressman, Thomas S. McMillan, whom you, Mr. Speaker, knew, and many other of our colleagues, was elected Mother of the Year in South Carolina. This honor could have happened to no finer person. Clara McMillan represents the most ennobling virtues of southern womanhood and motherhood. Despite the conflicting currents and distractions of modern-day living, her life will serve as a stabilizing inspiration to contemporary motherhood to withstand the insidious forces that mark modern-day living.

Mr. Speaker, I enclose an article from the Charleston, S.C., newspaper, the News and Courier, in which this important event is noted:

[From the Charleston (S.C.) News and Courier, Mar. 15, 1960]

MRS. McMILLAN OF ULMERS IS MOTHER OF YEAR

COLUMBIA.—Mrs. Clara Gooding McMillan of Ulmers in Allendale County, the only South Carolina woman to serve in Congress, Monday was named South Carolina Mother of the Year.

The 65-year-old widow of former Congressman Thomas S. McMillan and the mother of five sons will succeed Mrs. Hugo S. Sims of Orangeburg as State mother.

When her husband died in 1939, Mrs. McMillan succeeded him as U.S. Representative from the State's First Congressional District. She served 14 months of her husband's term.

At the time of her husband's death, Mrs. McMillan was left with five sons, ranging in age from 9 to 17.

After retiring from the House, she worked for the National Youth Administration, the Office of Government Reports, the Office of War Information, and the State Department, where she was a congressional liaison officer.

Mrs. McMillan was born near Brunson in Hampton County, was graduated from the old Confederate Home College in Charleston, and later taught school at Crockettville before marrying.

Her husband was at one time speaker of the State House of Representatives and was elected to Congress for eight terms.

Four of her sons—Thomas S., James C., William G., and Robert H.—all hold technical jobs at the Savannah River nuclear plant. The other son, Edward W., is serving in the Navy.

Mrs. McMillan has 15 grandchildren.

She will represent South Carolina in the American Mother of the Year competition.

Our Monetary System: High Interest Rates Are the Same as a Sales Tax on the Great Majority of the American People, Except That the Revenue From This "Tax" Goes To Fatten the Profits of the Financial Institutions and the Incomes of a Few Wealthy Families

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1960

Mr. OLIVER. Mr. Speaker, on March 21 I called attention to a most unusual and informative series of articles pub-

lished by the Texas Observer, of Austin, Tex., dealing with our monetary system and many of the Federal Reserve's present policies and practices.

These are extremely important articles, it seems to me, because they deal with a subject which intimately affects the economic well-being of all of us, as well as perhaps our national posture in the contest with Russia and the other countries that are pursuing the Communist brand of economic organization. Consequently, when I mentioned these articles previously, I put the first of the series into the CONGRESSIONAL RECORD as an extension to my remarks. Today I invite the Members' attention to the second in this series of articles, which is titled "High Interest Is a U.S. Sales Tax."

The high interest policy is, indeed, equivalent to a tax on the American people. It is a tax from which about 98 percent of the people lose and about 2 percent of the people enjoy an unwarranted bonus. The second of this series of articles is unlike the others in that it was not written by the staff of the Texas Observer, but is a statement contributed by our colleague from Texas [Mr. PATMAN].

Those people who are under an illusion that the Republican Party has established a record of fighting inflation and that the Democratic Party is the party of inflation have a surprise in store. The gentleman from Texas has prepared a tabulation of all of the roll-call votes on the issue of inflation during the World War II and postwar years. The factual record as to how the members of the two parties have voted on the question of checking inflation has shown that the Republican Members of the House over the years have voted consistently and overwhelmingly for inflation and against measures to check inflation.

I will not give away the plot but will reserve for the reader an opportunity to learn the exact scores in the article below. This article appeared in the Texas Observer of January 15:

HIGH INTEREST IS A U.S. SALES TAX

(By WRIGHT PATMAN)

TEXARKANA.—If Congress passed a stiff sales tax—one which would take a big bite out of every dollar consumers spend for groceries and everything else—many people would be up in arms about it. It is no wonder, then, that many people resent the administration's high-interest policy.

For 98 percent of the people the high-interest policy amounts to the same thing as a sales tax, except there are two notable differences. First, the tax is somewhat hidden and the uninformed consumer does not recognize it as one of the things causing his dollar to shrink. Second, this hidden tax is not going to pay the cost of Government nor reduce the Federal debt, but does fatten the incomes of a few families of great wealth, plus, of course, the incomes of the big bankers and Wall Street money dealers.

Consider what high interest has done just to the cost of owning a home. The present rate on FHA guaranteed mortgages, compared to 1952, means that the typical home buyer today—one with a \$13,500 mortgage—is paying out an extra \$4,500 in interest charges. The chairman of the House Subcommittee on Housing recently computed the cost this way: This average family purchasing a home today could have an added

bedroom and an added bathroom, and perhaps a garage also, for what it is paying in extra rates on most other things. The increase in FHA rates is relatively modest—a mere 35 percent since 1952. The total cost of high interest to the average family would come to a staggering amount if anyone could compute it. It takes a huge bite out of the budget of the family that buys an auto, a washing machine, or anything else on time.

More than that, it shows up in increased prices, because business firms—retailers, distributors, manufacturers, and so on—must all have credit. Increased interest rates have increased business costs. Today the average American family is paying \$200 a year in interest charges just to carry the Federal debt, and this is being rapidly increased as old bonds issued at lower rates are being retired and replaced with new, high-interest bonds.

There is nothing new about the Republican high-interest policy, nor about the cry that high interest fights inflation. This is an issue between the two political parties as old as the Republic itself. Oldtimers will remember that when the great depression was at its worst—when factories were closed down, 10 to 12 million were unemployed, the men were standing in breadlines all over America—the Republican policymakers were crusading against inflation just as much as today, if not more so. Actually, this crusade was continued even during World War II.

To illustrate, recently I found in my files a letter written to me in early 1942 by the late, great Senator Robert L. Owen of Oklahoma, in which he said this: "Inflationary has become an epithet of denunciation for any expansion of credit. It is used as a financial ghost to frighten the unintelligent." (Senator Owen, I might add, was longtime chairman of the Senate Committee on Banking and Currency; he helped draft the law setting up the Federal Reserve System and was one of the alltime great experts on our money and banking system.)

Despite all the talk about inflation when interest rates are at issue, Republican policy has been anything but good when real inflationary issues have been at stake. A few years ago I had tabulated all of the rollcall votes in the House between the beginning of World War II and the end of 1954 on measures where inflation was directly and plainly involved. There were 36 such rollcall votes in this period, having to do with such questions as whether we should have price controls during World War II, whether we should have more taxes to pay more of the cost of the war, and so on. There were 7,000 votes by Democratic House Members and 6,600 votes by Republican Members. These Republican votes were 76 percent for inflation and only 24 percent against inflation. The Democratic votes were 32 percent for inflation, and 68 percent were against inflation.

Incidentally, the letter from Senator Owen which I just mentioned was concerned with an issue which is with us again today. The issue was, and is, this: "When the Federal Reserve decides to increase the Nation's money supply, which method should it use?" The Federal Reserve has two methods. It may itself acquire more Government securities, in which case the interest payments on the securities are returned to the Treasury and the taxpayer is saved this cost. The other method is for the Federal Reserve to change its regulations so as to permit the private banks to create the money with which to acquire more Government securities. In this case there is no cost to the banks, but the interest payments go into bank profits.

Naturally, many bankers oppose the first method. It not only denies them an opportunity to pick up more Government securities

free of charge, it also tends to reduce interest rates generally. When interest rates on Government bonds go down, all interest rates go down. The present Federal Reserve Board is siding with the private bankers; but during World War II and up until the present administration, the Board sided mostly with the public.

Perhaps I should point out that the Nation's money supply is not fixed, but is increased when and as the Federal Reserve decides it should be increased. Generally, the money supply should be increased along with increased production of goods and services, otherwise a money pinch will tend to prevent an increase in production from taking place.

During World War II the Democratic administrations managed the Federal debt without raising the interest rate on long-term Government bonds above 2½ percent. This was also true in the postwar years—up until mid-1951—even though there were shortages of materials and no price controls. Naturally, many bankers did not like the low-interest policy and set up cries of inflation, but not quite for the same reason they are crying inflation today. The present administration has raised interest rates on long-term Government bonds to 4½ percent, and at this point it is stopped by a law passed during Woodrow Wilson's administration, in 1918, which sets a ceiling at this level.

During the past session of Congress the Wall Street bankers and administration brought all kinds of pressures to get this ceiling repealed, but Congress refused. The great crusade against inflation now being intensified, with the help of new recruits from the advertising council and many national organizations, is aimed at stirring up grassroots support for repealing this 40-year-old law. If this succeeds, all interest rates will continue upward and the average family will be even harder hit.

Plainly, the tight-money and high-interest policies have done none of the good things claimed for them. These policies brought on the great recession of 1957-58, yet even then, when industry was operating at low gear, the big unions obtained wage increases and the big corporations raised prices to cover the increased wage costs, and then some. High interest comes out of the economic hides of the unorganized and less powerful, namely, the consumer and small-business man and the farmer. To illustrate, farm income has gone down from \$15 billion in 1952 to about \$12 billion in 1959. But personal income from interest has gone up from \$12 billion in 1952 to about \$22 billion in 1959. Not more than 2 percent of the families profit, on balance, from high interest. For example, U.S. savings bonds are the most widely held by the interest-bearing obligation. By law only individuals can own them, and they are aimed at small investors by being issued in small denominations and made available on payroll savings plans. Yet a recent Federal Reserve survey shows that only 5 percent of the American families own 87 percent of the \$42 billion savings bonds outstanding, and 72 percent of the families own none.

KEY POINTS ARE LISTED

TEXARKANA.—In a statement of points which "should not be overlooked" in the Observer's report on the monetary situation, Representative WRIGHT PATMAN said:

"Over 40 years the Government interest rate on long-term bonds has been fixed at not exceeding 4½ percent. During this time we have gone through depressions and inflations and the rate was maintained at approximately 2½, seldom over 3 percent, with no demand to increase the overall of 4½ percent, until President Eisenhower demanded it recently.

"During 12 years, from 1939 to 1951, the Federal Reserve maintained the long-term rate at 2½ percent, and bonds did not go below par. During a part of this time the Federal Government was spending a quarter of a billion dollars a day in World War II. During a part of this time we had the greatest inflation threat caused by the holdup of purchasing power at a time when goods were not available and people holding this purchasing power all wanted to spend it at one time after the war was over. Notwithstanding this most trying time in history for our fiscal policies, the Government long-term rate was maintained at 2½ percent, and these bonds did not go below par.

"If such rates can be maintained as indicated, they can be maintained any time if the Federal Reserve Board and the Open Market Committee will cooperate. The truth is, the Open Market Committee is composed of five members who are selected by the banks, with the other seven Federal Reserve bank presidents. Seven members of this Board are selected for 14-year terms by the President and the other five are selected by the commercial banks who profit from their operations. This is a weakness right here. The people who profit from high interest rates are fixing them.

"On the national debt we are paying \$1 billion more in interest in 1959 than in 1958. We are paying \$4 billion more in 1959 over roughly the same debt in 1952. Our President is forcing an extortionate interest rate policy by allowing Federal Reserve to be independent. It is robbery in broad daylight.

"One of these days the people will get the truth about how our money system is manipulated by a few, and a change will be made. It is difficult to get the facts over when only one side is carried in the press or included in news information by other means of communication."

Wilkes-Barre Indebted to American Legion Post 132

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial which appeared in the Wilkes-Barre Times-Leader of March 14, 1960:

CITY INDEBTED TO LEGION

Post 132 of the American Legion is to be commended for providing the city with a \$14,500 ambulance with an assist from the public.

In years gone by, the Legion had financed the purchase directly, but last fall it announced help would be needed on the project with the post making a substantial contribution and sponsoring the undertaking.

Because of the multiplicity of drives, the ambulance fund ran into delay in the final stage, but happily when the situation was called to the attention of the community, the balance was forthcoming. In fact, it was not even necessary to make a special solicitation which had been proposed.

Wilkes-Barre is deeply indebted to the Legion for this enterprise. The ambulance, in use daily, in its own sphere is as essential as the fire department to the well-being of the municipality. The past two decades, Legion ambulances have responded to 22,000 calls. That is an impressive record that speaks eloquently for itself.

Food Power, U.S.A.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. WILEY. Mr. President, over the years, agriculture has served as a foundation for our economy.

In the face of complex problems—resulting in costly programs of assistance—the Nation at times, unfortunately, loses sight of the tremendous significance of the farm economy—the production plant turning out food, a most valuable resource.

Because of an ample supply of high-quality, nutritional food produced by the American farmer, the average citizen today is a stronger, healthier, more energetic, creative individual.

Recently, the Central Soya Co., Inc., of Ft. Wayne, Ind., published a fine brochure entitled "Food Power, U.S.A."

Reflecting the fundamental significance of the farm economy to our economy, the health of our people, and progress of our Nation, I ask unanimous consent to have excerpts from the publication printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

FOOD POWER, U.S.A.

FIVE MORE MOUTHS EVERY MINUTE

Today, the U.S. farmer, who has never failed to make his land yield to meet demands of the time, is breadwinner for 173 million Americans * * * and his U.S. family is increasing at the rate of five mouths a minute.

In the early 1800's, farming was a way of life, and the average U.S. farmer was producing enough food and fiber for himself and four other people. By 1920, the average farmer was supplying food for himself and eight other people, and the number of farmers was declining.

In the early thirties, an agricultural revolution began that has been gaining momentum every year. Electricity and tractors, trucks and farm equipment, and many other agricultural advancements were boosting the farmer's productive ability. Currently, our farmers feed themselves and 20 others. Soon it will have to be himself and 25 others.

Farming is no longer a way of life—instead, it is a highly skilled profession demanding many special talents.

Acreage for croplands in the United States has remained almost stable for the past 35 years. Yet population, which has always increased, is recording explosive growth, and showing a strong preference for eggs, meat, and milk every year.

Production is increasing

Fewer U.S. farmers, on larger farms, working fewer hours, are constantly increasing egg, meat, and milk production. Their progress in efficiency has increased farm output in the past 17 years as much as the total increase in the 120 years from 1820 to 1940.

As a nation, the United States has 7 percent of the world's population, and only 13 percent of our people are farmers. Yet U.S. farm producers, representing less than 1 percent of the world's population, are responsible for 51 percent of the egg production, 41 percent of the red meat, and 46 percent of the fluid milk in the world.

This tremendous production of Foodpower, U.S.A. was thought unattainable just a few years ago, and yet, there is no time to look at the record or rest on laurels. With no allowances for changes in per capita consumption, the production of eggs, meat, and milk must be increased at least another 25 percent by 1975, just to meet the expected increase in U.S. population.

Food's a good buy

Despite the rising index for costs of living, most protein foods, especially eggs and many meats, can be purchased for less money now than it took 10 years ago. The same methods of volume and efficiency in production that have made this possible should continue to make protein foods a good buy in the future.

FROM FARM TO MARKET TO DINNER TABLE

Miracles, in growth and production, in processing, in distribution and marketing, put sunnyside eggs, a sizzling steak or a cold glass of milk on American dinner tables.

With almost jewel-like precision, our delicately balanced animal food production machine meshes many indispensable "gears." Each gear is vital, each is powered by freedom of production and purchase. Each gear is governed largely by freedom of competitive enterprise.

Competition is keen

U.S. housewives with their freedom of purchase and desire for low-cost food have a powerful influence on the prices and volumes in every phase of food production, except the growing of grains on American farms.

The poultry, livestock or dairy producer must meet market prices influenced by housewife demand with a minimum of "outside" interference. The feed manufacturers supplying these food producers must meet competitive prices. The meat packing-houses, egg stations, poultry dressing, and dairy plants must operate within a narrow margin that is controlled by an intensely competitive food marketing system. The corner groceries and supermarkets are competing with each other for the millions of food dollars housewives hold.

It is this cherished privilege to compete and to purchase that lets a Philadelphia housewife buy a weekend roast that was born on the plains of Texas, fattened in feedlots of the Midwest, marketed through stockyards in Chicago, packaged, displayed, and sold at her local supermarket.

Controls are costly

Necessity motivates invention—demand for quick action usually results in politically expedient measures. Such was the case for beginning a program of production controls in agriculture. But in so doing, the power supplied by freedom of production is reduced. Freedom of competition in production and marketing is drastically impaired or eliminated.

Artificially supported prices have encouraged production of impractical volumes. Acreage limitations have been largely offset by increased yields per acre, transplanted acreage, new crops or production areas.

Unwieldy and enormous carryovers of some basic crops are now plaguing agriculture. These carryovers are confusing agricultural planners and costing taxpayers billions of dollars each year.

One agricultural newcomer in the United States—soybeans—has for the most part been left alone. With vision, soybean producers have resisted suggestions for acreage controls urging instead a program that would encourage production for use.

In this atmosphere of freedom, soybeans have become a major farm cash crop, the chief source of protein in today's vital animal feeds, an important source of fats and oils that have strengthened our national economy and let us share our blessings with other nations of the world.

Through tremendous increases in production with no cost to taxpayers, soybeans are making important contributions to foodpower, U.S.A.

EGGS "OVER EASY" PLEASE

Laying hens are efficient factories that use poultry feed as their raw material to turn out an economical and health-giving food—eggs.

Like any other factory, production efficiency—how many eggs from how much feed—is an important factor in production rate, volume and cost. In 25 short years, U.S. egg production has jumped from less than 3 to nearly 5½ billion dozen eggs per year.

Most of this astronomical increase in production has been due to the development of better egg "factories" and more efficient egg-producing feeds. Because of these developments, U.S. citizens are buying eggs today for less money than it took 10 years ago.

LIGHT MEAT OR DARK?

Meat-type broiler chickens and their heavier cousins—turkeys—provide 30 or more pounds of appetizing and healthful meat for each U.S. citizen per year.

Here again, production efficiency is the key. The more meat that can be produced from a bag of broiler or turkey feed, the more drumsticks, thighs and breasts there are at lower cost for our dinner tables.

Twenty-five years ago, U.S. turkey production was less than 250 million pounds per year—today it exceeds 1¼ billion pounds, providing Thanksgiving fare for the year around.

The broiler industry did not exist on a commercial scale 25 years ago. Yet this popular poultry meat has almost replaced the farm "fryer" of yesteryear making fried chicken a year-round meat instead of a seasonal treat. Today, broilers, the most efficient of our meat-producing animals, supply more than 4¼ billion pounds of tasteful meat per year.

THE MOST NEARLY PERFECT FOOD

Nature's most nearly perfect food and the first food fed to almost every baby born is milk.

There were almost 25 million cows on U.S. farms 25 years ago and they produced nearly 104 billion pounds of milk per year. U.S. milk production now exceeds 125 billion pounds per year and the number of cows on farms has dropped to 23 million.

Today's milk cow is bred for higher productive capacity, and she has modern dairy feeds to help her reach her inherited potential. These same feeds prolong her milking life, letting fewer cows produce more milk for longer periods of time for increased food production.

Dairy animals, too, make valuable contributions to low-cost meat supplies.

ANOTHER SLICE OF HAM

Pork production, making ham, pork chops, and bacon, is the largest single use to which our bin-bulging U.S. corn crops are put.

Just as with other food-producing animals, the ratio of feed per pound of meat in hog production has been substantially improved by the development of modern feeds. Scientific breeding and feeding practices are producing leaner, more palatable pork cuts for foodpower, United States of America.

Twenty-five years ago, U.S. pork production was nearly 9 billion pounds per year. At that time, hogs were marketed at 6 to 8 months of age. Almost 800 pounds of feed were needed to finish a weanling pig for market.

Today, pork production is a high-volume, high-efficiency operation, supplying more than 11 billion pounds of pork per year. Hogs go to market at 4½ to 5 months of age. Heavier, meat-type weanling pigs are now being finished for market on less than 500 pounds of feed.

MAKE MINE MEDIUM RARE

Steaks and roasts from beef are America's favorite meat, and beef cattle are the backbone of U.S. meat supplies.

In a short 25 years, beef production has risen from 6 to 14 billion pounds per year. In the same period, beef consumption has jumped from 46 to more than 85 pounds per person.

Beef production has also had the benefit of modern feeds. Today's cattle eat less per pound of gain, gain weight faster, produce beef that tastes better than that of yesterday.

Thanks to modern feeds, many farm crops are used more efficiently and there's more beef to eat.

SERVANTS UNSEEN AND UNSUNG

No man stands alone—behind our eggs, meat, and milk producers, and their record of progress, is an agricultural "army" whose services are unsung.

Educators, research workers, agricultural experiment station, and extension personnel all are scouting the horizons, and pointing the way, for agricultural improvement. These men know the need and are devoted to finding the methods for progress. Years of effort may lay behind their developments. But the reward is great, more Foodpower, U.S.A.

Agricultural universities and land-grant colleges of America are constantly equipping our agricultural manpower with "why" and "how-to" knowledge that helps them see the paths of progress that can and should be followed for tomorrow.

Research projects—sponsored by industry, education or government—are being carried on daily throughout our land. Out of these may come a hybrid seed that will yield more per acre, a hybrid breed that produces more food in less time, a blood-typing practice that reveals how much a dairy bull calf will improve milk production of his future daughters without waiting 5 years for an answer.

The value of these projects for future production cannot be measured in terms of today, they must wait for the results of tomorrow.

From test strips of land at U.S.D.A. and State agricultural experiment stations come new methods of tillage, new principles of crop fertilization, new practices for plant cultivation and harvest. All these result in greater production, and are vital factors for future Foodpower, U.S.A.

Agricultural extension people carry the message to the farmer. Through them, and their desire to see better methods put to good use, the practices, products, and principles for progress are "fed" to our food producers.

Just as with humans, farm plants and animals are subject to sickness, too. Countless doctors, our veterinarians, botanists and entomologists, devote lifetimes to fighting insects, parasites, and disease.

Their efforts may result in a plant or animal more resistant to disease, a new method for disease diagnosis or prevention, a product for insect, parasite, or disease control. Saving what our farmers already have is vitally important to increased production of the protein foods we prefer.

The feed industry: From feed manufacturers, pharmaceutical companies, protein processors and other commodity suppliers have come many important contributions. Nutritionally balanced feeds, vitamins and hormones, antibiotics and medications, all have been developed through progress in industry research to increase food production and makes farm operations more efficient.

Trained representatives make daily rounds, stressing the advantages of properly feeding livestock and poultry, recommending sound management and production methods.

Small Slam

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post, Tuesday, March 22, 1960:

SMALL SLAM

The lessons of the Army Air Force practice airlift to Puerto Rico underscore the urgency of a House Armed Services Subcommittee's plea for modernization of the Military Air Transport Service. By working its crews double time, calling on civil carriers to supplement its operations elsewhere and choosing a nearby island for the exercise, MATS has been able to move 21,000 soldiers in a few days' time. But only a third of the equipment that such a force would need in a real emergency was included in the lift.

If the exercise had been carried out over the Atlantic or the Pacific—as would be the case in a real limited war situation—the picture would have been completely different. Most of MATS' aircraft are old and slow, of World War II vintage. In a full-scale emergency, if island-hopping became impossible because of enemy submarine or missile attacks, MATS would have no more than 29 reasonably modern aircraft capable of strategic, long-haul transportation.

Yet in the face of these known deficiencies, which the so-called Operation Big Slam—Puerto Pines served to illustrate, the President has approved a mere \$50 million in the 1961 budget to begin development of a new military jet cargo plane. At best such a plane might take 5 years to produce. Nothing is provided for acquisition in the meantime of converted commercial jet planes which, in modest numbers because of their great carrying capacity and high speed, could transform MATS into the modern supporting arm that all the services urgently require.

Before the House subcommittee, headed by Representative L. MENDEL RIVERS, completes its timely month-long study of national airlift needs and capabilities, it will no doubt become apparent that modernization of MATS is intricately bound up with an unresolved dispute between the Air Force and the civil airlines over MATS future. The civil view was largely reflected in the President's recent policy statement on MATS which in effect urged that the military get out of the international airline business except for operations essential to its so-called hard-core mission.

As interpreted by the private carriers, this would ultimately mean that nearly all of the 1 billion ton-miles of transoceanic cargo now hauled annually by MATS would be shifted to the private carriers, which presently carry a little more than half that amount. The Air Force seems far from ready to accept this interpretation, with MATS arguing that it must maintain at least a 5-hour-per-day aircraft utilization rate to be ready for the 12-hour-per-day lift which it is charged with providing in a war. The civil concept of the hard-core-only policy would trim this to 1 or 1½ hours a day.

If the real readiness of the Civil Reserve Air Fleet could be improved upon and if MATS could revise its training and other readiness concepts as drastically as the private carriers think it could, perhaps some

adjustment of international cargo business in favor of the private carriers could be justified. The carriers insist they cannot afford costly jet cargo planes without assurance of a large slice of the cargo now hauled by MATS.

But however this dispute ultimately is settled, it ought not to stand in the way of an immediate military-civil agreement that provides for the prompt ordering of converted jet liners suitable for military troop and cargo lift. Government and industry ought also to cooperate in the development of more advanced cargo planes, designed to meet both military and civilian requirements. Meanwhile, a Defense Department review of the President's broad policy statement on MATS is proceeding, and in this context and before the Rivers subcommittee the question of who is to operate the new aircraft in peacetime can be further explored. Both the Air Force and the civil carriers recognize the inadequacy of present cargo planes for military and commercial needs, and upon this agreement a program for modernization should be able to proceed.

An Open Letter to the Taxpayers of Alabama

EXTENSION OF REMARKS

OF

HON. GEORGE M. GRANT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. GRANT. Mr. Speaker, I have been requested by the Christian Layman of Alabama to insert "An Open Letter to the Taxpayers of Alabama" in the CONGRESSIONAL RECORD.

This letter was distributed by this organization:

AN OPEN LETTER TO THE TAXPAYERS OF ALABAMA

Incidents, happening here in the cradle of the Confederacy, for the past few days have been most disturbing, not only to the citizens of Alabama, but throughout the Nation.

The Amsterdam News, a New York Negro newspaper, carried the following headline last Saturday, "Negroes in Dixie Sing: Sit Down and Fight a While"—and all the time we have been told that no one was fighting—just passive resistance. One out-of-State agitator told a mass meeting at Alabama State College (for Negroes) that we've got them so disturbed they don't know what to do.

A TV newscast pictured a recent meeting being held at the college. A Negro girl came to the mike and made the statement that when they expelled the nine . . . they expelled the entire student body. Are such statements as these Christianity or Gandhism? This might be worthy of consideration, and use the money to help relieve the 10 percent cutback in other State supported schools.

We white people of this State, who carry better than 70 percent of the tax load that supports this Negro college, are thoroughly disgusted with outside meddling and being told that we do not know what to do. We are thoroughly disgusted with suggestions made by the president of this college, such as . . . Let's take time to think things through . . . appoint a biracial mediation committee, etc. We remember that this was the pattern in 1955, regarding bus boycott. Look what happened. Many of our white taxpayers were amazed when they

learned from records that 5 of the 9 ring-leaders were out-of-State students.

We commend Governor Patterson and the State board of education for the stand they have taken and we want the world to know it. (We list below members of this board and suggest you contact them and let them know your feelings in the matter.)

In addition, gentlemen, and in consideration of the facts revealed, we respectfully request that you release to the taxpayers of this State, an itemized list, by name and address, of all out-of-State students attending Alabama State College.

ALABAMA STATE BOARD OF EDUCATION

Hon. John Patterson, president.
Mr. Robert R. Locklin, Mobile, First District, term expires 1961.

Mr. J. T. Albritton, Andalusia, Second District, term expires 1965.

Mr. J. P. Faulk, Jr., Samson, Third District, term expires 1961.

Mr. Harry M. Ayers, Anniston, Fourth District, term expires 1963.

Mr. J. J. Benford, Albertville, Fifth District, term expires 1961.

Mr. E. W. Skidmore, Tuscaloosa, Sixth District, term expires 1963.

Mr. W. C. Davis, Fayette, Seventh District, term expires 1965.

Mr. Cecil Word, Scottsboro, Eighth District, term expires 1965.

Mr. Chester Austin, Birmingham, Ninth District, term expires 1961.

Dr. Frank Stewart, State superintendent, secretary and executive officer.

Respectfully submitted,

THE CHRISTIAN LAYMAN.

MONTGOMERY, ALA., March 5, 1960.

Dr. Joseph I. Echikson Honored

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. ADDONIZIO. Mr. Speaker, on February 9, 1960, the South Mountain Lodge of B'nai B'rith presented the Americanism Award to Dr. Joseph I. Echikson of South Orange, N.J. This is the latest of numerous honors that have been conferred upon Dr. Echikson, for his brilliant leadership in his profession and in his community. All Americans have reason to be grateful to Dr. Echikson for his dedicated service, particularly for his outstanding contribution to the crusade to track down the great scourge of cancer.

The award was made to Dr. Echikson at impressive ceremonies at which the invocation was given by Rabbi Theodore Friedman, spiritual leader, congregation, Beth El; the welcome was delivered by Dr. Irving Schein, chairman, Americanism Award Committee. Guest speaker was Dr. Royal A. Schaaf, president, Medical Surgical Plan of New Jersey. Presentation of the award was made by Mr. Philip Lax, president, South Mountain Lodge, whose felicitous tribute follows with Dr. Echikson's gracious response:

The Americanism Award of B'nai B'rith is given each year by South Mountain Lodge to a man who has performed outstanding service to his community.

Many men reach the pinnacle of success in their chosen profession, but few are prone to give of their time and energy, and go far and above their normal call of duty.

It is truly a great man who attains these qualifications, a man with deep feeling, who thinks more of his fellow humans, and their comfort, rather than his personal welfare and relaxations. Dr. Joseph Echikson truly represents the ideals and qualities that lie behind this most coveted award, for although a noted heart specialist, his farsightedness and deep concern for his fellow man led him to a desire to establish a means of attacking the equally dread disease of cancer.

Through his efforts, capabilities and leadership he was a guiding factor in the growth and development of the New Jersey Cancer Society, of which he is a founding member. As such, he was directly responsible for bringing the problem of cancer and cancer research to the public. To have been a motivating factor in establishing the New Jersey Cancer Society is accomplishment enough, but to have been closely associated with its organization, development, and administration, surely must have been a tiresome, and in many ways, a thankless task.

Because of his achievements in both medicine and service to his fellow man, Dr. Echikson was awarded the Doctor Edgar J. Ill Award by the Academy of Medicine in New Jersey for his accomplishments in the field of medicine, public welfare and civic activities. In 1952 he received the Bronze Medal from the National Board of Trustees of the American Cancer Society. His biography is one for which he can truly be proud.

Tonight, we, the members of South Mountain Lodge, are doubly honored, for this makes the first time that one of our own members has been chosen to receive the B'nai B'rith Americanism Award.

Dr. Echikson, as president of South Mountain Lodge it is my pleasure to present the B'nai B'rith Americanism Award to you. It reads "Presented to Joseph I. Echikson, M.D., in recognition of outstanding leadership, unselfish service and devotion to his fellow man."

"SOUTH MOUNTAIN LODGE,
B'NAI B'RITH.

FEBRUARY 9, 1960."

DR. ECHIKSON'S RESPONSE

Mr. President, Dr. Schaaf, Dr. Schein, and the members of his committee, members of the lodge, my friends and family, I am understandably flattered by your gracious comments and I am at the same time most humble.

I am most impressed by the designation of your award, namely, the "Americanism" award. This is a most impressive title. It strikes at the very core of my philosophy of life. There are many who do not realize that in a democracy such as ours, there is an opportunity and privilege and indeed the duty and obligation to serve for the benefit of our fellow man. Such a philosophy does not exist in a totalitarian system of government. I am concerned, as I am sure are you, with the State of our welfare and with equal vigor I oppose the philosophy of the welfare state.

To be of service to one another without thought of material gain is one of the principles upon which our great country was founded. This is truly the spirit of America and, therefore, this award is aptly named. It has been given to others as recognition of the services which they had been privileged to give others, and while I do not feel worthy of your commendation, still I am deeply impressed by the significance of this award.

No man attains the qualifications which this award implies except through the helping hands of many other equally deserving people. If, as you believe, I deserve any

praise I must honestly state that I accept this award in behalf of those many wonderful citizens who have assisted me and have been most unostentatious in their efforts. At this moment I stand in the precarious position of being placed on a pedestal and I accept this honor with humility, knowing full well that the only place one can go from a pedestal is to fall off. I hope that I shall have the character and good judgment to maintain this enviable position so as to continue to merit your good will.

It has been a source of great joy to me to have served in various activities and I hope that my efforts have been of benefit to others.

In closing I wish to thank Drs. Schein and Alan Brotman and the members of the committee who have recommended me for this great honor and to the members of the lodge who endorsed this recommendation of the committee. I thank Dr. Schaaf who has honored me by consenting to speak here tonight. This is indeed a great compliment to me. I thank my dear wife who has through the years encouraged me and provided me with the time to participate in these various activities. She has made great personal sacrifices in my behalf and I wish to publicly acknowledge them. I thank my children for honoring me by taking advantage of the educational opportunity provided to them. I also thank my parents, who unfortunately have passed away, but who like all good parents provided me with the opportunity for education. They practiced self-denial to the highest degree. Unfortunately they are not here tonight, but I am sure that they would believe every word of praise which had been spoken here tonight. I thank my many friends who honor me by being present here on this occasion. My cup runneth over with joy. Thank you from the bottom of my heart.

Sterling Forest Gardens: America's Newest and Largest Floral Showplace

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. KEATING. Mr. President, on Thursday of last week I was pleased to welcome to Washington a most gracious and charming young woman from my State, Miss Anne Purves. She was visiting our Nation's Capital as ambassador of Sterling Forest Gardens, America's newest and largest floral showplace at Tuxedo, N.Y.

Miss Purves was a most attractive representative of the Empire State and one in whom all New Yorkers can take great pride. In the larger sense her visit was of interest to all Americans because she brought with her information and an invitation to view the wonders of this new addition to the New York State scene.

Sterling Forest Gardens are dedicated to the concept of a more beautiful America. Organized as a nonprofit corporation by a farsighted group of New York leaders, headed by Robert W. Dowling, these gardens represent an effort to emphasize the spiritual values of beauty in the lives of Americans.

Situated on a 125-acre tract near Tuxedo, N.Y., in what was formerly unre-

claimed swamplands, Sterling Forest Gardens will become an almost unrivalled permanent floral showplace, a rendezvous for flower lovers, naturalists, and horticulturalists from all over the world. The gardens will be open to the public on May 1, 1960. The opening will be a fine tribute to the role that forward-looking private citizens can play in what may become one of the most pressing problems of the future: the conservation of our Nation's great natural beauty for all of our citizens.

The gardens were designed as a garden of gardens, and were created by a distinguished staff of horticulturalists, landscape designers, engineers, and other garden experts. Work began on the project some 2 years ago, when 75 men undertook the task of clearing the wild, swampy area. Since then, this cooperative, nonprofit venture has created a system of drainage, formal design gardens, landscaped lakes, forests and lawns, and a unique exhibit showing man's relationship to time. Throughout, great care has been taken to preserve native trees, bushes, flowers, and other natural contrasts to the formal settings.

The first planting of tulips, which formally inaugurated the planting of the gardens themselves, was made September 17, 1959, by Her Royal Highness, Princess Beatrix of the Netherlands.

This and other aspects of the development of the gardens, created by City Investing Co. and Sterling Forest Gardens Corp., of which Robert W. Dowling is president, was carried out with the cooperation of the International Flower Show Committee of the Netherlands. Since that time, more than 1.5 million tulips, hyacinths, daffodils, and other early-blooming Dutch bulbs have been planted.

The first blooms will be followed by petunias and azaleas in May; iris, peonies, roses, begonias, hermercallis, and delphinium in June; lilies, snapdragons, marigolds, tritoma, and dahlias in the summer months; and asters, chrysanthemums, and helenium in the autumn. In fact, this scientifically planned garden, marked by the largest collection of spring flowers in any garden in the United States, will be a continuously changing panorama of bloom planned to change every 2 weeks from the opening on through the summer and into the fall.

A number of striking features are planned for these unusual gardens. They include the following:

A motor train, similar to those used at the Brussels Fair, will be used to transport visitors between the parking areas and the gardens' entrance. The train will run through a scenic wooded drive and past the Dutch Dam, on its way to the entrance.

A series of six lectures on the floral displays at different locations in the gardens will be broadcast over an electronic lectern system. Portable electronic receivers will be made available to visitors who wish to hear the lectures.

Jean Delacour, one of the world's leading aviculturists, will provide a colony of rare and exotic birds to be housed in uniquely designed aviaries

placed throughout the gardens. Birds that will be represented include flamingos, demoiselles, swans, crown cranes, peacocks, and varieties of small birds.

Two features which will be made available to large groups, garden clubs, and other societies are a special club meeting pavilion inside the gardens and an extensive picnic recreation area located near the parking areas.

A number of works of art are being designed for the gardens, since they are planned as a cultural as well as floral attraction. They will include a sculptured Raintree fountain, portraying the legendary tree of good luck and happiness. In another area, various fountain displays will illustrate man's growing enlightenment in his relation to the universe, tracing his concepts of the world from prehistoric time through the present and into the age of interplanetary travel.

The personal enthusiasm of Mr. Dowling and his associates in City Investing Co. plus the wholehearted cooperation of world horticultural leaders, has been responsible for creating Sterling Forest Gardens.

Samuel R. Walker, president of Sterling Forest Corp. and City Investing vice president, personally visited famous gardens in Europe when the project was first considered. He has participated actively in every phase of their creation.

Gustave Springer, American representative of the Associated Bulb Growers of Holland, brought leaders of the bulb industry to the United States to help in the selection of the site and to cooperate on many phases of the gardens.

W. Fred Johnson, vice president of Sterling Forest Gardens Corp., has had the responsibility of directing actual work on the project and carrying out the designs and plans of the many consultants.

Mr. President, I am confident that Sterling Forest Gardens will become more than a mecca for flower lovers. It will become more than an important center for research in horticulture.

I am extremely hopeful these gardens will help renew and justify our faith in man's capacity to create beauty and to keep and sustain it as part of the spiritual wealth of this Nation. It will serve as a living testimonial to the ability of private citizens to contribute substantially to the saving of America's precious natural resources.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "The Story Behind a Major New Garden," written by W. Fred Johnson, and published in the January-February 1960 issue of the Garden Journal, the publication of the New York Botanical Garden.

There being no objection, the article was ordered to be printed in the Record, as follows:

THE STORY BEHIND A MAJOR NEW GARDEN (By W. Fred Johnson)

Sterling Forest Gardens, now being created on a 125-acre tract near Tuxedo, N.Y., will open to the public May 1, 1960, with a display

of one and a half million hyacinths, daffodils, tulips, and other Dutch bulbs. Planning a single huge floral display such as this is a tremendous job in itself, but it is only a small part of the work being carried out, for the gardens must be kept in continual bloom straight through the summer and into fall.

Our staff has traveled thousands of miles in this country, and Robert W. Dowling, president of City Investing Co., and other members of that organization, which is co-sponsoring the gardens, have visited such famous foreign gardens as Tivoli in Rome, the Gardens of Versailles, Kew Gardens, Keukenhof in Holland, and even the famous gardens of Japan. All this was done to study methods of presenting constantly new floral displays and to observe at first hand the ways in which the interest and delight of visitors can be heightened in a garden.

FREQUENT NEW DISPLAYS

At Sterling Forest Gardens, we plan to introduce new floral themes every 2 weeks from May through the summer and far into the fall. Dutch bulbs—incidentally, the largest such collection in any garden in the United States—will give way to the finest and newest in iris and roses. Then annuals and perennials will come into bloom, to be followed in the autumn months by tremendous displays of chrysanthemums.

Sterling Forest Gardens are located in the foothills of the Ramapo Mountains, in a setting of woodland, meadow and rugged foothills. A number of small lakes have been created on the grounds, and unusual fountains, including a representation of the raintree, mystical tree of good luck and happiness, are planned to delight further the eyes of visitors.

EXOTIC BIRDS

The area being a wild one, there is already considerable birdlife in the gardens, and we believe that it will increase markedly as time goes on. But many of our native birds are rather inconspicuous; so to bring additional color and brilliance to the gardens, exotic species will be introduced. We should like also to have a few of the deer native to Sterling Forest in the gardens, but we have learned that they unfortunately have a very healthy appetite for the leaves of our hundreds of thousands of tulips. They will be fenced out, but can be seen roaming the other parts of the forest.

No doubt everyone is going to exclaim over the scope of the gardens and their wealth of plant material, but probably only one in a thousand visitors will realize that the story of their development has been, and continues to be, one of constant struggle against time and nature. We have been working for nearly 2 years to transform the area into this major floral showplace, and we have had as many as 150 men and dozens of large and small pieces of equipment busy at the job through the spring, summer, and fall of both 1958 and 1959.

NATURE—FRIEND AND FOE

Many times the elements of nature that have worked against us were the very ones we wanted to harness and have work for us. The principal ones, of course, were weather and water—water in the form of rains, floods, torrential downpours, masses of water falling and flowing across a very narrow area confined between hills.

The main part of the gardens is located in what was a swamp 2 years ago, with several feet of water standing in it. It was surrounded by wooded hills, which created a basin through which floods poured. Deposits of peat and clay in the swamp had been covered by water for centuries, perhaps thousands of years, and our first task was to cut huge drainage ditches 15 feet deep through the area to permit this water to drain out.

A SOLUTION FOUND

After much study and experimentation, we learned that it would be impossible to drain the underground water regardless of how many ditches we might dig, for it was trapped by various layers of clay and peat in a very complex arrangement. The only solution was to strip off the entire area and remake it completely with the clay as a base, then a deep layer of pervious sand and finally a layer of soil for growing the plants. By this method we were able to establish the underground water table at a desired level and to control it.

We had to prepare for flash floods of 3- to 5-inch rainfall within an 8-hour period. Such a devastating flood pouring down from the surrounding hills into the flat basin which would be the gardens could destroy them.

"DUTCH" DAM

Our solution was the creation of the series of lakes in the gardens which are actually flood catchment basins, and which at the same time serve the esthetic purpose of further beautifying the grounds. These catch basins are linked by underground conduits, permitting the flood of water to flow from one to another. Finally, the entire system is regulated by an automatic dam (called "Dutch" dam because the design is a copy of one we saw in Holland). It will open when the flood level in the lakes reaches a certain level, so that heavy floods can be passed through the system and out of the gardens without causing damage to them.

We had to think not only of how to get rid of the water but also how to get it back during the dry seasons, when plants need water badly and when the lakes might become dry. An irrigation system of pipes was installed. To make sure that the lakes do not go dry, we had to go to another swamp on a higher plateau above the gardens, and this was converted into a 10-million-gallon reservoir and emergency water supply.

AN INVASION

Another major problem in the development of Sterling Forest Gardens was the dense growth of brush in the swamp area. In fact, it was so dense that 2 years ago Dutch landscape architects responsible for the overall garden design got completely lost in it for about 30 minutes when they were making an inspection tour. Finally we heard their yelling and directed them back to the highway.

Seventy-five men, 35 chain saws and several bulldozers worked for 3 months during the summer of 1958 clearing out the area. During the height of this operation the noise in the confines of this basin was intense—in fact, it sounded like an invasion.

Even while this clearing was going on, six crews were working continuously surveying the area, and two draftsmen were translating their information onto detailed topographical maps. These are unusually large in scale and unusually detailed—we know the location of every single tree and every single boulder in Sterling Forest Gardens, and also the depth of the soil everywhere within its bounds.

RAINY DAY BLUES

Great pains were taken to preserve every possible tree in the area, and also the shrubbery, such as the native laurel. With huge bulldozers and draglines working all through the area, this was no simple task. Special equipment had to be selected and extreme supervision exercised for working the ground among the trees to prevent scarring them and damaging their root systems.

Spring of 1959 came, and even though we had studied weather reports for many years past, we began watching the skies as anxiously as a wheat farmer in the Middle West at spring planting time. We knew that when rains came our equipment would bog down and work would have to be

stopped. Initially a heavy rain would stop work for 10 days to 2 weeks. After the area was shaped and improved, this loss of time was reduced to 2 or 3 days. In our schedule of work we had allowed 50 percent lost time due to rains from June 1958 to May 1, 1960, the opening date. We have needed every day of good weather.

SUPREME TEST

Our flood control system came to a supreme test at the last rain on Friday, Saturday, and Sunday, October 22, 23, and 24, 1959, when a record rainfall of 3.5 inches descended within 8 hours. Our hearts were in our mouths; as we watched to see if our system would work or if the gardens would be destroyed. The system worked. The gardens were not destroyed. Rather, within hours after the rainfall we were able to walk almost any place; within 24 hours we could walk in the flowerbeds and within 48 hours planting was resumed.

The Dutch have been cooperating throughout this mammoth project by the International Flower Show Committee of the Netherlands. When planting time came this fall, for the 1½ million tulips, hyacinths, daffodils, and other bulbs, they offered to see us through that immense operation by sending nine young experts to supervise our untrained men. We owe the Dutch a vote of gratitude for all their interest and for their drive in getting the work done.

We hope that this brief report gives horticulturists, gardening enthusiasts, and the general public some idea of the tremendous amount of planning and work that has gone into the creation of this new, major floral showplace. Creating the lovely spectacles which they will see beginning May 1, 1960, has been a major undertaking, with its full share of anxious and worrisome moments, hours, and days. At the same time it has been an inspiring and exhilarating experience which more than 200 men and women have shared. We hope, in turn, that the gardens will prove an inspiring and exhilarating experience to the millions of people expected to visit them over the years.

Food Additives and Cancer

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. WOLF. Mr. Speaker, under leave to extend my remarks in the RECORD, I commend to my colleagues an excellent statement dealing with the question of food additives and cancer:

STATEMENT OF FEDERATION OF HOMEMAKERS, ARLINGTON, VA., PRESENTED JANUARY 29, 1960, BY MRS. ANN BOORAS, PRESIDENT, BEFORE THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, U.S. HOUSE OF REPRESENTATIVES

Mr. Chairman and members of the committee, I am Ann Booras, president of the Federation of Homemakers. Our federation is most appreciative of being afforded this opportunity to express the views of its membership with respect to proposed legislation dealing with the use of colors in foods and cosmetics. Our Federation of Homemakers, although but recently formed, consists of housewives residing in this area and in many of our States. We also have junior members attending local colleges. Our members are concerned not solely with the health and well-being of our own families, but with the

good health of all consumers. One of the objectives of our federation is to acquaint our members with past and future food legislation and the tasks and needs of the Food and Drug Administration in enforcing these specific laws.

We wish to thank the members of this committee for presenting to Congress recently an excellent food additives bill which includes the Delaney cancer clause. In our opinion, consumers should be most grateful for the protection now being afforded them through the enforcement of the Delaney cancer clause to the food additives amendment.

Some of our members have read the 1957-58 printed report of the hearings relative to proposed chemical additives bills held before the Subcommittee on Health and Science of this committee, and are impressed with the testimony of reputable doctors and scientists contained therein. From time to time we shall quote from this remarkable report portions of the testimony given by these eminent and highly respected authorities.

It is fortunate for consumers that this committee has a wealth of information obtained from numerous hearings on chemical additives. We feel confident that this committee will deliberate unhurriedly and will present a color additives bill to the Congress which will decrease the risks consumers may now unknowingly be taking by ingesting certain suspect dyes in their foods. We urge that any color additives bill presented to the Congress contain the Delaney cancer clause.

We note that the American Cancer Society in a letter dated July 22, 1957, written by James S. Adams, chairman, Legislative Committee, to Chairman John Bell Williams, relative to proposed chemical additives bills recommends: "That no substance shall be approved found to induce cancer in man, or after tests provided in No. 1 above, found to induce cancer in animals." In this same letter Mr. Adams states "the problem is one in which the individual citizen is powerless to protect his own health but must depend upon the Food and Drug Administration." Mr. Adams also believes and we continue to quote: "in considering the health problem created by the increasing use of chemical additives in food the adage 'an ounce of prevention is worth a pound of cure' is particularly applicable." Mr. Adams then urged "that your committee recommend legislation to the Congress to strengthen the Food and Drug Administration." This advice, in our opinion, can be applied also to the proposed color additives legislation.

Quite a few of our local members were present for Secretary Flemming's appearance at the morning session of the color hearings and were tremendously impressed with his statement to the committee. We are all agreed that consumers will benefit from his forceful presentation of the objectives of the administration's color additives bill. The members present at the morning session applauded the Secretary's summary on page 24 of his statement, particularly No. 3 which we quote here as it expresses the opinion of those members attending the hearing:

"3. We have concluded that such an anticancer clause constitutes sound public policy in view of the fact that no one knows how much or how little of a substance will induce cancer when added to the diet of man if it has been demonstrated that it will induce cancer when added to the diet of a test animal. In other words, if a person includes in his diet substances that induce cancer when included in the diet of test animals, he is taking an unnecessary risk. The Government has a responsibility to see to it that we are not exposed to unnecessary risks of this character. In discharging such a responsibility the Government can conceivably contribute to a reduction in the mounting number of cancer cases."

We wish to remind this committee that in 1939 American housewives, through their various organizations and clubs, went on record at hearings conducted by the Federal Security Agency that they wished only colors certified as absolutely safe used in their foods and for decorating such foods. These same housewives in 1939 went on record that they preferred to have the colors of their lipsticks and other cosmetics limited to a relatively few harmless shades than have a variety of hues provided by suspect or proven dangerous dyes.

If today's housewives were consulted about this problem of colors—our federation feels confident they, too, would go on record as wishing safety of the product to be paramount. Now that we are accustomed to the brightness which lipsticks give to our faces and the lift to our spirits, we would be loathe to forego our addiction to them—but we do plead that only the most benign dyes be selected. Members of our sex start using lipsticks these days at age 12 or thereabouts and continue their use till we depart this existence. Because of such universal and continual use of lipsticks by all ages of our female population, cumulative effects of the dyes must be seriously considered. It must also be recognized that lipsticks are being used by young persons whose cells are still dividing rapidly. Such dyes may have a different effect on these young persons than mature persons. Lipsticks are also applied by expectant mothers, whose bodies undergo so many drastic changes during the stress and strain of pregnancy. Then consideration of the possible effects upon the elderly who may be taking medication for chronic illnesses is suggested. Today it seems more necessary than in the past that in the best interests of the users lipsticks should be limited to a few harmless colors and variations of shades until lengthy tests on laboratory animals assure the wisdom of permitting a wealth of shades and colors.

In the case of food colorings, the very young ingest them as well as the aged and chronically ill of both sexes. The adolescent and the pregnant and those with allergies—all ingest food colorings—sometimes unknowingly (as in the case of butter). In these circumstances surely total impact on the human system should be considered as well as cumulative effect and synergistic action. It is our understanding that competent authorities believe that children, because of their immaturity and their state of growing, may be affected by chemical additives and dyes in a different nature than mature persons or mature experimental animals. Therefore it was very distressing to learn that the yellow and orange AB and OB dyes, now removed from the approved FDA lists, were used in many of the favorite foods and snacks of children. We trust these two oil dyes were never used in lipsticks. Now when the human system has to cope with air pollution and water pollution, as well as the products from atomic fallout, it seems especially needful that discretion and caution should be observed in the choice of dyes to be used in our foods. We would like to point out here that Dr. Jolliffe, eminent nutritionist and medical authority, has stated in the New York State Medical Journal, September 15, 1955: "although in America today, life expectancy at birth is near the best of any civilized country in the world, but at the age of 40, life expectancy is near the bottom."

In support of Secretary Flemming's policy that "no one knows how much or how little of a substance will induce cancer when added to the diet of man if it has been demonstrated that it will induce cancer when added to the diet of a test animal" we quote from the testimony of Dr. Francis E. Ray, research professor and director, Cancer Research Laboratory, University of Florida, Gainesville, Fla., before your committee, at the hearings on food additives legislation.

Dr. Ray stated: "There may be a safe dose of some cancer-producing chemicals, but we do know there is no safe dose of certain other cancer-producing chemicals. We do not know everything about cancer-producing chemicals. There, my feeling is we should be on the safe side. Because we know there is no safe minimum dose for certain cancer-producing chemicals, I think we ought to adopt that rule, at least tentatively, that there is no safe minimum dose."

In considering this important color legislation, we would like to remind the committee that for 25 years Agene was used to mature flour in this country. Then its use for this purpose was discontinued when research on dogs indicated it might be quite harmful to humans. Coumarin was used as a flavoring agent for 75 years before its use, too, was discontinued because it was felt it might have damaging effect on humans. Subsequent research may prove that many dyes now considered relatively innocuous are capable of causing harm to consumers. Dr. Ray also pointed out on page 200 of the Food Additives Report: "I wish to make one other point, too, and that is: Our experiments show that the younger the animal is when he is treated with cancer the more certain is the production of cancer. And so we may be initiating cancer in the children of today by the addition of chemicals, and they are very susceptible to that. We will not know, perhaps, for a generation or two what the effects will be." At this point we would like to remind the committee that the American Cancer Society in a press release last spring announced that cancer seemed to be getting more prevalent in younger women these days and was definitely more prevalent in children.

Dr. Morton L. Levin, in the Chemical Additives Report, states that cancer is a "common disease." We quote from his remarks, which appear on page 355 of the aforementioned report: "In the presence of a common disease, of which most cases are of unknown causation, I think you can understand the sensitivity of physicians and public health authorities to the possibility that substances which we do not suspect today may be causative of cancer."

"In other words, we cannot rule out the possibility that seemingly innocuous substances, on the basis of general experience, may turn out to be significant for cancer when studied thoroughly."

It would appear from the foregoing quotations that our bodies are old fashioned and do not adapt themselves easily to drastic innovations. It seems to us that simply because it may take years to recognize the damage done to body cells by certain pesticides, additives, and dyes, discretion and caution should not be discarded and their use permitted in our foods. It would be a tragedy for a child, initially damaged by a chemical additive at 4 or 5 years of age, to be struck down fatally by cancer at 15 or 16; yet such tragedies may even now be occurring.

Again we wish to thank the members of this committee for granting us this opportunity to convey the opinion of our members.

Millennium of Christianization of Poland Noted at Conferences

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following article written by Mr. John C. Sciranka, an editor from Passaic, N.J., which appeared in the Bethlehem (Pa.) Bulletin on Friday, March 11, 1960:

MILLENNIUM OF CHRISTIANIZATION OF POLAND NOTED AT CONFERENCES

(By John C. Sciranka)

The writer, is grateful to well known Dr. Oskar Halecki, professor at Fordham University, for an opportunity to participate in two academic conferences held in commemoration of the approaching millennium of the Christianization of Poland.

The first conference was held at the Fordham University on November 14, 1959, by the Polish Institute of Arts and Sciences in America, of which Professor Halecki is president. The subject of the conference was "Millennium of the Christianization of Poland."

Very Rev. Lawrence J. McGinley, S.J., rector of Fordham University, opened the conference. Prof. Berhart B. Lander, also of Fordham, spoke on "Holy Roman Empire of the 10th Century and East-Central Europe."

Rev. Dr. Francis Dvornik was on the program and he was to talk about St. Adalbert (Vojtech), famous bishop of Prague, who baptized St. Stephen, known as the first King of Hungary. Dr. Dvornik who is held in high esteem as a noted scholar was unable to be present on account of a heavy cold.

Rev. Astrik L. Gabriel, professor at Notre Dame University, spoke about Polish and Hungarian alliances. Professor Chudoba spoke about St. Adalbert (Vojtech), who was born in 956 A.D., in Prague. His father Slavnik was the Lord of Libice and his mother was Strezislava. He was baptized Vojtech, which means solace of the armies. Archbishop Adalbert, in Devin confirmed him Adalbert, which name is used by many German historians. In 986 when only 30 years he was consecrated bishop by Bishop Detmar. Bishop Vojtech labored in Bohemia, Slovakia and Poland. He suffered a martyr's death by the pagan Prussians on April 23, 997, when his feast is observed. The largest Slovak Catholic society is named in his honor.

On March 5, 1960, a second academic conference of the Polish Institute of Arts and Sciences in America was held at Fayerweather Hall, Columbia University, New York City. Dr. Henry L. Roberts, director of the program on East-Central Europe at Columbia, was chairman. He was introduced by Professor Halecki.

Prof. Ludwik Krzyzanowski, editor of the Polish Review (published by the Polish Institute), spoke on Poland's contribution to Western civilization. He was followed by Prof. George Y. Shevelof of Columbia University, who spoke on "Poland's Cultural Impact on the Eastern Slavs." Prof. John A. Lukacs, of Chestnut Hill and LaSalle Colleges, both in Philadelphia, had as his topic "Poland's Place in the European System." He is a well-known author of several books on this subject. "Poland's Place in the Baltic Region," was a theme of Prof. Arnold Speke of the University of Riga. Dr. George Washkovich of Hunter College, New York City, spoke on "Poland's Place in the Slavic World."

The second conference had two sessions just like the previous one at Fordham, one in the forenoon and afternoon. Discussions followed the morning and afternoon lectures. Both conferences were held on the highest academic level.

The year of 1966 is accepted as the marking of Christianization of Poland. The millennium will be observed in 1966.

Dr. Washkovich, who studied at the famous Charles University in Prague, capital of Czechoslovakia, is an American of Slovak descent. His parents came to America from Michalovce in Zemplin County, which

was also the home of Col. Geza Mihalotzy, well-known organizer of the Lincoln Rifleman of Slavonic origin, which he organized in February 1861, and received a written sanction from the famous emancipator. Mihalotzy was a captain of Chicago sharpshooters in 1861. He fell in the battle at Fort Chattanooga, which is often also called Fort Mihalotzy.

Dr. Washkovich spoke about the famous Slovaks—Jan Kollar, Pavel Safarik, Anton Bernolak, as well as Czech, Polish, and other Slavonic leaders of over a century ago, who had the foresight to vision the strength of the Slavonic people, now under the domination of Soviet Russia.

The writer was happy to join the discussion especially when given an opportunity to pay tribute to famous leaders like the late Polish military leader, Marshal Joseph Pilsudski, whose 25th anniversary of death is observed this year and who according to the late Col. Stephen Bonsal, author of "The Unfinished Business," a Pulitzer Prize winner, and "Sultors and Suppliants," helped the well-known Slovak leader Msgr. Andrej Hlinka to reach Paris on the Polish passport in 1919 to file at the Peace Conference the just claims of the Slovak nation for their autonomy as formulated in the Pittsburgh Pact, signed on May 30, 1918, in Pittsburgh, Pa., by the late President Thomas G. Masaryk, whose 110th birthday was observed on March 7.

The discussion was very lively. Prof. Henry L. Roberts as chairman kept the discussion most interesting and Professor Halecki in his remarks at the opening and the conclusion of this second academic conference made everyone feel eager to participate in other conferences for more interesting lectures on Poland and its neighboring Slavonic countries, who are Christian in character and are proud of their cultural heritage, which these conferences give an opportunity to acquaint the vast American public and enrich our melting pot for a stronger America.

Protecting the Small Businessman in the Meatpacking and Retail Meat Business

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. McGOVERN. Mr. Speaker, I desire to associate myself with the remarks of the gentleman from California [Mr. ROOSEVELT], with whom I have joined in sponsoring legislation on behalf of small business.

On February 25, I introduced H.R. 10682, a bill to amend the Packers and Stockyards Act of 1921, to strengthen independent competition in the meat industry. The chief sponsor of this legislation was the gentleman from California [Mr. ROOSEVELT] who has taken the lead in fighting for small business.

The purpose of this bill was to prevent the choking off of small business by vertical monopolies in the purchasing, processing, and retailing of livestock and livestock products. Investigations by the House Committee on Small Business and other studies have revealed an unhealthy trend toward monopolization in the food industry. This legislation was spe-

cifically designed to deal with one phase of that problem.

Section 1 of the bill would make it illegal for large food chains doing a volume of business greater than \$10 million a year to engage in meatpacking. The same section of the bill would make it unlawful for the packers doing a business of more than \$10 million yearly to enter the retail food business. On this section of the bill there can be no objection from those who believe that competition is essential to our free enterprise system. We need to take whatever steps are necessary to prevent a few huge corporations from securing a monopoly grip on our food industry.

The second section of the bill was intended to prevent large buyers from exploiting livestock producers through certain types of privately negotiated purchases. This section would have required that livestock producers selling more than \$100,000 yearly in livestock or purchasers buying more than \$1 million annually must carry on their transactions of livestock for slaughter through public competitive bids.

Several livestock producers in my State have pointed out to me that this second section of the bill might interfere with essential market operations for both producers and purchasers of livestock. I have discussed this matter with the gentleman from California [Mr. ROOSEVELT] and as he has stated in his remarks today, he and I are both anxious to remove any part of the legislation that might jeopardize legitimate marketing. I am, therefore, joining today with Mr. ROOSEVELT in offering an amended bill which strikes section 2 from the original legislation. The amended bill on which we will seek action contains only one provision, namely, the portion making it illegal for large food chains to enter the meatpacking business or for large meatpackers to engage in the retail food business.

The section to which some of the cattlemen have taken exception is completely removed from the legislation.

The War We Are In

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 22, 1960

Mr. SALTONSTALL. Mr. President, last week we were all saddened by the tragic accidental death of Reuben Robertson, one of America's leading public servants in Government and industry. Mr. Robertson was Deputy Secretary of Defense from 1955 to 1957, and has served the Government in various other important roles, most of which related to the Nation's defense setup and mutual security. At the time of his death, he was president of the Champion Paper & Fibre Co., of Hamilton, Ohio.

It is interesting to note, Mr. President, that the Champion Paper Co. has

frequently demonstrated its enlightened interest in the Nation's broader policy issues. Another high-ranking Champion official who has served in Government with distinction is Karl R. Bendetsen, a vice president of Champion. He has also filled various Pentagon posts, including Under Secretary of the Army, and served on Panel II of the Rockefeller Report on the Military Aspect of International Security.

Recently a brochure produced by the Champion Paper Co. entitled "The War We Are In—View I," came to my attention, Mr. President. This report offers a remarkably clear and vivid articulation of the protracted war the United States is in for the establishment of peace and the survival of freedom. It analyzes the methods, strength and tenacious dedication of the Communists, thus demonstrating the deepest implications of the crucial challenge that the United States and the free world face.

I ask unanimous consent that the introductory section of this study, entitled "The War We are In," along with two revealing quotes of Chairman Khrushchev and a concluding quote, by way of an answer and a "call to arms for Americans," by Adm. Arthur W. Radford, which are found in the Champion pamphlet, be printed in the Appendix of the RECORD. I also ask consent for a section of the same study entitled "The Anatomy of Peril" be printed in the Appendix of the RECORD.

There being no objection, the excerpts and article were ordered to be printed in the RECORD, as follows:

THE WAR WE ARE IN

The war we are in has been characterized as a protracted conflict. The man who has best described it is one of the most remarkable political and military strategists of all time—Mao Tse-Tung, designer of the Red Chinese colossus and the most formidable of living Marxist-Leninist theoreticians. It is his thesis that war and peace are not now separable conditions.

This protracted conflict is simple in concept, immensely difficult in execution—involving every sector of human activity, political, economic, psychological, cultural, technological, and military. There is about it one reasonably sure thing—it may most swiftly be lost by the side unaware that it is fighting it.

Most simply stated, here are the basic guidelines of protracted conflict: (1) Knock off your enemies one by one, as they become exposed. This applies to jungle warfare and it applies to international political warfare. Kill the straggler in a group of men. Penetrate the straggler in a group of nations. (2) Keep the enemy off balance. Again, it applies to jungle warfare or to the international thrusts and feints that have become a familiar Soviet tactic. (3) Sap the enemy's will to resist. This includes propaganda and cultural warfare and extends everywhere from convincing the enemy that you are technically superior—through talk as much as talent—to disarming him with the beauty of your ballet troupes. (4) Avoid a frontal assault, a knockout punch, until such time that it can succeed without powerful retaliation. (5) Divide the battlefield into a peace zone and a war zone. The peace zone of today is simply the full area of the Soviet Empire. All international tensions, according to the ground rules of Sino-Soviet tactics, lie within the war zone. Thus, the question of colonialism may be debated

in regard to Algeria, never in regard to Hungary or Tibet.

This concept, relatively new to the West, is ancient in the Orient. Centuries before Mao, in 500 B.C., the Chinese militarist Sun Tzu wrote that "To fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting." Mao himself quotes several of Sun's formulations in his *Strategic Problems of China's Revolutionary War*. One is: "Avoid the enemy when he is full of dash, and strike him when he withdraws exhausted."

But perhaps the most pointed of all that Mao quotes is this: "Make a noise in the east, but strike in the west."

"The Soviet Union is in a capitalistic encirclement and must be ready to deal a crushing blow to any attempt of the aggressors to hinder our peaceful construction."—Khrushchev, speech of February 23, 1954.

"I would like to draw your attention to the fact that at present the concept of 'capitalistic encirclement' of our country itself seriously needs a more accurate definition. With the formation of the world system of socialism the situation in the world has altered radically and it has not altered, as you know, to the advantage of capitalism. At present it is not known who encircles whom. The Socialist countries cannot be considered as some kind of an island in a rough capitalist sea."—Khrushchev, interview with Serge Groussard of the French newspaper *Le Figaro*, March 19, 1958.

"To my mind, American citizens must be much more conscious of the real dangers of our times and be willing to treat the time as not peacetime."

"How can American democracy meet the crisis of our times? To my mind, Theodore Roosevelt's guidance of many years ago is still good. 'Americanism means the virtues of courage, honor, justice, truth, sincerity, and hardihood—the virtues that made America.'"

"The things that will destroy America are prosperity-at-any-price, peace-at-any-price, safety-first instead of duty-first, the love of soft-living and the get-rich-quick theory of life."

"If Americans can get together—unite behind their leaders in the crisis of today—which is a real crisis, believe me—their security is assured. If they cannot so unite—if they insist on business as usual—politics as usual—then I fear for the future of this Republic, no matter how much military strength we have in being."—American Security in the Nuclear Age, an address by Adm. Arthur W. Radford before the Cincinnati Council on World Affairs, Cincinnati, Ohio, January 30, 1959.

THE ANATOMY OF PERIL

Perhaps the most penetrating public study ever made of the war that Communism is waging against the free world, was one released in May, 1959, by the Foreign Policy Research Institute of the University of Pennsylvania. In book form it is entitled "Protracted Conflict," published by Harper & Bros., New York; its authors are: Robert Strausz-Hupé, William R. Kintner, James E. Dougherty, and Alvin J. Cottrell. The excerpts reprinted here concern what could be the most fateful decade of this century.

The next 10 years of the protracted conflict may prove to be the most momentous in human history. The Communists will try to exploit this period to disarm and divide the West; to complete their military buildup; and to win the technological race. The Communists recognize that they must strive for a decisive margin of superiority in the realm of military-technological weapons—a margin which would enable them to

attack with impunity or to pose to the West the choice between surrender and total defeat. In the event of such a decisive breakthrough in the weapons race, the protracted conflict could be terminated by a strategic knockout blow. In the absence of a decisive breakthrough, however, any marginal superiority in the weapons race can serve to enhance the effectiveness of other conflict means—political, psychological, organizational, or economic.

The Russians, their frequent aberrations of doctrine notwithstanding, remain convinced Marxists. According to Marxist dialectical doctrine, technology (i.e., the means of production) is the key to the revolutionary process in history. But in the post-Lenin view, technology does more than merely transform the class structure of society; it transforms, also, the international power situation by gradually replacing one socioeconomic system with another. This, indeed, is the new meaning of the dialectic in the global setting of the protracted conflict. Marx taught that the industrial proletariat would assume one day complete control of those technological instruments which are the Unterbau of social power. Lenin substituted the conflict of state systems (Socialist versus capitalist) for the conflict of social classes (proletarian versus capitalist). The West's historical position of global supremacy has rested upon its virtual monopoly of technological power. To achieve hegemony for themselves, the Communists realize that they must not only break the West's technological monopoly but also outdistance the West in those technological capabilities which will form the future Unterbau of international power.

In addition to superior weapons, technological reserves are also needed to compensate for the possibility of successful hostile surprise. Communist strategists are well aware that the Western Alliance will not launch preventive war. Since the Western nations extend to the Communists the option of striking the first blow, the former must be ready to absorb the heavy cost which their defensive posture entails. This is primarily a matter of maintaining adequate levels of reserve forces. If the offensive and defensive capabilities of the two sides, at a given time, should balance out quantitatively and qualitatively, and should a surprise attack be technologically feasible, the Communists can count upon a sizable strategic margin in their favor, simply by virtue of their assured ability to make the first move. This factor points up the difficulty of calculating a safe margin of Western deterrence. The Communists are able to measure margins of deterrence differently from Western strategists because they may hope to destroy a substantial portion of the West's offensive capability before it can be put into operation. For this reason, the concept of global dispersion of strategic capabilities takes on added significance for the Western nations.

Technology is not merely a matter of hardware. Politics, psychology, and other social sciences are interwoven with developments in the technological order. The term "psychotechnology" indicates a broad and as yet unexplored area, the significance of which may be illustrated by citing the possibility of posing nuclear threats either physically or psychologically. No doubt, the technological race between the Atlantic allies and the Soviets forms a backdrop for many apparently unrelated international disturbances. The dramatic technological advances announced by Moscow in recent years have spurred the Afro-Asian systemic revolution. Soviet backing has emboldened anti-Western nationalist leaders—in the Middle East, for example—to challenge the West under the shield of Soviet nuclear blackmail. By thus supporting the forces of anti-Western nationalism with veiled nuclear

threats, the Soviets hope to effect a gradual rollback of the West's overseas strategic bases upon which the West's nuclear delivery capabilities largely rest.

The military technology of a nation or of a bloc of nations depends upon a number of broad factors. Many of these determining factors lie beyond the ability of the Communists to control or influence outside of their own sphere. But the Communists can be expected to do whatever they can to hamper weapons-system development in the Western countries. By stressing, in their propaganda, the potential devastation of nuclear conflict, they play upon the guilt feelings of Western scientists and thus attempt to make them reluctant to participate in military programs. By proposing suspension of nuclear weapons tests, they seek either to reduce the Western lead or to increase their own. The Communists also try, through nuclear blackmail and pacifist propaganda, to turn the peoples of the world against Western bases on their soil.

In the face of this calculated Communist campaign to win technological dominance there are some potentially dangerous gaps in our Military Establishment. Among these are our inadequate capability for fighting certain kinds of limited war, with or without atomic weapons, may well be one, although there is wide disagreement among the professionals as well as laymen on the limits of limited war and on where and when such a war might or should be fought. But the central military problem is to stand up against the Soviets' military-scientific blackmail and to meet, in the last resort, a Communist all-out nuclear attack: The West's extended strategy must rest upon the psychological as well as the objective acceptance of the risk of total conflict. Anchored in that resolution the West's extended strategy must seek to make an all-out war an extreme risk for the Soviets, to unhinge the Communist system and thus bring Soviet expansion to a halt. It is rather in the psychological arena than in its technological workshop that the West has displayed its most alarming shortcomings. Objectively, Western strategy has been far more effective than the sensational charges of its critics will have it. No doubt, our military posture is susceptible to a great deal of improvement. But an exaggerated zeal for improvement, especially when it is triggered by pained surprise at the latest ploy of Communist psychological warfare or considerations of domestic political advantage, might prove to be "counterproductive" in developing our real range of power.

There is a considerable gap between the launching of a Sputnik and the zeroing in, with Soviet intercontinental missiles, of all the West's farflung strategic installations. It is the responsibility of the free world scientists to scrutinize the significance of sensational Soviet technological achievements, especially those which are announced by Communist political news agencies, and not take Communist claims at face value. It is the responsibility of Western journalists to place those achievements in their proper perspective. As the world moves into an era of accelerating technological development, there is a greater need than ever for the exercise of a critical faculty by Western elites. If the latter drop their intellectual defenses, the Communists are certain to take advantage of the breach. We can, if we choose, expand and utilize our superior technology to foreclose any possibility of the Soviets seeking to resolve the conflict by force. This choice will be costly, but in all prudence it must be made.

Much has been said and written about the battle for the minds, hearts and stomachs of the "uncommitted" world. To many, this struggle is tantamount to the battle for

the world itself. Few would doubt that the hunger, poverty and disease which are the continuing lot of millions of people living in the free world are a source of danger in the protracted conflict.

The key problem is not only to develop the appropriate economic techniques but also to change the cultural and social ideas of the so-called backward peoples in order to bring them from their sunken civilizations into the 20th century. As Western technical culture has become universalized, the peoples in the dependent lands are reaching eagerly for the material benefits symbolic of Western culture even while they reject the socio-political ideals upon which this culture was built.

Most Western plans for coping with the understandable aspirations of these peoples completely overlook the psychological gulf which divides East and West and which only time—rather than increased communications—can bridge. In the wide areas of Asia and Africa, the economic, political, and ideological revolution in progress represents the fragmentation of the organic oriental society under the impact of the industrial West. If this revolution is anti-Western, this is due at least in part to the simple psychological fact that man instinctively resents change and the agencies that would bring about this change in the ways of his life.

The Communists have demonstrated that they understand only too well the forces at work in the systemic revolution. While the United States is attempting to solve the problem of the underdeveloped areas by working from the top down—i.e., through the existing government—the Communists are working from the bottom up, that is, by gearing their policies to the emotions of the people. U.S. policy is predicated upon the maintenance of existing order; the Communists' upon the creation of chaos. The foreign-aid programs of the West are guided largely by objective economic criteria; the Communists are interested only in the conflict and propaganda potential of a given foreign-aid gambit—be it a steel mill in India or pavement on the streets of Kabul.

For two-thirds of the world, the process of economic growth is just in its inception. It is essential in the early phases of this process that the most powerful economic power on earth exercise prudence in laying the philosophical and strategic guidelines of its aid program.

Most of the emphasis of the programs tendered thus far has been on the economic aspects of the problem. But even our economic hopes can be realized only in an environment free from the threat of Communist penetration. Foreign economic-aid programs cannot be carried out in a vacuum, divorced from political considerations. True enough, in view of all the complaints uttered in many recipient countries about aid with political strings attached, we might be tempted to think that such a separation can and must be made. In fact, this is neither feasible nor desirable. It is possible, albeit sometimes difficult, to separate private foreign investment from foreign-policy considerations. It is patently impossible, however, to draw any firm line between a government-aid program and international politics. No matter how much the West is willing and able to invest in the development of the "uncommitted" countries, there will always be a gap between the Western contribution and rising native expectations. The Communists need only move into this gap, be it even with the most modest resources, in order to divert to themselves whatever credit the recipient peoples might have been willing to accord a foreign giver. We cannot afford the luxury of succumbing to the demands of so-called neutralist nations to satisfy their hyperbolic economic demands lest they drift into the Communist orbit. We must never lose sight of the fact

that much of the fashionable "neutralism" which abounds in the "gray areas" depends, for its *raison d'être*, upon the continued bipolarity of the world. These countries cannot embrace categorically one or the other side of the global conflict without forfeiting their unique bargaining position. If many of the new nationalist leaders have not realized it before, they are beginning to learn by hard experience that communism is even less capable than we of meeting their economic needs. To ungracious demands from these quarters that we supply the aid they seek or see them go Communist, we may well heed George F. Kennan's advice and bluntly tell them: "Go."

The current phase of the protracted conflict will not be settled by the battle for the uncommitted areas however vital the outcome of this battle may subsequently become. Instead, the crucial decisions will be made in the hearts of the opposing camps—in the Western alliance and within the Communist bloc which stretches from the Elbe to China's Yellow Sea. In the underdeveloped world, the West's strategy for the decade ahead cannot be more than a holding action. There, the task must be to gain time, to avoid fixed commitments, to improvise and to abstain from action for action's sake. The contention, often heard in our midst, that the underdeveloped world represents increasingly the decisive battlefield of the cold war bespeaks the success of Communist strategy in distracting our attack from the most vulnerable sector of the protracted conflict—the Communist system itself.

Electronics and the Future Air Traffic Control

EXTENSION OF REMARKS OF

HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. HÉBERT. Mr. Speaker, I recently had the privilege of hearing Gen. E. R. "Pete" Quesada address the Electronics Industries Association here in Washington.

I was so impressed with the solid observations and specific program outlined by the Administrator of the Federal Aviation Agency that I am bringing his entire address to your attention.

It is refreshing to have such positive leadership given to an agency as exhibited by General Quesada. It is not surprising, however, because his record causes us to expect no less leadership.

The address follows:

ELECTRONICS AND THE FUTURE AIR TRAFFIC CONTROL

(Address, by E. R. Quesada, Administrator, Federal Aviation Agency, before the Electronics Industries Association Government-Industry Dinner, Statler Hilton Hotel, Washington, D.C., March 17, 1960)

I am indeed happy to be with you tonight and to discuss some of the more challenging problems facing us in the aviation community. This evening I hope to give you an up-to-date report on our plans and programs to provide safer and more efficient aviation facilities for the Nation.

Aviation and electronics have come of age during the lifetime of many of us here tonight. What's more, the two industries have grown up together. The years following Orville Wright's historic 12-second

flight at Kitty Hawk have been years of phenomenal progress for both aviation and electronics. Electronics has had its impact on the growth of the aviation industry. Likewise the electronics industry has benefited from the inexhaustible market generated by the air age. Manual and mechanical systems and devices in aircraft have been replaced by smaller, lighter, less expensive and more efficient electronics packages. The remarkable progress in electronics in the last decade is a tribute to engineers and scientists of the world who have dedicated their efforts to research and development. And, I might add, a tribute to the electronics manufacturers for their efficiency in producing the products of research and development for distribution to the users. In this regard, your organizations have promoted, not only our Nation's productivity but have furthered the well-being of its individual citizens as well.

As we look now to the future, aviation will rely on the efforts of men such as you to an increasing extent to provide the necessary airborne devices, navigational aids, and communications equipment that are the life's blood of a safe and efficient air traffic system. Your steady growth over the past several years reflects the increasing dependence that we are placing upon your industries in helping us reach our objectives. And I would say, without hesitation, that the electronics industries, big as they are, are only beginning to tap their productive potentialities. Your greatest years still lie ahead.

Now what are the objectives of the Federal Aviation Agency? There are many, but there is one that takes number one priority: Air safety.

We must attain air safety to the most absolute degree possible, for every type of aircraft that uses the navigable airspace, whether large or small, jet- or piston-engine, whether flying under visual or instrument flight conditions, from takeoff to touchdown.

I believe we have made excellent progress in the field of safety, through more and better navigational and communications equipment, through research and development activities, improved flight standards and air traffic control regulations and procedures, higher medical standards, and pilot qualification, and many other related factors. This progress has been due to the efforts of not one agency or one group, but rather to the cooperation and hard work of the entire aviation community.

The aviation picture today is rapidly becoming more complex. The airspace, which was more than adequate when I started my flying career 35-odd years ago, is literally shrinking as the result of increasing air traffic and the introduction of bigger, faster, and higher flying transport planes and thousands upon thousands of business and private aircraft. Today we have over 100,000 active aircraft in the United States. Of this number 70,000 are civil. We estimate that by 1965 we will have 83,000 civil aircraft in our national inventory. In terms of hours flown, we expect general aviation aircraft to jump from its current rate of 12 million hours per year to 16 million by 1965. This will be an increase of 33 percent in the next 5 years. These statistics are staggering in themselves, but when we consider the fact that next year we will have 225 jet transports operating in our system, the immensity of the task we face strikes home with stark reality. Now then, what are some of the specific problems associated with modernizing our national system of aviation facilities? First, to accommodate increased numbers and complexity of aircraft in smaller blocks of airspace, and still maintain safe separation between aircraft, we must provide a measure of flexibility in our air route structure to permit the more efficient utilization of our precious com-

modify—airspace. This requires improved navigation devices both on the ground and in the air. Our ultimate goal is to provide a navigation reference throughout the airspace from the ground to the highest altitude at which aircraft will fly. This means that we must provide facilities which will permit aircraft to be flown off airways—off the established air routes—a system in which aircraft are not necessarily required to fly from navigation aid to navigation aid.

There are available today, in various stages of development, many navigation systems that will permit off-airways, point-to-point flight. At our National Aviation Facilities Experimental Center, in Atlantic City, we are currently experimenting with Doppler navigators, pictorial displays, self-contained dead-reckoning computers, and other techniques to determine how this equipment can be used in a system based on ground-referenced devices. The accuracy of position information required for air traffic control demands at this time that self-contained airborne navigation systems be updated periodically by reference to a ground navigation facility. The VORTAC network being implemented throughout the country will provide accurate azimuth and distance information to facilitate this updating.

I would emphasize here that radar, our primary surveillance tool, plays a most important role in increasing the number of aircraft that can be safely flown in a given block of airspace. In addition to our own radars, the FAA has controllers at 38 Air Defense Command sites to provide radar advisory service under a joint use arrangement.

So far, my discussion has been pretty much directed to separation problems in the lateral plane. Of no less importance, and of at least equal complexity, are the problems associated with maintaining vertical separation between aircraft.

The ground-determined height of aircraft has long been a missing dimension in air traffic control. We are currently developing an air height surveillance radar. A receiver only, passive system, it uses an S-band air surveillance radar as the target illuminator. The antenna system is a 160-foot high structure, consisting of three antenna arrays, arranged to form an equilateral triangle, 60 feet on each side. The height-finding radar is designed to furnish comparative heights of aircraft within 50 miles of the airport complex.

We also need altitude information on aircraft that are in the enroute area, beyond the reach of our height-finding radar. There are several possible means of obtaining this information. One method we are investigating involves the use of the radar beacon system. A radar beacon, of course, is by nature a data link. The radar beacon system can provide the four essential bits of information required for positive air traffic control: range, bearing, altitude, and identity. The beacon system which the FAA is implementing presently provides three of the four, and we are now in the early stages of developing the capability of obtaining aircraft derived altitude information via the radar beacon link. Although our operational beacon capability today is limited, we are rapidly implementing beacons in our high density areas. By July of 1962, we should have operational coverage of the navigable airspace over the entire country, with over 50 beacons operational.

Another difficult problem facing us today is the ever-increasing demand for radio spectrum utilization. As more and more aircraft are introduced into the system, the overcrowded air traffic control and air navigation frequency bands will reach saturation in high density areas. We do not foresee any significant increase in aviation's share of the spectrum. We must live with what we have

and to do this, the FAA will do everything possible to insure that the bands of the spectrum allocated to aviation are assigned and used effectively. We are modernizing voice procedures and seeking ways to improve voice intelligibility. We are working to achieve improved techniques and better frequency stabilization.

We are well aware of the fact that the communications bottleneck must be overcome. We have developed and are currently testing a high-speed, automatic ground-air-ground communication system known as AGACS. AGACS is an experimental tool with which we will determine the design characteristics for a two-way data link adaptable to the requirements of all users of airspace. Within a 2-minute rollover cycle, AGACS handles up to 500 two-way messages. These messages are contained within a single frequency channel, as is presently used for voice communications. Routine flight instructions and advisory information from pilot or controller are transmitted to the aircraft or control station. Here they are converted into direct reading displays. Voice radio will still be used for nonroutine and emergency communications.

Implementation of radar beaconry, data link, VORTAC, and the host of other improvements to the overall air traffic control environment will provide the air traffic controller with the information he needs to move air traffic safely and expeditiously. To be of maximum value to the controller, this information must be correlated and applied swiftly and efficiently. The FAA is developing a data processing central designed to relieve the controller of many of his routine clerical chores and allow him to spend more of his time in his decisionmaking capacity. The data processing central will automatically print and update flight progress information. It will probe for, detect, and display potential conflicts between aircraft in the system. It will assist the controller in scheduling aircraft for landings. The data processing central will be available for use in the New York area in 1963.

Another extremely important area in which we are making progress is the development of a blind, or all-weather, landing capability.

Last year alone, the airlines forfeited \$23 million in revenue because they were not always able to deliver their passengers and cargo to destination airports. The military needs the all-weather landing capability to insure a full retaliatory combat potential. We are currently evaluating systems developed by the Navy and Air Force for their applicability to civil operations.

The introduction of this all-weather landing capability must, of course, be an evolutionary process. Our program is divided basically into three phases: In the first phase, our attention is directed to the improvement of the present instrument landing system (ILS) and the ground control approach (GCA). The second phase of the program involves the testing of an all-weather landing system for interim application where the need is urgent. And, finally, we will develop new techniques for a landing system suitable for the future air traffic environment.

Our National Aviation Facilities Experimental Center is today a full-fledged experimental facility complete with instrumented laboratories, high-capacity computer and simulation facilities, and is staffed by a dedicated group, and technically recognized experts in all fields of the informed aviation world. We are in the final phases of the development of improved standard airport lighting. We are evaluating five different visual glide slope systems. We are actively investigating aircraft arresting devices. We are making excellent progress in our program to automate weather measurements and provide for their automatic transmittal

to forecast centers. We are actively pursuing a program to collocate high-altitude air traffic control and air defense functions in the SAGE Super Combat Center.

In our long-range planning, we must envision the effects on our control system of the eventual introduction of supersonic and ultrasonic aircraft in the air carrier inventory. When this takes place the human limitations of pilot and crew to control their aircraft will become more apparent. It will be necessary to turn to automatic devices for the airborne environment to achieve maximum safety in flight. The quantity and the complexity of the electronic gear that will go into future aircraft will be greater than what they are today.

Future flight environments will require electronic equipment with greater operating extremes to cope with the variety of new problems created by supersonic speeds. This will not necessarily present new problems in design because much work in this area has been done in the missile programs. It will involve application of known principles and techniques to new equipment.

Powerplant performance and structural fatigue under high temperature conditions will have increased importance to safe operation. These problems will require close monitoring. Sophisticated electronic recording devices may be necessary to accomplish this monitoring.

Control of a supersonic airplane by a so-called autopilot, requires more precise and rapid sensing of airplane deviations from the flight path. Greater speed and accuracy will be demanded in the performance of the necessary corrective actions by the autopilot than are required in the autopilots of current turbine-powered airplanes.

Since the performance of a supersonic airplane is so critical and its instrumentation and control systems are so complex, the pilot will need information on flight parameters faster than can humanly be determined or computed. Therefore, the pilot will need assistance from sensing systems fed into a computer. The computer in turn will provide rapid answers to the pilot.

It is conceivable that ultimately the pilot will only monitor control of the airplane. The intelligence from the computer will be harnessed to provide actual control of the plane. All the parameters for a given flight might be fed into a computer before the takeoff and the entire flight to the end of the landing roll would be controlled automatically. The airborne portions of the VOR and DME systems would furnish some of the intelligence used in such a flight control system.

Coupled with flight control, would be automatic control of the various systems in the aircraft, such as engine fuel management, pressurization, anti-icing and deicing systems. This would appear to be the ultimate and will not all come at once. There will need to be intermediate stages in which only a portion of such control is utilized.

Since the takeoff of a high-speed aircraft is perhaps the most critical portion of a flight, information to show whether to continue the takeoff or to abort is very important. This involves sensing of engine power, aircraft speed, outside air temperature, and so forth. The computer will compare this data with ideal parameters and give the pilot information needed. This might logically be one of the first steps in the intermediate stage.

It is easy to see that systems such as I have just described would have to have extreme reliability and fail-safe performance. FAA will determine minimum performance and reliability standards. The equipment will have to meet the standards originally and be maintained so as to continue to meet them.

As you can see, electronic needs for future aircraft will be great.

In addition to the automatic control systems mentioned, the present day navigation equipment such as VOR, DME, LORAN, and DOPPLER will have to give way to more sophisticated electronic equipment to handle future navigation problems. This does not mean that the basic system will change, but rather equipment of those types will need to be redesigned to take advantage of improvements in the state of the art—to increase reliability and simplicity and to reduce size, weight, and cost.

Our progress to date is in large part attributable to the outstanding contributions of the electronics industries to our programs. Our continued progress and leadership in aviation will require sustained and imaginative research, development and productivity. They will require vitality, creativeness, and the application of new skills and techniques on the part of science, management, and government.

As a regulating agency we cannot cope with the problems which will confront us in the future without your continued help and guidance. I urge that you continue to assist us in whatever manner that is at your command. We will require advice and assistance on performance standards for the new types of equipment. Such standards in the past have been prepared to a great extent under the auspices of the Society of Automotive Engineers and the Radio Technical Commission for Aeronautics. Many of your member companies have furnished technical assistance on the working committees of those organizations. Continued technical support by working either directly with us when we ask for collaboration or as members of SAE or RTCA will be of great assistance. Knowing of your past record, I look forward to your future support with confidence.

Nationalism in Europe

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. COHELAN. Mr. Speaker, the following article by Mr. Marquis Childs, "Is Nationalism Rising in Europe?" concludes that the national feeling and development in certain nations of Europe, and particularly West Germany, is reaching new proportions.

While Mr. Childs does not draw conclusions, his observations are pointed and suggest varied possibilities, all of which warrant careful attention. Under permission to extend remarks in the RECORD, I submit his article which follows:

IS NATIONALISM RISING IN EUROPE?

(By Marquis Childs)

Germany today is Konrad Adenauer. Behind all the complex forces contributing to the German resurgence the Chancellor, as he has proved once again in his latest visit to this country, is the symbol and the front of what is again rapidly becoming the most powerful nation in Europe.

It is a paradox of Adenauer's dominance of the German scene that it both heartens and alarms those who hoped for a new and democratic Germany. He is so completely what he is—deeply religious, steeped in the cultural and political traditions of an older Germany, a stout old oak breathing defiance at Germany's enemies.

But at the same time it becomes more and more evident that he is a revered leader

without challenge or rival, and the precedents for that kind of leadership in Germany are far from happy. Increasingly, for all his allegiance to the Western Alliance, Adenauer is becoming the symbol of a national Germany. The analogy with Bismarck, with Kaiser Wilhelm II and, briefly, with von Hindenburg inevitably occurs. And, as the world has hardly forgotten, it was another and democratic leader who came at the end of this succession.

The attitude of the German people today offers evidence of both the guilt and pride that are a heritage of the past in the resurgent new nation. If you talk about the signs of anti-Semitism in Germany what about anti-Semitism in almost every other part of the world? You reproach us with seeking military bases in Spain but have not other Western Powers put bases in country after country? Does not the United States have airfields in Spain?

In the view of this observer it comes down to the following: a revived national Germany finds itself competing more and more effectively with other nation-states that are themselves increasingly nationalistic. A revived Germany will not longer be restrained by reminders of the guilt of the war or the mass crimes of the Nazis.

Nationalism, in short, and not just German nationalism, is more and more a force in Western Europe. How can you expect us, the Germans are in effect demanding, to be virtuous and renounce our deserved place in the sun when everyone else is scrambling to get ahead by any means they can?

No one can doubt Adenauer's loyalty to a supranational ideal. From the beginning he has been convinced that the only solution for Germany was within the NATO alliance and the European market. He talks with fervor of the dedication of German youth to the European ideal. Yet, as the German chancellor at 84 retires into a more and more lonely eminence where his word becomes law, it is clear that while these institutions have to some degree restrained the nationalistic competition they have certainly not ended it.

Within the common market of the six European powers both Germany and France are subtly striving for supremacy. NATO has remained a defensive military alliance despite all the talk about giving it a political and economic reason for being. With France so deeply committed in Algeria, the 12 German divisions that are coming into being will have a predominant position.

The British after 1945 held aloof from Europe, apparently hoping to play the old game of divide and rule. In the face of the common market they have organized the seven European powers that were outside and a threatened rivalry between the two groups can play havoc with tariffs and trade.

The underlying truth is that the frame of cooperation was neither big enough nor compelling enough. So the old nationalistic pieces are reappearing on the chess board.

As France demonstrated by setting off an atomic explosion at a heavy cost in terms of money and manpower, the competition is certain to extend to nuclear weapons unless some controls are quickly agreed to and put into effect. Nor will Germany be excluded from this competition. Whether it has come too early or too late, the era of the German scapegoat is rapidly drawing to an end.

After the bomb was dropped on Hiroshima the late Albert Einstein said: "Everything has changed except the thinking in men's minds." Nothing could illustrate this more dramatically and more poignantly than the revived current of the old nationalism. In that current the new Germany is swimming hard and fast and it would be little short of a miracle if she were not.

Civil Defense Workers, H.R. 856

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. MULTER. Mr. Speaker, on January 7, 1959, I introduced my bill H.R. 856 to amend the Federal Employees' Compensation Act to extend coverage to persons engaged in civil defense.

On February 24, 1960, it was my privilege to appear before the House Education and Labor Committee in support of the measure.

My testimony was as follows:

STATEMENT OF HON. ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Thank you, Mr. Chairman.

Mr. WIER. This is H.R. 856?

Mr. MULTER. Yes, sir.

Mr. WIER. Identify yourself, and the number of the bill.

Mr. MULTER. I am ABRAHAM J. MULTER, a Representative of the 13th District of New York.

I appreciate the opportunity this committee gives me to appear here in support of my bill, H.R. 856.

With your permission, Mr. Chairman, in order to save some time, I offer my prepared statement for the record, if you will take it that way, and I will give you a brief summary.

Mr. WIER. No objection? So ordered. We all have a copy of your report now.

(The information follows:)

"STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

"Mr. Chairman and members of the committee, may I first express my thanks to you and to the other members of this subcommittee for giving me this opportunity to appear here today in support of my bill, H.R. 856.

"This legislation is designed to extend the coverage of the Federal Employees' Compensation Act to include certain persons engaged in civil defense. Specifically, in the language of the bill, it would cover 'part-time and full-time, paid and unpaid volunteers, auxiliaries, and civil defense workers subject to the order and control of State government or any political subdivision thereof engaged in, training for, or traveling to or from, activities relating to "civil defense"

"I have introduced this bill because I sincerely believe that there are good reasons why the Federal Government should assume some responsibility for the welfare of these people if they are killed or injured while on duty.

"As you probably know, the protection provided to many of the people working either full time or part time in civil defense is in many cases woefully inadequate. This has been the case ever since the Federal Civil Defense Act was approved in 1950, and I think it is high time that we take the necessary steps to rectify this situation.

"In past years legislation has been introduced to authorize the Federal Government to make contributions to assist the States in awarding death or injury compensation in these cases. However, no action beyond hearings has ever been taken by Congress on any of this legislation. Over the years, apparently, the idea has prevailed that any compensation to be paid to people injured in the performance of civil defense duties should be paid solely by the respective States.

"This plan may be satisfactory in theory, but in actual practice it has been demonstrated to have serious shortcomings.

"Although it is true that many States have passed legislation to protect civil defense workers, it is also true that most of them have not done so. Even among the States which have acted, the coverage is not uniform. This in itself is unfortunate.

"Of greater importance, perhaps, than the inequity of uneven coverage among the States that have done something is the fact these workers in far too many States have no protection at all. These States have had 10 years to enact at least minimal legislation, but they have not done so.

"This situation is grossly unjust. Protection must be given to these people, and I think the Federal Government has a clear and compelling responsibility to provide it.

"I know that I do not have to make a case for what might happen to all of the American people if we should become involved in another shooting war. The consequences of such horrors are beyond our capacity to imagine. We must, if we are to be realistic, recognize the possibility of such a conflict.

"In the event of an enemy attack, the civil defense workers would be the most vulnerable group in our civilian population. They would be confronted with what, to say the very least, would be hazardous, demanding, and highly important duties.

"It is unthinkable that so many of them should be expected to serve under these circumstances without the benefits of adequate death or injury compensation. Yet, this is exactly the situation that has existed for 20 years, exists today, and will continue to exist unless and until Congress takes the necessary action to remedy it.

"By the very nature of civil defense work, if the program is to have any value at all, a great many people are required to participate in it. You cannot accept just anybody for these jobs. The work requires people with intelligence, a deep sense of responsibility, and a profound concern for the welfare and safety of the United States.

"The recruitment of persons of this caliber has always been a serious problem. And no wonder. We make heavy demands upon their time and upon their physical and mental energy, but, at the same time, offer them little or nothing in return.

"The inadequacy or complete absence of any death or injury compensation is a most serious barrier to recruitment of civil defense volunteers. As long ago as 1953 the head of the Federal Civil Defense Administration wrote: 'The Federal Civil Defense Administration continues to be seriously concerned over the representations by many State and local civil defense directors that the absence of compensation coverage for volunteer workers seriously hampers the development of a strong U.S. Civil Defense Corps.'

"There is every reason to think today that the assurance of compensation insurance would be of great assistance in this recruitment. The strongest argument for it is that it could correct a palpably unjust condition that can be measured in dollars and cents. But there are other arguments as well. As a moral factor, the knowledge that they were backed up by a program of Federal compensation insurance would demonstrate to the civil defense workers the genuine concern of the National Government in civil defense and in the welfare of all persons associated directly with it.

"The recruitment and training of personnel and other aspects of civil defense is the prime responsibility of the Federal Government. It has been delegated in part to the States and local governments.

"All of these levels of government have failed to deal adequately with this question of injury and death compensation for civil defense workers. I do think, furthermore,

that under the circumstances, the Federal Government has a duty and an obligation to do something about this. It was for this reason that I introduced H.R. 856.

"Let me, in conclusion, point out that this bill offers nothing in the way of compensation for unpaid volunteers or in the way of additional compensation for paid workers in the performance of their regular duties.

"The cost of this measure, if enacted into law, is important, of course, but it should by no means be controlling. It is far more important that the few payments that might be made under its terms would be money well and justly made. The very least we can do for anyone who meets some accident or injury in connection with his civil defense work is to guarantee to him that he will receive some compensation as a result of his misfortune.

"It is my sincere hope that the committee will see fit to report favorably a bill. In my opinion it deserves prompt consideration by Congress.

"Again I thank the members of this subcommittee for the courtesy they have shown me in giving me this chance to appear in support of H.R. 856."

Mr. MULTER. Mr. Chairman, and distinguished members of the committee, most of the bills that you have before you, and Mrs. St. George's bill is one exception, are retroactive in effect in that they try to cover situations of persons already injured or families of those who have been killed or died as a result of injuries under various and differing circumstances.

I think the St. George bill, like my bill, is prospective in effect in that it attempts to remedy a defect in the law as to all and sundry who may come within the terms of the law if it should be amended.

I have been offering this bill since 1951, and I am very happy that the committee has seen fit to set it for hearing as it reviews the entire act to determine how it can be brought up to date and made more effective.

Mr. WIER. I may say to you we have two or three other bills on the so-called civil defense noneligibility.

Mr. MULTER. I am glad that other members have also seen the need for this.

Mr. WIER. Congressman FINO has one in here.

Mr. MULTER. Yes. I think Mr. FINO's bill applies to persons who have heretofore been injured or the next of kin of persons who died as a result of injuries sustained in civil defense activities.

I do not think his is prospective in effect where mine would cover everyone and anyone who may be injured or dies as a result of injuries while working in civil defense.

The primary issue that the committee must determine is whether or not civil defense is a Federal obligation. My view is that it is. The defense of the country is the Nation's obligation.

While that portion of it which is referred to as civil defense has been delegated in part to the States and the municipalities, it is an unconstitutional delegation of power. I say that the U.S. Government cannot delegate its responsibility. While it can ask the municipalities and the States to assist in the program, it cannot pass on to them its responsibility to defend the country in time of peace and in time of war.

While we talk of war in the old sense of the shooting war, the cold war is just as much a war as the hot war or the shooting war. While we prepare for the time that we hope will never come of a shooting war, it is that portion of that responsibility of the Federal Government that we address ourselves to with a bill such as mine.

The training of persons in the Armed Forces is training for defense and national security. The training of volunteers and others in the civil defense of the country is the same kind of preparation. We will not

need them unless there is a shooting war or unless the country is attacked. We do not need our Armed Forces except to the extent they are a deterring effect upon an aggressor or potential aggressor. We will need them when the time comes to defend our country and its people and its property.

This bill has been prompted, in part, by my actual experience during the 1940's when I helped set up in the city and State of New York the air raid warden service and the police and firemen's volunteer auxiliary services.

Every time someone was in training in any of those programs and was hurt or they learned of somebody being hurt while going to and from a training center or in the training center, or while actually performing those duties, and they found that there was no way of their family being protected in the event of the death of the volunteer, and there was no way of even getting his medical expenses paid, if the volunteer was hurt, we lost hundreds of volunteers. The services almost disintegrated every time there was an injury or death, the reports of which were carried in the newspapers. We have the same thing today.

The New York State Civil Defense Commission as early as 1951 said the question of insurance protection for civil defense volunteers had arisen in every one of our 104 local offices of civil defense. The lack of proper coverage has definitely impeded our efforts to build up a strong civil defense volunteer force. The same thing occurs even today. You cannot get these people interested to do the job when you are not going to give them some protection.

It is true that we pay our members of the Armed Forces. But historically it is the duty, not the privilege; it is the duty of every American citizen, every able-bodied American citizen to serve his country in its defense.

The U.S. Government as the sovereign has the right to call up these men and these boys and require their services without compensating them. We do it because it is the right thing to do, not because it is the legal thing. So with these civil defense volunteers. There is no obligation to pay them but it is our duty to at least compensate them for their injuries and give their families some compensation in the event of a death while performing this very necessary volunteer service.

Mr. FRELINGHUYSEN. Mr. MULTER, I do not mean to interrupt you but you referred to civil defense volunteers. As I understand it, your bill would specifically include a full-time paid civil defense worker and presumably paid by the State government, or perhaps a municipality.

Mr. MULTER. Yes.

Mr. FRELINGHUYSEN. What would be the justification for including in this protection that type of individual?

Mr. MULTER. I include part-time and full-time, and paid and unpaid volunteers.

The justification is this: We should have one system uniform throughout the entire country to cover all of these people.

There is one defect in this bill which you call attention to. There should not be double compensation or double payment to these people. If a paid employee, part-time or full-time employee, gets any compensation as a volunteer or otherwise gets any compensation on the local level, I do not intend that it be supplemented. But he should get it. He should get it to the same extent throughout the country. If he is getting \$25 a week payment under a local statute, and this will provide for as much as \$500 a month or \$100 a week, he should get the difference. But these people who are serving the country should be on the same basis and compensated on the same basis. If some locality thinks they cannot pay as much as the Federal Government

does, give them the difference. If they are paying more, he gets nothing from the Federal Government.

To that extent my bill needs amending. I do not want double compensation. I do not want supplemental compensation. I do think they all should be compensated, or their families in the event they are compensated, on the same basis from one end of the country to the other.

That, I think, presents the problem to you gentlemen for your consideration.

I am sure all of these bills that are before you are entitled to your sympathetic consideration and you will give them the deserving attention they need. You have a tremendous task before you to try to fill up the loopholes that exist in the law and correct inequities in the law.

I am sure you will bring out an overall bill that will encompass all of these situations.

I have no pride of authorship. I do not urge you must bring out my bill, or my bill is the only way to do this. I think you can bring out one comprehensive bill and include the provisions of mine to the extent they appeal to your sympathetic consideration and do the real job that has needed doing since 1940.

Mr. WIER. Mr. MULDER, if I could think of anything that could be said about this bill or the need for it or lack of need, I will say that the State administrator in my State is a very, very good friend of mine, and he comes down here quite frequently to the Civil Defense National Committee meeting, that is, the representatives of every State come here for an assembly. Yet the only place that I learned of or have been approached for this is New York.

My administrator in Minnesota has never approached me and I would presume that there must be some accidents out there because the civil defense in the major cities, like Minneapolis, St. Paul, work at the football games where they are called out for traffic duty. When there is a big fire they respond for so-called policing. They have so-called police uniforms. That is limited. They are continually doing these things. They are not just waiting for somebody to shoot and start a war. They are doing State work. On the Fourth of July they are spread around the State as something to warn people that they are watching them.

But my friend has never approached me on this question of compensation for these men that serve in his department.

Mr. MULDER. I think, because your State has been much more forward looking than mine, your State has assumed the monetary obligation involved and enacted a statute that covers these men, so that they get compensation in the event of injury and the families are protected in the event of death.

Mr. FRELINGHUYSEN. Mr. MULDER, the chairman pointed out that to some extent the functions of civil defense work are certainly not national in flavor. Supervising traffic at a football game would not necessarily create a Federal responsibility if the individual were injured I would think this could be used as a disastrous argument against your point of view.

Do you happen to know how many people would be included as possible beneficiaries under your bill?

Mr. MULDER. It is impossible to foretell how many might be injured.

Mr. FRELINGHUYSEN. How many people are engaged in civil defense activities, broadly?

Mr. MULDER. I do not have that number.

Mr. FRELINGHUYSEN. Many millions, I would assume.

Mr. MULDER. The Civil Defense Administration certainly could supply that information to you.

You will find that as of today it is comparatively few because you cannot get the

volunteers on the local level to take up this national defense problem.

I have another bill which requires the U.S. Government to take over and do this job. I do not prohibit them from decentralizing. But you are never going to get a good national civil defense organization on the local level. It is a national problem and you cannot stir these people except in time of war.

Mr. FRELINGHUYSEN. If you define it as a national problem and if you say in the discharge of their Federal responsibilities and spell them out, you might have, I think, sounder ground for arguing that they should be compensated by the Federal Government.

If a man were injured directing traffic at a football game and you said the Federal Government is responsible for his total disability payments, you would get into trouble.

Mr. MULDER. You are certainly right.

Mr. FRELINGHUYSEN. So I would think if we were going to extend coverage to potentially hundreds of thousands of people that might be injured, millions perhaps—

Mr. MULDER. Under my bill—you see, I know how these men work and what they are doing—those—who have volunteered. Therefore, my bill says "while engaged in"—this is on page 1, line 10—"engaged in training for or traveling to or from activities relating to civil defense as such term is defined in section 3(b) of the Federal Defense Act of 1950."

That excludes the policing for traffic and the policing at football games. It refers, specifically, and covers them only while engaged in true civil defense as defined by our national statute.

Mr. FRELINGHUYSEN. Unfortunately, I did not have that statute with me. Presumably they are called out for traffic because they are members of the civil defense organization.

Mr. MULDER. On the local level. They have been enlarged to take in strictly local problems.

Mr. WIER. That is the only training they get.

Mr. MULDER. It is not the training called for by the Federal Civil Defense Act.

Mr. WIER. When we have a big parade—the Shriners, and the Legion, let us say—all of them are called out for policing the parade. We do not have enough policemen for that kind of a job.

Mr. FRELINGHUYSEN. Would not a policing function such as that be included within an appropriate definition of training for civil defense work?

Mr. MULDER. I think it is stretching it awfully far.

Mr. FRELINGHUYSEN. We do not have the definition. It is difficult to say.

Mr. MULDER. I never intended to cover that kind of function. It is necessary to keep these volunteers to give them something to do to keep their interest. In many communities they get additional policing duties. It gives him a feeling he is doing something for his community, while at the same time they keep up the defense organization. They must be in a state of readiness in the event the holocaust might come that we all fear but hope will never come.

Truly, it is not a part of civil defense duty to be policing a parade or football game or playing the part of a traffic officer.

Mr. FRELINGHUYSEN. In the case of a disaster, a sweeping disaster that might well be useful background to have had to be able to direct traffic out of the disaster areas.

Mr. MULDER. You now get into that basic problem about which there has been such tremendous difference of opinion. When you train a soldier—take, rather, a man in the Navy—what good is that training of showing him how to march and right face, left face, and about face? Yet it is part of basic

training. There is the argument: Should we not stop wasting time training an artilleryman to march? Should we not stop wasting time training a pilot of an airplane to march?

Mr. FRELINGHUYSEN. What would a civil defense worker in peacetime be engaged in officially unless it were something like the duties which the chairman indicated they do as a practical matter?

Mr. MULDER. The only actual training for work he has to do is that which includes first aid, fire protection, police protection—yes, and traffic control would undoubtedly come within that. I suppose you could stretch it far enough to say that this training at the parade and at the football game is training him in traffic control.

Mr. FRELINGHUYSEN. I think you might get into an administrative nightmare to try to say that it was not direct training or reasonably a direct connection between the actual disaster and training.

Mr. MULDER. You put your finger on something that probably requires definition in the statute.

Mr. WIER. Let me point out also in connection with the Federal relationship that last year all of the administrators of civil defense were down here making a sincere effort to get some heavy equipment; and when my friend came up to see me, I said, "What are you going to do with heavy equipment?"

He said, "Roy, we have a job. When we have a forest fire either on State or Federal property, most all of the western States pull these people out and use that heavy equipment for firebreaks."

So they were having an awful time getting some of the military surplus—that is, big tractors and equipment like that. I was wondering what they were training for. That is what they wanted it for. It was for protection of the forests up in the northern part of the State.

Mr. MULDER. Let me indicate this to you: As early as 1951, when the bill was first introduced, the Secretary of Labor said:

"It is the opinion of this Department that the Federal Government should assume responsibility for the payment of benefits only with respect to civil defense workers killed or injured as a result of enemy action as distinguished from injuries or death incurred in training or duty in advance of enemy attack."

I am sure you gentlemen would not agree with that kind of differentiation between injuries received while training to protect the country in event of attack.

Mr. ZELENKO. Under the present rules of war there would not be anybody left to administer this act if it were during a holocaust.

Mr. FRELINGHUYSEN. Let us change it to instead of rules of war, philosophy of war.

Mr. WIER. When did you get that letter?

Mr. MULDER. This letter is a copy of the letter from the Department of Labor of August 1, 1951, sent to Chairman BARDEN of the Committee on Education and Labor with reference to my bill, H.R. 3468, which was the identical counterpart of the bill now before you.

Mr. WIER. You heard the statement I made a minute ago.

Mr. MULDER. Yes, I did.

Mr. WIER. That we are getting reports on all these bills from the Department.

Mr. MULDER. Yes, I did. The reason I read that, that was the only objection he raised at that time, that we should assume the responsibility and pay them if hurt during attack or hurt during war, that we should not pay them while being trained to prepare to do the right thing.

Mr. FRELINGHUYSEN. Mr. MULDER, I think you agree that the difficulty of determining what constitutes training constitutes a problem as far as we are concerned; because of the necessity of being liberal in that defini-

nition, it makes it difficult not to get a tremendous number of beneficiaries even though it may be a very fringe kind of training for an actual disaster.

Mr. MULTER. As I said in my main statement, while the cost of this program is important, it should not be controlling. When we get into talking about numbers who may be covered, I think it is important to consider how many will have to be covered, but whether there are few or many, the principle is the same. If we should give them this compensation, I do not think it should matter whether there is 1 or 1 million that will have to be compensated. This is our obligation. If this is the Federal Government's obligation, we should meet it.

Mr. GOODALL. That is true, but you still have the problem of getting the Federal Government into covering them in all sorts of situations where they are doing nothing at all that is connected with the national purpose so-called.

Mr. MULTER. Yes, I agree.

Mr. GOODALL. This is particularly true because your section 2 would eliminate the present provision.

Mr. ZELENKO. Would the gentleman yield for one moment, please?

Mr. GOODALL. I yield.

Mr. ZELENKO. I have to leave to attend another meeting. I want to interrupt to commend my distinguished colleague from New York for bringing this problem to our attention and continuing to bring it to our attention.

I am most sympathetic with it. Something should be done. I think we almost all agree that the difficulty is how. I know if you continue to press this problem we will come to a solution.

These people are entitled to some kind of help, as I pointed out in the case of Mrs. St. George's bill. I am with you on the general theory. I hope we can work something out.

Mr. MULTER. That is all I ask of you.

Mr. ZELENKO. I commend you again for continuing to properly press this. You have been one of the leaders in pressing this and pointing out to the attention of the country this subject.

Mr. MULTER. Thank you, sir.

Mr. ZELENKO. If you will excuse me.

Mr. GOODALL. Your section 2 provides that the civil defense employees will be considered employees of the Federal Government for purposes of compensation.

This would raise all of these problems we are talking about if we change that classification and make them Federal employees for purposes of Federal compensation. Then what forest fires they are fighting or when there is a snowstorm or whatever it may be presumably the Federal Government would be responsible every time they are called out.

Mr. MULTER. That is so. But the main purpose, of course, of section 2 is to bring them into that so they can use that same machinery. You do not have to set up new machinery. There is no new department called for by my bill. They will file their claims just as though they had been employees. They will go through the same process that any other Federal employee's claim would have to go through. It is an expeditious way of handling it. It is a fair way. It never gives them complete compensation but it does put them on the same basis.

But as you both pointed out, the bill is by no means perfect. It probably needs clarification so as not to bring into it those that should not be covered.

Mr. GOODALL. I have one more question here.

Was there any particular reason that you put in this provision for maximum benefits provided under the act? It is my understanding that would provide for something like \$525 a month for these people.

Mr. MULTER. I think that would probably

come to about \$525 a month and the reason I did that was that my experience in New York City and New York State is that most of these volunteers are businessmen and the higher paid type of employee. You do not get the man who is earning \$50 or \$75 or \$100 a week ordinarily into this program. You get the man who has gotten to the point in life where he has the time and the feeling that he owes a duty to his community. There is an obligation to his community and to the country to do something in times of need and stress and disaster.

Mr. FRELINGHUYSEN. There may be such competition for positions under this provision that you will lose those higher paid types for the lower paid who would like to receive such compensation if they should be injured, I should think.

Mr. MULTER. I would have no objection to this provision reading that you take his base pay on the outside as the measure of his damages, not to exceed the maximum, so that if you got the man who is in the \$200-a-week category he is going to be limited to the maximum. I have no objection to it being handled that way.

Mr. FRELINGHUYSEN. Then you will get the \$200,000 a year man crowding for the consideration.

Mr. WIER. Let me assure, you, Mr. MULTER, since there are 20 amendments, it would be much easier if we already had a good bill. Some of the things I learn here in these hearings about the present Compensation Act, which it is a very good act for those that are covered, but there are a lot of problems.

Now, Mr. McCauley told us as an example that when somebody asked him about who is covered an example would be this:

If the Government or some agency of Government assigns two or three professional people in University of Minnesota, for example, to do some research work, by Government assignment and under the jurisdiction of the Government, even though they draw their pay out there, their university pay, as long as they have that assignment they are covered by compensation.

There are so many inequities in this bill. I am talking about maximums and minimums.

Some of the military is covered. Some of the military is not covered. Some chose not to be covered and preferred the Veterans' Administration compensation.

So this is not a simple bill.

Mr. MULTER. No. I think the task of your committee and the task of every congressional committee would be made a tremendously lot easier if we had some overall requirement in the law that every agency having jurisdiction under a particular bill or act would have to review at least every 10 years and submit to the Congress or the congressional committee involved in recodification bringing it up to date and indicating to the Congress what difficulties they have run across, what problems they have had in the administration of the act, and bring in a proposed overall bill so as to modernize the law.

If they did that once every 10 years, your problem would be a lot easier. I know ours would be in my standing committee. But they do not do it.

Mr. WIER. It is 11 years now since this bill was amended, so we have these problems that have come to light in those 11 years.

We want to extend our appreciation, Mr. MULTER, to you for pointing out some of the problems. It is a very controversial bill.

You gave us a job here and Mrs. St. George gave us a job in trying to define what the civil employee is.

Mr. FRELINGHUYSEN. Mr. Chairman, if I might add, that as might be expected, Mr. MULTER has been both an interesting and provocative witness.

I congratulate him on the handling of this subject.

The State of Our Cities and Suburbs in a Changing America—A Statement of the Advisory Council of the Democratic National Committee—Part 1

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mr. BRADEMAS. Mr. Speaker, I am very pleased to draw to the attention of Members of Congress an excellent statement published in March 1960 by the advisory council of the Democratic National Committee on the state of our cities and suburbs in a changing America.

This statement was prepared by a group of distinguished Americans who serve on the advisory committee on urban and suburban problems of the Democratic advisory council. Chairman of this committee is Mayor Richard C. Lee, of New Haven, Conn.; vice chairman is Mayor Richardson Dilworth, of Philadelphia, Pa.; secretary is Mr. Edward J. Logue, and counsel is Mr. Charles Patrick Clark.

Members of the advisory committee on urban and suburban problems are: Dr. Stephen K. Bailey, Edward F. Barry, Nathaniel S. Colley, Prof. John A. Davis, Mayor Joseph E. Dillon, Dr. Thomas Hopkinson Eliot, Brig. Gen. Arthur Evans, B. T. Fitzpatrick, Gordon Freeman, Charles F. Palmer, Dr. Ira Reid, Victor Reuther, James H. Scheuer, Mayor Edward F. Voorde, Mayor Robert F. Wagner, Mayor Ben West, Dr. William L. C. Wheaton, Dr. Robert Wood, Catherine Bauer Wurster.

My distinguished colleague, Mrs. GREEN of Oregon, will insert the second part of the statement in the CONGRESSIONAL RECORD following mine. Part 1 of the statement follows:

THE STATE OF OUR CITIES AND SUBURBS IN A CHANGING AMERICA

INTRODUCTION

The advisory committee on urban and suburban problems of the Democratic Advisory Council is composed of mayors, businessmen, labor officials, scholars, public administrators, and other civic leaders who have a deep concern and extensive firsthand knowledge of the problems confronting urban and suburban America today. The committee was formed to investigate these problems and to prepare a responsible program for their solution.

The committee has divided its task into two parts, as follows:

1. Policy paper No. 1—A report on urban and suburban problems of national concern.
2. Policy paper No. 2—Policies and programs for the solution of these problems. (In preparation.)

1. A CHANGING AMERICA

Every day the United States becomes more urban, less rural. Only a half-century ago, a majority of American families still lived on farms or in rural areas. Today, four-fifths of all American families live in cities or in the suburbs which surround them. By 1975, only 15 years away, our explosively growing population will sweep 55 million additional people into metropolitan areas—50

millions into existing or newly created suburbs.

As our population has grown, suburbia has become the chosen way of life for 50 million Americans and a fond dream for the urban millions who will escape there as soon as they can. Suburbia is a new mode of life in a changing America.

At the same time, America's older cities are all threatened by spreading slums and blight. The central cities of metropolitan areas confront not only rapid deterioration of residential neighborhoods but pressing problems of industrial and commercial obsolescence as well.

The Housing Act of 1949 set forth as our national goal the achievement of a "decent home and a suitable living environment for every American family." Ten years later we are a long way from achieving that goal.

This report concentrates on the physical and environmental aspects of urban and suburban life because they determine to such a large extent whether we Americans can use our material prosperity to enrich our lives or whether careless use of our wealth and productivity will blight our lives as well as our landscape.

Progress toward a better and fuller urban life is largely the responsibility of local institutions, private and public. The working presumption of the Democratic Party since the days of Jefferson has been that governmental power should be lodged in the smallest jurisdiction possible—and that even here the powers of government should be used to encourage and supplement private effort.

However, many problems in our life as a Nation cannot be solved solely by local, private or even State actions. When necessary, the Democratic Party over the years has proved its willingness to sponsor and to carry out vigorous programs at the Federal level in cooperation with local, State, and private efforts.

2. THE STATE OF OUR CITIES

Urban areas are as old as civilization. Cities are, and always have been, centers of trade, commerce, industry, transportation, and culture. People live in or near cities for the economic and cultural opportunities which urban and suburban life are supposed to provide. But the hope and the reality in much of America today are tragically far apart.

After 10 years of Federal aid for slum clearance and urban renewal, spreading slums and blight still threaten to destroy American cities as desirable places to live and work and raise a family. Despite substantial progress in many communities, urban slums continue to spread as fast as, or faster, than efforts yet made to clear them out or clean them up.

Slums and blight—the shame of our cities

The financial cost of urban slums is enormous. Slums go hand in hand with soaring rates of crime, delinquency, and disease. Neglect of urban neighborhoods costs our cities and our Nation untold millions in declining tax revenues, restricted economic opportunities, and the wasteful loss of once decent housing in urban neighborhoods. The taxpayer must pay an ever-increasing amount of local, State, and Federal taxes because of slums and deficit areas.

We pay a frightening social cost for slums as well. For millions of children the asphalt jungle of the slums is a grim mockery of the American way of life. For our country the waste of potentially useful and constructive lives is a loss we cannot long afford.

Slums are no minor sore on the body politic. They are rather a major malignancy, a spreading cancer.

There are today more Americans living in slums than on farms. The count now stands:

Farm dwellers.....	21,000,000
Slum dwellers.....	22,000,000

At the present rate of action, public and private, it will take at least a century to eliminate the slum dwelling units which exist today. And the slums are growing, spreading every year.

It is time for Americans to get better acquainted with their slums.

Perhaps what is needed most is some good old-fashioned walking tours. There is no substitute for what the senses can observe—the sight and sound and, above all, the smell of the slums.

If we look into the heart of a slum (usually only a 5- or 10-minute walk from the city's center), at the crowded streets, the debris-littered backyards, and, inside, up the stinking stairways into the overcrowded rooms, we can see for ourselves how far short we are falling in providing a decent home and suitable living environment for every American family.

Slums are neither inevitable nor hopeless. To say that the richest nation on earth cannot abolish its own urban blight is preposterous. Yet, in most instances, it is unhappily true that local, State, and Federal action to date in slum clearance, urban renewal, public housing, and code enforcement have only scratched the surface.

Decaying neighborhoods

Existing slums are bad enough but an equal and critical issue is the speed with which once decent neighborhoods are becoming decaying neighborhoods.

The rock-bottom slums tell only part of the story. All across America, more urban neighborhoods are slipping into blight than are being preserved in those few cities which are seriously trying to reverse the trend. Many older neighborhoods which could be preserved and enhanced by prompt and effective action are deteriorating beyond repair, victims of civic and national neglect. Our largest supply of decent, moderately priced housing is thereby depleted and new slums are created.

Neighborhood decay has many causes:

The automobile and the increasing mobility of American life have rendered many older neighborhoods obsolete.

The American standard of living is changing. The migration to the suburbs and the flight from older neighborhoods are a drive for more open space—elbow room—and better or at least more modern community facilities. The individual family acting alone cannot preserve the old neighborhood and its only recourse is to move to the suburbs, if it can afford to do so.

However, the root cause is the utter inability of the American city with the financial resources presently available to it to maintain standards of municipal services required to prevent decay. At the same time, our cities are unable to make the capital expenditures in new schools and other modern community facilities which will renew urban residential neighborhoods and keep them competitive with the suburbs.

The housing crisis

American cities are beset by a critical shortage of decent housing for the low- and middle-income families who form the overwhelming majority of their inhabitants. Federal housing policies and programs for these families are ineffective. We need effective housing programs for these families, and we must take positive steps to insure that there will be equal opportunities for all in choosing a place to live.

Housing for low-income families

Millions of American men, women, and children desperately need to get out of the clutches of slums. They live in housing which cannot be reclaimed by urban renewal or rehabilitation. Private enterprise is unable to build housing at prices these low-income families can afford and still make a profit.

We cannot continue to turn our backs on these families and tolerate the enormous social and financial costs of slums. We must establish the publicly assisted housing program at a level which will meet the housing needs for these millions of American families of low income.

Publicly assisted housing is the only means through which low-income families can be rehoused decently. The present Federal public housing program does not even pretend to meet the demands for decent housing for low-income families. It is merely a token effort, no more. Substantially larger amounts are needed to take care of the minimum number of families whose relocation is required by slum clearance, public highways, and other programs.

Two decades of experience have much to teach us about right and wrong ways of providing publicly assisted low-income housing. Improvements can and must be made but the defects of the present program should not be allowed to obscure the desperate fact that the need for publicly assisted housing for low-income families is greater now than at any time since the start of the public housing program. It is past time to face up to this need and to devise acceptable means of meeting it.

Housing for middle-income families

There are more than 15 million families with annual incomes between \$3,500 and \$6,500. It is these families that the Federal Housing Administration was set up to help. Yet increasingly FHA has moved away from these families, and the effective market for new private sales or rental housing has steadily become limited to upper-income families.

Moderate-priced homebuilding has also been sharply retarded by the restrictive credit policies of the Federal Government, which have raised financing costs sharply. Consequently, at a time when the need for expanded homebuilding for middle-income families is increasing rapidly due to population increase and dislocation from highway and urban renewal projects, we are building almost no moderate-priced housing, either in central cities or suburbs. Middle-income families in both cities and suburbs are subject to exploitation, hardship, disillusion, and despair in their quest for suitable housing.

Housing for minority families

Negroes and other non-white Americans suffer from much worse housing conditions than the rest of their fellow citizens. In many cities in all sections of the country the only housing available for non-whites has been secondhand housing formerly occupied by whites. The expansion of the non-white population in these cities has been confined to older neighborhoods. Overpricing, overcrowding and profiteering on the limited number of dwellings available to non-whites in rapidly aging neighborhoods have consequently accelerated decay. Thus the pressure is on minority housing to become slum housing.

The Negro and other non-whites have been increasingly caught in a crushing vise largely fashioned and encouraged by Federal housing policies. Discrimination in newly created suburban housing developments in all sections of the country has received the tacit support of FHA. Suburban housing is closed to the Negro in the face of the unwillingness of too many other Americans to share their neighborhoods.

On the other hand, the worst slums which are largely occupied by minority groups have been among the first to be cleared by slum clearance and highway programs. As a result, minority groups, particularly Negroes, have suffered far more than others from family displacement, the housing shortages which result and the lack of adequate relocation and low rent housing programs. The vise becomes tighter—non-white families are ex-

cluded from the suburbs and routed from the slums.

The extra burden suffered by minority families makes especially urgent the expansion of low rent and middle-income housing. Above all, there must be recognition of the right of every American family to have freedom of opportunity to choose a place to live and to have equal access to the means of financing that choice.

Commercial and industrial blight

The blight that afflicts urban areas is not limited to residential neighborhoods. All cities are afflicted with large areas of commercial and industrial blight. These older industrial and commercial districts have traditionally provided a firm economic base, assuring steady jobs and strong economic support for local government. An urban renewal program which deals only with residential areas and ignores the rebuilding of the urban industrial and commercial centers cannot succeed.

Downtown United States of America

The central business districts of American cities are in grave trouble. They are losing their capacity to compete effectively with new suburban shopping centers. The buildings are obsolete, streets are jammed, parking space is lacking. Driving downtown has become too much of a chore for the housewife, and transit service has deteriorated badly. These conditions have led to the flight of business from central districts, with a loss of income, jobs, and retail services to customers. Consequently, the municipal tax base is shrinking at a time when service costs are steadily rising.

Downtown should be an attractive marketplace for goods and services and for ideas as well. Downtown traditionally has been the economic heart of the metropolitan region, for the suburbs as well as the city.

Imaginative solutions have been developed which would enable central cities to renew their downtown areas. The ideas are there, but so far there has been little action because the financial resources are not available for more than token action.

Urban industry

Urban industry is the principal source of America's great power and wealth. But vast changes in our economy and technology have impaired this economic base of the city, creating industrial slums, depressed areas with resistant pockets of unemployment, and shifts in the location of industry and jobs. Cities must seek ways to adjust to these changes to provide jobs for workers, spending power for consumers and efficient locations for the manufacturer and tradesman.

Cities need to adjust to technological changes in plant location, transportation and labor skill requirements. Industrial slums, filled with overcrowded and often unsafe loft-type factory buildings must be replaced with newly fashioned industrial parks. More spacious industrial areas, with parking space, room for expansion, modern highways and other facilities are needed if the city is to continue to provide employment for its citizens. Centrally located plants will remain attractive to industry only if modern industrial areas, skilled workmen and excellent public services are available in new central industrial districts.

At the same time, cities are also the seedbeds for new industries and services. Only the city can provide the multiplicity of skills, business services, and proximity to customers required by the newly established small enterprise. This vital economic function must be carried on in cities at an increasing rate.

Some cities have been bypassed in our recent economic growth. These stagnating or depressed areas suffer from chronic unemployment, depressed business, and unused skills. These areas need help in rebuilding

their economies to serve the Nation, and to provide for their people a share in a growing national economy.

New life for our cities

Our report contains some sharp and unpleasant findings about the state of our cities today. But cities have survived recurring crises through the ages as important centers of population, culture, wealth, and commerce. We are confident they will meet this present-day challenge as well. There are signs everywhere of growing awareness of the problems of slums and blight.

Citizens throughout America are awakening to the disturbing trends in our cities and to the opportunities which lie ahead if our Nation mobilizes its resources to build a better urban life for future generations. Some cities have taken giant steps forward. Hundreds of other cities and towns are planning for the future and struggling to rebuild themselves within the confines of inadequate Federal programs.

A beginning has been made. We need to know more about the nature and dimension of urban problems. We need the imaginative research and a relentless quest for forward-looking solutions. But far, far more important we Americans must decide that we will put to work all of the resources, public and private, Federal, State, and local, that are required to banish slums from our country.

The State of Our Cities and Suburbs in a Changing America—A Statement of the Advisory Council of the Democratic National Committee—Part 2

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 22, 1960

Mrs. GREEN of Oregon. Mr. Speaker, under unanimous consent, I include in the RECORD the following portion of a statement issued by the advisory council of the Democratic National Committee entitled, "The State of Our Cities and Suburbs in a Changing America."

The second half of this statement follows:

3. THE SUBURBS—A NEW AMERICA

Suburbia is a distinctively new American way of life. A new family style of living, informal, friendly, and comfortable, has become an American goal. There is no doubt that Americans like it. In recent years, the move to the suburbs has become a mass migration.

A number of complex social and economic factors accounts for this unprecedented suburban migration:

The press of population growth, the lack of decent housing accommodations in the central cities and the unparalleled prosperity and mobility of postwar American life.

The new family way of life, the rising birth rate and the desire for space and elbow room.

The distaste of many Americans for declining and slum-ridden cities. In the suburbs, Americans recapture the old American dream of smalltown living.

Suburban sprawl

When do suburbs stop being suburbs? Fifty million Americans live in the suburbs right now. Eighty percent of our future population growth will take place in suburban areas. Each year more open space around our cities disappears as a million

more American families join the suburban migration. Villages become suburbs and the suburbs themselves grow into an urban sprawl.

There inevitably are problems in any mass migration. We must report that the great expectations of suburbia are beginning to tarnish in the face of the gigantic suburban population avalanche and increasing suburban sprawl. The suburbs confront these serious problems:

An ever-growing school population and rapidly rising tax rates.

Ever more congested commuter traffic patterns.

Demands for waste disposal, adequate water supply, and other public services.

A lack of public open space and recreation areas and the need for protection of natural scenic and physical resources.

To the residents of suburbs these problems are as pressing as the spread of blight and decay which confront our older city centers.

Soon: No more open space

Each year more and more open land is chewed up by the bulldozer (now 3,000 acres per day) as more and more American families join their neighbors in the countryside. The open country around our cities disappears. The historic townhall and quiet village green which have stood for generations as symbols of America's lovely small towns are being overwhelmed as a result of pell-mell suburban growth.

Small towns and local governments have been unable to stem the onrushing tide of suburban growth. Flying over the mushrooming suburbs which are growing up around our major cities, one sees that there will soon be no more open space in suburbia. It will take many years and much money just to unsnarl the congestion that is already here.

It is important to understand that the problems of suburban areas do not arise from any shortage of land. There is plenty of land for future suburban growth if we use it properly. What is lacking is not space itself but public policies and controls which will assure a balance in the new uses of the land. If our governments and our citizens do not concern themselves with the impact of suburbia on the land, then suburbia will, in fact, become a gigantic sprawl and a blight upon the landscape. This is no prophecy of the future. It has already happened outside our biggest cities.

There is an urgent need to preserve natural open space as well—the woodlands, hills, farmlands, and streams which give rural America its charms and which can give pleasure to both city dweller and suburbanite. Solutions which will preserve open space and retain local autonomy are imperative. The suburban way of life has too much to offer and on the whole has been too successful to be allowed to destroy itself.

Financing suburbia

At the town hall local officials have unhappily watched suburbia tax rates spiral upward. Suburban towns need suddenly to supply all the services that cities have developed over many years. The press of an ever-increasing number of families on schools, roads, water supply, waste disposal, and police and fire protection is forcing suburban finances to their limit.

There are four principal causes of suburban financial difficulties:

The taxes on homes alone will not support the public services these homes require. The majority of suburbs would be deficit operations already without State aid.

Nine large metropolitan areas today have 250 or more governmental units apiece; the average area has at least 50 separate jurisdictions. There is a massive mismatch between the supply of revenues and the needs of public service within this governmental maze.

There is little chance to spread costs across the entire range of properties which benefit from urban services. Here and there a suburban town endeavors to seal itself off from its neighbors and attract the "right kind of people" or the "right kind of industry." But few can succeed. The process of industrial diffusion gives some suburban towns tax windfalls but neighboring towns are denied access to the resulting revenues. American suburbs have on the whole been unable to act jointly with one another to make and carry out effective public policies to finance local services.

Fundamentally, all urban areas, central city and suburban, face an acute shortage of revenues. Local governments do not have access to the full range of taxable resources and must rely primarily on the property tax to meet increasing municipal costs. And tax revenue problems are partly man made in our local communities. There has been a failure of will, a failure to organize and administer local taxes with maximum effectiveness.

4. COMMON PROBLEMS OF CITIES AND SUBURBS

The city and suburb are inseparably linked. Without surrounding suburbs, the modern city would perish; without the central city the suburbs would wither away. Their markets, labor forces, manufacturers, and community services are mutually interdependent. In our studies we have concentrated on four areas of public service which reveal this interdependence most forcibly: transportation, education, recreation facilities, and air and water pollution.

Transportation and highways

Transportation binds the city and suburbs together. The automobile and commuter rail service made suburban expansion possible. Automobile ownership has doubled since the war and will increase an additional 60 percent by 1970. With nearly all America on wheels, cities and suburbs face transportation and traffic congestion problems which would have seemed like nightmares only 20 years ago.

The family car both serves and plagues the city dweller who must face streets jammed with peak-hour traffic, parking space forbidden or usurped, and traffic a constant hazard to life. Moreover, urban mass-transit services are declining in efficiency and economy. To the suburban commuter, the transportation mess spells traffic tieups, more lost time, deteriorating transit services, and lack of parking facilities at his destination. And suburban neighborhoods live under the threat of the poorly planned expressway that may cut through their heart, blighting homes and landscape.

We have scarcely begun to plan and construct the whole new transportation system which is so necessary to keep American cities and suburbs free from hopeless congestion. And transportation solutions cannot be achieved unless attractive and efficient rapid mass-transit facilities and improved rail service are developed to relieve the load on our highways in peak hours.

Education for our children

All American families, urban and suburban, want the best possible education for their children. Yet inadequate schools are the most pressing of urban and suburban problems.

The facts are plain:

Central city schools are typically old, lacking in play space and athletic facilities and unable to provide a school program as balanced and complete as that offered in the suburbs.

Suburban schools are newer, but overcrowded classes and double shifts are common and programs for the exceptional and the handicapped are lacking. Local tax rates are soaring as residential property is forced to bear major school costs.

Are there enough parks and playgrounds to go around?

Increasing family incomes, greater national wealth, and more leisure time, all spell greater opportunities for recreation. Yet both urban and suburban communities lack space and facilities for local, weekend, or vacation recreation.

Cities and suburbs lack recreation playgrounds, playfields, and parks for day-to-day recreation. Weekend and vacation spaces away from population centers are equally necessary in our society. But our remaining natural recreation areas—forests, lakes, rivers, and ocean frontage are disappearing rapidly. Our national parks are already jammed in season, and are overused. The vast Midwest today lacks lake, river, and forest areas needed to accommodate the present population, much less the greater population of the future. Cities, metropolitan areas, even States cannot meet these future needs in an era when 20 million people can drive across State boundaries on a brief weekend.

Air and water pollution

One city's refuse can pollute a hundred miles of river or water frontage. Industrial refuse has fouled thousands of once beautiful streams on which others depend for fresh water supplies. As our urban population grows, these problems of water and stream pollution have become more pressing. The spread of urban areas into continuous belts hundreds of miles long in the East, Midwest, Far West, and South have intensified the problems. In addition, metropolitan areas face growing problems of access to fresh water for domestic and industrial use.

Smog-industrial smoke, automobile exhaust fumes, and the soot of millions of home furnaces combine to foul the air with disease-breeding hydrocarbons and suffocating oxides. To date we have done little to curb these hazards.

6. THE NEED FOR NATIONAL LEADERSHIP

It would be an intolerable irony of history if the United States were to withstand the rigors of the cold war and the pitfalls of economic instability only to fall prey to civic disorganization in our slum-ridden cities and mushrooming suburbs.

Destroying slums and providing balanced and orderly suburban growth in a prosperous economy are primary domestic issues of our times. There is an urgent need for effective and vigorous national leadership.

This is the eighth and last year of the Eisenhower administration. We must report that the President and his administration are either uninformed or unconcerned with the mounting urban and suburban problems around them.

From the lack of sympathy and concern in the White House, it seems to us quite clear that the President and his budgeteers have neither seen nor heard nor felt the plight of the 22 million American slum dwellers. And with 50 million Americans already in the suburbs and 50 million more on the way, it is folly indeed to say that suburban problems are none of the Federal Government's concern.

Our conclusions with respect to the scope and effectiveness of Federal policies and programs are these:

Urban and suburban policies and programs are not at all geared to the total national solutions which are so urgently needed. Rather, in terms of action today, only a token effort is being made.

Federal aid programs are uncoordinated and are on a restricted, piecemeal basis.

The White House has directed that the plain intent of the Congress be frustrated through the creation of an ingenious administrative obstacle course for even the limited funds which are available. Through government by veto, the President has re-

peatedly destroyed all congressional efforts to fashion a comprehensive legislative program for urban renewal, depressed areas, and many other problem areas.

In far too many American cities today there are more slums than there were 10 years ago when the 1949 Housing Act was passed.

We can only conclude that the President and the Republican Party have turned their backs on cities and suburbs all across America.

AMERICA LOOKS AHEAD

The Democratic Party has demonstrated by its record in Congress a serious concern with urban and suburban problems and a willingness to provide responsible solutions and creative leadership. It is the task of the Democratic Party to prepare and implement action programs which will reverse these disturbing trends and make the American ideal and goal of a full and rich life a reality for all our citizens.

Our cities and our rapidly growing suburbs are the basic framework for our life and civilization in the challenging years which lie ahead. The deepest roots of day-to-day American democracy lie in our allegiance to our local communities, whether city or suburbs.

It is time that we as a Nation and as people take all the steps necessary to achieve the goal of a "decent home and a suitable living environment for every American family."

We propose that the Democratic Party rededicate itself to this goal and to its early achievement.

APPENDIX

Selected bibliography

This bibliography contains brief annotations on the leading books, articles and special reports which deal with urban and suburban problems.

Additional information and materials may be obtained from the following organizations: American Council To Improve Our Neighborhoods, 2 West 46th Street, New York, N.Y.; American Municipal Association, 1612 K Street, N.W., Washington, D.C.; National Association of Housing and Redevelopment Officials, 1313 East 60th Street, Chicago, Ill.

Special works

1. "The Urban Revolution, a Program for Survival."

Draft policy paper prepared for the Democratic Advisory Council's Committee on Economic Policy.

A convincing statement of the urban problems facing the Nation and a call for ideas and courage to develop new concepts of effective action.

2. The Rockefeller Report on "The Challenge to America: Its Economic and Social Aspects," 1957.

Widely hailed as a hallmark of "intelligent capitalism at its finest" this report presents a remarkably thorough statement of the economic and social problems facing America. It falls short in prescribing remedies adequate to meet the problems as presented. It goes far beyond any proposals that the present administration has made.

3. "Report of the President's Advisory Committee on Government Housing Policies and Programs," 1953.

This report was accepted in large part by the President and helped form the basis of the Housing Act of 1954 which broadened the scope of urban renewal. When compared with the veto message on the Housing Act of 1959, it now appears ironically out of date.

4. "Where Shall We Live?" Report of the Commission on Race and Housing, 1956.

A lively and very thorough discussion of segregated patterns of living and their impact on the future. Prepared by a distinguished Commission.

5. American Municipal Association, "1960 National Policy Recommendations."

The AMA represents more than 13,000 municipalities across the country. The AMA policy recommendations have been hammered out over the years and represent the best thinking of the city officials who know the urban and suburban problems from firsthand experience.

Articles

1. William L. C. Wheaton, "What Next for the Cities?" Housing Yearbook, National Housing Conference, 1959.

The lead article in the 1959 Housing Yearbook examines the consequences of the forthcoming population expansion, the decline of cities and the need for a long-range program of significant proportions to make both cities and suburbs attractive and livable.

2. Edward J. Logue, "Urban Ruin—Or Urban Renewal?" New York Times magazine, November 9, 1958.

A concise policy statement of the need for a continuing and comprehensive national urban renewal program.

3. William L. C. Wheaton, "A New Cabinet Post?" National Civic Review, December 1959.

A discussion of the proposal to create a Federal Department of Urban Affairs.

Committee for Economic Development

The Committee for Economic Development is a nonpartisan organization composed of leading businessmen, educators and civic leaders which has made significant contributions through economic research on a national scale.

Through CED's Area Development Advisory Committee, several very useful, detailed monographs on urban and regional problems have been commissioned and published. Other papers are now in process.

CED has not itself taken a policy position on these matters. The research is a significant contribution.

The published papers are:

1. Dr. Raymond K. Vernon, "The Changing Economic Function of the Central City."

A detailed analysis of what makes a big-city economy tick and why we should expect more dispersion, not less, in many traditional areas of central city dominance.

2. Dr. Robert C. Wood, "Metropolis Against Itself."

An analysis of the problems of government organization and overlapping jurisdictions in metropolitan areas.

Other useful works

There are a number of worthwhile books, articles, pamphlets, and other materials devoted to aspects of suburban and urban problems. Several of these are listed below:

1. *Berman v. Parker*, 348 U.S. 26, 75 Sup. Ct. 98, 99 L. Ed. 27 (1954).

The leading constitutional decision on redevelopment, Justice Douglas' opinion for a unanimous court is a broad and clear statement of public purpose.

2. "The Culture of Cities," Lewis Mumford.

The dean of critics of the American scene examines the make-up of urban life.

3. "The Human Side of Urban Renewal," Millsbaugh & Breckenfield.

A lively and stimulating study of the effectiveness of rehabilitation as it has been practiced in several American cities. Mr. Millsbaugh is presently Assistant Commissioner for Urban Renewal with the Federal Government.

4. "Metropolis in Ferment," Annals of the American Academy of Political and Social Science, Philadelphia, 1957.

A series of challenging articles on the varying dimensions of urban problems and predictions for the future. These articles have unusual scope and intensity.

5. "Veto Message of the Housing Act of 1959."

The President vetoed the 1959 Housing Act on July 7, 1959. The message was printed in the New York Times of that date and may also be found in the CONGRESSIONAL RECORD. The message makes an interesting contrast with the report of the 1953 President's Advisory Committee on Housing Policy and the President's own budget message of 1954.

Books

1. Editors of Fortune, "The Exploding Metropolis": New York, Doubleday Anchor Books, 1958 paperback ed.

An exceptionally well-written book by "people who like cities." The most comprehensive and up-to-date work available on the broad range of urban and suburban problems. Includes discussion of the nature of cities, mass transportation, municipal administration, the spread of slums, urban sprawl, and urban design.

2. Robert C. Wood, "Suburbia": Boston, Houghton-Mifflin Co., 1958.

A complete and challenging study of the suburbs, their politics and problems. Discussion of the economic and social forces at play in suburbia and how they may shape its future. The author explodes several suburban myths and illustrates the strength of suburban trends as well.

3. Wilfred Owen, "Cities in the Motor Age": New York, the Viking Press, 1959.

A well-written and comprehensive book based on a 1957 conference on the impact of the Federal highway program. Discussion of the transportation problem, both auto and mass transit, in the context of the changes in cities and the requirements for effective policy. Not a traffic engineering treatise but a book for laymen to enjoy and ponder.

4. John K. Galbraith, "The Affluent Society": Boston, Houghton-Mifflin Co., 1958.

A book full of fresh ideas that will startle and educate Democrats concerned with economic and social problems in these times. Very well-written with humor and dispatch. Presents a superb case for the importance of revised allocation of national resources in an abundant economy.

5. Charles F. Palmer, "Adventures of a Slum Fighter": Atlanta, Ga., Tupper and Love, Inc., 1955.

An account of the first slum-clearance, low-cost housing project in the United States and the author's efforts to start the housing program on its way during the 1930's.

Family Farm Legislation

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. McGOVERN. Mr. Speaker, recently, seven Governors appeared in person before the House Agriculture Committee to testify in support of the Family Farm Income Act of 1960, sponsored by myself and a number of our colleagues in the Congress.

The gentleman from North Carolina [Mr. Cooley], the chairman of the Committee on Agriculture, and the gentleman from Texas [Mr. Poage], a chief sponsor of the family farm legislation, both observed that they could not recall any previous time when so many Governors appeared in a body to testify in support of agricultural legislation.

The intelligent concern of the midwestern Governors with the problems of

agriculture is a most encouraging factor in the present effort to establish an improved farm program.

Under unanimous consent I ask that a recent news broadcast prepared by the Farmers Union Grain Terminal Association at St. Paul, referring to the testimony of the Midwest Governors, be printed at this point in the RECORD:

Every once in a while a group of people in leadership positions will organize spontaneously and initiate an action that deserves the acclamation of all the people in the countryside. When this happens, as it happened Tuesday in Washington, it is usually motivated by a very serious situation that affects the welfare of all the people.

The group of men we are referring to is made up of 10 Midwestern Governors who went to Washington to seek the aid of Congress and top Government officials in easing the disastrous cost-price squeeze on farmers. These leaders are deeply concerned about the plight of agriculture. It promises no good for the economy of their States and they would like to see it corrected before really bad trouble develops.

As far as farm families are concerned, if the Governor of your State was present in this group you can be proud that you have an aggressive leader who is not only working for you as farmers, but for all the other people in your State.

So right now let's name these State leaders: The group included seven Governors in person: Hershel C. Loveless of Iowa, Orville Freeman of Minnesota, Steve McNichols of Colorado, Ralph Hereth of South Dakota, G. Mennen Williams of Michigan, James Blair of Missouri, and Gaylord Nelson of Wisconsin. Three others sent personal spokesmen. They were Governors Joe Hickey of Wyoming, Ralph Brooks of Nebraska, and George Docking of Kansas.

All 10 put their unanimous support behind the Burdick-McGovern farm bill now in the House. It is similar to the Family Farm Income Act of 1960 in the Senate, where its author is Senator HUMPHREY of Minnesota. We've talked about this bill before and you'll be hearing a lot more about it in the future because it is shaping up as the most promising piece of farm legislation introduced thus far.

When the group of governors appeared before the House Agriculture Committee, Chairman Cooley observed that it was the "most distinguished group to appear before this committee."

As spokesman for the governors, Hershel Loveless of Iowa laid the case for agriculture before the committee. He said that farmers have been badly hurt by rising costs and falling income. "There is in Iowa," he said, "a growing support for the idea that production should be controlled." Governor Freeman of Minnesota seconded that, and added that farmers have demonstrated in referendums a complete willingness to cooperate with control measures because they know they cannot survive much longer without fair prices and incomes. Freeman pointed out that farm income in Minnesota has been dropping by an average of \$30 per year per farmer while nonfarm income is increasing by \$70 a year.

The governors said that a decent farm bill that will do something for farmers and control production and be fair to city people at the same time, may never get by the President, but it is still up to Congress to pass such a bill and give the Chief Executive a last opportunity to make good on his farm promises.

Farmers will certainly welcome this action by their governors. It is a positive step in the right direction, of the kind that has long been urged by the farmers of GTA the co-op way.

The Forand Bill—Trend or Treadmill?

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech recently given by Dr. Leon Roe, of Canisio, N.Y., to several meetings in the 37th Congressional District of New York. It deals with H.R. 4700 and similar proposals, and, I believe, throws light on some interesting aspects of these proposals:

SOME CONSIDERATIONS OF THE SOCIAL-ECONOMIC-POLITICAL ASPECTS OF HEALTH CARE

(By Leon M. Roe, M.D.)

When one begins consideration of the social-economic-political aspects of present-day health care, he must, by necessity, give some thought to the trends that are occurring in the lives of Americans.

It is my philosophy that, with the framing of the Constitution of America, our forefathers intended that each American citizen and those of future generations should have both freedom of opportunity and the individual responsibility to provide for their own welfare. However, a large segment of our population no longer holds to this view. Since the middle thirties, a philosophy of security for all and the promulgation of a welfare nation has come to the fore, both in the minds of many of our citizens and the thinking of many of our Federal and State governmental officials. For those who may not believe this statement, please take heed of the following facts: In midyear of 1953, the welfare portion of our Federal Government was \$6.9 billion. To midyear of 1961, the welfare portion of our Federal budget will be \$20.3 billion or an increase of \$13.4 billion in 7 years. This includes the following categories, all of which our Federal Government has a hand in helping supply the money: old-age insurance pensions, civil service pensions, disability pensions, people on relief, jobless benefits, State employment services, railroad workers' pensions; grants and loans to colleges, school districts and students; school lunches, some 2.3 billion meals per year; hospitals, health and other welfare costs. This does not include veterans' pensions and benefits to veteran dependents such as the \$60-million medicare program which was reestablished by Congress for the year of 1960.

For a specific example of the way in which new programs tend to spiral in cost, take a look at the disability pensions. These started going out to disabled workers 50 years of age or older just 2 years ago or in 1958. The initial cost was \$170 million a year; the cost of the coming year is forecast at \$610 million or a near 5-fold increase in 2 years. Plans now receiving serious consideration would give this program a big lift by easing the rules and removing the age requirement for disability and thus further increase the rapidly growing cost of this single program.

There are few who would argue against the good sound economic-social progress of unemployment insurance and the disability program based upon bona fide claims, or of reasonable and necessary Federal aid to education, hospitals and health. However, when plans are brought forth at any level of government to supply health insurance by compulsory taxation, either to a select group or to every American citizen, the

issue of the responsibility of the government versus individual responsibility and freedom of private enterprise has been reached.

Despite outstanding progress and effort being made by private industry to provide voluntary health insurance, including the aged, for all who desire it, there are opposing forces to this scheme of doing things. One such force is powerful influences in our Federal Government which apparently feel that it is their responsibility to see that every recipient of social security has health protection whether he needs it or not. Another force is the State government and, of course, a third force is a segment of American people who want to be provided by the Government in one form or another with health protection. As a result of this trend, bills have been introduced into the Federal Government and others are now being considered in our New York State Legislative Health Committee to provide compulsory health insurance through payroll deduction on both the part of the employer and the part of the employee.

One such bill which is now before the House Ways and Means Committee in Washington is H.R. 4700 or the Forand bill. This bill was introduced by Representative AMIE FORAND, and is strongly supported by the AFL and CIO union organizations. In essence, this bill provides for additional deductions in social security to provide 120 days hospitalization and surgical care, and 120 days nursing home care in any one year for every recipient and his or her beneficiaries of social security. It authorizes the Secretary of Health, Education, and Welfare to contract with hospitals, surgeons, either as groups or individuals, and nursing homes for such care. As of today, there are approximately 16¼ million people in the United States who would become, were this bill passed, eligible for these benefits. Mind you, these benefits are not based upon the need for help or assistance. It would make no difference how many shares of stock, how much money in the bank, how much property an individual might have, he and his dependents would be entitled to his 120 days hospitalization, surgical care and 120 days in a nursing home if he needed it out of each year.

Now from my personal welfare as a physician, I would probably benefit from such a bill since 35 percent of all those people in Steuben County now receiving old-age assistance also receives some form of social security. For example, were I to do an appendectomy on one of these people, instead of receiving \$50, which is our present welfare fee for this service, I probably would be reimbursed with a fee of \$125 to \$150 or possibly more. And of course, each year many more people become eligible for social security. Within our own county it is anticipated that within the next 10 years 70 percent of all recipients of old-age assistance will be receiving some form of social security. So you see, from a personal viewpoint, I really would have nothing but gain.

However, I am opposed to this bill in principle and for the following reasons: It places the Federal Government in a position of supplying health insurance on a large scale program and thereby becoming a large competitor of private enterprise. Since approximately 20 percent of all hospital admissions are over 65 years of age and nearly all admissions to nursing homes are in the aged group, such a bill could place the Federal Government in a dictatorial position of setting the standards of hospital and nursing home care. Further, in a liberal sense of the word, this bill is discriminatory. First, it provides only for a select group of people but at the same time every employer and employee would pay for it by taxation. Second, it discriminates against hospitals since among other things in the provisions

of the bill, these folks, except in an emergency, could not be given care except in accredited hospitals. And since hospital accreditation is relatively new, there are many good hospitals in the Nation which are not yet accredited. Third, it discriminates against the medical profession since only the surgeons would benefit. It is a well known fact that the ills of these people are more often medical such as strokes, heart disease, diabetes and pneumonia rather than surgical conditions.

The cost of this bill which is now estimated at \$2 billion in its first year of operation, will very rapidly become a staggering figure in the very near future, as witness the multiplying cost of most any national health insurance program or of our own disability program. As you know, Sweden inaugurated a complete system of socialized medicine in 1956 and within 4 years the rapidly rising of unanticipated costs of this form of medicine made it mandatory that beginning January 1, 1960, the Swedish Government had to add a 4 percent tax on everything sold in Sweden to help them underwrite their medical program. You also know that under the present system of laws, social security will increase each year until in 1966, it will reach a total of 9 percent or a 4½ percent for employer and 4½ percent for employee. Further deduction from paychecks for further increases in Social Security or any other form of compulsory health insurance make for less take-home pay, thereby the unions fight for another round of wage increases and inflation goes on and on. Therefore, to my mind, this bill is definitely of an inflationary character. But more important than the economics involved, this bill would tend to lessen the individual's responsibility throughout his lifetime to provide for his own welfare through voluntary means.

In addition to the Forand bill and the Federal Government, hearings were held in Albany on February 18 and 19 of this year on six bills which were introduced by the Joint Legislative Committee on Health Insurance Plans. This new series of bills would provide health insurance coverage for New York State workers covered by the Disability Benefits Law whether employed, unemployed, or the recipients of public assistance. In the words of Senator Metcalf, chairman of this committee, "We are aiming at using the resources of private industry in cooperation with Government to achieve the goal of adequate health protection for as large a proportion of our people as possible without abdicating this responsibility to some mechanism of the Federal Government. We are not attempting to accomplish womb-to-tomb coverage," he said, "we are simply trying to establish a comprehensive health insurance program in New York State's tradition of responsibility for neglected human needs. Moreover, there is the very obvious object of reducing the staggering burden of the cost of public welfare."

Now it is to be admitted that it is very difficult to argue against such a statement in this day and age when so many are thinking of security. However, we must remember that this is a compulsory form of health insurance. It would require all employers governed by the disability benefits law (in essence, all those with three or more employees) to provide basic health insurance coverage at least as comprehensive as presently called for by a disability insurance law. These provisions themselves would be increased by the bills referred to, to a minimum of 120 days of hospitalization, plus a medical and surgical schedule with maximum benefits of not less than \$250. This particular bill further specifies that the cost of health insurance must be shared on a 50-50 basis between employer and employee when only the employee is covered, and on the basis of 35 percent for the employer and 65 percent for the employee when both the employee

and his dependents are covered. It would permit any existing coverage provided by disability benefits law or workmen's compensation to be counted against an employer's responsibility under this bill.

A second bill in this series would provide that the cost of health insurance coverage of an employee, should he become unemployed, must be included in the premium of the group policy while the employee is still on the job, or all employers of three or more are to be taxed one-fourth of 1 percent for payments into a health insurance unemployment fund to be administered and regulated by the Workmen's Compensation Board. Contributions would be made for 1 year before the law goes into effect in order to build up the fund. There is a provision also that if the fund should fall to less than \$20 million, the board is authorized to increase the rate of contributions of employers in order to bring it up to that figure.

A third in this series of six bills provides that after an unemployed worker has exhausted his benefits and goes on public assistance, his health insurance premiums are to be continued, the payment to be made on a 50-50 basis by the municipality in which he resides and the State of New York.

A fourth bill makes the same provision but the State department of health is given jurisdiction over its administration with the public health council promulgating rules governing the minimum quality of hospital, medical, and surgical care to be provided.

Now in addition to these bills, there is a bill sponsored by the unions of New York which is called a health center bill. This bill would incorporate the Syracuse Health Services, Inc., with power to establish and maintain health centers and furnish medical facilities to members of unions in Onondaga, Cayuga, Madison, and Cortland Counties, subject to approval of the State board of social welfare. It further states that this corporation shall furnish such facilities to members of any union within the counties of Onondaga, Cayuga, Madison, and Cortland and their families, and to employees covered by collective bargaining agreements between such unions and employers, or association of employers and the families of such employers and to any other people interested or, in other words, to the public. This bill, known as the Hughes-Brown bill, would place labor unions in a position to dominate medical care within a community. The growth of their facilities would be at the expense of facilities maintained by management, private hospitals, etc., which are more representative of the public in general. Four certified Syracuse labor leaders are named in the bill as those who would form the corporation and would be the health center's first board of directors. From newspaper releases, it is in the long-range planning that this health center would eventually revolve around a union controlled 200-300 bed hospital.

Now is there a need for this type of legislation either on a State or Federal level? It does seem absurd that in this day and age of high prosperity with an automobile or two and a television or so in nearly every home, and with personal income at an all-time high of \$373 billion per year, that compulsory State or Federal Government sponsored health insurance is necessary. It may be that we have reached the stage where one has facetiously defined an underprivileged child as one whose parents have two automobiles but no motorboat. However, in view of this pending legislation, studies have been done by many groups to determine if there is a need for such a bill. Although it is granted that statistics may be found to support almost anyone's viewpoint, one recent reasonable study by the Health Information Foundation showed that the group over 65 years of age is as heterogeneous as

any other group in our Nation. Many are rich—many are poor—but the majority are in between. When asked the question, "How would you meet a medical hospital bill of \$500 or more?" 82 percent answered that they would meet it in whole or in part from savings, current income, life insurance, mortgages, health insurance, or from children and relatives. Only 18 percent indicated they would have to rely on public assistance or charitable aid. It is obvious from this study, at least, that whatever problem exists, is among the needy or the near needy aged who would be rapidly reduced to a state of destitution by a major illness.

In recognition of this fact, the board of trustees of the American Medical Association and the American Hospital Association recently adopted a resolution dedicating their full resources to accelerate the development of adequately financed health care programs for needy persons, especially the aged needy. Both organizations stated that the indigent or near indigent is primarily a community responsibility. The resolution further pointed out that the Forand bill fails to meet the need of the indigent aged since the vast majority of such aged are not eligible to receive social security benefits. United Medical Service of New York City, which is Blue Shield and Blue Cross, has just recently developed a voluntary health coverage program for individuals of any age who desire it. Last year, the Buffalo Blue Shield Group put into effect their golden age health insurance program in which individuals past 65 years of age could receive this type of insurance. So far, the plan is working out well and appears to be financially sound. Other Blue Cross, Blue Shield nonprofit groups are rapidly studying and preparing to bring forth senior citizenship health and hospital insurance coverage. Many of these plans also offer health insurance for catastrophic illnesses with benefits ranging from \$5,000 to \$15,000. Many private insurance companies are offering at reasonable prices to senior residents health insurance plans which adequately cover surgical, medical or hospital expense. Already in this Nation, 43 percent of those over 65 years of age are covered by some type of insurance and it is anticipated by the Health Insurance Council of America that by the end of 1960, 60 percent of those over 65 who wish to purchase such insurance will be covered, and probably by 1970, 90 or more percent of such people will be covered.

Thus, through present social security cash benefits, private pension plans, increasing savings and liquid assets, through the combination of these, the economic resources and purchasing power of the group over 65 years of age is rapidly and steadily improving. Thus voluntary and governmental enterprise that preserves individual responsibility and initiative have teamed up in recent years and are moving rapidly to resolve whatever problems still remain. It seems to me that if State and Federal governments wanted to be more helpful, they could allow as legitimate tax deductions the premiums paid on health and hospital insurance. Further studies under the present program of old age survivors and trust funds and welfare agencies could be made to determine the possibility of insuring these people as a group on a local level, either through Blue Cross-Blue Shield, or through commercial insurance carriers as a means of protecting local governments against the rising costs of the welfare budget.

Political developments along all lines of health care should be closely watched by every American. If this type of legislation as discussed, is enacted into law, it will directly affect our economic and, to some extent, our future way of living. Union leaders, of course, who would like to have a hand in the health care of our Nation are strongly supporting these various types of

legislation. As you know, with all due respect to the many fine men and women who are union members, the leaders of these unions have become strong, powerful and in a sense arrogant. With some union leaders, it is becoming extremely difficult to negotiate with them on any reasonable basis.

It is my personal opinion that one can justifiably say that no Federal agency, or State agency, or union agency has ever been able to do a job as well, as efficiently and as economically as private enterprise. By the same token, those of us who are interested in maintaining some semblance of individual responsibility, private enterprise, and initiative, must see to it that no one within our county and, if possible, within our State or Nation, goes without adequate medical or hospital care because of lack of funds. In doing so, we must be aware of the ever-rising costs not only of health care but of national inflation in general.

Quoting from Paul Talbot, who heads United Business Service and writes a weekly statement in this bulletin, "If we are to adequately appraise current events in the historical perspective, where better can we turn for helpful guideposts than to that great work of Edward Gibbon, *The Decline and Fall of the Roman Empire*. From this huge mass of fact and opinion we find that Gibbon lists five primary causes for the deterioration of Roman society. They are: (1) The rapid increase of divorce and the undermining of the sanctity of the home. (2) The spiraling rise of taxes and extravagant spending. (3) The mounting craze for pleasure. (4) The building of gigantic armaments and the failure to realize that the real enemy lay within the gates of the empire in the moral decay of the people. (5) The decay of religion and the fading faith into a mere form, leaving the people without any guide. Granted, that many things have changed since the days of the Roman Empire—and over two centuries since Gibbon wrote—but the indictments he lists came much too close for comfort. From an objective, historical viewpoint, we may be treading a dangerous pathway."

In the final analysis, methods of supplying health protection, whether voluntary or compulsory, will be made by the decision of the American people through their elected representatives in Government.

Except in areas of real need, how much of the individual's responsibility do we wish to relinquish either to the State or Federal Government?

The People Are Fed Up With Our Present Farm Program

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960
